## Before Federal Trade Commission

Dockets 1654, 1647, 1626, 1621, 1624, 1625, 1648, 1629, 1632, 1643, 1652, 1644

In the matters of Algoma Lumber Company, Big Lakes Box Company, California Fruit Exchange, Clover Valley Lumber Company, Davies-Johnson Lumber Company, Diamond Match Company, Ewauna Box Company, Feather River Lumber Company, Hobart Estate Company, Lassen Lumber & Box Company, Pelican Bay Lumber Company, Red River Lumber Company

*Secretary's certificate*

I, Otis B. Johnson, secretary of the Federal Trade Commission, do hereby certify that transmitted herewith is a full, true, and correct transcript of that portion of proceedings before the Federal Trade Commission in the above-entitled matters designated in stipulation entered into subject to approval of the court, and attached hereto, consisting of—

Part 1—Pleadings and Testimony (pages 1–512),
Part 2—Testimony (pages 513–1101),
Part 3—Testimony (pages 1102–2090),
Part 4—Testimony (pages 2091–2860),
Part 5—Testimony (pages 2861–3682),
Part 6—Exhibits (originals),
and separate original exhibits marked:

That this transcript is certified to the United States Circuit Court of Appeals for the Ninth Circuit, pursuant to the filing in said court of petitions for review of orders to cease and desist, dated June 8, 1931, entered by the Federal Trade Commission in those proceedings.

In witness whereof, I hereunto subscribe my name and affix the seal of the said Federal Trade Commission, at its office in the city of Washington, D.C., this 18th day of February, A.D. 1932.

[SEAL] OTIS B. JOHNSON, *Secretary.*

B In the United States Circuit Court of Appeals for the Ninth Circuit

No. 6716

ALGOMA LUMBER COMPANY ET AL., PETITIONERS

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

*Stipulation as to transcript of record*

This stipulation is consequent upon a desire of the parties to this proceeding to save time and expense, and in view of the following circumstances:

1. That the respective complaints before respondent Federal Trade Commission, which resulted in the several orders to cease and desist, sought herein to be reviewed by this honorable court, were identical except for their respective docket numbers, the names of the respective respondents, and the statements respecting the respective States of incorporation and the principal places of business of said respondents;

2. That the reports and orders of said Federal Trade Commission in said several proceedings before said Commission were identical, save and except in the respects hereinbelow set forth; and

3. That said several proceedings before the Federal Trade Commission were consolidated for hearing and argument before said Commission, and were tried, recorded, and argued as a single consolidated proceeding before said Commission.

Wherefore it is hereby stipulated by the petitioners and the respondent through their respective counsel, subject, however, to the approval of this honorable court, as follows, to wit:

1. That a single copy only of the transcript of the oral testimony in said several proceedings against these petitioners before said Federal Trade Commission shall be filed herein by respondent as a part of its record.

2. That the documentary and other exhibits offered and received in evidence before said Federal Trade Commission in said proceedings before it shall be filed with the court as physical exhibits.

3. That the complaints in the said several proceedings before the Federal Trade Commission differ only in their titles and in the Com-

mission's docket numbers and in averment of the respective States of incorporation and of the several places of business of said respondents, all of which are set forth below:

| Com.'s docket number | Name of respondent | State of incorporation | Principal place of business |
|---|---|---|---|
| 1654 | Algoma Lumber Company | Calif. | Klamath Falls, Ore. |
| 1647 | Big Lakes Box Company | Oregon | " " " |
| 1626 | California Fruit Exchange | Calif. | Graeagle, Calif. |
| 1621 | Clover Valley Lumber Company | Nevada | Reno, Nevada |
| 1624 | Davies-Johnson Lumber Company | Calif. | Calpine, Calif. |
| 1625 | Diamond Match Company | Illinois | Chico, Calif. |
| 1648 | Ewauna Box Company | Oregon | Klamath Falls, Ore. |
| 1629 | Feather River Lumber Company | Calif. | Delleker, Plumas County, Calif. |
| 1632 | Hobart Estate Company | Calif. | Hobart Mills, Calif. |
| 1643 | Lassen Lumber and Box Company | Calif. | San Francisco, " |
| 1652 | Pelican Bay Lumber Company | Oregon | Klamath Falls, Ore. |
| 1644 | Red River Lumber Company | Minnesota | San Francisco, Calif. |

and accordingly, that the complaint in the proceeding against petitioner Algoma Lumber Company only shall be filed by respondent Federal Trade Commission as a part of its record herein.

4. That inasmuch as the Commission on June 24, 1929, amended each of its said complaints by inserting the terms, "pondosa", in lieu of the term "ponderosa", at certain points in each of said complaints, the complaint in the said proceeding against the Algoma Lumber Company, to be filed as aforesaid, shall be the said complaint as so amended by the Commission.

5. That the answers of all the above-named respondents, except respondents California Fruit Exchange and Clover Valley Lumber Company, are identical with the answer of Algoma Lumber Company, except in their titles, docket numbers and execution; that the answer of respondent Hobart Estate Company, however, is an amended answer, and it is agreed that the answer of said company as originally filed need not be filed with this court as a part of the record of the Federal Trade Commission. The answer of respondent California Fruit Exchange differs in its preamble and in paragraph one from the preamble and paragraph one of the answer of respondent Algoma Lumber Company, the remaining portions of said answer being identical with those of the last-named respondent. The answer of respondent Clover Valley Lumber Company differs throughout from that of the Algoma Lumber Company. Accordingly, it is agreed that only the answers of the respondents Algoma Lumber Company and Clover Valley Lumber Company shall be filed herein in full, and that the preamble and paragraph one of the answer of the respondent California Fruit Exchange shall also be filed.

6. That the findings as to the facts and conclusions of the Federal Trade Commission in the proceedings against all of the above-named petitioners, except California Fruit Exchange and Red River Lumber Company, are identical with those in the case of Algoma Lumber Company, except for the titles, the Commission's docket numbers, the respective findings of the respective States of incorporation, and location of principal places of business which were found in accordance with the tabulation in paragraph 3 above. The findings as to the facts in the proceeding against respondent California Fruit Exchange differ in paragraph one from the corresponding paragraph in the findings in the case against Algoma Lumber Company. The findings as to the facts in the proceeding against respondent Red River Lumber Company differ in paragraph three, from the corresponding paragraph in the findings in the case against Algoma Lumber Company. Accordingly, it is agreed that the findings as to the facts in said group of proceedings before said Federal Trade Commission shall be filed herein only to the extent of the entire findings in the proceeding against Algoma Lumber Company, together with paragraph one of the findings in the proceeding against California Fruit Exchange and paragraph three in the findings in the proceeding against Red River Lumber Company.

7. That the Federal Trade Commission's orders to cease and desist in each of the respective proceedings against petitioners herein, except Red River Lumber Company, are identical, except in respect to the titles of the several respondents, the Commission's docket numbers, and the insertion of the respective names of the several respondents in the body of the orders. Accordingly, it is agreed that of said orders to cease and desist only the orders made with respect to respondents, Algoma Lumber Company and Red River Lumber Company, shall be filed by the Federal Trade Commission as parts of its record herein.

8. That explanatory notation in accordance with paragraphs 3 to 7 hereof shall be made at appropriate points in the record to be filed herein by said Federal Trade Commission, where the said pleadings, findings, and orders, or parts thereof, shall appear.

10. That respondent may file briefs, in consolidated form, in this proceeding in respect to any or all of said petitioners, and that said petitioners may consolidate their briefs to such extent as they may elect, and that this proceeding shall be orally presented to the court upon a single occasion.

This stipulation is entered into subject to the approval of the court.

In witness whereof, this stipulation is executed by the respective parties through their counsel.

That portion of the proceedings in the above-entitled matters designated in the stipulation entered into subject to the approval of the court.

C

Before Federal Trade Commission

Docket No. 1654

(Filed in accordance with paragraph 3 of court stipulation, supra)

In the matter of Algoma Lumber Company, a corporation, its officers and agents

*Complaint*

(Corrected in accordance with item 4 of court stipulation filed herewith)

Acting in the public interest pursuant to the provisions of an act of Congress, approved September 26, 1914, entitled "An act to

create a Federal Trade Commission, to define its powers and duties, and for other purposes", the Federal Trade Commission charges that the Algoma Lumber Company, its officers and agents, respondents named in the caption hereof, have been and are using unfair methods of competition in interstate commerce in violation of the provisions of section 5 of said act, and states its charges in that respect as follows:

Paragraph one: The respondent, Algoma Lumber Company, is a corporation incorporated under the laws of the State of California, having its principal place of business in Klamath Falls, Oregon.

Paragraph two: The respondents are engaged in the sale of logs and/or timber products and/or lumber products, all of which are hereinafter designated as "forest products", and ship their said forest products from the State of manufacture to customers located in other States in various sections of the United States, and located in some instances in various foreign countries. In causing their said forest products to be sold and transported from one State to another and from this country to foreign countries, respondents are in competition with other individuals, partnerships, and corporations producing forest products and selling and transporting the same from one State of the United States to another and to certain foreign countries.

Paragraph three: Respondents, in the course and conduct of their business as described in paragraph two hereof, for more than five years last past, have manufactured and sold, and now manufacture and sell, among other products, forest products produced from that certain species of tree native to the mountainous regions of Pacific slope, botanically designated "Pinus ponderosa" under the name and designation "white pine", with or without the addition before said name and designation of one or another of the words, "California", "Arizona", and/or "Western", and/or of the words "New Mexico", and during said period of time respondents, in advertisements inserted in trade journals and other media of national circulation, together with other forms of advertising, and/or circular letters, and/or correspondence with purchasers and prospective purchasers thereof, and/or on their respective letterheads, billheads, and invoices and orally through their respective sales forces, have designated and described such forest products as "white pine", whereas in truth and in fact, said Pinus ponderosa does not, either botanically or by common name or in the character of lumber made therefrom, belong to that group of pine species known as white pines, as set forth in paragraph four hereof.

Paragraph four: There is a certain group of pine species known both popularly and botanically as "white" pines. They are species of the genus Pinus, having certain botanical marks of distinction from other pines, and are further characterized by light, close-grained, softwood in which the early- and late-formed portions of the annual rings or layers are not sharply defined, and have thin

and nearly white sapwood. Another group of species of the genus Pinus is known both popularly and botanically as the "yellow pine" group, having certain botanical marks of distinction, and being characterized by rather hard, heavy wood, in which the early- and late-formed portions of the annual rings or layers are sharply defined.

Paragraph five: Among the species of pine belonging to the said described white pine group is that botanically known as "Pinus strobus." It is a native to the upland regions of the North Atlantic Seaboard States and of the Great Lakes States and other northern portions of the central valley of the United States. Since early colonial history, Pinus strobus has been known as a building wood, has proved its remarkable value during upwards of 250 years of general use, and has gained universal esteem under the common designation of "white pine." Pinus strobus is a genuine white pine and is the best known of the said white pine group. The approximate present annual production and sale in the United States on the part of the manufacturers of forest products made from Pinus strobus is 825,000,000 feet, b.m., and that of Pinus ponderosa 2,746,000,000 feet. Of the said annual production and sale of Pinus ponderosa, approximately an aggregate of 1,668,000,000 feet is now annually sold under the trade name and designation of "pondosa" or "pondosa pine" and the remaining portion only, or approximately 1,078,000,000 feet, is sold as "white pine" either with or without one or another of the designations mentioned in paragraph three which include the said words "white pine." To persons not skilled in the identification and distinction of various species of forest products, it is at times difficult to distinguish between forest products made from Pinus strobus, and those made from Pinus ponderosa.

Paragraph six: The wood of Pinus strobus is strongly characterized by its softness, ease of working, its ability to stay in place after being fitted, its comparative freedom from resinous substances, its durability in uses where exposed to influences of decay, and by its exceptionally high degree of uniformity of quality both locally and throughout its range, and in individual specimens of the species. In each of these respects, and especially as regards uniformity of quality, the said Pinus strobus excels Pinus ponderosa. The latter, while varying in its commercial characteristics in various portions of its range, among individual specimens within given localities, and also in many instances between heartwood and sapwood of individual specimens of the species, is botanically, by common designation, and by the average commercial qualities and characteristics of the species, a member of the aforesaid yellow-pine group. By reason of the said described comparative characteristics and excellence forest products made from the Pinus strobus have a general tendency in lumber markets to command and in general have commanded a higher average f.o.b. mill price than forest products made from Pinus ponderosa.

Paragraph seven: There is a species of pine, native to the mountainous regions of the Pacific Coast States, designated botanically as Pinus lambertiana, known universally throughout its range under the common name "sugar pine." The products made from Pinus lambertiana are likewise known and sold widely as sugar-pine products, and are in competition with products made from Pinus ponderosa. Pinus lambertiana is a genuine white pine. It is far more nearly related to the said Pinus strobus than Pinus ponderosa, both botanically and in commercial qualities and characteristics, as set forth in paragraph six hereinabove. It equals Pinus strobus in its average rating in the said described characteristics. The approximate annual production and sale of Pinus lambertiana is 282,000,000 feet board measure.

Paragraph eight: Respondents and other manufacturers of forest products made from Pinus ponderosa are in competition with manufacturers of forest products made from Pinus strobus and Pinus lambertiana. They were reluctant to use the common name of Pinus ponderosa, to wit, "western yellow pine" as a commercial or trade name for their products since they desired to avoid the market disadvantages from association and possible confusion in the mind of the public and of the trade, of forest products made from western yellow pine or Pinus ponderosa with those made from the dense, resinous, and, for the uses for which Pinus ponderosa is best adapted, the relatively inferior forest products made from Pinus palustris or the longleaf yellow pine of the Southern States, known commercially as "southern yellow pine", from which latter the commercial qualities of Pinus ponderosa on the average differ markedly, Pinus palustris being on the average harder, denser, and heavier than Pinus ponderosa. The use of the words "white pine" as the name or as part of the name given to forest products made from Pinus ponderosa was adopted and has been continued by respondents and other manufacturers thereof as a substitute for that western yellow pine, for the purpose of securing for their said products the market advantages of a name suggestive to the trade and to the public mind of the commercial species of genuine white pine and particularly of said Pinus strobus and its aforesaid high qualities and reputation, and further in order to cause the trade and buying public to minify or ignore the characteristics wherein Pinus pondersoa is inferior to Pinus strobus as in paragraph six hereinabove set forth. A confusion as more fully set out in paragraph nine herein has resulted from the said designation by respondents and other said manufacturers of Pinus ponderosa as a white pine, and, in or about the years 1924 and 1925 there was among various manufacturers of lumber an advocacy of, on the part of some, and an opposition on the part of others to, a proposal to change the trade name and designation of forest products made from Pinus ponderosa from "white pine" or from the designations named in paragraph three hereof which include the words "white pine", to some other designation and particularly to "ponderosa" pine, and the said change to ponderosa pine

was actually made for all commercial purposes by manufacturers of the major part of the forest products made from Pinus ponderosa as shown in paragraph five.

Paragraph nine: The use of the words "white pine", whether or not coupled with any one of the said words in paragraph three hereof named has the capacity and the direct tendency to result and has resulted in a wide-spread misconception of the comparative qualities, characteristics, commercial values, and even the identity of forest products made from Pinus ponderosa on the one hand and from species of genuine white pine on the other, and has actually confused the minds of many of the trade and of ultimate consumers and has misled and deceived them as to the actual and true comparative values of forest products made from the said species. The said use of the aforesaid words has the capacity and a direct tendency to produce and in many instances has produced numerous results unfair to competitors and to the public and, among other such, the results described as follows, to wit:

(a) Spurious market equality in both the trade and public estimation in certain instances has been given to forest products made from Pinus ponderosa with those made from genuine white pines for uses wherein genuine white pines excel Pinus ponderosa as herein in paragraphs six and seven set forth.

(b) There has been brought about public doubt and misapprehension as to the respective qualities of forest products made from various species of pine native to the Pacific coast and the uses which may most advantageously be made of them to the loss and detriment of the public and of competitors of respondents. The reputation and public esteem of forest products made from Pinus lambertiana have been seriously impaired as regards the qualities in which said Pinus lambertiana surpasses Pinus ponderosa as set forth in paragraphs six and seven hereinabove. Many buyers and prospective buyers, as a result of the aforesaid misnaming of Pinus ponderosa as and for white pine and as a result of their ensuing experience therewith, have come to the mistaken and erroneous belief that none of the Pacific coast species of pine possesses qualities equal to or approaching those described in paragraph six hereof as the qualities for which Pinus strobus has long been noted.

(c) Jobbers and retailers in many instances have been and still are misled into buying Pinus ponderosa in the belief that they thus secure a genuine white pine having the aforesaid qualities and characteristics thereof in the comparatively high degree described in paragraph six, and have been and are thus induced to buy forest products made from Pinus ponderosa for resale for purposes to which they are as an average comparatively ill-adapted.

(d) Such retailers as have known the distinction between forest products made from Pinus ponderosa and those made from genuine white pines, but who have desired to gain by substitution of Pinus ponderosa for genuine white-pine products in their sales to cus-

tomers, have been enabled to mislead and have been aided in misleading their customers into the belief that Pinus ponderosa was a genuine white pine with the same excellent qualities possessed by genuine white pines and in the same high degree as in paragraphs six and seven set forth, and have filled orders for genuine white pine with ponderosa pine.

(e) Such retailers as have been in ignorance of the distinction in qualities and characteristics between Pinus ponderosa and genuine white pines have been caused to sell to the public forest products made from Pinus ponderosa as and for genuine white pine to consumers desiring the qualities of lumber made from genuine white pine.

(f) Retail dealers having stocked their yards with Pinus ponderosa purchased and to be sold by them as and for genuine white pine in various instances have not desired and do not desire to stock their yards with forest products made from said genuine white pine, thus depriving manufacturers of genuine white-pine products of numerous market outlets.

(g) Numerous builders, contractors, architects, and ultimate consumers have been and are misled into the advocacy, recommendation, adoption, and use of Pinus ponderosa in the belief that it is genuine white pine and has the aforesaid high degree of said described qualities.

(h) Respondents and other manufacturers by misnaming and misbranding Pinus ponderosa as a genuine white pine have been enabled on numerous occasions and now are enabled to secure a higher price for their said forest products than they could secure therefor in competition with genuine white-pine products if a true name and designation of their said products were used; and have been enabled to fill and have actually filled orders for genuine white pine with consignments of ponderosa pine.

(i) Manufacturers of forest products made from said genuine white pine, frequently through the ignorance of the buyer or of the public as to the commercial qualities distinguishing genuine white pine from Pinus ponderosa, are unable to sell their said products to customers at a higher price than customers will pay for forest products made from Pinus ponderosa when the latter are misnamed and misdescribed as white pine.

(j) The average f.o.b. mill cost of forest products made from said genuine species of white pine exceeds the average f.o.b. mill cost of forest products made from Pinus ponderosa and the said misdescription of Pinus ponderosa as white pine has a direct tendency to cause and has at times caused manufacturers of genuine white pine products to lose sales and has at times caused them to make sales at or below actual cost of production and distribution.

(k) Manufacturers of forest products made from Pinus ponderosa who describe their products as pondosa pine as hereinabove in paragraph eight described are at a sales disadvantage as contrasted with such competitors, respondents and others, as misname and mis-

describe their products, likewise made from Pinus ponderosa, as white pine, and who wrongfully imply and at times declare that their products possess the aforesaid superior commercial qualities for various uses that are possessed by genuine white pine.

(1) The employment of Pinus ponderosa in lieu of genuine white pine by builders, contractors, architects, and the general public for uses wherein it is exposed to decay, and for which genuine white pine, by virtue of its aforesaid greater durability was and is preferred and desired in contrast with Pinus ponderosa, has conduced to and resulted in and still conduces to and results in the waste of forest products through the necessity to replace Pinus ponderosa more frequently than replacements would be or would have been necessary had white pine been used in the first instance.

Paragraph ten: The practices and methods of competition engaged in by respondents as hereinabove set forth have the capacity and a direct, substantial, and dangerous tendency to mislead and deceive the trade and public with regard to the identity and the comparative qualities and values of said above-described forest products and have actually so misled and deceived in such regard. The said practices and methods of competition of respondents are against the public interest and constitute unfair methods of competition in commerce between the States and with foreign nations in violation of section 5 of the aforesaid act of Congress known as the Federal Trade Commission Act.

Wherefore, the premises considered the Federal Trade Commission on this 23d day of May, 1929, now here issues this, its complaint against said respondents.

NOTICE

Notice is hereby given you, respondents herein, that the 5th day of July, 1929, at 10:30 o'clock in the forenoon, is hereby fixed as the time, and the offices of the Federal Trade Commission, in the city of Washington, D.C., as the place, when and where a hearing will be had on the charges set forth in this complaint, at which time and place you shall have the right, under said act, to appear and show cause why an order should not be entered by said Commission requiring you to cease and desist from the violation of the law charged in the complaint.

You are notified and required within thirty (30) days from service of the complaint, unless such time be extended by order of the Commission, to file with the Commission an answer to the complaint. After filing answer you will be given reasonable notice of the time set for hearing. The Rules of Practice adopted by the Commission with respect to answers and failure to answer (rule III) provide as follows:

(1) In case respondent shall desire to contest the proceeding such answer shall contain a short and simple statement of the facts which constitute the ground of defense. Respondent shall specifically ad-

mit or deny or explain each of the facts alleged in the complaint, unless respondent is without knowledge, in which case respondent shall so state, such statement operating as a denial. Any allegation of the complaint not specifically denied in the answer, unless respondent shall state in the answer that respondent is without knowledge, shall be deemed to be admitted to be true and may be so found by the Commission.

(2) In case respondent desires to waive hearing on the charges set forth in the complaint and not to contest the proceeding, the answer may consist of a statement that respondent refrains from contesting the proceeding or that respondent consents that the Commission may make, enter and serve upon respondent an order to cease and desist from the violations of the law alleged in the complaint or that respondent admits all the allegations of the complaint to be true. Any such answer shall be deemed to be an admission of all the allegations of the complaint and to authorize the Commission to find such allegations to be true.

(3) Failure of the respondent to file answer within the time as above provided for shall be deemed to be an admission of all allegations of the complaint and to authorize the Commission to find them to be true and to waive hearing on the charges set forth in the complaint.

In witness whereof, the Federal Trade Commission has caused this complaint to be signed by its secretary, and its official seal to be hereto affixed, at Washington, D.C., this 23d day of May, 1929.

By the Commission.

[SEAL] OTIS B. JOHNSON, *Secretary.*

D

Before Federal Trade Commission

Docket No. 1654

(Filed in accordance with ¶ 5 of court stipulation (supra))

In the matter of Algoma Lumber Company, a corporation, its officers and agents

*Answer of Algoma Lumber Company*

Filed July 15, 1929

Comes now the respondent, Algoma Lumber Company, in its own behalf and in behalf of its officers and agents, and answering the complaint herein, admits, denies, and alleges as follows:

Paragraph one: Admits the allegations of paragraph one of the complaint.

Paragraph two: Admits the allegations of paragraph two of the complaint.

Paragraph three: Admits the allegations of paragraph three of the complaint with the exception of the allegation that said species of tree botanically designated as "Pinus ponderosa" does not, either botanically or by common name or in the character of lumber made therefrom, belong to that group of pine species known as white pines; in this behalf respondent admits that said Pinus ponderosa does not botanically belong to said group of pine species known as white pines, but respondent denies that the same does not by common name or in the character of lumber made therefrom belong to said group; respondent alleges that the forest products manufactured from said Pinus ponderosa are, and for more than forty years last past have been, known by common name as white pine, and that the character of lumber made therefrom is truly designated as white pine, all as hereinafter more particularly set forth.

Paragraph four: Respondent is without knowledge sufficient to answer the allegations of paragraph four of the complaint, except that it admits that there is a certain group of pine species known both popularly and botanically as "white" pines, having certain botanical marks of distinction from other pines, and that there is another group of species of the genus Pinus known both popularly and botanically as the "yellow pine" group, having certain botanical marks of distinction.

Paragraph five: Admits the allegations of paragraph five of the complaint, except that respondent is without knowledge sufficient to answer the allegations therein contained respecting the approximate present annual production and sale in the United States of forest products made from Pinus strobus and Pinus ponderosa, respectively, and respecting the approximate aggregate of forest products made from Pinus ponderosa sold annually under the trade name and designation of "pondosa" or "pondosa pine" and the approximate amount sold as "white pine" either with or without one or another of the designations mentioned in paragraph three of the complaint.

Paragraph six: Admits the allegations of paragraph six of the complaint, except that respondent denies that said Pinus strobus excels Pinus ponderosa in any of the respects specified in the first sentence of said paragraph; respondent admits that Pinus ponderosa varies in its commercial characteristics in various portions of its range, and among individual specimens within given localities and that it is botanically a member of the said yellow pine group, but respondent denies that said Pinus ponderosa is a member of such yellow pine group either by common designation or by the average commercial qualities and/or characteristics of the species. In this behalf respondent alleges that lumber and other forest products manufactured from said species of pine designated botanically as "Pinus ponderosa" are, both in appearance and in physical and mechanical properties, in the uses to which they are adapted and in their essential characteristics, truly and fairly known and designated as "white pine"; that such lumber and other forest products so

manufactured from said Pinus ponderosa are not known and cannot be truly or correctly designated as "yellow pine" with respect to appearance or any other of the characteristics or properties last hereinabove set forth; respondent alleges that by common designation, and by the average commercial qualities and characteristics of the species, said lumber and other forest products manufactured from said Pinus ponderosa are properly known and designated as "white pine."

Paragraph seven: Admits the allegations of paragraph seven of the complaint, except that respondent denies that Pinus lambertiana is more nearly related to the said Pinus strobus than Pinus ponderosa in commercial qualities or characteristics; and except that respondent is without sufficient knowledge to answer the allegation in said paragraph contained as to the approximate annual production and sale of Pinus lambertiana.

Paragraph eight: Admits that respondent has not used, and has been reluctant to use, the term "western yellow pine" as a commercial or trade name for products manufactured from Pinus ponderosa, but denies that such reluctance is or has been due to a desire to avoid any market disadvantages either as alleged in paragraph eight of the complaint or otherwise; respondent denies that the common name of Pinus ponderosa is "western yellow pine." Respondent admits that it now desires, and at all times has desired, to avoid association and possible confusion in the mind of the public and of the trade of forest products made from Pinus ponderosa with those made from the dense resinous and, for the uses for which Pinus ponderosa is best adapted, the relatively inferior forest products made from Pinus palustris or the long leaf yellow pine of the Southern States known commercially as "southern yellow pine"; respondent admits that the commercial qualities of Pinus ponderosa on the average differs markedly from Pinus palustris and that said Pinus palustris is on the average harder, denser, and heavier than Pinus ponderosa. Respondent denies that the use of the words "white pine" as the name or as part of the name given to forest products made from Pinus ponderosa was adopted or has been continued by respondent and/or other manufacturers thereof as a substitute for that of western yellow pine for the purpose of securing for their said products the market advantages of the name suggesting to the trade and to the public mind of the commercial species of said alleged genuine white pine and/or particularly of the said pinus strobus or its alleged qualities or reputation, or in order to cause the trade or buying public to minify or ignore the characteristics or any of them wherein the complaint alleges that Pinus ponderosa is inferior to Pinus strobus. In this behalf respondent alleges that the use of the words "white pine" as a name or as part of the name of forest products made from Pinus ponderosa has been adopted and has been continued by respondent for the reason that such forest products are more nearly similar in their properties to forest products manufactured from Pinus strobus than to forest products manufactured from said

"southern yellow pine"; that the properties of the forest products manufactured from said Pinus ponderosa are markedly dissimilar to the forest products manufactured from said "southern yellow pine" and that it would be misleading to the lumber trade and to lumber consumers and unfair to manufacturers of and dealers in said "southern yellow pine" to describe forest products manufactured from Pinus ponderosa by the term "yellow pine" or by any other term including the word "yellow." Respondent denies that a confusion has resulted, either as set out in paragraph nine of the complaint or otherwise, from the said designation by respondent and/or said other manufacturers of Pinus ponderosa as a white pine, as alleged in the concluding sentence of paragraph eight of the complaint. Respondent is without information sufficient to answer the remaining allegations contained in said concluding sentence of paragraph eight.

Paragraph nine: Respondent denies that the use of the term "white pine", whether or not coupled with any one of the said words named in paragraph three of the complaint, has the capacity or the direct or any tendency to result, or that it has resulted, in a widespread or any misconception of the comparative qualities, characteristics or commercial values or the identity of forest products made from Pinus ponderosa on the one hand, and from species of alleged genuine white pine on the other, or has actually confused the minds of many or any of the trade or of ultimate consumers or has misled or deceived them or any of them as to the actual or true comparative values of forest products made from the said species. Respondent denies that the use of said words has the capacity or a direct or any tendency to produce and/or that it has in many or any instances produced numerous or any results unfair to competitors and/or to the public in the respects set forth in paragraph nine or otherwise.

Answering subdivision (a) to (l), both inclusive, of paragraph nine of the complaint, respondent admits, denies, and alleges as follows:

(a) Denies that spurious market equality either in the trade or in public estimation has in any instance been given to forest products made from Pinus ponderosa with those made from alleged genuine white pines for uses wherein such white pines are alleged to excel Pinus ponderosa either as set forth in paragraphs six or seven of the complaint or otherwise or at all.

(b) Denies that there has been brought about public doubt or misapprehension as to the respective qualities of forest products made from various species of pine native to the Pacific coast or the uses which may most advantageously be made of them either to the loss or detriment of the public or of competitors of respondent; denies that the reputation or public esteem of forest products made from Pinus lambertiana has been seriously or at all impaired as regards the qualities in which said Pinus lambertiana is alleged to surpass Pinus ponderosa either as set forth in paragraphs six

or seven of the complaint or otherwise; denies that any buyers or prospective buyers, either as a result of the alleged misnaming of said Pinus ponderosa as and for white pine, or as a result of any ensuing experience therewith, or by reason of any circumstance, have come to the mistaken or erroneous or any belief that none of the Pacific coast species of pine possess qualities equal to or approaching those described in paragraph six of the complaint as the qualities for which Pinus strobus has been noted as therein alleged.

(c) Denies that jobbers or retailers in any instance have been or still are misled into buying Pinus ponderosa in the belief that they thus secure an alleged genuine white pine having the said qualities and characteristics described in said paragraph six of the complaint, or have been or are induced to buy forest products made from Pinus ponderosa for resale for purposes to which they are comparatively or at all ill-adapted, either as an average or otherwise.

(d) Denies that such or any retailers as have known the distinction between forest products made from Pinus ponderosa and those made from said alleged genuine white pines have been able to mislead or have been aided in misleading or have misled their customers into the belief that Pinus ponderosa was such white pine, as alleged in the complaint, with the same qualities possessed by such white pines and in the same degree as in the complaint set forth. Respondent is without sufficient knowledge to answer the allegation that certain retailers, as in subdivision (d) set forth, have desired to gain by the substitution of Pinus ponderosa for alleged genuine white-pine products in their sales to customers, or the further allegation that such retailers have filled orders for such genuine white pine with ponderosa pine.

(e) Respondent is without sufficient knowledge to answer the allegations of subdivision (e).

(f) Respondent is without sufficient knowledge to answer the allegations of subdivision (f).

(g) Denies that numerous or any builders, contractors, architects, or ultimate consumers have been or are mislead into the advocacy, recommendation, adoption, or use of Pinus ponderosa, in the belief that it is such alleged genuine white pine, as alleged in subdivision (g) or otherwise or at all.

(h) Denies that respondent has at any time misnamed or misdescribed Pinus ponderosa; denies that it has on any occasion or is now enabled to secure a higher price for its said forest products, either in competition with alleged genuine white pine products or otherwise, than it could secure if a different name or designation of its said products were used, excepting, however, that inasmuch as the term "white pine," with the addition of the word "California" or some other qualifying word indicative of the State or region of production, has been established for many years, as herein elsewhere alleged, and the lumber and other forest products marketed under such term have justly acquired high repute with the trade

and with the public, the abandonment of such term would tend to cause lower prices for such lumber and other forest products, to the damage of respondent and other manufacturers of lumber and forest products from Pinus ponderosa; denies that it has been enabled to fill or has actually filled any order for alleged genuine white pine with any consignment of ponderosa pine.

(i) Respondent is without sufficient knowledge to answer the allegations of subdivision (i), excepting, however, that respondent denies that forest products made from Pinus ponderosa have been misnamed or misdescribed as white pine.

(j) Respondent is without sufficient knowledge to answer the allegations of subdivision (j) except that respondent denies that such Pinus ponderosa has been misdescribed as white pine.

(k) Denies that manufacturers of forest products made from Pinus ponderosa who describe their products as ponderosa pine are, or that any such manufacturer is, at a sales disadvantage as contrasted with such competitors, respondent or others, as name and/or describe their products made from Pinus ponderosa as white pine; respondent denies that it has at any time misnamed or misdescribed its products made from Pinus ponderosa; respondent alleges that its products made from Pinus ponderosa possess the superior commercial qualities for various uses that are possessed by alleged genuine white pine, but denies that it has wrongfully or otherwise implied or declared that its said products are in fact identical with products made from Pinus strobus.

(l) Denies that the employment of Pinus ponderosa in lieu of alleged genuine white pine by builders, contractors, architects, or the general public for uses wherein it is exposed to decay, has conduced to or resulted in, or now conduces to or results in, the waste of forest products through the necessity to replace Pinus ponderosa more frequently than replacements would be or would have been necessary had such white pine been used in the first instance either as alleged in subdivision (l) or otherwise; respondent denies that such alleged genuine white pine has greater durability than Pinus ponderosa.

Paragraph ten: Denies that any practice or method of competition in which it is engaged, as alleged in the complaint, has the capacity or a direct, substantial, or dangerous or any tendency to mislead or deceive the trade or public with regard to the identity or the comparative qualities or values of the forest products described in the complaint, or has misled or deceived in such or any regard; denies that it has engaged in any practice or method of competition, as alleged in the complaint, or otherwise, which is against the public interest or which constitutes an unfair method of competition in commerce between the States and/or with foreign nations, in violation of section 5 or any other provision of the act of Congress known as the Federal Trade Commission Act, or otherwise or at all.

Paragraph eleven: Further answering the complaint, respondent alleges that lumber and other forest products manufactured from Pinus ponderosa have the appearance and essential physical and mechanical properties of white pine; that such lumber and other forest products manufactured from Pinus ponderosa do not have the appearance or the physical or mechanical properties of yellow pine; that lumber and other forest products manufactured from Pinus ponderosa are more correctly designated by the term "white pine" than by the term "yellow pine"; that for more than forty years last past the term "white pine", either with or without the addition of the word "California" or the word "Western" or some other qualifying word indicative of the State or region of production, has been employed to designate the lumber and other forest products manufactured from Pinus ponderosa; that said term was adopted, has continuously been used, and is still used in order clearly to distinguish said lumber and other forest products manufactured from Pinus ponderosa from lumber and other forest products manufactured from yellow pine, and particularly from southern yellow pine, all to the end that neither the trade nor the public might be confused or misled as to the essential physical and mechanical properties of said lumber and other forest products and that manufacturers of and dealers in southern yellow pine might not be subjected to unfair competition; that if the respondent and other manufacturers of lumber from Pinus ponderosa were to describe their product as "California yellow pine", "Oregon yellow pine", "Western yellow pine", or by any other term including the word "yellow", the trade and the public would in many instances be confused and misled with respect to the character of such product and particularly with respect to the uses to which it is best adapted, and manufacturers of and dealers in "southern yellow pine" would be subjected thereby to unfair competition; that the term "white pine", with or without the addition of the word "California" or some other word indicative of the State or region of production, has been used for more than forty years as hereinbefore alleged, has become well known to the trade, is truly descriptive of lumber manufactured from the species of pine tree known as Pinus ponderosa, and is indicative of the uses to which it is best adapted; that the abandonment of such term would occasion confusion and damage to the trade and to the public; that the continued employment of such term is more appropriate and less calculated to cause confusion than the use of any other term, and that the same does not and will not result in unfair competition.

Wherefore, respondent prays that said complaint be dismissed.

ALGOMA LUMBER COMPANY,

Before Federal Trade Commission

Docket No. 1621

(Filed in accordance with ¶5 of Court stipulation, supra)

In the matter of Clover Valley Lumber Company, a corporation, its officers and agents

*Answer*

Filed June 25, 1929

Comes now Clover Valley Lumber Company, the respondent above named, by its attorneys, Price & Hawkins, and answering the complaint in the above-entitled matter, admits, denies, and alleges as follows:

I

The respondent, answering paragraph one of said complaint, admits the allegations contained in said paragraph.

II

The respondent, answering paragraph two of said complaint, admits the allegations contained in said paragraph, beginning with line 1 thereof and ending with the word "countries" in line 6 of said paragraph, and respondent admits that it is in competition with the manufacturers of lumber on the Pacific coast who are selling the same character of lumber as that sold by respondent, but respondent avers that it is without knowledge as to any competition by it with any other manufacturers and/or dealers in lumber.

III

The respondent, answering paragraph three of said complaint, admits that it is engaged in the manufacture and sale of lumber from a species of pine known as Pinus ponderosa as well as from other species of pines, but respondent denies it has advertised and/or sold the products of its manufacture from Pinus ponderosa under the designation "white pine" alone, and that in all cases so far as respondent is aware it has advertised and sold its "forest products" manufactured from Pinus ponderosa with the prefix "California" added to the designation "white pine", which designation, California white pine, has been a well known commercial term applied to the lumber from the Pinus ponderosa and so used by Pacific coast lumbermen for more than twenty-five years last past, and respondent further avers that it is without knowledge that Pinus ponderosa does not botanically or by common name or in the character of lumber made therefrom belong to that group of pine species known as white pines.

The respondent, answering paragraph four of said complaint, avers that it is without knowledge as to any and all of the allegations set forth in said paragraph.

V

The respondent, answering paragraph five of said complaint, avers that it is without knowledge as to any and all of the allegations set forth in said paragraph.

VI

The respondent, answering paragraph six of said complaint, avers that if is without knowledge as to any and all of the allegations set forth in said paragraph.

VII

The respondent, answering paragraph seven of said complaint, avers that it is without knowledge as to any and all of the allegations set forth in said paragraph.

VIII

The respondent, answering paragraph eight of said complaint, avers that it is without knowledge as to any and all of the allegations set forth in said paragraph.

IX

The respondent, answering paragraph nine of said complaint, avers that it is without knowledge as to any and all of the allegations set forth therein, and more specifically answering the subdivisions of said paragraph nine, respondent avers that it is without knowledge as to all the allegations contained in subdivision (a) thereof; that it is without knowledge as to all the allegations contained in subdivision (b) thereof; that it is without knowledge as to all the allegations contained in subdivision (c) thereof; that it is without knowledge as to all the allegations contained in subdivision (d) thereof; that it is without knowledge as to all the allegations contained in subdivision (e) thereof; that it is without knowledge as to all the allegations contained in subdivision (f) thereof; that it is without knowledge as to all the allegations contained in subdivision (g) thereof; that it is without knowledge as to all the allegations contained in subdivision (h) thereof; that it is without knowledge as to all the allegations contained in subdivision (i) thereof; that it is without knowledge as to all the allegations contained in subdivision (j) thereof; that it is without knowledge as to all the allegations contained in subdivision (k) thereof; and that it is without knowledge as to all the allegations contained in subdivision (l) thereof.

## X

The respondent, answering paragraph ten of said complaint, denies each and all the allegations therein contained.

## XI

The respondent, further answering the complaint in said matter, alleges that it has been engaged for more than ten years last past in logging and manufacturing into lumber of pines and other conifers growing in the State of California, and that it has engaged in no lumbering operations outside of said State; that in its business it has used the term "California white pine" and applied the same to the lumber produced from species of pines growing in California other than sugar pines; that said term "California white pine" so used by respondent has been in continuous and general use among lumbermen and lumber dealers of the Pacific coast for more than twenty-five years last past to distinguish the lumber manufactured from the species of pine known as ponderosa and other species from the species commonly known as sugar pine; that the term so used is not and has not been intended as a botanical expression but as a commercial distinction well known to the lumber trade, and that the use thereof has not been intended to be and is not misleading.

In witness whereof the respondent has caused this answer to be signed by its duly authorized attorneys this 21st day of June 1929.

PRICE & HAWKINS.

F

Before Federal Trade Commission

(Filed in accordance with paragraph 5 of court stipulation, supra)

*Preamble and paragraph one of answer filed in docket 1626 in the matter of California Fruit Exchange*

Comes now the respondent, California Fruit Exchange, in its own behalf and in behalf of its officers and agents, and appearing specially herein, and not otherwise, files this its answer to this complaint for the information of the Federal Trade Commission only, but without admitting the jurisdiction or any jurisdiction of said Federal Trade Commission over it or over its operations, officers, or agents, or any of them. With this express qualification respondent answers the complaint herein and admits, denies, and alleges as follows:

Paragraph one: Admits that it is a corporation incorporated under the laws of California, but alleges that it was not organized to carry on business for profit either for itself or for its members; denies, therefore, that the Federal Trade Commission possesses jurisdiction over it or over its operations, officers, or agents, or any of them, either under section five (5) or any other section of the act of Congress

Federal Trade Commission Act, or otherwise; denies that its principal place of business is in Graeagle, Plumas County, California, but alleges that its principal place of business is in the California Fruit Building, Sacramento, California.

*Order appointing examiner and fixing time and place for taking testimony*

Sept. 17, 1929

This matter being at issue and ready for the taking of testimony,

It is ordered that John W. Addison, an examiner of this Commission, be, and he hereby is, designated and appointed to take testimony and receive evidence in this proceeding and to perform all other duties authorized by law.

It is further ordered that the taking of testimony in this proceeding being on Friday, October 4, 1929, at 10:00 o'clock in the forenoon of that day, at room no. 331, Young's Hotel, Boston, Massachusetts.

Upon completion of testimony for the Federal Trade Commission, the examiner is directed to proceed immediately to take testimony and evidence on behalf of the respondents. The examiner will then close the case and make his report.

By the Commission.

*Substitute order appointing examiner and fixing time and place for taking testimony*

Jan. 3, 1930

Whereas William W. Sheppard, an examiner of this Commission, was heretofore appointed to take testimony and receive evidence in this proceeding, and whereas the said William W. Sheppard, by reason of other duties to perform, will be unable to continue the taking of testimony herein on the Pacific coast at this time,

It is ordered that Ellis DeBruler, an examiner of this Commission, be and he is hereby appointed to take testimony and receive evidence in this proceeding and to perform all other duties authorized by law, at all hearings scheduled to be held, or hereafter scheduled to be held, on the Pacific coast, in the place and stead of the said William W. Sheppard; Mr. Sheppard to resume charge of the case when, and if, hearings are to be held in a locality or localities other than the region of the Pacific coast, and to prepare the trial examiner's report upon the facts.

It is further ordered that the taking of testimony before Mr. DeBruler begin on Monday, January 20, 1930, at 10:00 o'clock in the forenoon of that day, at room no. 401, U.S. Post Office Building, Spokane, Washington.

By the Commission.

Dockets Nos. 1620, 1621, 1623–1633, 1635–1652, 1654–1658, 1662–1665

In the Matter of White Pine Cases

*Stipulation as to consolidation*

Whereas in order to obviate the necessity for a multiplicity of trials, these proceedings, by mutual consent, have been tried simultaneously and as a consolidated proceedings, and it is now desired that the understanding thus acted upon be reduced to a written stipulation and that an understanding respecting the applicability of certain general testimony to these specific proceedings be reduced to writing;

Now therefore, subject to the approval of the Federal Trade Commission, it is hereby stipulated by counsel for the Commission and by counsel for respondents in such of the above numbered proceedings as are named below in the subscription hereof, as follows, to wit:

That these proceedings may be consolidated for the purposes of a unified report by the trial examiner, for the submission of exceptions and briefs, and for final argument before the Commission on a single occasion;

That nothing herein contained shall be taken to deprive any respondent of the right of presenting an individual petition for review of any order herein to any Circuit Court of Appeals of the United States having jurisdiction in the premises;

That the evidence received in the several hearings in these proceedings relating to the subjects listed below may be deemed to have been received for and/or against each of the respondents in the above numbered proceedings, to wit:

(a) The botanical and commercial nomenclature of the several varieties of conifers of interest herein, and the factors to which consideration is given by botanists in the determination of botanical nomenclature or classification, and the considerations affecting commercial nomenclature or classification;

(b) The appearance, quality, characteristics, repute, and utility of lumber and other forest products manufactured from both the so-called "white" and the "yellow" groups of pine species, and the appearance, quality, characteristics, repute, and utility of lumber and other forest products manufactured from the several species of pines of interest herein and the distinction between said groups and species, including their botanical, common, and commercial names, commercial practices respecting such lumber and other forest products, their mechanical and physical characteristics and the uses to which they are put and to which they are adapted;

(c) The origin, purpose, extent, duration, tendency, and results of the use, in the lumber trade, of various terms including the word "white" for forest products made from that species of pine known as Pinus ponderosa (respondents, however, not being precluded from denying that there is competent evidence of record respecting any of such matters or from relying upon their objections to any such evidence), and the circumstances giving rise to the said trade terms;

(d) The extent of the official recognition of said trade term for Pinus ponderosa forest products which include the term "white", together with the occasion for partial discontinuance of certain said trade terms and the extent of such discontinuance, counsel for respondents, however, not thereby admitting that evidence relating to the occasion for such partial discontinuance and the extent thereof is material or relevant or that it may be used against respondents; and

(e) The conditions of competition in the manufacture and sale of forest products manufactured from pine varieties of interest herein;

provided, however, that this stipulation shall not constitute a waiver of any objection which was made in behalf of any party respecting the admissability or pertinence of any evidence of record herein; and provided further that nothing herein shall be taken to render appli-

cable the doctrine of admissions as said doctrine is susceptible of being invoked against joint conspirators, no conspiracy among these several respondents being charged or proved herein.

Dated December 19, 1930.

K

Before Federal Trade Commission

(Filed in accordance with ¶ 6 of court stipulation (supra))

Docket No. 1654

In the matter of Algoma Lumber Company, a corporation, respondent

*Report, findings as to the facts, and conclusion*

June 8, 1931

Acting in the public interest, pursuant to the provisions of an act of Congress approved September 26, 1914 (38 Stat. 717), the Federal Trade Commission on May 23, 1929, issued and served a complaint upon the respondent above named, charging it with the use of unfair methods of competition in interstate commerce in violation of the provisions of section 5 of said act.

The complaint herein is one of a group of fifty complaints (dockets 1620 to 1669, both inclusive) issued by the Commission against corporations, partnerships, and individuals, charging the use of one or more trade terms inclusive of the phrase "white pine" to designate lumber, logs, and other forest products manufactured and sold in interstate commerce from the pine species hereinafter described, known as "Pinus ponderosa."

Respondent appeared and filed an answer. Thereafter this group of fifty cases by mutual consent, in the interest of economy and for the avoidance of a multiplicity of hearings, was tried as a consolidated proceeding. Hearings were had and evidence was introduced,

both in support of the complaints and in defense, before an examiner of the Federal Trade Commission, duly appointed, beginning October 4, 1929, at Boston, continuing at New York; Detroit; Indianapolis; Chicago; Madison, Wisconsin; Spokane; Portland, Oregon; San Francisco; Albuquerque, New Mexico; and Flagstaff, Arizona; and closing at Chicago on February 20, 1930. All of the evidence was recorded, duly certified, and transmitted to the Commission.

Thereafter this proceeding came on for final hearing, and the Commission having duly considered the pleadings and all the evidence taken herein and the record herein and being fully advised in the premises, makes this its report, stating its findings as to the facts and its conclusions drawn therefrom.

CONTENTS

Findings as to the facts.
I. Respondent uses nomenclature which includes the phrase "white pine" for its Pinus ponderosa products in interstate trade.
II. Grouping of pine species.
III. Characteristics of the white-pine group.
IV. Characteristics of the yellow-pine group.
V. Northern white pine.
Present production.
History.
Qualities and reputation.
Commercial future of the species.
VI. Meaning attached to "white pine" by the public.
VII. Sugar pine.
VIII. Idaho white pine.
IX. Pinus ponderosa.
Trade terms for ponderosa.
Origin and extent of terms which include "white pine" for ponderosa.
More than half of ponderosa output is no longer sold under "white pine" trade terms.
X. Comparison between true white pine and ponderosa lumber.
A. Variability of qualities.
B. Comparison of the so-called mechanical properties.
C. Comparative proportions of heartwood and sapwood.
Importance of the proportion of heartwood for remanufacturing purposes.
D. Comparative durability under weather exposure.
XI. Utilities of ponderosa lumber.
XII. Extent of confusion through the use of trade terms including "white pine" for ponderosa.
A. Market conditions.
B. Extent of the resulting confusion to wholesalers and remanufacturers.
C. Extent of resulting confusion to retail dealers.
D. The use of the phrase "white pine" by distributors of ponderosa as an aid to dealers to mislead consumers.
E. Extent of the resulting confusion to architects.
F. Extent of the resulting confusion to the general public.
XIII. Effect of the use of terms which include "white pine" for ponderosa products upon competition.
A. Upon true white pine competitors.
B. Upon "Pondosa pine" competitors.
XIV. The relation of the use of trade terms which include the phrase "white pine" for ponderosa to public good will.
Summary and conclusions of fact.
Conclusion of law.

## *Findings as to the facts*

Paragraph one: The respondent is incorporated under the laws of the State of California and has its principal place of business at Klamath Falls, Oregon.

### I. RESPONDENT USES NOMENCLATURE WHICH INCLUDES THE PHRASE "WHITE PINE" FOR ITS PINUS PONDEROSA PRODUCTS IN INTERSTATE TRADE

Paragraph two: The respondent is engaged in the manufacture and sale of lumber and timber products and ships said products from the State of manufacture to customers located in other States in various sections of the United States and, in some instances, located in various foreign countries. In causing its said products to be sold and transported from one State to another and from this country to foreign countries, respondent is in competition with other corporations, partnerships, and individuals producing forest products and selling and transporting the same from one State of the United States to another and to certain foreign countries.

Paragraph three: Respondent in the course and conduct of its business, as described in paragraph two hereof, for more than five years last past, has manufactured and sold, and now manufactures and sells, among other products, forest products produced from that certain species of tree botanically designated "Pinus ponderosa" under the name of "California white pine"; and during said period of time respondent, in advertisements inserted in trade journals and other media of national circulation, together with other forms of advertising, circular letters, correspondence with purchasers and prospective purchasers thereof and on letterheads, billheads, and invoices and orally through its sales forces, has designated and described such forest products made from Pinus ponderosa as "California white pine."

### II. GROUPING OF PINE SPECIES

Paragraph four: Pine trees, the genus pinus, have for a long period been divided by botanists, wood technologists, foresters, and the public generally into two groups, namely the "white pine" and "yellow pine" groups.

Paragraph five: In the classification of conifers including the pines, in so far as it is of purely botanical character, the number and grouping of needles, the nature of the cones and the character of the bark are the primary considerations. The qualities and uses of the lumber produced by the trees classified are not considered for such botanical classification and the botanical classification of species of trees into a given genus does not always bring together a group of species producing lumber of closely related qualities and uses. After the above mentioned botanical and practical grouping of the pines

had been made, a microscopic study and classification of the cellular structure of the pines revealed that pine species belong to two distinct groups as regards their cell structure and that the division on microscopic bases is identical with the botanical and practical classification into the "white pine" and the "yellow pine" groups.

Paragraph six: The microscopic distinction in cell structure between the members of the white pine group on the one hand and the members of the yellow pine group on the other, bears no known causal relation to the practical qualities of the lumber produced by the various pine species. The utilities of lumber have been learned by experience.

Paragraph seven: Experts are able to determine microscopically whether a fragment of wood came from one of the white pines or from a yellow pine. They are not able thus to ascertain whether a given piece of white pine lumber was taken from a tree of one or another species of white pine and conversely they cannot be sure of the species of any given piece of yellow pine. In large quantities experts and experienced lumbermen would in most instances be able to state with fair degree of certainty by what species of pine the lumber was produced. In the forest there is generally no uncertainty in distinguishing the species by differences in the bark and in the cones and by the presence of five needles in each bundle in white pines—the yellow pines having a less number.

### III. CHARACTERISTICS OF THE WHITE PINE GROUP

Paragraph eight: The white pine group includes, by common consent, the following commercial species of interest herein:

(a) The Northern white pine, known also by various other trade names, all of which include the phrase "white pine", botanically known as Pinus strobus:

(b) Sugar pine, botanically known as Pinus lambertiana; and

(c) Idaho white pine, known botanically as Pinus monticola.

These are the leading commercial species. The word "white" as part of the common name given to the members of the white pine group is not in origin descriptive of the outward appearance of these trees in the forest but of the lumber made therefrom.

Paragraph nine: The white pine group has (a) a high degree of uniformity of lumber qualities as a group and is (b) preeminent for its high average of the following lumber characteristics:

Durability under exposure to weather and to other conditions of moisture, a great proportion of heartwood content as contrasted with sapwood content, lightness of color, lightness in weight, softness and evenness of texture, closeness and fineness of grain, freedom from resinous content, from shrinkage, "checking" (i.e., the forming of minute fissures in the grain of the wood), and warping. Consequently the white pines have great ability to stay in place, exceptional ease of working, and exceptional ability to hold nails without splitting when driven close to the end or edge of any given piece of lumber, and also to receive and retain paint.

### IV. CHARACTERISTICS OF THE YELLOW-PINE GROUP

Paragraph ten: The species of the yellow-pine group are in general and as an average far harder, heavier, stronger, more subject to shrinkage and warping, darker in color, more resinous, denser in fibre, and coarser and more difficult to work than any of the members of the white-pine group. The typical species of the yellow-pine group are valuable for purposes where structural strength of timber is required whereas the species of the white-pine group are not adapted to heavy construction.

Paragraph eleven: In contrast with the white pines the yellow pines vary widely. The most typical and commercially important of the latter is the long leaf yellow pine (Pinus palustris) of the Southern States. From this species, the hardest of the group, the yellow pines vary to Pinus ponderosa which produces the softest lumber of any of the group. The characteristics of the Pinus ponderosa lumber are set forth in section X below. The typical yellow pines of the South do not produce lumber in "shop" grades (see parag. 49) to any marked extent.

### V. NORTHERN WHITE PINE

Paragraph twelve: The white pine known over far the longest period and most widely is Pinus strobus. It is native to the Northeastern States and westward to the Great Lakes region, including Minnesota, together with great sections of the eastern Canadian Provinces. Its range extends also along the Appalachian highlands into the Southeastern States.

Paragraph thirteen: This lumber is often referred to merely as "White pine." Of its other names, the commonest is "Northern white pine." It is also given various designations, including "New England white pine", "Maine white pine", "Michigan white pine", "Michigan cork pine", "Wisconsin white pine", "Minnesota white pine", "Canadian white pine", "New Brunswick white pine", among others.

#### Present production

Paragraph fourteen: American production of white pine was formerly immense. As the virgin stands of the species became depleted in eastern sections, supplies from further north and west came into use and additional virgin stands were from time to time depleted.

Paragraph fifteen: While some virgin northern white pine remains in New York State and elsewhere, there remain only small areas in the United States outside of Minnesota. In the latter State the virgin stands are still extensive and of high quality.

#### History

Paragraph sixteen: White-pine lumber was the almost universal building material of the settlers of New England from the earliest days. From this section, moreover, it was marketed throughout the

country as settlement developed and became and remained for generations the leading softwood of the country. Many ancient buildings constructed from this lumber, 1636 to 1780, are still in use and are in a high state of preservation. Among these are certain famous buildings, including Christ Church in Cambridge, the Longfellow house, the James Russell Lowell house, the Fairbanks house, among others. In numerous cases the original shingles or clapboarding are still exposed to the New England climate. In certain instances the white-pine lumber was not protected by paint and is still in a good state of preservation.

### Qualities and reputation

Paragraph seventeen: White-pine lumber from adult growth possesses precisely the qualities enumerated, as characteristics of the white-pine group, in paragraph nine hereof. It has long held and still holds an exalted reputation among the consuming public for the said enumerated qualities and in general esteem is the highest type of lumber as respects the excellences desired in softwood materials. These views of white pine are widely shared by the consumers, builders, dealers, architects, millwork manufacturers, and professional foresters and technologists. This species is coming more and more to be a specialty wood, largely devoted to special purposes, as it becomes scarcer and higher in price. It is in great demand.

### Commercial future of the species

Paragraph eighteen: The importance of white pine is enhanced by reforestation efforts by the National Government, State governments, and by private persons. Great areas have been planted in many parts of the country.

## VI. MEANING ATTACHED TO "WHITE PINE" BY THE PUBLIC

Paragraph nineteen: As a result primarily of the aforesaid high qualities and reputation, the long continued and the wide-spread use of white-pine lumber under numerous trade names, above mentioned, which include the phrase "white pine", the public long ago came to associate and still associates with the phrase "white pine" the said qualities above in paragraph nine described.

## VII. SUGAR PINE

Paragraph twenty: Sugar pine (Pinus lambertiana), the second species of the commercial white pines (supra parag. 8), is native to upland regions of California, southern Oregon, and small parts of Nevada.

Paragraph twenty: Sugar pine (Pinus lambertiana), the second been sold as "sugar pine." Its producers advertise it, and other-

wise promote its sale, as a genuine white pine, with the qualities of true white pines. It has been in the market of the country widely for about 30 years and has an annual production of about 280,000,000 feet.

Paragraph twenty-two: Sugar-pine lumber is preponderantly a heartwood and has in high degree the qualities typical of the true white pines outlined in paragraph nine hereof. This species is closely akin as a tree and as lumber to white pine.

Paragraph twenty-three: Sugar pine has a high reputation for durability, particularly when exposed to the weather or to other processes of wetting and drying and in actual use has endured exposure for long periods. Original lumber made from sugar pine is still in place where exposed to the weather and is in good condition after many years use in numerous instances. This is true occasionally even where the wood has been left unpainted. This species is highly valued for exterior uses. Sugar pine is the most largely used and most highly valued of any species for industrial patterns on account of its exceptionally high degree of softness, uniformity of texture, the large dimensions in which it is obtainable, its freedom from warping, checking, and shrinkage and its consequent exceptional ability to stay in form. For similar reasons it is highly valued for interior woodwork of pianos and organs. There is a tendency for sugar pine to become a specialty wood.

### VIII. IDAHO WHITE PINE

Paragraph twenty-four: Idaho white pine (Pinus monticola), the third species of commercial white pines, is indigenous to the mountainous sections of northern Idaho, Washington, and Oregon, western Montana, and portions of British Columbia. Northern white pine and Idaho white pine resemble one another closely.

Paragraph twenty-five: Lumber cut from this species is characterized by the qualities of the true white pines described in paragraph nine hereof. Idaho white pine has come into general use only within about 20 years; it has shown excellent durability under weather exposure. It has an excellent reputation for durability, and is recognized as a true white pine.

### IX. PINUS PONDEROSA

Paragraph twenty-six: Having described the commercial species of true white pine, we turn now to Pinus ponderosa, the lumber designated by respondent and numerous other producers by names which include the phrase "white pine." The term ponderosa is not used in the trade but is employed herein for convenience. Ponderosa is fully recognized as belonging, both by botanical classification and its cellular character to the yellow-pine group.

Paragraph twenty-seven: This species has a range extending over a wide area from British Columbia to the Northern States of Mex-

ico and from the Pacific Coast States to the mountainous sections of Montana, Colorado, and New Mexico. Ponderosa averages a larger growth than northern white pine or Idaho white pine but is smaller than the sugar pine. This tree is readily distinguishable from true white pines by its bark, cones, and the number of its needles to each sheath. It is given the designation "Western yellow pine" by the United States Forest Service. It is generally known by the residents of its home regions and by loggers merely as "yellow pine."

Paragraph twenty-eight: The annual production of Pinus ponderosa is 2,800,000,000 feet, b.m., while that of true white pine is 1,600,000,000 feet.

## Trade terms for ponderosa

Paragraph twenty-nine: The lumber from this species has been given the names in controversy in the above described group of cases (see page 2) by respondent and various other producers, to wit, California white pine, New Mexico white pine, and Arizona white pine. Ponderosa lumber, by many of the producers in the so-called "inland empire" (i.e. eastern Washington and Oregon, Idaho, and western Montana), was formerly given the name "western white pine", which however was abandoned by these producers (see infra, parag. 33) and the term "pondosa pine" adopted for their ponderosa products. The term, western white pine, is now used only by a few producers in Arizona and New Mexico and as an alternate term only. The ponderosa producers using the terms in controversy, in contrast with the retailers, have almost always refrained from advertising, invoicing, or selling this lumber as "white pine" without prefixing one or another of the said geographical terms. Occasionally, however, the term "white pine" has been used alone by the producers. Nor have these producers supported their designation of ponderosa products by terms which include the phrase "white pine" by express declarations to their customers that said products are true white pine.

## Origin and extent of terms, which include "white pine", for ponderosa

Paragraph thirty: Ponderosa lumber came to be given terms which include the phrase "white pine" for local markets in California, New Mexico, and Arizona about 1880. By 1886 it was being generally marketed under terms including "white pine" in California, Nevada, and Utah points with occasional shipments further east. By about 1900 it was coming into middle western territories and about 1915 ponderosa completed its national distribution by entering New England in a limited way. (But see parag. 74, infra.)

Paragraph thirty-one: But as ponderosa lumber gradually spread eastward it came into competition more and more with true white

pine in markets long occupied by true white pine. Accordingly ponderosa producers came to value the use of trade terms which include "white pine" for ponderosa products, and they now desire to continue such use, since these trade terms classify and associate ponderosa in the market with the true white pines and afford producers of ponderosa a substantial monetary sales advantage.

Paragraph thirty-two: Terms for ponderosa which include the phrase "white pine" are now in use by almost every producer from and including the Klamath section of southern Oregon, California, Nevada, Arizona, and New Mexico. In the last two named States, however, these terms were partially dropped before these proceedings began.

More than half of ponderosa output is no longer sold under "white pine" trade terms

Paragraph thirty-three: The ponderosa of the "inland empire" did not enter midwestern and eastern markets as early as the more southerly supplies. When it did it was under various terms, of which western white pine was most employed (see supra, parag. 29). In 1924 the majority of "inland empire" producers of ponderosa adopted the name "pondosa pine" and abandoned all other terms for this lumber. The same term is used by a very few California producers whose chief product is sugar pine. Pondosa pine is the term employed for ponderosa by the representatives of the producers of slightly more than half of the ponderosa marketed. Certain Arizona and New Mexico producers use it as an alternative term. Pondosa pine is used for the same purposes as before the change of name but whether in the same proportions the record does not reveal. It is used in general for the same purposes as such ponderosa as is marketed under terms which include the phrase "white pine" but not in the same proportions.

### X. COMPARISON BETWEEN TRUE WHITE PINE AND PONDEROSA LUMBER

Paragraph thirty-four: The importance to the buyer of the confusion, hereinafter found, is due in large measure to certain differences between the lumber of the genuine white pines and that made from Pinus ponderosa. Report on those distinctions next ensues:

#### A. Variability of qualities

Paragraph thirty-five: The ponderosa species grows readily under an unusual variety of conditions of soil, drainage, temperature, latitude, altitude, and of high precipitation or semiaridity. The true white pines are far more restricted and more exacting in their requirements in the foregoing respects. They do not thrive under conditions so widely varying.

Paragraph thirty-six: Correspondingly ponderosa has a high degree of variability in characteristics as lumber. Ponderosa products from different parts of California vary widely, some sections producing light colored wood of soft texture, while in other districts the product is far harder, darker, heavier, and denser. The ponderosa of the "inland empire" is a smaller tree as an average and produces lumber differing in some respects, including the average character of its knots. "Inland empire" ponderosa also presents varied lumber characteristics. The higher elevations of Arizona and New Mexico produce soft, pale types of ponderosa, varying in color and texture from California types. These variations in ponderosa lumber are far greater than the variations in the species of true white pine.

Paragraph thirty-seven: There are also greater variations in given individual localities in the same stand of ponderosa than in the corresponding stands of the genuine white pines.

Paragraph thirty-eight: Moreover, in the same tree and in the same piece of lumber there are greater average variations in the softness, ease of working, appearance, and color of ponderosa than in the case of true white pines. These latter variations are of two kinds: There is a greater variation in general between the spring and summer portions of the annual rings of ponderosa than in the white pines. The texture of the white pines is more uniformly smooth and relatively unbroken by differences in characteristics between the two portions of each annual ring, while in the case of the average ponderosa there is a greater hardness of the summer growth of the tree as contrasted with the spring growth.

Paragraph thirty-nine: Further and more notably there is a greater difference in ponderosa than in the true white pines between the color, texture, density, weight, and resinous content of the heartwood and of the sapwood. As an average the heartwood of ponderosa is notably darker, heavier, and more resinous than either the sapwood of the same tree or the heartwood of genuine white pines.

Paragraph forty: True white-pine lumber is far more durable than ponderosa lumber, especially when exposed to weather conditions. The ponderosa pine has on an average a far greater amount of sapwood than trees generally used for lumber. It has a far greater percentage of sapwood than the true white pines. The sapwood of the ponderosa is less durable than any other part of the tree—especially when exposed to weather conditions. It is the sapwood of the ponderosa that most closely resembles the heartwood of the true white pines in appearance and softness. It is the sapwood of the ponderosa that is usually sold for uses and purposes for which the heartwood of the true white pines is celebrated. The close resemblance between the heartwood of the true white pines and the sapwood of the ponderosa above noted is one of the greatest causes of the confusion and deception in the marketing of the two species.

Paragraph forty-one: Accordingly, an order for ponderosa lumber may be correctly filled by material having a considerably greater diversity of characteristics than an order for true white pine. Furthermore, if orders for "white pine" (see parag. 62) are interpreted by the dealer to permit the delivery not only of true white pine but also of ponderosa purchased by him under names which include the phrase "white pine" (see parags. 65–69), there is far more risk of the buyer receiving lumber either of characteristics differing from those desired or of characteristics widely varying within the consignment than in the case of an order for "white pine" when interpreted so as to require true white pine exclusively.

B. Comparison of the so-called mechanical properties

Paragraph forty-two: The findings as to "mechanical properties" made under above heading exclude the comparative variability of the lumber produced by the species in question, the respective proportions of their heartwood and sapwood content and the relative durability of the species compared. In mechanical properties, so restricted in meaning, ponderosa is found as an average to compare with the true white pine as follows:

Paragraph forty-three: The genuine white pines distinctly excel ponderosa in freedom from shrinkage and "checking" (i. e., the formation of minute fissures). Checking is a partial cause of the warping and twisting of lumber and conduces to decay. It also promotes a more frequent failure of ponderosa lumber to "stay in place."

Paragraph forty-four: Genuine white pines as an average excel ponderosa in softness of texture, freedom from resinous content, in paleness of color and lightness of weight, ease of working and ability to hold nails close to the edge or end of the lumber. The white pines also as an average excel ponderosa as regards their ability to hold paint.

C. Comparative proportions of heartwood and sapwood

Paragraph forty-five: Growing timber is divided into the heartwood and the sapwood portions, the heartwood of trees in general including the four pine species hereinabove described, constituting that portion of the product which possesses the greater durability, where exposed to weather conditions or in other ways to moisture.

Paragraph forty-six: The proportion of heartwood has an important bearing here. The sapwood of none of the varieties here in question has a long life where exposed to conditions inducing decay. (But see parag. 57.)

Paragraph forty-seven: Ponderosa has a far less proportion of heartwood than each of the true white pines.

Importance of the proportion of heartwood for remanufacturing purposes

Paragraph forty-eight: The difference between the proportions of the heartwood to the sapwood content in ponderosa and in the true white pines is important in the remanufacture of the lumber into mill-work products and in the utility of the products.

Paragraph forty-nine: In sawing the tree into lumber the preliminary process is "slabbing." Thereby a far greater proportion of the sapwood content of the average true white-pine log is removed than of the sapwood content of the average ponderosa log. The lumber thereafter first taken constitutes in high proportion what is sold as the "select" grades of lumber both in the white pines and in ponderosa. These grades consist to a substantially larger extent of heartwood in true white pines than in ponderosa. Proceeding further into the log more knotty portions are encountered. These are used as the "shop grades" for remanufacturing into both inside and outside finish. In true white pine these shop grades consist of heartwood to a much larger extent than is the case in ponderosa shop lumber.

Paragraph fifty: For this reason manufacturers of outside finish from true white pine can and some of them actually do so mill the lumber as to turn the sapwood portions toward the inside and to present a complete heartwood surface to the weather. This it is not possible to do with ponderosa shop lumber since the sapwood content is too great.

Paragraph fifty-one: Still further in the inter or the great number of knots unfit the lumber for shop use and it is used as common lumber. In the "common" grades ponderosa and true white pine are some times sold together as "pine common."

Paragraph fifty-two: The heartwood content constitutes the typical lumber of true white pine. But in ponderosa the heartwood content is much smaller in percentage, as an average, and is harder, heavier, darker, denser and more resinous than the sapwood of ponderosa or either the heartwood or sapwood of true white pine. Accordingly ponderosa heartwood is not as an average highly adapted in amount, appearance, and texture to compete with true white-pine lumber.

D. Comparative durability under weather exposure

Paragraph fifty-three: Climatic conditions of moisture, precipitation, and humidity have a direct effect upon the durability of exposed lumber. Other things being equal the greater the exposure to moisture, the greater tendency of any given species to decay.

Paragraph fifty-four: The reputation of ponderosa for durability, and its actual durability, in uses where exposed to the elements is far

below that of the true white pines in general. Ponderosa is not sought by buyers for its durability for exterior uses. It is not recommended for such purposes by architects. While the United States Forest Service has conducted no investigations of the comparative durability of lumber which have resulted in dependable data, that bureau, in common with experts generally, deems ponderosa to have notably lower durability under weather exposure than true white pine. This is also asserted by practical lumbermen generally.

Paragraph fifty-five: Said low comparative standing of ponderosa as to durability results from experience with it in various parts of the country and the contrasting experience with the true white pines, and over the far longest period, with northern white pine. Ponderosa has failed to endure in exterior uses under conditions of high precipitation and humidity in various sections east of the Mississippi River. It has become unserviceable through decay in about seven years in various cases. Prompt painting has not always prevented the decay of ponderosa.

Paragraph fifty-six: In some sections of California, there are houses constructed of ponderosa of many years standing. Although still serviceable the exterior of these has rotted to considerable extent and the "shakes" have rotted badly. California users and architects prefer sugar pine to ponderosa for exterior use because experience has shown that sugar pine endures longer. In the arid regions of the Southwest, ponderosa has a record of centuries of use in structures made by the Spanish and Mexican settlers, but even in that section the long life experienced as regards this lumber is where not exposed to the weather. Rotting has occurred in this section where there was weather exposure."

Paragraph fifty-seven: Where sugar pine and ponderosa have been compared as to durability of standing dead timber, in stumps of cut timber and in dead and down logs, in the same localities and under similar conditions, the ponderosa has decayed and become wholly unmarketable after periods of one to four years, while sugar pine has endured for many years. A comparison of dams, each subject to daily depletion and replenishment of the supply of water, built of ponderosa and of sugar pine respectively showed a life of about two years in the case of the former material and about 39 years for the sugar pine. The sapwood of sugar pine outlasts the sapwood of ponderosa and the heartwood of the white pines outlasts that of ponderosa.

### XI. UTILITIES OF PONDEROSA LUMBER

Paragraph fifty-eight: Ponderosa lumber as an average resembles true white pine in appearance and general texture and it competes actively with true white pine in many markets and for many purposes for which true white pine has long been used.

Paragraph fifty-nine: Ponderosa is excellent for many uses and has sold and continues to be sold in great quantities upon its merits. It has fine characteristics as inside finish for which it is widely used

on account of its lower market price. Another reason for preferring it over true white pine for interior use is that numerous architects, members of the trade and consumers desire the ponderosa type of grain. Ponderosa is distinctly inferior, however, to true white-pine lumber, for reasons set forth hereinabove, for outside uses including exterior trim (paragraphs 53 to 57), and for numerous purposes requiring the acme of characteristics enumerated hereinabove in paragraphs nine and twenty-three. The true white pines do not supply enough of the shop grades to make all of the exterior millwork normally needed by the building trade.

### XII. EXTENT OF CONFUSION THROUGH THE USE OF TRADE TERMS INCLUDING "WHITE PINE" FOR PONDEROSA

#### A. Market conditions

Paragraph sixty: As the eastern stocks of virgin northern white pine diminished, Michigan and Wisconsin "white pines" came into the market. As these stocks in turn diminished, Minnesota and Canadian "white pines" have come increasingly into the market. All of these were of the northern white pine or strobus species. Idaho white pine and sugar pine also advanced with the recession of the supply of northern white pine, entering the markets in a gradual eastern progress. The character and qualities of each of these species possess and were presented to the trade and public as those of a true white pine. Ponderosa, under names which included the phrase "white pine", entered the same markets during the same general period.

Paragraph sixty-one: Throughout the competitive relations among the white pines and between them and ponderosa there has, with practical uniformity, existed a price differential in favor of each of the true white pines. The white pines have maintained and still maintain a higher price than ponderosa products.

Paragraph sixty-two: The character and reputation of true white pine as above set forth (parags. 9, 17, 19, 22, 23, 25) have led the general public, builders, architects, and the trade over a long period to call for and specify "white pine", and this demand continues to the present time. The dealers, architects, and consuming public are influenced by the common names given to lumber products and not by the botanical names. They seldom know the Latin terms for the respective species, although of late there has been a tendency on the part of certain architects to use "strobus" in their specifications of northern white pine. Nor are these classes of buyers informed of or concerned over the purely botanical distinctions considered by scientists in the classification of species. They buy by common names and are concerned over distinctions between the characteristics of the lumber of the various species.

Paragraph sixty-three: The general public associates certain qualities as above found (parag. 19) with the term "white pine",

but does not have sufficient knowledge of lumber species to be able to distinguish by appearance between the true white pines and ponderosa. Even experienced retailers cannot always be certain as to whether lumber is ponderosa or true white pine, and architects, as a class, do not have the special technical knowledge required for them to distinguish between the two. This is true of the lighter and softer types of ponderosa and particularly of its sapwood lumber.

B. Extent of the resulting confusion to wholesalers and remanufacturers

Paragraph sixty-four: Some wholesale lumber merchants and millwork concerns are apprised of the fact that ponderosa products, in the market under terms which include the phrase "white pine", are not true white-pine products, but they have little opportunity to inform themselves directly as to camparative durability.

C. Extent of resulting confusion to retail dealers

Paragraph sixty-five: Some retailers of lumber know the species and quality distinctions among these varieties of pine lumber and of this number a portion make it their practice to deliver genuine white pine upon orders for "white pine." The various terms which include the phrase "white pine" for ponderosa are thoroughly familiar to the retail trade as well as the appearance of the lumber they receive under said terms, but many retailers do not know whether ponderosa products sold under said terms are true white-pine products or not. Some retailers believe them to be genuine white-pine products. Ponderosa under names which include the phrase "white pine" is sold by many retailers upon orders for "white pine." Numerous dealers in various parts of the country do not distinguish between ponderosa so named and true white-pine lumber in their respective qualities and utilities. Many dealers sell ponderosa and the genuine white pines on orders for "white pine" according to the stocks they may chance to have on hand. The use of the phrase "white pine" as part of terms for ponderosa is confusing to and misleads a substantial portion of the retail lumber trade.

D. The use of the phrase "white pine" by distributors of ponderosa as an aid to dealers to mislead consumers

Paragraph sixty-six: The practice by retailers of selling ponderosa, when designated by a term which includes the phrase "white pine" on orders for "white pine" is not confined to dealers who do not know the distinctions of quality between ponderosa so named and true white pine. Dealers who know that white pine excels ponderosa in important respects frequently sell either product to fill orders for "white pine" according to their own interest or the exigencies of their yards.

Paragraph sixty-seven: Some dealers who know that ponderosa products purchased under trade terms which include the phrase "white pine" are not genuine white pine prefer to stock their yards with such ponderosa as comes to them so named, rather than with ponderosa otherwise named, on account of the sales value which the word "white" so used possesses. Some retailers feel justified or safer in selling ponderosa products on orders for "white pine" on account of the inclusion of the phrase "white pine" in the term under which they purchase.

Paragraph sixty-eight: When an order comes for "white pine" dealers sometimes make an effort to learn to what use the lumber is to be put and supply ponderosa or true white pine accordingly. Others make no such effort. Dealers, however, quite generally omit to pass to their customers the information that ponderosa is not a true white pine. Even ponderosa sold to the retailer under the trade term "pondosa pine" is sometimes sold to the consumer on orders for "white pine." The latter sales are aided and made more frequent by the fact that "pondosa" lumber is cut from the same tree as ponderosa lumber sold under names which include "white pine", and by the further fact that representatives of "pondosa" producers, meeting in competition the salesmen of ponderosa, offered under said names, urge that "pondosa" is as much entitled to be sold as "white pine" as ponderosa so named.

Paragraph sixty-nine: There is a powerful motive for the retailer's substitution of ponderosa under terms which include "white pine" for true white pine in the lower cost of ponderosa and there is excellent opportunity afforded by the fact that architects and consumers cannot ordinarily check the material furnished.

### E. Extent of the resulting confusion to architects

Paragraph seventy: Architects desire for exterior uses lumber from such species as possess primarily the quality of durability; for interior purposes they desire such lumber as possesses the qualities of beauty. The members of the profession prize the qualities of true white pine and particularly of northern white pine, which has an exceedingly high reputation among them. Accordingly architects for many years have specified "white pine" and are still so specifying, particularly for exterior use.

Paragraph seventy-one: The majority of architects desiring true white-pine quality specify in terms "white pine." Under such specification some architects would knowingly accept nothing but strobus; others would knowingly accept any genuine white pine; still others would accept Idaho white pine but not sugar pine.

Paragraph seventy-two: The majority of architects do not know whether ponderosa lumber when given names which include the phrase "white pine" is true white pine with true white-pine qualities or not, particularly as to durability. Nor do architects possess the knowledge necessary to apply the microscopic test between true

white pines and yellow pines, nor do they have sufficient experience to accurately distinguish between true white pine and ponderosa, particularly in the softer and lighter products of the latter species. They unwittingly accept ponderosa on behalf of their clients when true white pine and its qualities are desired and when "white pine" is ordered. This is caused by the advertisement and use of names, including "white pine" for ponderosa products.

### F. Extent of the resulting confusion to the general public

Paragraph seventy-three: The qualities and reputation of the true white pines has led the consuming public to desire and order "white pine" for many years. This desire persists to the present time, and retailers are constantly called upon to furnish "white pine." Consumers, however, have less training and opportunity than architects for distinguishing by appearance ponderosa products from true white pine.

Paragraph seventy-four: Consumers are constantly buying ponderosa pine under terms which include the phrase "white pine" when they order "white pine" and desire it for purposes for which true white pine excels ponderosa. Although ponderosa products have been sold under names which include the phrase "white pine" in certain markets outside of the regions of production for thirty years, there is still almost complete confusion resulting in the mind of the consuming public as to the distinction between ponderosa products so named and true white-pine products. This confusion on the part of the consuming public is to be found even among a substantial proportion of California buyers in spite of the use of the term "California white pine" in local markets since about 1880.

## XIII. Effect of the use of terms which include "white pine" for ponderosa products upon competition

Paragraph seventy-five: The producers of ponderosa products marketed under trade terms which include the phrase "white pine" sell their said products to the wholesale and retail trades and to millwork manufacturers. In this trade they compete in selling to the same customers with producers of true white pine and also with producers of ponderosa who use the term "Pondosa pine."

Paragraph seventy-six: The use of the phrase "white pine" in names for ponderosa products has a positive monetary advantage for the producers in marketing the product. This is due to the association with and the suggestion of true white pine by means of that phrase.

### A. Upon true white-pine competitors

Paragraph seventy-seven: Manufacturers of true white pine have found it more difficult to dispose of their products in competition with the lower-priced ponderosa sold under terms which include

the phrase "white pine." Retailers frequently desiring to purchase so-called "white-pine" products at a low price, accept ponderosa sold under terms which include the phrase "white pine" for the reason that such lumber can be sold upon orders for "white pine" better than ponderosa products otherwise named. The retail customer buyers of true white-pine products encounter a similar difficulty in competition with retailers selling lower-priced ponderosa products under names which include "white pine", and this affects their purchases of true white pine.

B. Upon "pondosa pine" competitors

Paragraph seventy-eight: The manufacturers of ponderosa products who are using the trade term "pondosa pine" have also found it more difficult to dispose of their products in competition with ponderosa products sold under names which include the phrase "white pine." This is due in material degree to the use of the phrase "white pine" in the trade term. Dealers frequently desire to buy lumber products sold under a trade term which includes the phrase "white pine" and yet can be marketed competitively at prices lower than the prices of true white pine.

Paragraph seventy-nine: This results in the purchase by certain retailers of ponderosa products designated by terms which include "white pine" in preference to the competing ponderosa products designated "pondosa." Salesmen of "pondosa" products try to protect themselves by pointing out that pondosa lumber is cut from precisely the same species of tree as ponderosa lumber sold under terms which include the phrase "white pine." Nevertheless the preference remains for a product the trade name for which includes "white pine." Certain retailers cannot be convinced that "pondosa" and California, etc., "white pine" products are made from the same species of tree. Others can be convinced but still prefer a product under a trade name which includes the phrase "white pine" because the latter sells more readily.

XIV. THE RELATION OF THE USE OF TRADE TERMS WHICH INCLUDE THE PHRASE "WHITE PINE" FOR PONDEROSA TO PUBLIC GOOD WILL

Paragraph eighty: When dissatisfaction occurs from the use of ponderosa lumber delivered under orders for "white pine" there is a direct tendency toward the discrediting of "white pine" generally without public discrimination between true white pine and ponderosa products marketed under trade terms which include the phrase "white pine." The tendency from the practice of selling true white pine and ponderosa products, all as "white" pines, is to lessen and destroy the especial public confidence in, and the public regard for, the true white pines with respect to the important purposes for which true white-pine lumber is especially fitted. Such

tendency exists without at the same time availing to establish a well-defined and independent reputation and esteem in favor of ponderosa for the important uses to which it is peculiarly adapted. The tendency is to lessen the ability of each of these products to hold the market, as contrasted with lumber substitutes, to the best advantage. The result is further to promote public doubt and confusion as to identity, qualities, and comparative excellences of the respective species for various important uses to the market detriment of each.

SUMMARY AND CONCLUSIONS OF FACT

(a) Respondent is a corporation producing and marketing Pinus ponderosa products which it designates, nationally advertises, and sells in trade between the States under a term including the phrase "white pine."

(b) Certain pine species have long been known to botanists, lumber technologists, and the public as the white-pine group.

(c) The most widely known of the white-pine group is the northern white pine. The lumber made from this species has for more than 200 years held and still holds a preeminent reputation with the public for certain qualities. It has been widely known under many trade terms which include the phrase "white pine."

(d) As a result of said high and long sustained reputation of the white-pine group, the consuming public understands and has long understood by the phrase "white pine" as applied to lumber, not merely a white colored pine wood, but lumber made from a true white pine species and having the qualities and uses of northern white pine.

(e) Pinus ponderosa does not belong either botanically or in public understanding to the white-pine group. Its lumber, in certain important qualities and for certain important uses, is inferior to the white-pine group.

(f) A substantial number of retail dealers frequently sell ponderosa lumber purchased by them under trade terms which include the phrase "white pine," upon orders for "white pine," not knowing that ponderosa so named is not a true white pine nor wherein it differs from the latter. Other retail dealers also substantial in number substitute ponderosa so trade-named for higher priced true white pine on such orders, knowing that the latter is not a true white pine and that it differs in certain important qualities therefrom. Both of the foregoing classes of sales are directly promoted by the circumstance that the ponderosa so sold is purchased by the dealer under trade terms which include the phrase "white pine." And in making the latter class of sales dealers are partially protected by the trade names in question. Still other retailers sell only true white pine on orders for "white pine."

(g) An inducement for the substituting of ponderosa so named on orders for "white pine" exists in the lower prices paid by the dealers for ponderosa lumber than for true white pine.

(h) The use of the phrase "white pine" as employed for ponderosa products frequently results in the purchase by the general public unknowingly of ponderosa under orders for "white pine" and as and for true white pine and results in the approval of ponderosa products unknowingly by architects, when true white pine and the qualities thereof are sought by the buyer and the architect. It results also in the employment of ponderosa products for uses for which it is less adapted than true white pine.

(i) Trade terms which include the phrase "white pine" have been used for about thirty years in marketing ponderosa products in districts beyond those of its production. But, so long as the public associates the phrase "white pine" with true white pines and the distinctive lumber qualities of these species, the use of the phrase in question for ponderosa products is inherently misleading and deceptive to the public.

(j) The said confusion is increased by the fact that ponderosa lumber frequently closely resembles that of the true white pines in several of its immediately obvious qualities and in several of its utilities.

(k) The employment of said phrase for ponderosa has a tendency toward the adoption of the latter lumber for uses for which it is comparatively lacking in durability.

(l) The employment of said phrase for ponderosa products has a tendency toward a lower public estimation of true white pine lumber.

(m) The use of trade terms which include the phrase "white pine" for ponderosa products by concerns marketing said products in interstate commerce has caused a diversion of trade from their competitors selling true white pine products and truthfully representing them to be true white pine.

(n) The use of trade terms which include the phrase "white pine" for ponderosa products by concerns marketing said products in interstate commerce has caused a diversion of trade from their competitors who sell ponderosa products under trade terms which do not include the said phrase and who do not give them a deceptive and misleading trade name.

(o) The use of trade terms which include "white pine" for ponderosa products has caused and still causes many retailers, architects, and consumers to buy ponderosa products when they have believed themselves and still believe themselves to be purchasing true white pine products.

*Conclusion of law*

The acts and things done by respondent under the conditions and the circumstances described in the foregoing are to the injury and prejudice of the public and are unfair methods of competition in interstate commerce, and constitute a violation of the act of Congress approved September 26, 1914, entitled "An act to create a Federal Trade Commission, to define its powers and duties, and for other purposes."

By the Commission.

[SEAL] C. W. Hunt, *Chairman.*

Dated this 8th day of June, A.D. 1931.

Attest:

Otis B. Johnson, *Secretary.*

L Before Federal Trade Commission

(Filed in accordance with ¶ 6 of Court stipulation, supra)

*Paragraph one of the findings as to the facts in docket 1626, in the matter of California Fruit Exchange*

Paragraph one: The respondent is incorporated under the laws of the State of California and has its principal place of business at Sacramento, California. It was formed to market the fruit products of its approximately 7,500 member-growers which it does on a commission basis without profit to the respondent corporation as such. It also owns and operates two lumber mills as an incidental line of business. The box shook products from its lumbering operations respondent sells to its members. The better grades of lumber respondent sells competitively on the market. The commissions for fruit marketing are collected in advance and each year respondent refunds to its members the excess of these collections over the costs of its operations as actually and yearly experienced. All profits made on the better grades of lumber go to increase the said refund to its members.

M Before Federal Trade Commission

(Filed in accordance with ¶ 6 of Court stipulation, supra)

*Paragraph three of the findings as to the facts in docket 1644, in the matter of Red River Lumber Company*

Paragraph three: Respondent in the course and conduct of its business, as described in paragraph two hereof, for more than five years last past, has manufactured and sold, and now manufactures and sells, among other products, forest products produced from that

certain species of tree botanically designated "Pinus ponderosa" under the name of "California white pine"; and during said period of time respondent, in advertisements inserted in trade journals and other media of national circulation, together with other forms of advertising, circular letters, correspondence with purchasers and prospective purchasers thereof and on letterheads, billheads, and invoices and orally through its sales forces, has designated and described such forest products made from Pinus ponderosa as "California white pine" and occasionally merely as "white pine."

Docket No. 1654

In the matter of Algoma Lumber Company, a corporation, respondent

*Order to cease and desist*

June 8, 1931

This proceeding having been submitted to the Federal Trade Commission upon the complaint of the Commission, the answer of respondent and the evidence received by the trial examiner for the Commission, and the matter having been presented to the Commission through written and oral argument, and the Commission having made its findings as to the facts and its conclusion that respondent has violated the provisions of an act of Congress approved September 26, 1914, entitled "An act to create a Federal Trade Commission, to define its powers and duties, and for other purposes";

It is now ordered that the Algoma Lumber Company, a corporation, its officers, agents, representatives, and employees, in connection with the advertising, offering for sale, and/or sale in commerce among the several States of the United States, or with foreign countries, of lumber, logs, or other forest products made from the pine species known as Pinus ponderosa, which have been designated by respondent in its trade as "California white pine" products, do cease and desist from using, either orally or in writing, the word "white" in connection, combination or conjunction with the word "pine" or in connection with other word or words used in combination or conjunction with the word "pine."

And it is further ordered, that the said respondent, within sixty (60) days from the receipt of this order, shall file with the Commission its report in writing, setting forth in detail the manner and

form in which it has complied with the order to cease and desist hereinabove set forth.

By the Commission.

Dockets Nos. 1620 to 1621, 1623 to 1633, 1635 to 1652, 1654 to 1658, 1662 to 1666, all inclusive

In the matter of the White Pine cases

*Stipulation as to Commission's exhibits 35 and 36*

May 27, 1930

Whereas in the course of the trial of the above-entitled proceedings, on January 21, 1930, action upon the Commission's offer of Commission's exhibits marked "35" and "36" for identification was inadvertently omitted and these exhibits were not received in evidence.

Now, therefore, it is hereby stipulated that Commission's exhibits for identification numbered 35 and 36 may be deemed a part of the record, under the same numbers, in the above-entitled proceedings.

FEDERAL TRADE COMMISSION,
By ROBT. E. HEALY, *Chief Counsel*,
By EUGENE W. BURR, *Attorney*.

BOSTON, MASS., ROOM 331, YOUNGS HOTEL,
*October 4th, 1929*.

Met pursuant to notice, 10:00 a.m.
Before William W. Sheppard, examiner.
Appearances:
Eugene W. Burr and J. G. Birks, attorneys for the Commission.
McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Company, et al.; Davies-Johnson Lumber Co., et al.; Diamond Match Company, et al.; California Fruit Exchange, et al.; Penman Peak Lumber Co., et al.; Feather River Lumber Company, et al.; Kesterson Lumber Company, et al.; Hobart Estate Company, et al.; Fruit Growers Supply Company, et al.; Quincy Lumber Com-
3 pany, et al.; Spanish Peak Lumber Company, et al.; Lassen Lumber and Box Company, et al.; Red River Lumber Com-

pany, et al.; Owen-Oregon Lumber Company, et al.; Big Lakes Box Company, et al.; Ewauna Box Company, et al.; Klamath Lumber & Box Company, et al.; Lamm Lumber Company, et al.; Pelican Bay Lumber Company, et al.; Algoma Lumber Company, et al.; Shaw Betram Lumber Company, et al.

4 PROCEEDINGS

Examiner SHEPPARD. The hearing in dockets nos. 1620 to 1669, inclusive, generally referred to as the "White Pine cases", will now be convened, in accordance with the Commission's direction, ordering the first hearing to be held in the city of Boston, Massachusetts, on Friday, October 4th, 1929, in Youngs Hotel at 10:00 a.m. of said date.

Mr. MATTHEW. If the examiner please, for respondents in docket no. 1621 and the others which I have listed and handed to the reporter, I desire to note the appearance of McCutcheon, Olney, Mannon & Greene and Allan P. Matthew and Carl I. Wheat.

Examiner SHEPPARD. Now, Mr. Matthew, you have indicated some of the respondents that you represent; are there any appearances by attorney or otherwise for any of the respondents who have not been indicated as being represented by Mr. Matthew?

Mr. MATTHEW. Perhaps you will allow me to state, Mr. Examiner, that there will be appearances for other respondents at later meetings, but so far as I am personally advised there will be no other attorney appearing for any other respondents at this time.

Examiner SHEPPARD. Very well, you may call your first witness.

5 WILLIAM D. SAWYER was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Give your name to the reporter, please.

A. William D. Sawyer.

Examiner SHEPPARD. Mr. Sawyer, you will have to speak up loud so we will all hear, even the men in the back of the room.

Q. Mr. Sawyer, what is your business?

A. Retail lumber.

Q. With what concern are you connected?

A. E. D. Sawyer Lumber Corporation.

Q. Where do you buy your supplies, your pine, from what localities?

A. All of them, some from California, Idaho, Maine, New Brunswick.

Q. Where do you get your white pine?

A. Some from Maine, Idaho, New Brunswick, except sugar pine, which I get from California.

Q. Do you deal in California white pine at all?

A. No; I do not carry it at all.

Q. How long has that been the case?
A. We tried one car about eight or ten years ago, but it was not satisfactory to the customers; it was too hard.
6 Q. What part of the country did you get that from?
A. That came from California.
Q. How did you sell that, did you sell that as white pine?
A. I think so, or California white pine—it is so long ago that I have forgotten.
Q. You never bought any since or before, of California white pine?
A. No.
Q. Did you deal in what is called pondosa pine?
A. No, sir.
Q. Did you realize that that is the same as California white pine or don't you know?
A. I thought it was about the same thing.
Q. Do you know whether it is the same species of white pine, botanically?
A. I don't know about that.
Q. How large a percentage of your supply of white pine do you get from Maine, would you estimate roughly—I don't want the exact figures?
A. Are you talking about at this time, now?
Q. Yes; at the present time.
A. Oh, a very small percent, not over 10.
Q. Ten percent of your total white pine?
A. Yes.
Q. Do you call sugar pine white pine?
7 A. No; we call that sugar pine.
Q. You always call that separately sugar pine?
A. Yes.
Q. Do you regard that as a white-pine species?
A. Yes; I should.
Q. If someone came into your place of business and asked for a certain specification of white pine you would not sell them sugar pine unless you told them that it was sugar pine, would you, or what is your policy?
A. If they came in and looked at it and said it was sugar pine, but if they did not it might go for white pine.
Q. Do you handle any pattern stock?
A. Yes, sir.
Q. To whom do you sell that, to the man who makes the patterns?
A. Yes.
Q. You do not make any patterns yourself, do you?
A. No.
Q. What stock do you sell for pattern purposes?
A. Nine times out of ten sugar pine.

By Examiner SHEPPARD:

Q. What do you mean by "pattern stock"?

A. For making patterns for castings.

Q. That is not plain to me.

A. You take this pine, and if you want to cast it into a certain shape you make it out of pine first and put it in sand
8 boxes, and then you take it apart.

Q. You mean for making castings?

A. Yes; these are patterns for castings.

Examiner SHEPPARD: I see; proceed

By Mr. BURR:

Q. Now, for the pattern stock, what do you sell?

A. Usually the sugar pine.

Q. Is that preferable to the Idaho white pine, do you know?

A. Yes.

Q. Why?

A. It is a little softer and an easier handling wood?

Q. Don't you use northern pine for that?

A. Cannot get it soft enough, for one thing.

Q. There are too many knots in it?

A. Yes.

Q. How about California white pine; did you ever try that for patterns?

A. Never, but once.

Q. Did you try that for patterns or pattern stock, when you handled it?

A. Yes.

Q. What happened?

A. They used it, but did not want any more.

Q. Now, where do you buy your northern pine, except Maine?

A. New Brunswick and around the Ottawa Valley.

9 Q. Is the bulk of your white pine supply Idaho white pine?

A. Yes; now.

Q. Do you happen to know the botanical name of the Idaho white pine?

A. No; I don't.

Mr. MATTHEW. That can be stipulated, but I do not think that there is any question about it.

Mr. BURR. I guess so.

Q. How long did you say you were in the retail business here?

A. We have been here over fifty years, father, brother, and myself; my father and brother are now dead.

Q. What is your address in Boston?

A. 24 East Cambridge Street.

Q. Can you tell us somewhat of the history, from your long experience, of the course of the northern white pine in the Boston market?

A. Well, we used to get the principal part of it from Maine.
Q. Up to what time would you say that was, roughly estimating it?
A. Well, we get some now, but not very much.
Q. Your ten percent that you referred to.
A. Yes. It has gradually drifted out to Michigan, and then when we got pretty well cut out there, we bought the Idaho in preference to what is called the eastern pine. It runs better and is also cheaper in price.
Q. The early buildings in this part of the country, from what kind of lumber were they made?
A. They were made mostly from pine that came from around here and Maine.
Q. Was that practically universally so at one time?
A. I should think so.
Q. Up to when would you say?
A. Seventy-five to a hundred years ago.
Q. It was bought until around about 75 to a hundred years ago?
A. Yes.
Q. For what purposes was it used, or was it used for all purposes?
A. They used it for all purposes, even the timbers.
Q. Even the timbers?
A. Yes, sir.
Q. Didn't you use oak for inside work?
A. Occasionally. What do you mean, for finish?
Mr. MATTHEW. Is the witness talking about fifty or seventy-five years ago, or the present time?
Mr. BURR. I am satisfied, under the rule, that reputation feature is admissible; there is no other way in the world to prove it. I happened to consult the authorities on that last night, to determine whether it was admissible, and I think it is clearly so, of course, taking into consideration the fact that there is no other way of proving such matters of public interest.
Mr. MATTHEW. If it is a matter of public interest; if not, I think it is clearly objectionable, but I shall not offer an objection, as long as it is confined to anything that is pretty well known in any event.

By Mr. BURR:

Q. For softwood purposes, was pine the universal wood up to 75 or a hundred years ago, would you say?
A. I think so; yes.
Mr. BURR. I think that is all; you may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Sawyer, do you frequently receive orders for white pine, without any other designation?
A. Yes, sir; either white pine or soft pine; it is used both ways.
Q. What lumber do you customarily supply, in response to an order for white pine?
A. Well, for the ordinary uses, we supply the Idaho.

Q. I think you intimated, in response to a question from counsel for the Commission, that you were not familiar with the botany of these various pine trees?

A. Not particularly; no.

12 Q. You do not know whether the so-called Idaho white pine is identical, from a botanical standpoint with the old northern pine that you had here originally in Maine and later in the Northern States and in the Middle States?

A. I do not know; I could not say.

Q. But it is the practice, nevertheless, to furnish Idaho white pine in response to an order for white pine?

A. Yes, sir.

Q. You stated that you also carry sugar pine?

A. Yes, sir.

Q. And if I got one of your answers correctly, you said that in certain cases, that pine might be supplied in response to an order for white pine?

A. Yes, sir.

Q. So that we are to understand, that in response to orders for white pine, you may supply either Idaho white pine or California sugar pine?

A. Yes, sir.

Q. Or perhaps the white pine of Maine or New Brunswick?

A. That is correct.

Q. Indiscriminately?

A. No; because we only carry the sugar pine in the high grades.

Q. But if there was an order for white pine in the higher grades——

13 A. Then it would be sugar pine.

Q. You would feel free to furnish either sugar pine or northern pine or Idaho white pine?

A. Yes; that might be so.

By Examiner SHEPPARD:

Q. Where do you get your sugar pine from?

A. From California.

By Mr. MATTHEW:

Q. I assume that in response to those orders, Mr. Sawyer, you use your best judgment as to what particular variety of pine you will supply?

A. Yes, sir; it depends on what it is going to be used for.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Now, Mr. Sawyer, can you tell the difference between a stack of Idaho white pine and a stack of northern white pine?

A. Yes, sir.

Q. You can tell which is which?

A. Yes.

Q. What are the distinguishing marks between them?

A. It is a little different in the knot character; the knots are a little more red and hard in the Idaho.

Q. Suppose somebody were to cut a small piece of wood,
14 would you be able to tell which variety of white pine—admitting that it was white pine—would you be able to tell which variety it was?

A. Sometimes you can and sometimes you could not; it is according to the grain and texture of the wood.

Q. In the last two answers you made, do you include in white pine, sugar pine?

A. No.

Q. Could you tell sugar pine from northern pine?

A. I think so, most of the time.

Q. What is the marked distinction there?

A. There are microscopical pitch pockets, probably it isn't pitch, but it looks like it.

Q. How about the California white pine, can you tell the difference between that and the northern white pine?

Mr. MATTHEW. Pardon me, as long as the witness says that he has only handled one shipment and that was ten or twelve years ago, I think he ought to be qualified.

Mr. BURR. All right, I will qualify him.

The WITNESS. Sometimes in buying the Idaho they run in one, two, four, or five pieces of pondosa which is practically the same thing.

By Mr. BURR:

Q. Pondosa is just about the same thing as what?

A. Practically as California white pine.

15 Q. You are more or less familiar with California white pine and pondosa?

A. Yes, sir.

Q. Do you have occasion to see the supplies of lumber of your competitors occasionally?

A. Yes, sir.

Q. How do you get to see the supplies of your competitors?

Mr. MATTHEW. Is this recross-examination or redirect?

Examiner SHEPPARD. It did not come out in the direct or cross, but without objection, I will let it go in.

Mr. MATTHEW. I rather think we have had an intimation of an objection just now, if the examiner please.

Examiner SHEPPARD. If you insist upon your objection, I shall support you.

Mr. MATTHEW. I prefer to stand upon that objection.

Examiner SHEPPARD. I will support you.

Mr. BURR. That is all.

By Examiner SHEPPARD:

Q. Mr. Sawyer, I want to ask a couple of questions. Do you do business under the name of William D. Sawyer?

A. No, sir; E. D. Sawyer Lumber Corporation.

Q. You are located here in Boston?

16 A. Practically—it is Cambridge, just about a mile from Boston.

Q. Mr. Burr asked you some questions regarding northern pine; where does that come from?

A. Either the Ottawa Valley, New Brunswick, or around that country. We call Maine pine eastern pine.

Q. They come from this northern country then?

A. Yes; the northeastern country.

Examiner SHEPPARD. Anything else, Mr. Matthew?

Recross-examination by Mr. MATTHEW:

Q. Just one question about this term "eastern pine", you just stated in response to a question from the examiner that you refer to Maine pine as eastern pine.

A. Usually.

Q. Is that confined to Maine pine or does it include pine from New Brunswick?

A. Not very often. Practically Maine and New Hampshire; we get some from New Hampshire, too.

Q. I thought you said you got some from New Brunswick?

A. Yes; but that is called New Brunswick pine.

Q. The term "eastern pine" when it is employed here, customarily means Maine and New Hampshire pine?

A. Yes, sir; but sometimes they get the New Brunswick in as the same thing as eastern pine.

17 Q. I beg your pardon.

A. I say occasionally they put in New Brunswick as eastern pine.

Q. That is just a matter of local usage?

A. That is all.

Q. And is the pine which comes from either Michigan, Wisconsin, or Minnesota ever referred to as eastern pine?

A. No, sir.

Q. What term is used?

A. I think ordinarily they use the term "western pine" for that; that is what they used to use.

Q. The term used to be "western pine"?

A. Yes.

Q. Do you obtain any of that pine now?

A. Very little; once in a while.

Q. You referred to Ottawa pine.

A. Yes.

Q. Is that referred to as eastern pine?
A. No; that is called northern pine.
Q. That you call northern pine?
A. Yes.
Q. So then, as I understand you, we have these terms: Eastern pine, New Brunswick pine, northern pine, and western pine, all of which are used to refer to lumber, which is white-pine lumber.
18 A. Yes, sir.
Q. Produced in these several localities, and I think counsel will stipulate, from the tree which is botanically the same, called Strobus.
Mr. BURR. Yes; I will stipulate that.

By Examiner SHEPPARD:

Q. Mr. Sawyer, do you wish to claim your fee for coming up here under subpena?
A. No, sir.
Examiner SHEPPARD. We are much obliged to you for coming.
(Witness excused.)

WILLIAM E. WALL was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your name, please.
A. William E. Wall.
Q. Mr. Wall, you live in what city, Boston?
A. No, sir.
Q. Where do you live, in Cambridge?
A. No.
Q. Where do you live?
19 A. Somerville.
Q. How long have you lived there?
A. Forty-three years last July, in one house.
Q. Can you tell us if you ever held office in Christ Church, Cambridge?
A. Yes.
Q. How long?
A. Forty-two years.
Q. What office is that?
A. Vestryman and chairman of the committee on public property.
Q. When was that church built, to the best of your knowledge?
A. It is a matter of record, sir. Of course, I was not there. It began in 1759 and was finished in 1761.
Q. What lumber materials were used in the erection of that building?
A. Chiefly white pine.
Q. What else was used besides white pine?
A. Oak.

Q. What was the oak used for?

A. Rafters mostly and occasionally as crosspieces, as my observation goes.

Q. Will you state what your observation has been of that structure which was erected, as you say, in 1759?

A. From what angle, do you mean, architecturally?

Q. I mean from the standpoint of the materials used and
20 the condition of the building.

A. I think the building is in a remarkable state of preservation, considering its age and standing in the New England climate, to which I attribute largely the fact that its chief composition is made of white pine.

Q. In little more detail, what is the condition of the church? Is it partly rotted through age or what is the situation? Describe that to the examiner.

A. I will do my best, but it is a pretty large order.

Structurally, the timber seems to be white pine, and hewn, and around some of the sills there has been decay and some of the sills have been replaced and the outer covering boards in many cases, especially on the east side, have been replaced. They were originally white pine and white pine has been used to replace them—to replace the old white pine that was there.

The white pine in the interior of the finish is altogether, as I can see white pine, including the columns, which are all twelve inches or more in diameter at the top and perhaps fourteen or fifteen inches at the base. Let me say, if I do not trespass too much on your time, a peculiar condition exists in these columns, discoverable through the records of the church, not by any examination of them, and that is that they were bored with a pump augur on the center, inside,
21 and that takes up the checking and cracking that would have occurred on the outside had they been solid. That was an old custom, which is coming into vogue again, but I do not want to discuss the mechanics of this, but I only want to say that in 1856 the chancel end of the church was moved to the southern section of the building, and in between it included two other columns on either side—there are four columns in that section and they were originally the masts of old vessels, which was the only timber that they could get at that time—very solid, and they are standing as sound as they were when they were put in 1759 to 1761, but the finish and the joinery works on the inside——

Q. I am not so much interested in the inside as the outside.

A. On the outside, on the westerly side, nine tenths of the covering boards of that church are the original boards, from the cornice down to within two feet of the water table.

Q. You mean below the surface of the soil?

A. No, no; the water table is eighteen inches above the surface of the soil—that is an angle that comes out, but the covering boards from the cornice, including the cornice down to the water table, that

sheds the water away from the basement of the original boards on the easterly side. However, the majority of the boards have been replaced there from the time of '57 or subsequently, and many of them in my own time

22 Q. By "57" you mean 1857?

A. Yes. An observation would be the best way, a personal observation, to get into your mind what I am trying to say; but it is remarkable that the wood on the outside of the church, in the least exposed portions, is in the condition that it is mechanically so good and sound.

The upper portion of the tower had gotten in bad shape, and three or four or five years ago we wanted to cover it over, but we could not find boards of the kind we wanted to use, of white pine boards, so we had to use cypress. They are there now.

Q. Cypress is wearing well, of course?

A. Well, it isn't long enough to tell how it is wearing.

Q. Aside from the cypress, has the exterior replacement been of white pine in every case?

A. In every case.

Q. How much experience, if any, have you had in handling or observing wood?

A. I have been a student of wood, sir, from my boyhood. I am still a student. It is my business to match the grains of wood and the structure of all woods, in ordinary finish, is known to me, but the mechanical side of it, the working of the wood, I have only from hearsay and observation, but I have seen a great deal of woodwork, and I know that men prefer some kinds to others because of its usefulness.

23 Q. You have been a grainer; is that the term you used?

A. Yes; for fifty-seven years.

Q. What is a grainer?

A. An imitator of the grains of wood.

Q. Do you imitate grains of wood by external application of stain and varnish; is that the idea?

A. Yes; we use colors of different sorts and a little bit of gray.

Q. Have you had any observation as to the durability of the pine joists as compared with the oak pin?

A. I recall one instance, sir, when the organ was taken from the gallery, where it was installed in the early days of the building, and a new organ was put on the westerly side of the church; that my brother-in-law, who is a carpenter, had sawed a piece out of the sill so that a projection could be made on that side, and he brought home to me a piece of pine wood that angled or braced, as we call it over a sill up to an upright, and driven through that to hold it in place was an oak pin. The oak pin was found to be powder posted and worm-eaten, almost to a shred, while the pine through which it was driven seemed to be in as good condition as when it was erected.

I don't know whether it was the upper section or the lower of the sill; I had it in my possession, but it got displaced.

Q. I hand you a pamphlet marked "White Pine Preeminent Today, as Always, in Home Building", and call your attention to page 30, and ask you if that is a picture of the structure you have been telling us about?

A. Yes, sir; that is old Christ Church on the eastern exposure, the churchyard is there and on the other end is the Unitarian Church, and there is the cemetery that Longfellow called "God's Acre", Christ's Church the nest and the Unitarian Church he calls the sentinel.

Mr. BURR. I ask that that be received and marked "Commission's Exhibit No. 1."

Mr. MATTHEW. I have no objection to the photograph of Christ Church being received of record, but the publication from which it is taken is obviously an advertisement.

Mr. BURR. I see the force of that, and if you will permit me, I will cut that portion off.

Examiner SHEPPARD. Any objection to that, Mr. Matthew?

Mr. MATTHEW. None whatever.

Examiner SHEPPARD. Let it be received in evidence and marked "Commission's Exhibit No. 1.")

(The document referred to was thereupon received in evidence and marked "Commission's Exhibit No. 1.")

By Mr. BURR:

Q. Have you had an opportunity to observe the other ancient houses in Cambridge?

A. Yes, sir.

Mr. MATTHEW. May I perhaps offer a suggestion: If it is the purpose of counsel merely to show that this white pine of the Northern and Eastern States, that is the pine yielded by the tree of the genus strobus, has an excellent record of durability, that may be conceded, and that will save time, but if he prefers to put it in the testimony, I have no objection.

Mr. BURR. If the examiner please, if counsel represented all the respondents, or if I knew that no respondent, not represented by counsel would file a petition for review in the Circuit Court of Appeals, in the event the Commission should happen to issue an order to cease and desist in this matter, I would be very glad indeed to accept the suggestion of counsel and make the stipulation, but inasmuch as counsel here present represent only about one half, numerically, of the parties respondent in this group of cases, I feel that I want to make a reasonably strong case on the various points in issue, because it might be that some other respondent might file a petition to review.

Mr. MATTHEW. The examiner will understand that I have no objection to the evidence going in; I was simply endeavoring to expedite matters.

Examiner SHEPPARD. Yes; I understand.

26 By Mr. BURR:

Q. What other ancient houses are you personally familiar with in the vicinity of Boston?

A. I worked in the Longfellow house, better known as the Craigie house, thirty or forty years ago, when Longfellow was alive, and I worked in all sorts of houses in my trade around Boston in the last forty-five years.

Q. What were these old houses built of?

A. These old houses, without exception, are all of white-pine construction. Some of the older houses have spruce clapboards, but the old New England houses have pine clapboards, which in my opinion, are immeasurably better than the spruce clapboards.

Q. Without encumbering the record too much, can you tell us the condition of the various individual houses, naming them, and just give us a short paragraph as to the conditions of these houses?

A. The James Russell Lowell house—old Lieutenant Governor Oliver, the last of the lieutenant governors under the Crown, if I remember, and the house is now called Elmwood—purchased and occupied by James Russell Lowell, who died there some thirty years ago. I know that house and I know its construction is of white pine, as far as human observation can decide, over a painted surface, because there was no other available wood in that locality in

27 the days when that house was erected.

Q. What is the condition of that house? What sort of condition is it in?

A. It is in excellent condition, as is the Longfellow house; exteriorly, anyway.

Q. Do you mean that the original boards are still there?

A. So far as my observation goes, they are the original boards.

Mr. MATTHEW. It seems to me that answer should be stricken out, unless the witness knows.

By Mr. BURR:

Q. What is the local reputation of the character of the outside of that building as to its original or replaced character?

Mr. MATTHEW. I object to that.

Examiner SHEPPARD. That is pretty broad—but I will let you do the best you can with that.

The WITNESS. I will answer it in two words; it is in good condition.

By Examiner SHEPPARD:

Q. Have you personally examined the boards and seen them yourself?

A. I have passed within a few feet of them.

By Mr. BURR:

Q. How recently?

28 A. Well, the Longfellow house and the James Russell Lowell house both within a month—only from the street it might be more than ten feet, perhaps.

Q. Did you ever work in either of those houses?

A. In both of them.

Q. How long ago?

A. The Longfellow house would be over thirty years ago, and a longer period of time for the Russell Lowell house.

Q. Handing you a portion of the same pamphelt referred to a few moments ago, will you be kind enough to see whether one of the houses you described is pictured on that? [Document handed to witness.]

A. Yes; this house was built by Henry Vassel, known as the Craigie House, otherwise known as the Longfellow house, built about the time Christ Church was built.

Mr. BURR. I offer that in evidence and ask that it be marked "Commission's Exhibit 2."

Mr. MATTHEW. No objection.

Examiner SHEPPARD. Let it be received and marked "Commission's Exhibit 2."

(Document referred to was thereupon received in evidence and marked "Commission's Exhibit 2.")

By Mr. BURR:

Q. Are you familiar with the so-called Cooper-Austin house in Cambridge?

29 A. Yes; I worked in that house over forty years ago.

Q. What is that house built of?

A. White pine, with beams protruding through the corners in many places.

Q. Has that been replaced or is that the original?

A. That is the original material.

Q. Are there any other ancient houses that you worked on in that vicinity?

A. A brother of Henry Vassel, John Vassel, built a house across the street, on Vassel Street—Henry Vassel built the Longfellow house, and John Vassel built the house across the street from his brother; the house is still standing and is in good condition and was built of white pine.

Q. What sort of condition is that in?

A. Excellent.

Q. Do you know whether there have been any replacements there?

A. Not to my knowledge; there have been no replacements. I would not say, sir, but what there might have been a board or two.

Q. But no general replacements?

A. No, sir; no, sir.

Q. That is the reputation in the community, that there has been no replacement there?

A. Yes, sir. That is intact, just as it has been built.

30 Q. That is of white pine?

A. Yes, sir.

Q. When was that built?

A. That was built before Christ Church was erected, because both John and Henry Vassel were wardens and incorporators of the church, I should say in the early '50's—1750's. They were both planters in the West Indies and made their money largely there.

Q. Do you know anything about the Bernard Capin house?

A. I do not remember the name, sir. I have worked in many houses, and in many other places, such as Salem, but I do not recall that by name. Is that a Cambridge house? I worked in the Inman house in Cambridge, which was sawed into three sections and moved three quarters of a mile and put together again. Ralph Inman was one of the incorporators of Christ Church, a wealthy man who had one of the largest houses between Harvard house and Boston. That is also in good condition.

Q. Have there been any replacements there?

A. No; except making it into a tenement house from what it originally was, a mansion.

Q. Have there been any changes in the house exteriorly?

A. The exteriors are original.

Q. Are you familiar with the structure that I mentioned before?

31 A. No; I don't recall that, sir.

Mr. BURR. You may examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Wall, you stated in the course of your direct testimony that at one time it was necessary to replace a certain portion of Christ Church and that you could not get white-pine boards which were suitable, and for that reason you obtained cypress.

A. Yes; that was on the tower of the church, the upper tower, the belfry.

Q. Why were you unable to get white-pine boards which were suitable for that purpose?

A. The carpenter reported that he could not buy white pine of the size of the boards to correspond with those already on the other portion and the nearest he could do was to get the cypress.

Q. Then the available supply of the old white pine which you had in New England in the early days was pretty well exhausted?

A. Yes.

Examiner SHEPPARD. I was going to ask you, Mr. Matthew, to ask this witness where the original white pine came from for those churches and buildings, and who they were manufactured by.

32 Mr. MATTHEW. I think that question can be properly put to the witness at this point.

Q. What was the source of the white pine generally used in this territory, Mr. Wall?

A. It was New England pine, sir, in this vicinity; almost entirely Massachusetts pine. We have some records of the purchase and the charge that was made in pounds, shillings, and pence for running the logs up the Charles River—the log of the dimensions sufficient in

size to make the columns of the church. They had been made from masts of vessels that were rafted up the Charles River, and the charge is there on the books for having them run, and there was an old turner's shop on Cambridge Common where those logs were cut.

By Examiner SHEPPARD:

Q. As I understand you, in the ancient days, a hundred or two hundred years ago, the white pines that entered into the construction of Christ Church and these other buildings, which you have been so interestingly telling us about was obtained from this very neighborhood?

A. Absolutely.

Examiner SHEPPARD. That is sufficient on that.

By Mr. MATTHEW:

Q. There is comparatively little of that pine cut in Massachusetts today, is there, Mr. Wall?

A. There is none to be cut, sir.

33 Q. It is gone. And there is comparatively little that is obtained from New Hampshire, Maine, or any other New England States?

Mr. BURR. Mr. Examiner, I doubt very much if a man not in the lumber business is competent to answer that.

Examiner SHEPPARD. I will leave it to you, Mr. Wall, if you have sufficient knowledge to answer that question.

Mr. BURR. I would like to have some qualifying questions put by Mr. Matthew to see if he knows where the white-pine supply from New England come from and whether this gentleman has direct knowledge of it himself.

Examiner SHEPPARD. I think this is quite in line with the questions asked on direct.

By Mr. MATTHEW:

Q. Are you familiar with the sources of supply of white pine, which is commonly used in New England?

A. Such as is used in buildings, I see it every day of my life, but I do not want to pose as an expert on lumber; but I do know something about woods, because I have worked on woods for over fifty-odd years.

Q. Are you able to answer the question as to the principal sources of supply of the white pine which is commonly used here in New England today?

A. It has not been obtainable in New England, as New Eng-

34 land pine, for forty-odd years, of any quality. I might add, if you care to hear it, that I was in the shipyard in Bath, Maine, in 1891, and I saw a stock of two-inch white pine lumber and I asked the gentleman who was showing me through whether that was Maine pine or Canada pine. He said it was Michigan pine. The date of that was 1891—but perhaps I am exceeding my authority, sir, in saying this.

By Mr. MATTHEW:

Q. The fact that you were unable to get white pine boards in the dimensions required for replacement in the steeple of the church indicates, I take it, that it has been impossible to get the white pine of the quality and size that was available a number of years ago?

Mr. BURR. From where do you mean?

Mr. MATTHEW. In any section, so far as this witness knows.

Mr. BURR. I do not believe the witness is qualified to answer that question.

Mr. MATTHEW. He just spoke of Michigan pine.

Mr. BURR. Does he know where the pine comes from, is the question, but if you will qualify him I have no objection.

By Mr. MATTHEW:

Q. Do you know of the sources of supply of white pine that is commonly used in New England today?

35 A. Yes.

Q. Name them.

A. Mr. Sawyer has answered all of that as effectively as I could. I have a piece of white pine that I brought home, which I worked on, stamped "Idaho white pine." I know Arkansas white pine is a reddish pine. I do occasionally see some Idaho pine, but the white pine of New England can very easily be distinguished from it and any man who works on it can tell it at once.

Q. All right; what are the sources of supply, then, of the white pine commonly used in New England today? You have spoken of Idaho white pine; is there a great amount of Michigan pine, so far as you know?

A. I think there is, yet I think we get as much from Canada as we do from Michigan.

Q. Is the quality of the Canada white pine as good as the white pine that was used in the early days?

A. I could not answer that definitely or correctly, but my observations show me that it is much the same, clear and free from knots and sap.

Q. What is the Arkansas pine?

A. That has red streaks through it; it makes a variegated wood for a finish in the natural state, but it is not of even texture.

Q. You don't know whether that is true white pine or not?

36 A. I think it is not, sir.

Q. You said certain replacements were made in Christ Church. How do you know that the white pine which was used for the replacements came from any particular source?

A. I don't know, sir.

Q. You don't know what kind of white pine was used in replacements. You said some of the boarding had been replaced, particularly on the east side?

A. Yes; in 1857; and there can be no question but what the pine was of New England origin.

Q. All right; let us grab [grant] that. We will assume that, but take more recent replacements; can you tell where they came from?

A. I could not say, sir.

Q. You don't know as to that?

A. No, sir.

Q. Has your observation been sufficient to enable you to state whether or not the bulk of so-called white pine which is now used comes from Idaho?

A. No, sir.

Q. You don't know?

A. I would be willing to say that it does not.

Q. You think it does not?

A. No.

Q. From what source does the bulk of the white pine come?

37 A. From New Brunswick, Ottawa, from the Ontario Provinces, and nearer here than Idaho.

Mr. MATTHEW. That is all.

(Witness excused.)

HENRY I. FAIRBANKS was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Fairbanks, you live where?

A. Dedham, Massachusetts.

Q. What house do you live in there?

A. I live in the house just in the rear of the old Fairbanks house, on the homestead there.

Q. How long have you lived there?

A. Steadily since 1912, and for three years previous to that I came in regularly during the summer.

Q. Did you live for a time in the old Fairbanks house itself?

A. Never.

Q. You never did?

A. No, sir.

Q. What is the old Fairbanks house; will you describe that a little more fully?

A. What is it?

Q. Yes; is that a historic relic?

38 A. It is said to be the oldest frame structure now standing in the United States.

Q. How much investigation has been made, to lead to that belief?

A. Well, five years previous to 1896, at the time the Fairbanks genealogy was written, Lorenzo Fairbanks gave five years of his time to look up writings, records, and things, and that is his conclusion from his work.

Q. That house was built in what year?

A. It is believed to have been built in 1636.

Q. What sort of records or what sort of a foundation do you have for saying that it was probably built in 1636?

A. Personally I do not know why I came to that conclusion other than the fact that the man who received that grant of land in 1637 came there and signed the Dedham covenant for three of his sons and himself. He settled there with his wife and six children, so that it is reasonable to believe, I suppose, that the first thing he would provide for his family would be a shelter for them, and the man who looked up the record of the family in the Fairbanks genealogy states that a section of the house was built in 1636.

Q. The original settler and builder was a Fairbanks, you say?

A. Yes, sir; Jonathan Fairbanks.

Q. That is an ancestor of yours?

39 A. Yes, sir; I am the ninth generation direct.

Q. And they have all occupied the premises?

A. Eight generations of the Fairbanks family up to this time did.

Q. That was a white-pine structure, was it?

A. I don't know what is underneath the present clapboarding; about forty years ago that was replaced, but the lining to the kitchen is still of the old white pine.

Q. When was the replacement made; what was taken off from the clapboarding?

A. I could not tell you, sir, because that was done before——

Q. Is there any reputation about it?

A. The clapboarding, they tell me, that came there were of varying widths.

Q. Were those clapboards reputed to be white pine that came off originally?

A. They said they were, but I have no personal knowledge of it.

Q. They said they were; the people that took them off knew?

A. Yes; but I am no authority on woods.

Q. When was that replacement made?

A. About forty years ago.

Q. Do you know anybody still alive who was familiar with it at that time?

A. No, sir.

Q. Are there any clapboards on any part of that structure

40 that are the original clapboards?

A. There are a few up in the end of one of the L's that was built on the back; that was said to be built on in 1648, and up in one end there are a very few of those old clapboards.

Q. Would you be kind enough to tell me whether this picture I now hand you is an accurate photograph of the Fairbanks house? [Picture handed to witness.]

A. That is a photograph of the Fairbanks house; yes, sir.

Mr. BURR. I ask that that be marked "Commission's Exhibit No. 3."

Mr. MATTHEW. No objection.

Examiner SHEPPARD. Let it be so marked.

(Picture referred to was thereupon received in evidence and marked "Commission's Exhibit No. 3.")

Q. Now, handing you Commission's Exhibit 3, would you be kind enough to describe more fully where those original clapboards still are to be found.

A. There are a few up in this section here and a very few up in this end here.

Examiner SHEPPARD. Let the record show that the witness refers to the left-hand portion of the house in the picture.

Q. That portion facing forward in the picture, is that correct?

41 A. That is correct. These here [indicating] you can see evidently were at one time of the character of these. [The witness refers to the right-hand side of the picture.] This house was struck by lightning at this corner and shattered those, and some were taken off and modern, up-to-date clapboards were put on.

Q. How about that structure as to paint; was it ever painted?

A. No, sir; it never had any paint.

Q. It never had any paint on at all?

A. No, sir.

Q. How do you know that to be the case?

A. Well, it has come down from family tradition.

Q. When the replacement was made forty years ago were the boards that were taken off at that time unpainted?

A. Unpainted, they said, just the same as those there now.

By Examiner SHEPPARD:

Q. Is the house occupied now?

A. No, it is kept as a family treasure.

Q. It is now being used as a place of general interest for the public to visit?

A. Yes; as a place of general interest for the public. About 8,000 visitors come every summer from all over the country.

By Mr. BURR:

42. Q. I hand you another picture; will you be kind enough to state whether that also is a picture of the same structure? [Photograph handed to witness.]

A. It is; yes, sir.

Q. Can you point out any of the original clapboards from that view?

A. No, sir; not from that view.

Mr. BURR. I ask that that be received as Commission's Exhibit 4, for the record.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. No objection.

Examiner SHEPPARD. It may be received in evidence and marked "Commission's Exhibit No. 4."

(The picture referred to was thereupon received in evidence and marked "Commission's Exhibit No. 4.")

Q. Do you know whether there are any beams or rafters made from white pine in that structure?

A. I do not, sir. The rafters in the old house itself, the central section, are of oak.

Mr. BURR. That is all.

Mr. MATTHEW. No questions.

(Witness excused.)

43 FRANK A. BOURNE was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Bourne, will you state your full name?

A. Frank A. Bourne.

Q. You are located at what place?

A. 177 State Street, Boston.

Q. In what business are you engaged?

A. Architect.

Q. How long have you been an architect?

A. I hate to say how long—about 30 years.

Q. You have been in Boston and vicinity all that time, have you?

A. Always, since 1899.

Q. Have you ever had any experience or done any professional work with old colonial houses in this vicinity?

A. Yes; on Beacon Hill, in Scituate and Ipswich.

Q. What houses were they, if you can name any particular cases?

A. Something that would apply to what has been under discussion here, that I have heard. At Ipswich there is a house called the Emerson house, built in 1640; there is another house there that I personally had nothing to do with, built in 1638, and I know

44 there is a great deal of pine used in those houses.

Q. What kind of pine do you mean?

A. White pine. At Scituate there is a house that I own, built in 1810, where the finish was undoubtedly white pine; on Beacon Hill—61 Beacon Street, there is a house that was built in 1837, that was done over very thoroughly, and there is some white pine in there.

Q. What sort of condition does the white pine in these various structures reveal when you have had occasion to examine them?

A. Could I add, before answering the question——

Q. I suppose that is not a very good question.

A. I don't mean that, but could I add Charles Street Meeting House?

Q. Where is that?

A. That is at the corner of Mount Vernon Street——

Q. Here in Boston?

A. Yes; in Boston. Now, to your question.

Q. Let me put it this way: What kind of evidence is there as to the durability, or lack of durability, of white pine that has been used in the construction of these colonial houses that you have had to do with? We can probably save the record by asking a general question without going into each house that you have mentioned.

A. I consider the white pine to be more durable than any
45 other wood to be found in the house. There were clapboards on the outside of this so-called "Emerson house" at Ipswich that we always assumed to be original from the way they were cut, and they are still there. Now, those had been given a coat of paint at sometime, but the paint had worn off, and in fact for many years stood without paint.

Q. Which house did you say that was?

A. The Emerson house at Ipswich.

Q. Have you given us the date on that?

A. 1640. The antecedents of Ralph Waldo Emerson lived there.

Q. You mean the original wood stood unpainted there since 1640?

A. No; it had been painted and had received several coats of paint, but had been without paint for a long time, and the clapboards are still there.

Q. What condition were they in, somewhat rotted, I suppose?

A. Not rotted, but weatherworn, but still in good condition. The finish of the house, the window frames, some of them had rotted and been replaced, some parts of them, but there were still a good deal of what seemed to be original wood in the house. The sashes had, I think, all been replaced. Those were undoubtedly white pine.

Q. I understand you to say, then, that the white pine seemed to outlast the other lumber materials; what other lumber
46 materials do you find in those old colonial structures?

A. Spruce.

Q. Does that go back—is that comparable with white pine, in the age of the structure?

A. The framing was largely of spruce and oak. There was some white pine.

Q. Some white-pine rafters?

A. In the frame. I think some of the large beams in the old-fashioned frame were of pine; some were of oak. I think the oak and the white pine were in good condition.

Q. Both the oak and white pine?

A. Both the oak and white pine were in good condition.

Q. How about the spruce?

A. Well, I remember some of the spruce framing that were still strong enough, but it was not so permanent appearing nor in so good condition as the oak and white-pine framing.

Q. Did you find anything else that had been used on the outside of these structures besides white pine?

A. I don't recall anything else.

Q. How about the ancient white-pine doors?

A. I might qualify that last answer by saying that where there had been some piecing out they might have used other materials.

Q. You mean the replacement work, do you?

A. Yes; some replacement and some additions, where they
47 would use other material, but the original that I am speaking of is white pine.

Q. Have you ever had an opportunity to observe ancient white-pine doors?

A. Yes, as far back as 1810; I have one in my house that was taken out of a building that was put up probably in 1806 in Boston, and I kept it as a sample of a door and frame; it was in perfect condition as far as the quality of the wood is concerned.

Q. Do you happen to know whether that was an outside door—a front door or an inside door?

A. It was a front door of a house on Lynde Street and is a very good example of colonial work of those days, in the early 1800's.

Q. Had that been painted on the outside surface?

A. Yes; that had always been painted, but probably had been allowed to weather; that is, the paint had gotten off. It is a beautiful example of colonial work.

By Examiner SHEPPARD:

Q. That was white pine?

A. White pine: I am very sure it could not have been anything else.

By Mr. BURR:

Q. As an architect, you have occasion to prepare specifications as to the materials to be used?

48 A. Yes.

Q. And what do you recommend for building purposes, in the way of lumber?

A. For window frames and sash—the sash particularly—white pine is still specified; in doors that are of good quality, if they are to be painted, white pine is specified.

Q. Why, if they are to be painted; if they are not to be painted, what do you use?

A. In that case you use oak or mahogany or some other material or a veneer, that would probably be veneer over white pine.

Q. And do you specify what is to be beneath the veneer in your specifications?

A. Yes.

Q. Does that specification generally call for white pine by its botanical name, or do you just say white pine?

A. I never knew the botanical name to be used.

Q. In the specifications, you mean?

A. Yes, sir.

Q. What do you get when you order white pine in your specifications; do you get Idaho white pine or Northern white pine or California white pine?

A. Now they are getting California white pine.

Q. On specifications calling for white pine?

A. Yes.

49 Q. Where does that come from?

A. There might be certain cases of particularly good wood, where you could get the white pine, the local white pine, but that is rather rare; then we get what is called country pine; that is used a good deal particularly for interior finish.

Q. Do you know what that pine is?

A. That is second or third growth with lots of knots in it.

Q. That is second or third growth of white pine?

A. That is what we suppose it is.

Q. When you get California white pine, you accept that, do you, as complying with the specification?

A. Yes; depending on where it is going. You would accept a certain quality of white pine for some places where you could not for others.

Q. Will you specify a little more in detail what you mean by that?

A. I am afraid specifications ought not to go into that, because you get in too deep for our ordinary work here.

Q. But you do accept California white pine when you order white pine?

A. It is generally accepted now.

Q. That is the general practice among your profession?

50 A. I think so, so far as I know.

Q. How long has that been the case?

A. I should say between five and ten years it has been coming into the market as other materials for exterior finish were going out. The original white pine has been out of the market for a good many years for a great deal of the exterior finish of the house, and then cypress came into the market and now cypress is getting so scarce that they are using California white pine.

Q. Have you had occasion to observe the durability of California white pine, or has that not come within your knowledge?

A. We have had some exterior finish that has not stood very well, but I have been unable to find out where the material came from, because after six or eight years there was no record of what was actually used.

Q. Can you testify as to any particular structures where something of that nature has happened?

A. I don't know whether I would want to have that get into the record.

Q. We are here to make an investigation and we have a right to ask for that information, no matter whom it hits or how it turns out to be.

A. Well, there was one case where we had some exterior finish, that I supposed was put up in white pine——

51 Q. Had you specified white pine?

Mr. MATTHEW. The witness is not certain that it is California white pine or some other wood and I hardly think it ought to go into the record. The witness says he supposes it was white pine.

Mr. BURR. I may tie that in. If the court please, I may not be able to prove my entire case with one witness, but I will connect it up.

Examiner SHEPPARD. Very well, I will give you the opportunity.

By Mr. BURR:

Q. Can you give me the address?

A. I could; yes.

Q. Can you look up the address for me or do you recall it now?

A. I could state the circumstances, then if you want it, I can put it in.

Q. All right, please state the circumstances and if counsel wants to make a motion to strike on the ground of materiality——

Examiner SHEPPARD. I will let you state.

The WITNESS. This is a case where some exterior finish was put up about eight years ago and last year, when the building was being repainted, a small amount of this was found to be rotted and had to be taken down and replaced. The carpenter or contractor
52 who put it up, the general contractor, knew nothing about it; the foreman was dead and I had no way of tracing where they got the original material.

By Mr. BURR:

Q. Do you know what the specifications were?

A. Yes; the specifications were for—in that case were either white pine or cypress. The material that came down was not cypress, but it was a wood that resembled white pine, but we never carried the investigation so far as we would have if we had known what might depend on it.

Q. Have you the address of that place?

A. Yes.

Q. What address is it?

A. Is this for publication?

Q. It is not for publication; it is for the information of the Commission.

A. It was the Charles Street Meeting House that I was telling you about a moment ago.

Q. The balance of the material was not replaced?

A. No; that is still there, and that could be investigated.

Q. That could be examined to see what variety of pine it is?

A. Who could tell? I could not.

Q. You could not, but a technologist of wood could tell.

A. It would be interesting, and I would like to know myself.

Q. You don't know where that lumber shipment came from?

53 A. I could not tell you. I could give you the name of the contractor; he might replace it for you.

Q. Who was the contractor?

A. A. Hathaway Company. Of course, you understand, I do not want to get the contractor into any difficulty, and I don't want to get into any difficulty myself. I think they all did the best they could under the circumstances. The finish that was taken down was one of the large urns on the tower.

Q. That is Charles Street and what other street?

A. Charles Street at the corner of Mt. Vernon, Boston. It is only about twelve or fifteen minutes' walk from here.

Q. Are you a member of any architectural societies?

A. Yes; the American Institute of Architects, since 1901.

Q. Have you ever held any office in that society?

A. I have been treasurer of the local chapter and am now on the executive committee.

Q. Of the local chapter?

A. Of the local chapter.

Q. This society has chapters in all parts of the country?

A. All over the United States.

Q. Do the architects, as a rule, make themselves responsible for the genuineness of the variety of lumber which they specify as regards what goes into a building eventually?

A. I think they try to get what they specify, but they hold
54 the contractor responsible. I do not see how the architect could be held responsible.

Q. Are they technically trained, so that they could tell the difference in lumber or varieties that closely resemble each other, on close observation?

A. I do not believe that there are five architects out of a hundred that you would call technically trained to tell the difference between one wood and another; on the other hand, the other 95 percent would be in a situation, if they were asked to report on it, they could not give the correct information, one way or the other.

Q. Do they actually, when there is a shipment of lumber delivered for building purposes, check up on the character of the lumber that is delivered, that is, check it up with the specifications to see whether it is of the same species that they asked for?

A. I doubt if that would be done on ordinary work, unless there was an appearance of inferior material, then they would check it up very vigorously. Ordinarily if the material furnished reaches the general tone or general character of the specification, it is likely to be accepted, if it is properly handled. That is to say, they might use an inferior quality in certain places, where it would fit the work, provided the best quality were used in places where the best
55 quality should be used. For instance, on a front entrance, if you have wood carving in white pine, that would be where the contractor commonly would use the best quality of material; on the other hand, wood which is to be painted in a great many places in the building, where you would not need to use clear pine of the best quality, I don't think the specification would ever go into detail quite as much as that, except to see that wood for fine mouldings or carvings would be of best quality that the market affords.

Q. Does the National Association of Architects——

A. The American Institute of Architects is the name, that is a national association.

Q. Does it have rules of practice or rules of ethics outlining the duties of architects?

A. Oh, yes.

Q. Do those rules require that the architect himself be a sufficient wood technologist to be able to tell the difference between various varieties of woods?

A. I don't think so. They have got to depend, in a modern building, to get standard material and——

Q. It would be expecting too much of the architect to ask him to be a wood technologist?

A. Yes; but I believe the architect should be able to find out for the owner's benefit every detail that goes into a building.

Q. Would you be able to differentiate between California
56 white pine and Idaho white pine, if that material were placed ready to go into a building?

A. I would come pretty near finding out before I got through. But if you put two pieces side by side, I would not be able to say that I could tell, and I do not think it is too much to say that I doubt if ten percent of architects or even men in the lumber business could tell. I doubt if you could pick ten men out of a hundred who could tell if you put two pieces side by side.

Q. Do you, as a matter of practice, trust to the lumber man regarding the identity of the material which you get, as to the character of the lumber?

A. If the contractor is a man that you deal with, so that you know the quality of the work and material he is in the habit of furnishing, you would trust him in ordinary work.

Q. Aside from this Charles Street Meeting House, do you know of any other cases where pine that has been ordered as white pine, has failed to show durability when exposed to the weather?

A. Not any particular instance at this moment. There are cases that I know from hearsay, that I could name.

Q. I shall not ask that. I just want cases within your own experience.

A. No, sir.

Q. Would you be able by consulting your records, to find
57 out from your notes whether there are any such other cases?

A. I do not recall anything at this moment where anything has gone wrong.

Q. I would like to make a suggestion that you let me know this afternoon, if that would be time enough for you to look at any records you have of that character, or do you not make records of that description?

A. I don't remember of any other case that has gone wrong, and I would remember it if it had gone wrong, that is, as to the material.

Mr. BURR: That is all, you may examine.

Cross-examination by Mr. MATTHEW:

Q. You stated, Mr. Bourne, that it is quite difficult to distinguish Idaho white pine from California white pine?

A. I did not intend to say so.

Q. That is as I understood you, sir.

A. I said I was not sure that I could tell the difference if two pieces were laid on the table. I might, but I am not sure that I could.

Q. I thought you added that not one man out of ten could probably distinguish between two pieces, one of which was California white pine and the other Idaho pine.

A. From the sample that is lying on the table, I am not sure that he could.

58 Q. Can you readily distinguish California white pine from southern yellow pine?

A. Oh, yes.

Q. There is a marked difference there?

A. From what I have been told is California white pine; yes.

Q. You have stated that California white pine is customarily accepted and has been accepted in the last five or ten years in response to specifications calling for white pine?

A. I guess so.

Q. You would not accept southern yellow pine on specifications calling for white pine, would you?

A. No; except I believe we might put it in certain places, if the market would be crowded. There are places where you could use it, and you would not insist on the specification where the market could not furnish just exactly what you wanted.

Q. We admit, of course, that there are exceptional cases.

A. Yes; you have to give the architect and contractor a certain amount of leeway, depending on the market.

Q. But, speaking generally, you would not accept southern yellow pine in response to specifications calling for white pine?

A. No; I should say not.

Q. Would a lumberman deliver yellow pine on a specification calling for white pine?

59 A. They would not.

Q. Southern yellow pine differs in marked degree from California white pine and eastern white pine, does it not?

A. Yes. May I ask a question? When you referred to Idaho white pine you mean the same white pine that you are supposed to get from Michigan and Minnesota?

Q. I understood you to refer to Idaho white pine, and I am using the same term.

A. I consider it the same as Michigan or this other white pine.

Q. Then you make no distinction between Idaho white pine and Michigan white pine?

A. I do not know Idaho white pine.

Q. Do you know California sugar pine?

A. I would not be able to tell it; I have heard it is sometimes used.

Q. Can you say whether or not California sugar pine would be accepted by architects in response to specifications calling for white pine?

A. Depending on where it was going. It might be, as I said before, used in certain places as a substitute, but for good work, where you wanted clear white pine, even California white pine you would hesitate to use.

Q. Now, coming to my question as to sugar pine, ordinarily you would not accept California sugar pine in response to

60 specifications calling for white pine, would you?

A. Not if you knew it, or saw it when it was going in. Could I qualify that? I said two or three times that you have to accept what is on the market and it would depend on individual cases whether or not you would accept these substitutes.

Q. That will be understood to be the qualification in your answers, Mr. Bourne. All I am desirous of ascertaining is your inclination in this matter. You have referred to certain woods used for fine moulding or carving——

A. And very fine exterior front entrances of doors and sash.

Q. To some extent, you have these mouldings for interior work?

A. We have it for interior work, too.

Q. Likewise you have carvings in the interior?

A. Yes, as for mantles and cornices.

Q. Would you customarily accept California white pine for such work if the specifications called for white pine?

A. I doubt it. I think that would depend a good deal on the particular places where they are going.

Q. You said that you understood or assumed that the Idaho white pine is the same thing as Michigan white pine?

A. Yes.

Q. That is, you do not distinguish between them?

A. No, sir.

61 Examiner SHEPPARD. I thought the witness said he was not familiar at all with Idaho white pine.

Mr. MATTHEW. The witness said so.

The WITNESS. I asked the question before if by Idaho white pine, you mean what we would call Michigan or Minnesota white pine. Is it of the same quality?

By Mr. MATTHEW:

Q. That is you do not know, or are you asking the question here?

A. We do not use the expression Idaho white pine around here.

Q. I understood a question was put to you by counsel for the Federal Trade Commission as to whether you could readily distinguish between California white pine and Idaho white pine; am I in error in so recalling the question?

Mr. BURR. I think that is about the way I put it.

The WITNESS. My recollection is he did not use the expression Idaho white pine. I should say that there is a distinction between

California white pine and between white pine that I have seen growing in Minnesota, which is, I believe, real white pine.

By Mr. MATTHEW:

Q. That is, botanically, there is that distinction in the first instance?

A. Yes.

Q. Are you familiar with the lumber which is marketed
62 under the general name of Idaho white pine?

A. I should immediately raise the question if that was the same as the white pine I had seen in Minnesota.

Q. I am asking you if you are familiar with that lumber?

A. Not under that name, Idaho.

Q. You are not familiar with the term Idaho white pine?

A. No.

Q. And if it is a lumber which is actually yielded by a tree in Idaho, then you don't know whether you would accept lumber designated as Idaho white pine, in response to specifications calling for white pine?

A. I would have to look into it.

Q. I take it, that as an architect, you are not primarily interested in the botany of trees, but you are essentially interested in the quality and utility of the lumber from those trees?

A. I could not express it so well. That is true.

Mr. MATTHEW. That is all.

Redirect-examination by Mr. BURR:

Q. Do you regard varieties of pine, which are not white pine, as equally durable as white pine?

Mr. MATTHEW. Are you going into the botany of the case?

63 Mr. BURR. No; I am going into the particular distinction he has testified to.

Mr. MATTHEW. I think the question is objectionable on the ground of its indefiniteness.

By Mr. BURR:

Q. Do you regard California white pine as white pine?

A. No.

Q. You don't?

A. No.

Q. Do you regard the durability of California white pine as equal to the durability of northern white pine?

A. I have not any real instances to make me say absolutely that it is not so durable, but I should immediately hesitate to use it if the question were brought up by a contractor and I should tell him to try again to secure the northern pine.

Q. You mean on the ground of durability or on other grounds in the difference between the two woods?

A. I would question the durability, but I think the quality would show for a certain kind of finish. It is different in quality as to

hardness and evenness of the grain and those are the things that I would immediately question.

Q. You would question regarding California white pine, so-called, would you?

A. Yes. I would want to see samples that go into the particular construction.

64 Q. Do you regard a shipment of lumber made from sugar pine as compliance with specifications calling for white pine?

A. I have not had any instances of that, where that question has come up, so I don't attempt to answer that.

Q. I believe you did testify that you would regard a shipment of California white pine as compliance with specifications calling for white pine; did you say that?

A. No; I say, California white pine is often specified now for work where we previously would specify white pine, for the simple reason that the California white pine is in the market and so-called white pine is not—that is, for certain things, it is more difficult to get.

Q. I think, right in the beginning of my direct examination of you, that you testified that when specifications were made calling for white pine, that California white pine was frequently accepted as white pine.

A. That is very true, but we also specify California white pine.

Q. You also specify it by name?

A. We specify it by name.

Q. I am not interested in the question where California white pine is specified as California white pine, but I am interested, and my question is directed to the proposition where white pine is specified and California white pine is delivered; is that acceptable in

65 this vicinity as compliance with a specification for white pine?

A. I think it is often accepted when they don't know where it comes from.

Q. You mean it is accepted, not knowing that it is California white pine?

A. Absolutely.

Recross-examination by Mr. MATTHEW:

Q. Is the term, "California white pine", now pretty well known?

A. Yes; it is put in specifications.

Q. You said, in answer to a question by counsel for the Federal Trade Commission, that you might desire, in particular instances, to examine the particular supply of lumber that was offered in response to an order?

A. Yes.

Q. And if, upon examination, that seemed to satisfy your requirements as to quality, you would accept it even if you knew it was California white pine?

A. That often happens, depending on the market and depending on the place where the material is to be used.

Q. Depending on the market and the use to which it is to be put?

A. Yes, sir.

66 Redirect examination by Mr. BURR:

Q. Would you accept it as compliance with specifications, as regards interior finish quicker than you would for exterior use?

A. That depends on other things; it depends on the quality, and if it is for natural finish, or depends on the way it receives paint. A good many things have to be taken into consideration; you want to see samples of the material that is coming, before you accept it.

Q. Suppose you specify for your client white pine and it is for external use, and they deliver California white pine, would you regard that as compliance with your specification and accept it?

A. No.

Q. Now, then, if it was a specification for interior work and they supplied you with California white pine, would you accept it as compliance?

A. That would depend on the material that they actually supplied. You would not accept it as compliance with the specification absolutely, but I can imagine a good many instances where if the market was such, that California white pine was delivered, where white pine had been ordered, that the California white pine would be accepted rather than compel the contractor to go outside and perhaps

67 wait for the material. I imagine there would be places where the average architect here in Boston and anywhere in the United States——

Q. And yourself?

A. And myself would accept it.

Q. You are talking about interior work or both interior and exterior now?

A. Interior work. If I may add a word, I can imagine California white pine of a certain quality or grain, for certain purposes that might be better than an inferior quality of white pine.

Q. Referring still to interior use?

A. Yes; but, on the other hand, if you are specifying white pine, you want to know what you are getting, and you are expecting to get white pine, and I think that the best thing that could be done for the architect would be to enable him to get these things nailed down so that you know what you are getting when you specify it, by some simpler method than by this long way of hunting through the contractor or material man or supply man and finding out where this material is coming from and thus trying to ascertain in that way whether the material that you get is the material asked for. It is what is needed by every architect because the average architect cannot tell first off when the material appears on the building where it comes from or how long it is going to last, and he has to

68 depend on the standing of the material man who is furnishing the material. That happens all the way through the work, and they fall back—it is assumed they do—on the man that gets out

the material. You have, to a large extent, to trust your supply man all the way through, and I think the average architect does that in the ordinary practice.

Recross-examination by Mr. MATTHEW:

Q. It comes back substantially to this, does it not, that quality and utility are the essential criteria from the architect's standpoint?

A. Absolutely. You don't care whether a piece of wood grew in Michigan or Kamchatka providing it meets his requirements; the architect wants to be fair to his client, and if he specifies a certain thing he wants to get either that thing or something that is known and guaranteed in connection with it. In other words, he is given a certain amount of freedom and that kind of freedom is the difference between what I should say an engineer allows who insists that if a certain thing is specified you must get that certain thing, but an architect in Boston or all over the United States, for that matter, if they specify a certain thing they want a certain result and if you can get that result in quality or get it in durability you will have to make up your mind to take it, and it is quality that you

69 want in the interior and durability is what you want for the exterior. That is what you want, whether it is grown in a swamp or on the hillside.

Q. That is, it is immaterial what the botanical name of the particular tree might be if you get the quality and utility of what you desire; is that it?

A. Yes; but you should have a name for what you want, so that when you name a thing in your specification and when you contract for it you get it by name.

Redirect-examination by Mr. BURR:

Q. As an architect, you are interested in the difference between species to the extent that they represent differences in quality and other characteristics of the wood?

A. Certainly.

Mr. BURR. That is all.

(Witness excused.)

70 GEORGE R. TODD was thereupon called as a witness, and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your name, please?

A. George R. Todd.

Q. You are connected with William Curtiss Sons Company?

A. Yes.

Q. Of Milton, Massachusetts?

A. Yes, sir.

Q. Milton, Massachusetts, is about how far from here?

A. Just about ten miles; just outside of the city district.

Q. What is your line of business?

A. Retail lumber business.

Q. Do you wholesale any?
A. None at all.
Q. From whom do you buy, wholesalers?
A. Wholesalers and commission men, both.
Q. Do you buy direct from the lumber manufacturers at all?
A. In some cases.
Q. How long have you been in the retail lumber business?
A. Forty years.
Q. Always in the vicinity of Boston?
A. Always in Boston until we went to Milton.
Q. When did you go to Milton?
71 A. October of last year.
Q. Where was your place of business in Boston?
A. 30 Eustis Street.
Q. You carry white pine, do you?
A. Idaho, California sugar, and ponderosa.
Q. Do you carry California white pine, too?
A. We do not carry California white pine; we do not call it that; we call it California sugar pine.
Q. Do you know whether there is on the market a lumber which is distinct from California sugar pine, which is known as California white pine?
A. I do not.
Q. You do not know that?
A. I have been out there in that section and heard it called white pine, but we never handle it.
Q. You say you heard it called white pine?
A. No; California sugar pine; I have heard other people speak of it as California white pine.
Q. You think that when they spoke of California white pine they referred to sugar pine, do you?
A. I think so, but I would not say so definitely.
Q. Where do you get your Idaho white pine from?
A. From Idaho.
Q. Right from Idaho yourself?
A. That is where it is supposed to come from; that is
72 it is billed from.
Q. Do you mind telling us what company your source of supply comes from?
A. We buy it from numerous companies.
Q. When you get specifications for lumber and specifications read "white pine", what do you deliver?
A. In our class of business we do not get specifications. Our contractors and builders ordinarily order pine, and they just call it pine. They do not specify it as white pine; it does not come down to that minute question.
Q. Do you not get orders for white pine?
A. Only under the name of pine.

Q. You get orders, in general, as pine and not white pine?
A. We get orders for pine; that is right and we take it to mean white pine. We have North Carolina and southern white pine and pondosa, but they are used for different purposes.
Q. What if there is an order given you for pine, would you think that you could fill that order with North Carolina pine?
A. No, indeed.
Q. Pine does not mean North Carolina pine?
A. No. We take the meaning of pine to be Idaho; that is the only one we carry for that particular purpose.
Q. Do you mean that when a man orders pine that you could not give him pondosa, that is pine?

73 A. The only grade of pondosa we carry is only fit for box-boards; we have the low grade no. 4 common—that is the only kind we carry and that is meant for boxboards.

Q. What section do you get that from?
A. I could not tell you. We have a number of different shippers; we do not specify where it is coming from, we just order pondosa.
Q. And what do you get, no. 4 common?
A. No. 4 common, that is all.
Q. You never did buy anything under the specification of California white pine?
A. No, sir.
Q. You do not carry California sugar pine either?
A. Very little. It is only in the common grade and that is the only thing we sell it for.
Q. Where do you get your sugar pine from?
A. I could not tell you where we get it from; we get it from the millman and the mills do not specify.
Q. You do not know whether it is California or where it comes from?
A. We do not know what State it comes from but we suppose it is California.
Q. How long has sugar pine been on this market, so far as you know?
A. I should say a little over five years, maybe more than that; time goes by very fast. We started in years ago with Michigan

74 pine, and that is now almost entirely gone.

Q. When did you cease to get your Maine white pine lumber supply from New England?
A. You mean the eastern pine?
Q. Yes.
A. We have had it within less than five years and the only reason we stopped getting it is because the quality ran down.
Q. Did you find it to be second growth or third growth?
A. Second or third growth, running small.
Q. Did you ever buy it from Canadian Provinces?
A. Yes; some.

Q. That is good quality still, is it not?

A. We have not had any since, as I tell you the last four or five years, when we shifted to Idaho.

Q. And the Idaho quality is satisfactory?

A. It is better than the eastern, we claim.

Q. You sell pine for patterns, do you?

A. Sugar pine; practically, that is the only purpose we use it for, pattern stock.

Q. Do you think that is preferable to Idaho white pine for patterns?

A. We do, because of the clearness of it; the only bad feature is the gum part; when you cut into it, you might run into that; it is not seen from the surface.

Q. You mean a pitch pocket?

75 A. Yes; pitch pockets.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Todd, did you ever furnish sugar pine in response to an order for pine, without any qualification?

A. If they ordered pine for pattern work, yes.

Q. So you receive orders for pine without any qualifying term?

A. Except the grade.

Q. Except the grade. And if you know that it is desired for pattern purposes, you supply sugar pine?

A. Yes.

Q. If you understand that your customer, however, does not desire to use the lumber for pattern purposes, you would supply the Idaho white pine?

A. Yes.

Q. Do you receive any orders at all for white pine, as such?

A. No; it is not specified as just white pine. Our main business is for speculative building—home building, and we know about what the builder requires, and the only thing we ask them is the grade that they wish.

Q. You have been in this business, I think you said, approximately 40 years?

76 A. Yes.

Q. At one time you carried a great deal of Michigan pine?

A. Yes.

Q. Was that likewise sold in the same fashion; that is, in response to orders for pine?

A. Just the same way.

Q. At the present time you are unable to get Michigan pine of the quality your trade requires, as I understand?

A. Yes; and the price both. The price would be prohibitive here for the use we have for it.

Q. That means that Michigan pine is practically off the market here?

A. Yes.

Q. Is it true of the other pine of the same species? I am referring now to what has been commonly termed either eastern white pine or northern white pine, meaning by that the pine of the New England States and of the Northern, Middle, and Western States—is practically all that pine off the market?

A. No; there is some here, but it is so small and coarse that we cannot use it for the purposes we want.

Q. The quality is decidedly inferior to the quality you require?

A. Yes.

Q. And it is for that reason that you have turned almost entirely to Idaho pine for those purposes?

77 A. That is right.

Redirect examination by Mr. BURR:

Q. Have you ever examined the white pine coming from the Canadian forests?

A. Examined it? You mean when we received it?

Q. Yes.

A. Yes, sir.

Q. That is virgin forest up there, is it not?

A. I do not know whether it is at the present time or not; whether they have cut their old virgin stock all off I could not state.

Q. When was it you stated you had your last shipment from the Canadian Provinces?

A. Canadian and New England States, both; if we could not get it at one place we got it from the other, but I do not think we had any in the last four years.

Q. Would you testify that there is no virgin growth coming from Canada?

A. I could not state.

Q. There might be white pine up there that had the original quality, for aught you know?

A. There might be.

Q. That is higher in price than the Idaho white pine?

78 MR. MATTHEW. The witness says he does not know.

Mr. BURR. He might know what the prices are.

The WITNESS. No; we have not paid any attention to New England or Canadian markets since that time.

Q. You have not interested yourself in the price then?

A. No; we confine ourselves to Idaho since we made the change.

Q. Would you testify that there was no virgin growth coming from the Lake States of northern white pine?

A. No; I would not state that.

Mr. BURR. That is all.

(Whereupon a recess was taken till 2:00 o'clock p.m.)

79 AFTER RECESS

2:00 p.m.

H. ALLEN BAILEY was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Bailey, what is your business?
A. White-pine lumber.
Q. Whereabouts do you carry on your business?
A. 166 Fifth Street, Chelsea.
Q. How long have you been in the lumber business?
A. About ten years.
Q. It is entirely a retail lumber business, is it?
A. Entirely retail.
Q. Have you been there for that entire length of time?
A. Yes, sir.
Q. What were you doing before that?
A. Just got out of school.
Q. Are you dealing in white-pine lumber?
A. Yes, sir.
Q. Where do you get it from?
A. The New England States, Canada, California and Oregon, Minnesota, Wisconsin and Idaho, and some little from Pennsylvania.
Q. You get white pine from all those localities?
A. So-called white pine from some of them.
80 Q. You sell it as white pine?
A. Yes, sir.
Q. Irrespective of what forest it comes from?
A. All depending on what the job may call for.
Q. Suppose I come in and order lumber and specify white pine, what do you sell me; do you sell me Idaho, California, or New England?
A. If I could have the pleasure, I should like to take you over in the yard and let you pick your own, telling you what you are buying.
Q. What would be the nature of what you would tell me?
A. Just what do you mean by that?
Q. Suppose I came in there and I said I wanted to buy some white-pine clapboarding, what would you tell me?
A. We do not carry any of that; we only carry the lumber, we do not carry the manufactured article.
Q. Do you carry boards?
A. Boards? Yes.
Q. What else?
A. Planks.
Q. What else?
A. That is all.
Q. That is all; boards and planks, no scantling?
A. No scantling.

Q. And no beams or anything of that kind?

81 A. Once in a while, squares, which at times are used for beams.

Q. What if I should come in and ask for certain specifications as to length and breadth of board and ask for white pine, what are you going to furnish me; will you furnish me what you have in stock of any of those varieties of white pine or do you choose what the selection is to be, or what method do you employ?

A. The selection depends entirely on the man and what he is going to use it for.

Q. Is it any of your business what he is going to use if for, as long as he specifies the kind of wood he wants?

A. Yes; sometimes it is.

Q. All right, tell me all about it; just what do you do in that case?

A. If he calls for white pine or you might call it by the botanical name of Pinus strobus.

Q. But you do not call it by the botanical name very often, do you?

A. No.

Q. Suppose I do not ask for Pinus strobus but ask for white pine, what do you give me?

A. At the present time you would get the California white pine.

Q. Is that also true of all the retailers that you compete with as well as yourself?

82 A. I think it is true of most retailers today.

Q. And that would be true if I came to your yard today?

A. If you just asked for white pine, but we would specify that it was California white pine in selling it to you.

Q. How do you specify that, orally or in writing?

A. Orally.

Q. You have stated that you buy white pine from several localities; what is the proportion, roughly speaking, taking it over a period, say, of the last couple of years, what is the proportion of lumber that you buy from New England, referring now to white pine lumber?

A. That would be pretty hard to say offhand; without consulting records I would say about 35 percent.

Q. Thirty-five percent would be your best estimate?

A. Yes.

Q. That would be strobus?

A. Yes, sir.

Q. How large a percentage would you say would California white pine, or would you not consider that as being white pine for the purposes of your answer?

A. We do not consider that as white pine.

Q. When you said strobus 35 percent, you were referring to Idaho and northern white pine?

Mr. MATTHEW. I thought he said that was New England.

Q. Did you mean to say in your answer that the 35 percent
83 of strobus would not include California?

A. No.

Q. The 35 percent was New England strobus?

A. Yes.

Q. Would there be any other strobus?

A. There would be another proportion of strobus from other countries.

Q. Where?

A. Minnesota and Wisconsin.

Q. Any from Canada?

A. Not from Canada.

Q. This Minnesota and Wisconsin, that is strobus of second growth?

A. I could not say, but I should think it was a second growth.

Q. Would you say it was second growth?

A. I would say so.

Q. What would lead you to that view?

A. The size of the lumber.

Q. What sized lumber is coming in now, in diameter?

A. An average of 9 inches.

By Examiner SHEPPARD:

Q. You mean by that the diameter is 9 inches?

A. No; in width.

Q. That is the diameter?

A. Yes.

84 Q. The width of the tree?

A. The width of the manufactured article, say in inch boards, it would be nine inch average.

By Mr. BURR:

Q. Are you getting any from Canada?

A. Yes; we do.

Q. That is virgin timber in Canada, the strobus that you get from there?

A. I would not say it was; no, sir; there may be some that is coming in, but it is a pretty late day to get much virgin timber from anywhere—genuine white pine.

Q. Is it genuine white pine that you are buying from Idaho?

A. No. The Idaho pine we handle would be only no. 3 common; we do not carry it in the better grades.

Q. Do you regard that as genuine white pine or do you not?

A. It is so called; I do not know.

Q. You do not know. Do you regard California white pine as genuine white pine?

A. No; I do not.

Q. For what reason? Do you draw a botanical distinction, or do you think there is a distinction in the type of lumber itself?

A. There is a distinction in the type of lumber itself.

Q. What would you say that consisted of?

A. More in the nature of yellow pine.

85 Q. What is the distinction in characteristics?

A. The texture.

Q. Is it not as soft or is it softer?

A. It is not as soft as the genuine white pine.

Q. What else; is there any other distinction or characteristic?

A. No; I think that is enough, the lasting qualities and durability.

Q. You think there is a distinction in lasting qualities between genuine white pine and California white pine?

A. In the length of time it has been in this section, it is hard to determine that from our experience, but I would not say that it lasts as long as the genuine white pine.

Q. In your judgment, then, it would not last as long?

A. No; it would not.

Q. When you refer to genuine white pine, are you also referring to Idaho white pine?

Examiner SHEPPARD. I thought he did not.

Mr. MATTHEW. He said he did not.

A. No; I did not.

Q. From what companies, if you can recall, are you buying the northern white pine?

A. I cannot recall, because we buy from a good many.

Q. Do you buy it from the Weyerhaeuser group?

A. Some of the Idaho.

Q. Not the northern?

86 A. No; we do not buy any northern pine from them.

Q. You do not know whether they are furnishing virgin white pine or not—virgin strobus from the north?

A. No; I do not.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Examiner SHEPPARD. Before you start let me put a question or two.

By Examiner SHEPPARD:

Q. What do you mean by this word strobus, Mr. Bailey? You know I have no technical knowledge of this game, and I do not know anything about it, and I want to know what these things mean, as I go along; what is strobus; how do you spell it?

A. S-t-r-o-b-u-s, I believe.

Q. What does that mean?

A. As near as I can tell you, it means genuine white pine.

Q. It is the botanical name?

A. I believe it is.

Q. The technical name?

A. The technical name.

Q. In your judgment, and from your knowledge of lumber and the things connected with it, where does this genuine white pine or strobus come from that you are talking about?

A. From Michigan, Minnesota, some parts of Wisconsin, I
87 believe; I think some from Idaho and some from Canada and some sections of New England.

Examiner SHEPPARD. All right; you may go on now.

By Mr. MATTHEW:

Q. You just stated that you think some part of the lumber that you referred to as Pinus strobus comes from Idaho?

A. Yes, sir.

Q. But you do not know that as a matter of fact?

A. No; I do not.

Q. Whether that lumber does come from a tree which is known as a Pinus strobus, botanically?

A. No; I do not.

Q. I assume, Mr. Bailey, you are not interested particularly in the botanical names of these trees, you are interested mostly in the utility and quality of the lumber?

A. I am interested in that, but I cannot remember all the names of them, but as occasion arises, I am interested in the botanical names.

Q. But as far as your business as a retail lumber dealer is concerned, your prime interest is the quality and utility, including in that the durability of the lumber that you furnish to your customers?

A. Yes, sir.

Q. When you order lumber from Idaho do you order it under the name of white pine or Idaho white pine or under what
88 designation do you order it?

A. Idaho white pine.

Q. When you sell it do you sell it as Idaho white pine, or as white pine?

A. As Idaho white pine.

Q. When you order California white pine, do you order it under that name?

A. I order it as California white pine and sell it as California white pine.

Q. You order it as California white pine and it is supplied to you by the dealers as California white pine and you sell it as such?

A. That is right.

Q. Do I understand that you do not deal in southern yellow pine?

A. No, we do not.

Q. Do you ever handle California sugar pine, so-called?

A. Yes.

Q. Under what name do you sell that pine to your customers?

A. As sugar pine.

Q. You never sell it as white pine?

A. Never.

Q. You do not know whether that is classified as a genuine white pine or something else?

A. I believe it is classified as a member of the white pine
89 family.

Q. But you would not sell lumber from the sugar-pine tree as white pine, would you?

A. No, you could not very well.

Q. Whether it is genuine white pine or not, you think it would cause confusion if you sold it as white pine?

A. I do.

Q. And you think, in order to avoid any possible misunderstanding or confusion on the part of your customers, you should continue to sell that as sugar pine?

A. I think I should.

Mr. MATTHEW. That is all; thank you.

Redirect examination by Mr. BURR:

Q. Now, the Idaho white pine belongs to the white-pine group or white-pine family?

Mr. MATTHEW. He said he did not know.

A. I do not know.

Q. You know that sugar pine belongs to the white-pine family, do you, is that right?

A. Yes, sir.

Q. I think you testified in the beginning of my direct examination of you that if a customer asked for white pine, he would be likely under certain circumstances in connection with the order that
90 he might leave with you, for certain specifications, he might receive on that order for white pine, California white pine, that is true, is it?

A. It is true to an extent; yes. We try to know what the customer is going to do with his lumber.

Mr. BURR. That is all.

By Examiner SHEPPARD:

Q. Would you tell the customer that it was California white pine when you sold it to him?

A. Yes; we would always tell him that it was California white pine that he was buying.

By Mr. BURR:

Q. Does the ordinary customer distinguish between the various varieties of pine, in a technical way, would you say?

A. No; he does not.

Q. When he gets a wood that is sold to him as California white pine, he regards that as white pine, does he not?

Mr. MATTHEW. Just a moment, can he speak for a customer? It seems to me he cannot be expected to testify to what a customer would regard that wood as. It seems to me he should confine his answer to what he does in the trade and not what may be in the mind of the customer.

Examiner SHEPPARD. Yes; I do not know that this man can testify as to what is in the customer's mind; I will let you testify what you know yourself.

A. I was going to tell the gentleman that I can't testify for
91 others.

Q. When you tell him that he is buying California white pine, you do not tell him that that is the genuine white pine, do you?

A. At times, we do.

Q. Not as a rule, do you?

A. Fully 80 percent of the customers that we sell California white pine to have been told that it is not genuine white pine.

Q. They have at one time or at another time been told?

A. Yes; but not on each particular sale.

Q. What class of customers do you sell, contractors or what?

A. Contractors, finishing mills, small carpenter shops, and the industrial trade.

Q. The industrial trade gets pattern stock, do they?

A. Yes.

Q. That is largely sugar pine, is it?

A. No; we sell very little sugar pine to the pattern trade.

Q. What do you sell them?

A. A good part is our own New England stock.

Q. The buyers of mill stock form how large a percentage of your customers?

A. Finishing mills, you mean?

Q. Yes.

A. At least 50 percent.

92 Q. Of the quantity of lumber or of the number of buyers, do you mean?

A. Buyers.

Q. Number of buyers?

A. Yes.

Q. Do they buy in larger quantities, most of them, than the average customer, these finishing mills?

A. I should say it was about evenly distributed.

Q. Now then, these finishing mills, they are men who are more familiar with the distinction between the species of woods than the ordinary buyer, are they not?

A. That I could not say.

Re-cross-examination by Mr. MATTHEW:

Q. How long has the term "California white pine" been used in the trade here, Mr. Bailey, to your knowledge?

A. Five or six years.

Mr. MATTHEW. That is all.

(Witness excused.)

JOHN J. CONNELLY was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your full name?

93 A. John J. Connelly.

Q. Your business is what, sir?

A. Yard manager for the Malden City Lumber Co.

Q. You live at Malden, do you?

A. Yes.

Q. How long have you held that position?

A. I should say 15 years.

Q. Are you interested with the company, too?

A. No, sir.

Q. Prior to that were you in the lumber business?

A. Well, for 5 years more—20 years in the lumber business altogether.

Q. Your company deals in white pine, does it?

A. Somewhat.

Q. Do you do millwork?

A. No, sir.

Q. Do you sell to millwork houses?

A. No, sir.

Q. What is your line of trade?

A. Mostly contractors and jobbers.

Q. You deal with the representatives of the ultimate consumers, is that the idea?

A. Yes.

Q. You buy white pine, do you?

A. Yes.

94 Q. Where do you get it?

A. Very little from New England; the biggest part is from Idaho.

Q. Do you buy California white pine too?

A. No, sir.

Q. None at all?

A. No, sir. Practically all we handle is Idaho and a little eastern pine.

Q. Did you concern ever handle California white pine?

A. Not to my knowledge.

Q. You are familiar with the wood, California white pine, are you?

A. No; I am not.

Q. Do you ever receive boards of California white pine when you get Idaho white-pine shipments?

A. No; I figure it is all Idaho.

Q. You figure it is all Idaho?

A. Yes, sir.

Q. Do you come in competition—does your yard come in competition with California white pine?

A. Not that I know of. All we ever get is pine—it is usually called pine, the "white" is usually left out of it.

Q. Are you a customer of the Long Bell Company in California?
A. The Long Bell?
Q. Yes.
95 A. We have bought flooring from them, but that is not in the pine line.
Q. What is that?
A. We have bought oak flooring.
Q. From whom do you buy your northern white pine?
A. It is so long since we had any; that is, bought any—it used to be from a man named Ostrander. I guess he used to pick it up here and there.
Q. Your white-pine stocks are not northern white pine; is that right?
A. No; they are not.
Q. What are your stocks of white pine?
A. Idaho and a little eastern pine.
Q. You do not call eastern pine and northern pine the same thing?
A. Eastern pine is what I would call New England pine.
Q. You do not buy any white pine in the lake States?
A. Not that I know of.
Q. How large a percentage of your white pine is from Idaho?
A. I should say 90 percent.
Q. Does your firm regard that as genuine white pine?
A. As far as I know.
Q. When some one comes into your place and wants stock from your yards of white pine he is likely to get eastern white pine or Idaho white pine, as it may happen; is that right?
96 A. I suppose so.
Q. You make no distinction between the two?
A. Only in grades.
Q. That is no. 1 or clear or no. 4, or what not?
A. Yes.
Q. Can you tell whether that is the customary situation in the trade in your vicinity?
A. As far as I know, I guess the majority in that vicinity are putting out Idaho pine, because there is very little——
Q. Putting out Idaho white pine and the other white pine without distinction, you mean?
A. Yes.
Q. How about California white pine?
A. I could not tell you about that.
Q. Do you have any competition from California white pine?
A. No.
Mr. BURR. That is all.
Mr. MATTHEW. No cross-examination.
(Witness excused.)

ADOLPHUS C. SWEEZEY was thereupon called as a witness, and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your business?

97 A. Lumber business, retail.

Q. Where are you located?

A. Malden, Massachusetts.

Q. Are you the brother of the Sweezey that I called?

A. I am.

Q. Do you deal in white pine, sir?

A. I do.

Q. What variety of white pine do you carry?

A. Mostly Idaho.

Q. Do you carry California white pine also?

A. No; we do not.

Q. You do not carry it at all?

A. No.

Q. Why is that?

A. There is no call for it—no demand for it.

Q. Did you ever carry it?

A. No; we did not.

Q. Have you had any experience with it?

A. Very little. We have had—I will take that back—we had some California clapboards in the past, but not in the general line of finished woods.

Q. Did you have an opportunity to check up to see what sort of satisfaction it gave?

A. No; we did not.

Q. Did you check up as to the satisfaction that your lum-

98 ber gives anyhow?

A. I don't know what you mean by checking up on it.

Q. I mean, do you have an opportunity to find out whether your customers are satisfied with what they receive?

A. Oh, yes; we know that.

Q. You get kicks occasionally, I suppose, like most everyone does?

A. Yes.

Q. Are you, as well as the other Mr. Sweezey, a millman?

A. No; he is the millman.

Q. He is the millman and you are not?

A. That is right.

Q. Do you sell to millmen?

A. Very little; it is mostly to contractors.

Q. Do you sell pattern stocks?

A. I do not.

Q. Do you regard genuine white pine as being equal to, inferior, or superior to the California?

Mr. MATTHEW. I object; he said he knows nothing about California white pine. He never dealt in it and it seems to me he ought not to be asked that question; he is not properly qualified.

By Examiner SHEPPARD:

Q. Mr. Sweezey, have you dealt in and have you sufficient knowledge of California white pine to answer the question?

99 A. No personal knowledge of it at all.

Examiner SHEPPARD. I will sustain the objection.

Mr. BURR. I think that will be all.

Mr. MATTHEW. No questions.

(No cross-examination.)

Mr. JOHN J. CONNELLY. I want to say that we carry pondosa in clapboards.

JOHN J. CONNELLY, resumed.

By Mr. BURR:

Q. Do you regard pondosa clapboards to be different from California white pine clapboards?

A. I can tell you about Idaho pondosa but not California.

Q. Do you regard them as different?

A. I would not call pondosa a white pine.

Q. Why?

A. It looks more of a hard pine than a soft pine; it has not got a white pine appearance.

Q. Do you notice more difference between the heart wood and sapwood of the pondosa than white pine?

A. I will tell you one is handled all bundled up and you handle the other board by board; this is all tied up in bundles, the pondosa clapboards; the Idaho is handled individually.

Q. Does that make any difference, in the knowledge you have, as to the type of the lumber?

100 A. Yes; I should say it is a good deal harder texture.

Q. I get that; but the last question I asked you, I believe, was whether you notice more difference between the heart wood and sap wood in the pondosa than the heart wood and sap in the Idaho?

A. I think there is more heart and sap in the pondosa than Idaho.

By Mr. MATTHEW:

Q. In what territory do you get your pondosa pine; what section of the United States do you get your pondosa?

A. I could not state that; I suppose it comes from the western part of the country.

Q. You do not know the actual source of the pondosa pine?

A. No; we only handle the Idaho.

By Mr. BURR:

Q. What company do you buy that from—the pondosa?

A. The Pacific Coast Lumber Company.

By Mr. MATTHEW:

Q. But you buy that in Boston here, do you not?

A. Yes.

J. E. DOWNES was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

101 Q. Mr. Downes, you are connected with what lumber company?

A. The Downes Lumber Company.

Q. What office do you hold in the corporation?

A. I am the president and treasurer and general manager.

Q. You are in the retail business, are you?

A. Yes.

Q. And located where?

A. At Boston.

Q. South Bay Avenue, is it?

A. That is one of our yards; we have three yards.

Q. You handle California white pine and other varieties of so-called white pine, do you?

A. Yes.

Q. What are your sources of supply?

A. We get pine from different parts of the country here—different kinds of pine.

Q. All right, will you be kind enough to describe them?

A. May I tell my own story?

Q. All right, sir.

A. In this vicinity they have what they call eastern or northern pine; that is, pine that comes from here and the St. Lawrence River and from Lake Champlain to the coast; they call that northern and eastern pine, and most of those who testified here testified that way.

By Examiner SHEPPARD:

102 Q. Would that take in New Brunswick?

A. That would take in New Brunswick, yes, and the southern part of Canada except near the Lakes.

When you get over by the Lakes, and come down along the Lakes, you have run into what they call the Canadian soft pine and further along, you get Minnesota and Wisconsin pine.

By Mr. BURR:

Q. That is white pine, all of it?

A. I am describing white pine now.

Then, when we go further along west, we get into the inland empire, and get some more white pine, known as Idaho white pine; then we get to the coast and get some more white pine, and we buy the California sugar pine, that is what we sell for white pine. Then there is another pine that we get out of California, now known as California white pine and which we do not think is the right name for it; that pine has a hard texture, yellowish color, a little heavier in weight and more apt to check and split than the California sugar pine, which is known to us as the clear white pine, and that is what we call it.

Now, the other pine, the California white pine, that is the name by which it is commonly known in this territory, is similar pine to what is called in the inland empire ponderosa, or, as we call it now, pondosa. Of course, we get yellow pine from the South, real yellow pine.

103 Q. That is much harder than the California white pine?

A. Yes; much harder.

Q. Southern yellow pine is much harder than California white pine, is it not?

A. Yes; although the sap wood of yellow pine in color and texture—it would take an expert to tell the difference between the sap wood yellow pine, soft texture, and a similar board coming out of California known as white pine, or Idaho known as pondosa.

I am trying to make this clear. I heard a witness say he did not know anyone who could tell the difference, so that there will be no misunderstanding of just what is in my mind, I say——

Q. You say it would take an expert to tell the difference between a California white pine board and a southern yellow pine board?

A. I did not say that. You did not follow me.

I said, if you take the sap wood of the southern yellow pine, the light soft texture sap wood, and then take a similar board—and you can find lots of them—that will come out of California or out of the inland empire, and it would take an expert to tell the difference.

In other words, you would have to get a microscope and look right at it to see the difference in the texture. I am not up in the

104 botanical language, or in the botanical end of this at all, and I do not care anything about that. I could bring you three boards right here, and unless a man that I would call an expert—a man examining them in a laboratory under a microscope—he could take those three boards and he could not tell and you could not tell from color, from weight, and you could not tell from texture—and by texture I mean softness or hardness—and you could not tell from the grain, although you might be able to tell by the taste.

Q. You are talking about southern yellow pine and ponderosa, are you?

A. And California white pine.

Q. And the same would be true of the pondosa up in Idaho, would it?

A. I said that.

Q. California yellow pine and pondosa, as you call it?

A. We do not like to call it yellow pine, because it really is not that; I am talking from the retailer's point of view, not botanically.

To our estimation, it is not really a yellow pine, for the reason that the heart of the yellow pine is a great big, solid, substantial wood of peculiar color, quite heavy, hard in texture, has a taste to it from pitch different from that which you will find in the California white pine or the inland empire's so-called pondosa pine.

Q. Do you draw a distinction between the California white
105 pine, so-called, and the pondosa of the inland empire, in texture?

A. No; I do not.

Q. You have customers, have you, who come in ask for white pine?

A. Yes.

Q. When they ask for white pine, what do they get? If they do not specify Idaho white pine, northern white pine, California white pine, what do you sell them?

A. You probably noticed that the other witnesses hesitated in answering that. They really did not know how to answer that, simply because when a man asks for pine, unless you are familiar with the wants of that customer, and there are so many varieties of pine, that he does not understand, you really have to ask him for what purpose he is going to use it; the first question is what he is going to use it for; the next question is how much does he want to pay.

I will assume that you are going to ask me for some white pine. I will answer as intelligently as I possibly can.

You call me up and say that you want two pieces of white pine. I do not know you at all, and the first question I would say to you is, "What are you going to use this for"? After you tell me, then it would be up to my judgment to know what to give you.

Q. Suppose I asked for exterior stuff.

A. I would ask you then whether you wanted a good pine
106 or a cheap pine or the best pine. I really can answer you better if you do not know anything about it; I can answer you better than if you do; I think I can sell you then, but if you do know something about it, then I do not think I can.

Q. Suppose I say I want some white pine at the best price you can make me.

A. In other words, you want the best pine you can buy?

Q. I want white pine at the best price I can get.

Mr. MATTHEW. The lowest price, do you mean?

Mr. BURR. Yes.

A. Are you going to use it for outside purposes?

Q. Yes.

A. We have a pine with a sound knot in it that comes from the East; that is pretty good pine; we have a pine that we call an Idaho pine for outside finish, with a small knot in it; that is good pine; they are both at the same price, and I would give you one as quick as I would the other.

Q. Do not customers that ask for white pine sometimes get California white pine, when they are talking price to you and want to get a low price?

A. Not if I know anything about it.

Q. They do not get it?
A. No; because they would come back.
Q. Why?
A. Too hard.

107 Q. In other words, you do not sell California white pine as white pine to a customer that wants white pine?
A. Not if we want him back again; he will send it back, anyway.
Q. Have you ever had it come back?
A. Oh, yes; surely. I only sell about two million feet of this a year.
Q. Of what?
A. White pine.
Q. California white pine?
A. No.
Q. You only sell two million feet of what, sir?
A. Pine.
Q. What kind of pine?
A. All kinds, if you are going to include yellow.
Q. What do you include in the two million feet?
A. I include in the two million feet the eastern country pine that I described, the sugar pine, California white pine, Idaho white pine, and the pondosa pine from the inland empire.
Q. You are including all of those as part of your two million feet of pine?
A. I include all of those in the two million feet of pine; yes.
Q. You did not say anything about southern yellow pine?
A. About a million feet.
Q. You did not mention that——

A. Oh, I would say about two million feet of southern
108 yellow pine that comes from North and South Carolina.

Q. You sell 2,000,000 feet of pine, you say, exclusive of the various varieties of southern pine, is that right, hard pine?
A. That is right.
Q. You regard all those others that you mentioned as soft pine, in that two million feet?
A. We regard it as soft pine; yes, sir. We have educated our customers to the fact, after bringing back thousands of feet of lumber, that there are two kinds of soft pine today——
Q. Yes.
A. One is pondosa and the other is white pine.
Q. Pondosa, you say, is too hard and comes back if you sell it as white pine?
A. That is right. Still, at the same time, there are a lot of people that might use it, but there are a lot of people who won't use it and we have to be careful about that.
Q. Are there not a lot of people that get it for white pine?
Mr. MATTHEW. From this witness, do you mean?
Mr. BURR. From this witness.
A. I do not think so.

People that are buying pondosa pine from us today know they are getting pondosa.

Q. I am talking about California white pine, I am talking about that, don't any of your customers ever get California white pine
109 from you, on occasion, under an order for white pine?

A. No.

Q. Never?

A. No.

Q. Are you sure of that?

A. They get it as California white pine.

Q. Do you say, "This is California white pine."

A. Yes.

Q. If they ask for white pine, and they get California white pine——

A. We tell them this is California white pine and they immediately say, "What do you mean by that?" and we have to tell them.

Q. Do they always say ,"What do you mean by that?"

A. If they know their business.

Q. Have you not a lot of jay birds that don't know their business?

A. They get educated quick in this business.

Q. Yes, they get educated by sad experience, and they get it by taking California pine for white pine.

Mr. MATTHEW. The witness has not said that. He said specifically that he does not sell California white pine when he is asked for white pine.

Q. You are positive, sir, that there is no California white pine that goes out of your shop without an explanation to people
110 who want white pine?

A. Those are my orders; I could not say I am positive.

Q. How long has that been your orders?

A. It has always been that way ever since I have known anything about the business.

Q. Do you sell white pine for pattern stock at all?

A. Yes.

Q. What do you sell for that?

A. We sell the eastern pine, the better grade of eastern pine and we sell the California sugar.

Q. Do you sell Idaho white pine at all for patterns?

A. No, I do not.

Q. Did you ever have it tried out and find it unsatisfactory, or what is the reason?

A. I may have tried it out 15 or 20 years ago.

Q. Is California white pine suitable for pattern stock?

A. I would not advise it.

Q. Do you know of its being tried in experiments along that line?

A. I think they have experimented and they found it unsuitable.

Q. Do you know anything about that of your own knowledge?

A. Yes.

Q. I see.

Could you relate the circumstances at all?

A. Years ago, when I was selling lumber on the road, naturally I would see the workings of some of the lumber, and this California white pine, they claim it splits and the resin or pitch comes out and it does not take the cutter's knife. They do not care for it.

111

May I just say another word about this pine, while I am here?

Q. Yes.

A. Only last Wednesday I was talking with one of our largest pattern dealers, and I said to him, "You haven't bought any pine from us recently", and I said, "What is the trouble?"

"Well", he said, "we found somebody that has got a little softer pine than you have." He had been using this eastern country pine, so I said, "Where did he say it was from?" He said it was from the Lakes, Tonawanda. He said it was a virgin cut they had just found and they had to get a great deal more money for it. He was trying that out and found it very satisfactory but did not know whether he could continue to use it on account of the price.

I said, "Why do you not use sugar pine?"

He said, "I tried that. I had it from you. Sometimes you get it soft, sometimes you get it hard."

I said, "I am going to try to clear that up for you. You haven't used any of that, as I remember, for years, about 15 years ago you had that?"

And he said, "Yes."

112

"You only buy it occasionally?"

He said, "Yes."

So I said, "You come over to our yard and let us show you some real soft sugar pine."

He said, "I have had the California white pine."

I think what the trouble has been is that people from the California pine associations have not been careful enough in selecting and assorting their white from sugar pine and the result is when a man would buy a load of this California sugar pine, they would get a few pieces of the white pine in there and the pattern maker would drive his knife in and it would cut or break or split and then get disgusted and condemn the whole business.

I said to him, "We will give you every piece of soft sugar pine. I think you better use it and save a lot of money, and as far as the grade is concerned you can get it a great deal better."

He promised to see me.

Q. When you referred in that narration to white pine, you were referring to California white pine?

A. We were talking about California white pine, the pine that comes from California; let us put it that way.

Q. The contrast that you made was between sugar pine——

A. And California white pine.

Q. That is the same, do you understand, as ponderosa?

113 A. Yes.

Q. Do you have an opportunity to ascertain what your competitors are doing in the way of selling California white pine? Do you have an opportunity to know about that?

A. Yes.

Q. Is California white pine sold in competition with your yard as white pine or under orders for white pine?

A. No; it is sold in competition with ponderosa.

Q. California white pine is sold in competition with pondosa pine?

A. Right.

Q. By pondosa you mean, do you, that part of the lumber marketed from the ponderosa tree, which goes under the trade name of pondosa from the northwest Pacific coast; is that right?

A. What they call the inland empire.

Q. It might also come from northern Oregon, might it not?

A. Yes.

By Examiner SHEPPARD:

Q. I am a little confused, Mr. Downes, as between what is known as soft and hard pine; do you refer to the southern yellow pine as soft pine?

A. No; in this section of the country—I do not blame you being confused—I have sat right in lumber conventions and wondered whether I was in one part of the country or another, when they talked about various kinds of lumber and for years we have

114 been trying to standardize sizes and kinds of pine, and I think this is a move in the right direction.

Mr. MATTHEW. I should object to the witness giving advice. I think he ought to answer the examiner's questions, as a matter of fact.

Q. Yes; what do you consider soft pine and what do you consider hard pines?

A. Hard pines are the woods we get from the South of the United States; we generally consider that hard pine.

Q. So yellow pines from North and South Carolina would be hard pines?

A. Yes; they would be in that family.

Q. Now, take the pine that comes from Minnesota and Wisconsin.

A. We consider that soft pine.

Q. Soft pine, is that what you refer to as ponderosa?

A. No.

Q. What do you call that?

A. It is a softer pine than the pondosa pine.

Q. Where do you get the pondosa?

A. Pondosa comes from the inland empire and from California and northern Oregon.

Q. This sugar pine that you spoke of, that comes from California, is that soft or hard?

A. We call that soft pine.

Q. Take the white pine that we have been talking of from
115 California. Is that soft or hard?

A. We would call that hard pine—a hard species of soft pine; California white pine we would consider a hard texture of soft pine.

We would consider soft pine, California sugar pine, Idaho white pine, and Minnesota and Wisconsin pine, and pine from New England and southern Canada.

Q. All those are soft?

A. Yes, sir.

Q. And softer than pondosa?

A. Oh, yes; much softer. In other words, to make myself clear, we look at the pines in three families.

One we call hard pine, known as yellow pine from the South. The other is a soft pine—it has a soft texture—coming from New England and Minnesota and Wisconsin, and then there is a certain kind of pine that grows in California; then there is a pine in between. That pine in between is not as hard as southern yellow pine and not as soft as the northern white pine, something in between, and that is what we are educating our trade to, as pondosa pine; that is neither soft, neither is it yellow, it is exactly in between, from a lumberman's point of view.

Q. How about Idaho white pine?

A. Idaho white pine is a soft-texture pine.

116 By Mr. BURR:

Q. Have you had any opportunity from your personal knowledge to check up the durability of the varieties of pine that you refer to as white pine?

A. Yes.

Q. What opportunities have those been?

A. In the use of it in the manufacture of it.

Q. Can you be a little more specific, what your personal opportunity has been to tell us about the durability of it?

A. Right here in Massachusetts it has been prominently advertised. We have a house built of white pine some 200 years ago—that is as to its durability. Then that same texture pine I recommended to friends of mine building houses as the best wood for outside when they could not get what we call tidewater cypress.

Q. Do you recommend California white pine for outside work?

A. No, never.

Q. Have you any experience, anything of your own personal knowledge now with regard to the comparative durability of California white pine, with the regular varieties of white pine?

A. Yes.

Q. Will you give that?

A. You take the California white pine and you put it outside and it does not seem to stand so well under the weather. What I

mean by "stand so well under the weather" is that it will
117 check and split quicker and then it will commence to get a little decayed and you have to paint it over frequently in order to hold it in place. If you don't, it will rot quicker than the other pines—what we call the soft pines. We never recommend California white pine or pondosa pine for outside finish.

There seems to be something in the wood that does not wear as well as the softer pine.

Mr. BURR. I think that is all, sir.

Cross-examination by Mr. MATTHEW:

Q. You stated, Mr. Downes, that you customarily furnish sugar pine for pattern work?

A. Yes, we do; sometimes.

Q. Sugar pine has a deservedly high reputation for pattern purposes, has it not?

A. It has not got as good a reputation as I wish it had and which I think it will have some day because there seems to be an old-fashioned prejudice against it.

Q. Personally you think well of sugar pine for pattern purposes?

A. Very well; and I recommend it.

Q. May I ask you how you order your sugar pine when you purchase it?

118 A. We order it as California sugar pine.

Q. Do you purchase it locally or do you buy it directly from the western lumberman?

A. We buy it both ways.

Q. And in each instance you specify California sugar pine?

A. Yes; I have a letter or telegram here that will show——

Q. You have answered my question satisfactorily. That is all I need on that, Mr. Downes.

You have also stated that you make a very earnest effort to supply your customers with what you understand that they want for their purposes?

A. Yes.

Q. And that if they order white pine, you do not supply them with lumber that is known as California white pine?

A. Right.

Q. You have referred to the southern yellow pine; if a customer comes to you and desires southern yellow pine, does he order it by that name?

A. He calls it that; yes.

Q. Does he just ask for yellow pine or does he ask for southern yellow pine or does he order long-leaf pine, for example, or short-leaf pine?

A. He is just as likely to order or inquire in all of the terms that you have mentioned.

Q. And any of those inquiries might well be received?

119 A. Yes; we sense it immediately in this locality. We almost know immediately when he talks about the yellow pine that he invariably means the southern hard pine.

Q. That wood is best known for its structural strength?

A. Yes.

Q. In that respect it is much superior to the other pines?

A. Oh, absolutely.

Q. When a customer asks you for yellow pine you would not think of furnishing California white pine so called?

A. I would not.

Q. Would you furnish the southern yellow pines?

A. I would.

By Examiner SHEPPARD:

Q. Is it a more expensive wood?

A. Yes.

Q. The yellow pine?

A. You see when you get in the first grade of yellow pine—I am talking about the southern pine now—and get into the wide widths and the heart lumber, the very best of it would not be as expensive as the very best of a similar soft pine, as far as price is concerned, but they would be close to one another.

By Mr. MATTHEW:

Q. I think you also stated, Mr. Downes, that you do not ordinarily furnish Idaho white pine for pattern wood?

A. We do not.

120 Q. Why is that, Mr. Downes?

A. Maybe a personal prejudice. I have got an idea that the Idaho white pine in the upper grades may check or split—I see a man coming into the room now that I bought almost a million feet from last year, and he is probably smiling at that remark.

Q. Nevertheless, that is a statement of the reasons of your preferring to furnish California sugar pine to Idaho white pine for pattern purposes?

A. That would be our suggestion.

Q. Do you ever deal in lumber known as Arkansas soft pine?

A. Yes.

Q. Do you know whether that comes from a tree which is a yellow pine, botanically?

A. It does come from yellow pine.

Q. But it is materially softer in texture than the yellow pines of the South, concerning which you testified on your direct examination?

A. Yes.

Q. I assume, then, that the important thing from your point of view and the point of view of your customer is the utility and durability of the lumber which you supply to them?

A. Right.

Q. Mr. Downes, you have referred to the texture of pondosa pine in contrast with the texture of the northern white and
121 Idaho pines, and said that the texture of the pondosa pine is coarser and harder——

A. I want to make myself clear; you have a lot of pines in there.

Q. By pondosa pine you were referring particularly to the pines of the inland empire section?

A. Yes.

Q. Can you tell us as to the relative softness of the pondosa pine from the inland empire and the so-called California white pine?

A. Yes; personally I would think or I would consider that the pine from the California district known as California white pine is a little softer than the pine that comes out of the inland empire, known as pondosa pine—a little softer. While I would take one with the other and call them both the same as far as texture is concerned, I think that the California white pine is inclined to be, as a whole, a little softer in texture.

Redirect examination by Mr. BURR:

Q. Have you had any opportunity to consider the texture of California white pine from the standpoint of its uniform texture that is, does it vary much in texture or is it of about uniform softness?

122 A. I consider that a very smart question.

Q. I just want the facts, that is all.

A. As a matter of fact, take the pondosa pine from the inland empire, the texture of the pondosa pine from the inland empire, is, as a whole, about the same texture——

Q. As the California white pine?

A. No; I am answering that question that you just put to me—the texture as a whole, is quite uniform.

Q. Quite uniform with itself?

A. Yes; uniform with itself, whereas the California white pine, as a whole, is not as uniform in texture as the inland empire.

You take a carload of about 25,000 feet—that is ordinarily a carload of California white pine—and you might possibly find 5 percent of it that would be very hard texture, almost like a piece of hardwood, on the other hand, the rest of it—the texture of the rest of the car as a whole would be softer texture than a similar car of the inland empire pondosa.

Q. Have you ever considered the uniformity of texture feature as regards the heartwood and the sapwood of the California white pine?

A. We go in for texture very strongly. We have apparatuses and everything else—as a matter of fact, we are one of the few con-
123 cerns that advertise soft texture and hard texture. I do not think any firm in this part of the country advertise medium or soft or hard texture as we do.

Q. I do not think you quite hit the point I was aiming at.

On the texture feature of California white pine, is there a contrast in texture between the heartwood and the sapwood that is more marked than in other varieties of pine?

A. I think so.

Q. Would you say that the hard texture that you referred to has the percentage—I forget the percentage you gave—was heartwood or was that hardwood in character?

A. It might be either.

Q. You are not sure?

A. I never could understand how it got so hard. I had cars that had very few pieces in it.

Q. Is that typical? Have you observed whether the typical soft part of California white pine is sapwood or part heartwood?

A. I would say it was part sap and part heart.

Q. Part of the heart, you think, is soft in texture, and part hard, or have not you studied that feature?

A. Yes. The heartwood of the California white pine is softer in texture than the heartwood of the pondosa of the inland pine. Is that what you wanted?

Q. It is not quite what I wanted, but I am glad to get the
124 information.

(Witness excused.)

GEORGE F. LINDSAY was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your company, Mr. Lindsay?

A. I am associated with the Weyerhaeuser organization.

Q. How long have you been so associated with them?

A. Forty years.

Q. What position do you hold with the Weyerhaeuser organization?

A. That would be difficult to say. I am one of the stockholders.

Q. Do you have a title with any one of the companies?

A. We are so organized—we have a rather disjoined organization. I am president of several companies; I hold other offices in other companies; we have no central organization. Perhaps I never told you that before.

Q. Now, Mr. Lindsay, the Weyerhaeuser concern has several subsidiary companies or several independent companies, I will put it that way?

A. They are made up of independent companies.

Q. And they are manufacturers?

125 A. Yes.

Q. Then you have a sales company for a large number of manufacturers of affiliated companies?

A. For all of them.

Q. The Weyerhaeuser interests, taking these companies under that general term, is that a fair term?

A. Yes.

Q. The Weyerhaeuser interests comprise certain holdings of timber in various parts of the country, do they not?

A. Yes.

Q. In what varieties of pine timber do they hold interests in the stump?

A. In the Wisconsin and Minnesota territory, white and Norway pine; the inland empire—I would better say the woods that grow there, there is quite a number of them. Do you want them listed?

Q. Just the pines I am interested in.

A. Idaho white pine and pondosa pine on the west coast; the woods again on the west coast, Douglas fir primarily; in the South, short-leaf yellow pine and long-leaf yellow pine—I might say in that connection that we have no cypress interests, neither have we any North or South Carolina interests. We have no interest in the timber of the New England States.

Q. Your companies are among the largest producers of pine lumber in the country, are they?

126 A. So considered, I believe; yes.

Q. The names that appear in the record, I believe, include the eastern country, northern Minnesota, Wisconsin, Canadian white pines; can you give me the botanical names of those various varieties of white pine?

A. I think so.

Q. What are they? Just of the white pines.

A. The white pine of the North or Lake States of New England go under the botanical name of Pinus strobus.

Q. And the white pine of Idaho?

A. That is called Pinus monticola.

Q. I did not include monticola or Idaho in my question: I think we can clear this up best by asking this: New England white pine is what botanically?

A. Pinus strobus.

Q. Minnesota and Wisconsin are what?

A. Pinus strobus.

Q. Canadian and Ontario are what?

A. Pinus strobus.

Q. In other words, all those common names all refer to the same species of white pine, strobus?

A. Yes, sir.

Q. There is in addition what is well known as the Idaho white pine, which is given the botanical name of what?

A. Pinus monticola.

127 Q. Now, referring to Pinus strobus for the moment, I would ask whether the Weyerhaeuser interests have large holdings still in Pinus strobus?

A. Yes, sir.

Q. Can you state offhand, or is it not a fair question—can you offhand give me the standing stumpage that is to be found in Pinus strobus?

A. I could get it for you, but I would not dare answer that question offhand, because it is a pretty hard question to answer.

Q. Are you still getting virgin Pinus strobus from any of your Weyerhaeuser holdings?

A. From all of them.

Q. Do you have any holdings in Maine?

A. No.

Q. Where, in general, roughly speaking, are your holdings from which you are getting Pinus strobus?

A. Principally, at the present time, from Minnesota. We have some small interests in Wisconsin, but Minnesota is the heaviest producer at the present time of strobus.

Q. Are you getting full-sized trees of strobus from some of those acreages up there?

A. The full-sized tree?

Q. Yes; are they as large in growth of strobus as appeared in the virgin forests earlier and further east.

128 A. Your question would have to have some explanation. Unquestionably the largest timber of trobus that grew came from Michigan. The next largest came from Wisconsin and the next largest is where we are now heavily operating—while it is large, it is not as large as these others—relatively, you start with Michigan, then you go to Wisconsin, and the timber of Minnesota, generally speaking, is not as large as those of the other two States—it is large, but not as large.

Q. Does it compare with the Canadian strobus?

A. I would say that it did.

Again, Mr. Burr, when you get into Canada, you have that great question of geographic differentiation to take into consideration, and it is very difficult to answer a question like that yes or no.

Q. Do you have any holdings for the Weyerhaeuser interests in Canada?

A. No, sir.

Q. Do you know whether there is virgin strobus coming from Canada?

A. Yes.

Q. Is the Canadian lumber that is coming into the market largely virgin in character?

A. Very largely virgin. I would not want to say definitely, but I would assume that 90 percent of it is.

129 Q. Would you be able to give me any approximation of the amount, in general, of virgin Pinus strobus that is coming into the American market, or is not that a fair question?

A. I would not want to try to answer that.

Q. You would not want to answer that?

A. No; I could get the figures for you, but I would rather not take a shot on that. I could make a guess on those questions, of course.

Q. It is several hundred thousand feet?

A. It is several hundred million feet.

Q. I meant several hundred million feet. Will you be able to get us those figures later in the course of this hearing? I do not mean today or in Boston, but later on?

A. Yes.

Q. I do not think I asked you how long you have been in touch, in a practical way, with the lumber situation; how long is it?

A. With the lumber situation?

Q. With lumber, yes; how long have you been a lumberman?

A. About 40 years.

Q. Did you ever have any practical experience in the forests?

A. I have.

Q. How long ago?

A. About 20 years ago.

Q. What kind of jobs did you hold in the forests? Suppose you sketch your experience back from somewhere near the beginning.

130 A. I have been all over—practically all over northern Wisconsin, northern Minnesota—the timber area of Wisconsin and Minnesota and in Canada. I bought and sold timber; bought logs and sold logs, and in the earlier days that I spent all the winters, or almost every winter in the woods country.

Q. Did you serve an apprenticeship in the lumber camps at all?

A. Just what do you mean by an apprenticeship?

Q. I mean a practical apprenticeship as a logger.

A. Yes; I have been through all the phases of logging of every character, as far as I know.

Q. Have you had occasion to study the New England situation, from the market standpoint as regards the history of Pinus strobus, in the New England market?

A. I have.

Q. Can you sketch that for us, beginning as early as your knowledge of it goes?

A. It was perhaps 20 to 25 years ago that we began to sense the strong competition that was coming for white pine in this Eastern territory.

We began about 18 years ago, through a publicity campaign, trying, as far as it was possible, to meet it. In New England, where white pine had had its parentage almost—as these old houses

131 in New England, which Mr. Fairbanks spoke of is simply saturated with the strobus pine, and we realize that here was the place, if anywhere, where white pine had its home, and we began a very aggressive publicity campaign, and we found ourselves in the peculiar position of having aroused a tremendous interest in the white pine, but we could not deliver it.

We sold white pine in this New England territory, but we could not deliver white pine, because there were other woods that were selling under that name, and what we considered white pine, I mean by that Pinus strobus, and Pinus monticola, we could not assure an architect that he could get it under any specifications that he was ordinarily willing to incorporate into his specifications.

You noticed this morning that Mr. Bourne said that you can go about so far in specifications, but you cannot ask us to put in all those botanical terms and everything that will guard us and go through our contractors, and so forth, and so on, unless there is some certain simple phrase that we can put in specifications that will assure us of getting what we ask for, otherwise, we won't get it.

In many cases, we found that trouble existed. I will say frankly I had the feeling at the time that if we could have delivered what we had advertised, I was very hopeful that we could occupy in white pine the same position that cypress occupied in Florida, that
132 is, as a more or less specialized wood. Cypress occupies that position today. I do not mean by specialized, as you specialize in blue-white diamonds or anything of that kind, but I mean that it would occupy a particular position down here in New England that it might not in any other place in the United States, so we centered our efforts here—I do not mean New England exactly, but from New York north.

Q. That effort failed, did it?

A. I would say that it failed because we could not deliver what we were advertising.

Q. Is there a difference in the cost of production of Pinus strobus as contrasted with Idaho white pine, for example?

Mr. MATTHEW. I cannot see that that is material whether there is a difference in cost of production particularly between strobus and Idaho white pine.

Mr. BURR. Suppose we develop that a little further later on; I will withdraw that question for the moment.

Q. Your companies have, in pricing their various lumbers, considered the cost of production, have they?

A. Yes; and cost of stumpage.

Q. And cost of stumpage. How do you secure your stumpage? Do you secure your stumpage by purchase from people who take it up under the Federal acts?

A. Usually by proxy in that way. We usually buy from somebody who has bought, I mean, somebody who has bought
133 a tract; we are very liable to buy that tract if opportunity offers, and in some cases, we have bought the original claims and bought back a tract of timber ourselves, but those days have rather gone by when it was possible to do that.

Q. When you refer to the cost of stumpage, that is the cost of those purchases that you have referred to?

A. Yes.

Q. And in addition to that cost there is another element of cost, namely, that of logging the territory?

A. Yes.

Q. Do you find that there is a difference in the cost of logging in various sections?

Mr. MATTHEW. I do not think that question is relevant, Mr. Examiner.

Examiner SHEPPARD. Let the record show that the objection is noted and ruling reserved after discussion off the record.

Mr. BURR. I withdraw that question for purposes of advisement for the time being.

Q. Is the territory from New York north the main market for the Pinus strobus products of the Weyerhaeuser interests at the present time, would you say?

A. The principal market, is that your question?

Q. The principal market.

A. Yes.

134 Q. Could you give me, roughly, what percentage of your Pinus strobus goes from New York City north?

A. I would rather have someone else answer that. I could make a guess at that, but it would be wild.

May I say this, Mr. Burr, in my association, while I am very closely in touch with the Weyerhaeuser Sales Company as to matters that take on a technical sales aspect, there are others in our organization who would be a whole lot better qualified to answer than I.

Q. Do you hold any position with the Sales Corporation?

A. No.

Q. Do you do any supervising for the Sales Corporation?

A. No.

By the way, what do you mean when you say "supervising"?

Q. Are you an officer that gives instructions to the Sales Corporation?

A. No, only as a stockholder to formulate policies; to that extent, yes.

Q. You are giving your time to the Weyerhaeuser interests?

A. Yes; in every phase of it.

Q. In one phase as well as the other?

A. Yes; but in general terms.

Q. What is your executive title?

A. Again I say there is no central organization, so I have no executive title. I might say that none of the Weyerhaeuser

135 boys have an executive title; there is not any such thing; we have no central organization. It is all units made up, that are more or less coordinated, but there is no president, vice president, secretary, or treasurer.

Q. How about executive committee?

A. We have not any executive committee.

Q. How are instructions issued?

A. Instructions are issued through a group of interests when they come together and, as I said, without any executive committee, but which perhaps we ought to have.

Q. Have you from your own personal experience in the woods and elsewhere a knowledge of the differences, as lumber, between Pinus strobus on the average, if you can take such a conception, Pinus strobus on the average and Pinus ponderosa as an average, referring now to the tree?

Mr. MATTHEW. Did the witness state that he has had experience in lumbering operations in connection with ponderosa pine?

Q. Are you familiar with ponderosa pine?

A. Not to the extent I am with Pinus strobus, but I have been much in the woods in Idaho but not in California.

Q. Are you familiar with the inland empire variety of ponderosa?

A. Yes.

Mr. MATTHEW. May it be understood that the question is
136 limited to Pinus strobus and Pinus ponderosa and the inland empire?

Mr. BURR. I will agree to that.

Q. Now, will you answer that question?

A. I hope I may be able to answer any question along that line.

Q. What is the difference between the two woods, taking a conception of an average tree?

A. Pinus strobus is a wood—do you want a description of Pinus strobus?

Q. Yes, first; that is the best way to give us the comparison.

A. Pinus strobus is a wood that is largely heart, very little sap, possibly on the average strobus would be 90 percent heart and 10 percent sap.

There is a variation there, of course, in different localities, but generally speaking that would be a statement of fact.

Strobus is a wood that is soft in texture, easily workable and because it is a heart wood, it is a long-lived wood when exposed to trying weather conditions.

Any other question with regard to strobus that you would want me to answer particularly?

Q. How about its texture?

A. It is soft in texture.

Q. How about lack of uniformity or uniformity, as the case
137 may be?

A. It is fairly uniform, of course; it goes the gamut of every defect which all woods are susceptible of, but in texture particularly it is about equally soft from heart to sap all the way through; it has knots, little streaks, not large ones; it has no pitch pockets; it is close grained, close knit; stands all sorts and character of weather under trying conditions and does not check; it does not split; takes paint perhaps the best of any wood known. Is that the gamut of strobus?

Q. I am hardly qualified to answer that question. Have you ever had occasion to note the texture of the summer and spring portions of the annual rings there and trace between the texture of the summer growth and spring growth?

A. Yes; and from a practical standpoint I do not think it is appreciable.

Q. It is appreciable in some woods, is it?

A. It is appreciable in many woods; it is appreciable in the hardwoods.

Q. In other words, the uniformity between the spring and summer rings—that is, the uniformity between the two is in the strobus above the average in uniformity?

A. Oh, yes.

Q. Is that a quality for which it is remarkable, would you say, that evenness?

138 A. Yes; it is a wood that is very even in its texture, especially between its sap and its heartwood. From the workability of it, and so on, they are much alike; you can distinguish the line between the sap and the heart, because the sap is very white and the heart is more like light taffy candy color, like butter color, but they are both soft, both equally soft and both alike workable.

Q. Before the coloring has been introduced, you mean?

A. Yes.

Q. Will you state what the characteristics of the Pinus ponderosa of the inland empire are, in the same fashion that you just stated for strobus?

A. I will endeavor to.

Pinus ponderosa of the inland empire runs much heavier to sap than this white pine. In other words, generally speaking, 65 percent possibly of heartwood as against 35 percent on an average of sapwood.

The heartwood of pondosa pine is very much harder than the heartwood of white pine, and on the other hand, the sapwood of pondosa pine is almost equal in appearance—in fact, certain portions of it, if taken, it would be impossible to select the heartwood of strobus as against the sapwood of ponderosa.

Q. Did you ever notice what the color, the average coloring, of the heartwood of the ponderosa from the inland empire is?

139 Is it more distinct from the sapwood, the coloring?

A. The heartwood and the sapwood of ponderosa?

Q. Yes.

A. The heartwood is distinctly darker than the sapwood of ponderosa. In other words, if you will—I wish I could make that plain in words—if you take the sapwood of white pine, it is almost milk white, then you take the heartwood of white pine and the sapwood of pondosa, they are almost identically alike.

Q. In color, you mean?

A. We are talking about color now, in appearance and in texture—equally so in texture—they are almost alike.

The next step down is the heartwood of pondosa; that is distinctly darker. Do I make myself plain there?

Q. I think so. Is the sapwood of ponderosa from the inland empire as soft, you think, as the heart wood of strobus; do you think it is about as soft?

A. There is very little difference.

Q. Is there a more distinct difference between the summer wood and the spring growth of ponderosa than there is in strobus in those seasons?

A. That I would not attempt to answer. I do not think so. I do not think the relativity there is greater than it is in strobus, but that is a technical question that I would not attempt to answer.

140 Q. Your company owns holdings of ponderosa?

A. Yes.

Q. And they are located where?

A. In Idaho and in California.

Q. Do you have any in Oregon?

A. Just overlaying; I would say no. Just Idaho and California.

Q. Are you about to open in Klamath Falls?

A. Yes.

Mr. MATTHEW. The Klamath Basin is largely in Oregon, is it not?

The WITNESS. Pardon me, I have made a misstatement. The Klamath Basin is largely in Oregon.

Q. You have ponderosa there?

A. Yes; I am glad you corrected me on that.

Q. Your company is manufacturing ponderosa at various points, are you?

A. Yes.

Q. In Idaho and in California, as you stated, where you have holdings?

A. Yes; and just coming into Klamath Falls.

Q. The company is selling a considerable body of ponderosa?

A. Yes.

Q. Under what trade term?

A. Pondosa.

141 Q. What would be the comparison, approximately, between your sales of ponderosa under that trade name and your sales of strobus?

A. About our sales of strobus I do not know that I can say, but if you will say strobus and monticola, a third more of pondosa than the other two combined.

Q. Than monticola and strobus combined?

A. Yes.

Mr. MATTHEW. Now, just what does that mean? He says he sells one third more than the other two combined—I think I get your meaning.

The WITNESS. Is that not clear?

Q. I think it is clear. How about sugar pine, are you selling any sugar pine?

A. No.
Q. Have you any holdings in sugar pine?
A. No.
Q. You have told me about your sales, how about your holdings; do your holdings in ponderosa, irrespective of what you are marketing, do your holdings of ponderosa exceed your holdings in monticola and strobus?
A. They are about the same.
Q. But you are selling ponderosa faster?
A. Yes.

Q. How long have you been using the trade term pondosa?
142 A. Since the action of the Federal Trade Commission, five years ago. What was that date, Mr. Burr? We were selling under the name of western white pine before that, just the same as everybody else, until a change was made about five years ago, when we changed to pondosa pine——
Q. That was in the inland empire?
A. Yes.
Q. Do you refer to the time when the Commission brought certain complaints against certain parties?
A. Yes.
Mr. BURR. May we stipulate that it was about 1924 or 1925?
Mr. MATTHEW. I will take your word for it.
Mr. BURR. I will give you the date right now. It was May 1925.
Q. Up to that time you were calling it California white pine?
A. No; western white pine.
Q. At that time, all of the inland empire manufacturers of ponderosa pine adopted the name of pondosa pine, did they, as far as you know?
A. Yes; there might have been a few very minor exceptions, but 99 percent did.
Q. And they have continued to use that name since, have they?
A. Yes.

Q. Did you attend any conferences with any of the Cali-
143 fornia white pine men at that time; were you present?
A. Not personally; but our people attended.
Q. All right, I shall not ask you anything further on that.
(Whereupon at 4:00 o'clock p.m., an adjournment was taken until Saturday, October 5th, 1929, at 9:30 a.m.)

144 Docket Nos. 1620–1669, inc.

BOSTON, MASS., ROOM 331, YOUNGS HOTEL,
*October 5th, 1929.*

Met pursuant to adjournment, 9:30 a.m.
Before: William W. Sheppard, examiner.
Appearances:
Eugene W. Burr and J. G. Birks, attorneys for the Commission.

McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Company et al.; Davies-Johnson Lumber Co. et al.; Diamond Match Company et al.; California Fruit Exchange et al.; Penman Peak Lumber Co. et al.; Feather River Lumber Company et al.; Kesterson Lumber Company et al.; Hobart Estate Company et al.; Fruit Growers Supply Company et al.; Quincy Lumber Company et al.; Spanish Peak Lumber Company et al.; Lassen Lumber and Box Company et al.; Red River Lumber Company et al.; Owen-Oregon Lumber Company et al.; Big Lakes Box Company et al.; Ewauna Box Company et al.; Klamath Lumber & Box Company et al.; Lamm Lumber Company et al; Pelican Bay Lumber Company et al.; Algoma Lumber Company et al.; Shaw Betram Lumber Company et al.

Mr. MATTHEW. With your permission, Mr. Examiner, I would like at this time to reserve the point as to the juris-
145 diction of the Commission in this proceeding over the California Fruit Exchange, one of the respondents which we represent.

I should have made this statement at the opening of the hearing yesterday, but I neglected to do so. The California Fruit Exchange is a nonprofit cooperative corporation and has been so recognized by various departments of the Federal Government. Whether that point will be found to be material in these proceedings or not, I am not prepared to say. As long as the California Fruit Exchange officers desire us to have that point made of record, I shall ask Your Honor for permission to have that record made.

Examiner SHEPPARD. It may be so noted, Mr. Reporter.

Mr. Burr, I read for the first time last night the complaint in this case, and I want to tell you that, in my judgment, the testimony that you wanted to put in yesterday is, in my judgment, fully justified under this complaint.

It is just a matter now for you to decide whether or not you want to put it in.

Mr. BURR. I shall not do so at this Boston hearing.

Examiner SHEPPARD. I believe, if you decide to do so, it will add a thousand pages to this record, and many not add anything to the case at all.

Mr. BURR. I have a little thought in mind which I may develop in New York, and I may compromise on the point a
146 little.

Examiner SHEPPARD. I just wanted to tell you that in my judgment you can go ahead if you wish to.

Mr. BURR. I thank you very much.

Examiner SHEPPARD. Now, gentlemen, we will proceed with Mr. Lindsay.

By the way, Mr. Matthew, do you want to ask him any questions?

Mr. MATTHEW. I should like a few questions on cross-examination, with the liberty to engage in further cross later on if counsel has finished.

Mr. BURR. Further cross-examination?

Mr. MATTHEW. Further cross on the examination we had. Possibly, Mr. Burr, if you have no objection, but maybe the questions that I will ask this morning will be all of my cross-examination. I shall try to be brief and not go beyond the absolute requirements of the case.

I should like, at least, the liberty of being allowed to recall him if necessary.

Mr. BURR. I shall not object.

GEORGE F. LINDSAY, recalled.

Cross-examination by Mr. MATTHEW:

Q. Mr. Lindsay, I understood you to say, in the course of your testimony yesterday, that your companies operate to some extent in the southern pine belt?

147 A. Yes.

Q. Do you engage in the production and marketing of shortleaf and longleaf pine?

A. Shortleaf now; longleaf up to a few years ago, but we have no longleaf at the present time; we disposed of our longleaf.

Q. Are you personally familiar with the commercial practices of the short leaf and longleaf industries?

A. I would say yes, shortleaf particularly. You might ask me a question about long leaf that I could not answer, but I should be glad to try.

Q. I wanted to ask this question, whether commercial longleaf pine is identical with botanical longleaf pine?

A. Commercial longleaf pine identical with botanical longleaf pine? I would say it was.

Q. Do you know whether or not it is the practice in the industry to grade the lumber yielded by the longleaf and shortleaf pine with respect to the quality of the particular lumber and not with respect to the species of tree from which it is obtained?

A. What do you mean, common and things like that?

Q. I mean any kind of lumber.

Mr. BURR. Do you mean gradation as common?

Mr. MATTHEWS. Not gradation, I meant as to the classification of the lumber which comes from those trees.

148 Mr. BURR. Classification or species?

Mr. MATTHEW. No; lumber. In other words, what is commercial long-leaf lumber? If that question is not clear to you, let me put it to you this way:

Q. Do you know whether or not is a fact that commercial long-leaf lumber contains, to a large extent, lumber which is yielded by short-leaf pine trees?

Mr. BURR. I would like to object to the materiality of this.

A. I may be dense this morning, but I do not get that question.

Examiner SHEPPARD. We will let Mr. Matthew go on for a little while.

The WITNESS. Pardon me, I must be dense; I have not got that point again.

Q. Very well, let me try again.

There are certain mills in the South which cut both shortleaf and longleaf pine; you know that to be true?

A. Yes.

Q. In classifying the lumber which is yielded by those trees, is it not a fact that lumber will be graded and classified as longleaf lumber irrespective of whether it comes out of a shortleaf tree or longleaf tree? In other words, it is graded with respect to its particular quality?

A. I think that is true.

149 Q. I think you stated that your company operates in Douglas fir on the west coast?

A. Yes.

Q. Under what name is the lumber yielded by that tree marketed?

A. The Weyerhaeuser Timber Company.

Q. Is it sold as douglas fir?

A. It is sold as douglas fir.

Q. Is it ever sold as Oregon pine?

A. No.

Q. Do you know whether or not the tree from which the lumber is obtained is in fact a fir, botanically?

A. The botany of that territory is going to bother me I am afraid.

Q. You do not know whether that is classified as a false hemlock and not as a fir?

A. As a false hemlock?

Q. Yes.

A. I know there are different species out there.

Q. I am now speaking of the well-known Douglas fir lumber.

A. I think as you say douglas fir is largely fir and the name douglas fir is attached to it——

Q. You do not know whether botanically it is known as a false hemlock?

A. The botany of that country, I must say, I am vague on,

150 but I could get the information for you.

Q. We will pass that, then.

Does not your company sell this Douglas fir to which you referred in southern California, under the name of Oregon pine?

A. I think not.

Q. You do not know as to that.

You spoke of your California holdings in lumber and I think you afterwards explained that your holdings were primarily in the Klamath Basin which is in Oregon?

A. Yes; it overlaps there.

Q. Do not your holdings consists of a considerable stand of sugar pine trees?

A. Yes—I would not say considerable—it is relatively small but considerable; yes.

Q. Are you marketing any of the products from that particular operation now?

A. No.

Q. The mill is not yet built?

A. It has not yet been built.

Q. Do you know whether you expect to market the sugar pine obtained from that section under the name of sugar pine?

A. I do not know as that point has arisen as yet but I assume yes.

Q. You know that the sugar pine is classed botanically as
151 a true white pine?

A. Yes.

Q. You would not expect to market this lumber as either California white pine or Oregon white pine?

A. No.

Q. That would cause confusion in the trade, if you adopted any such term?

A. Yes; I would assume right away that it would be marketed under sugar pine; there is no question about it.

Q. Such terms as Oregon pine, California white pine, would cause confusion in the trade of this particular product?

A. Yes.

Q. Can you tell us what percentage of lumber that is obtained from Pinus strobus ordinarily falls in the shop grades?

A. Pinus strobus ordinarily falls in the shop grades? That is a question, Mr. Matthew, that I would rather have Mr. Williamson answer in New York. He could do it definitely; I have an idea, but it is perhaps not exact.

Q. I thought perhaps your experience in that particular operation was sufficient to give us that.

A. No; that would be vague. That is a very broad question.

Examiner SHEPPARD. We will get it definitely.

The WITNESS. Mine would be just misleading and I certainly do not want to do that.

Q. One other question about sugar pine, if you please; do
152 you know whether the practice is to mix the sugar pine with the so-called California white pine in the common grades?

A. If that is the California practice, I would not be able to answer.

Q. You are not familiar with that.

You undertook yesterday, Mr. Lindsay, to describe with some particularity the lumber which is yielded by Pinus strobus and compare it with the lumber yielded by the pondosa pines so called in the inland empire section, and you said, among other things, that Pinus strobus yields approximately 90 percent of heartwood and 10 percent of sap?

A. That would be an approximation. I hope I stated it that way; there might be differences of opinion, but it is about 85 or 90 percent.

Q. Is that just based upon opinion or upon definite knowledge?

A. It is based on 30 or 40 years' experience; just personal experience; just opinion from that.

Q. It does not proceed from any actual statistical data or anything of that kind, or any governmental statistics?

A. No.

Q. Similarly, when you said that pondosa yields 65 percent heartwood and 35 percent sap; that simply reflects your personal judgment?

A. It is based on the same theory.

Q. I think you said, if my notes are correct, that the sap-
153 wood of the pondosa pine is almost alike in appearance to the heartwood of the strobus pine?

A. Yes.

Q. You refer to appearance only in that connection, you meant simply in its color?

A. In its color and in its texture and in its general appearance and the inability after putting them side by side to easily distinguish between the two.

Q. In point of fact, is not the heartwood of the strobus pine quite a bit darker than the sapwood of t.. pondosa?

A. I would say not.

Q. I think you did not undertake to describe the Idaho white pine lumber in the same fashion as you described the lumber you referred to as Pinus strobus and Pinus ponderosa; could I ask you, if you please, to compare or contrast the Idaho white pine lumber with the strobus pine lumber?

A. In percentages of sap and heart and texture or both?

Q. Just as you did yesterday in comparing the pondosa pine with which you are familiar and the strobus pine.

A. Pinus monticola or Idaho white pine would run in percentage of sap to heartwood almost identically with strobus. Perhaps a shade to the advantage of monticola; if anything, there would be a shade, a percent or two above.

Q. That is, the proportion of heartwood?

A. Heartwood to sapwood.

154 Q. Would be a little greater——

A. In monticola than in strobus, but that only by a shade, one or two percent, something like that, but that is a matter of opinion again.

Q. You said that the strobus lumber is soft and easily workable; how does the Idaho white pine compare with that statement?

A. Equally true of Idaho white pine; it is of the same color, too.

Q. How does it compare with the lumber yielded by the ponderosa pine in that respect?

A. The relative difference again would be quite the same, just as I gave between strobus and ponderosa, if that answers your question.

Q. Is not the pondosa-pine lumber just as soft and easily workable as the Idaho white-pine lumber?

A. The sapwood of it is.

Q. How about the heartwood?

A. The heartwood would come harder again.

Q. Is there any material difference between the lumber yielded by these three trees, Pinus strobus, Pinus monticola, and Pinus ponderosa, as far as quality of hardness is concerned?

A. I should say a distinct difference. There is in quality; the hardness or sapwood of pondosa would compare very closely
155 with the heartwood of both strobus and monticola and the heartwood of pondosa would immediately be distinctly harder.

Q. That again reflects your personal opinion without reference to any authoritative data of any kind?

A. That could be substantiated, I think, with all character of authority; I do not think that is a matter of opinion at all.

Q. How about the specific gravity of the lumber yielded by these three trees?

A. You are speaking of weight now?

Q. Yes; the weight.

A. Strobus and monticola practically the same. The heartwood of—pardon me, the sapwood of pondosa substantially the same as the strobus and monticola; the heartwood of pondosa distinctly heavier.

Q. You have already said distinctly harder?

A. Distinctly harder.

By Examiner SHEPPARD:

Q. If I remember right, pondosa is sugar pine?

A. No; pondosa is the California white pine.

Q. Ponderosa is white pine of California?

A. Ponderosa is called white pine in California.

Q. That is the respondent's tree, as I understand?

Mr. MATTHEW. Yes; that is our trade name.

Q. All right; clear up for me pondosa.

156 A. Pondosa is a trade name used in Idaho for the same botanical species as ponderosa is in California; botanically they are both yellow pine.

Q. Now, distinguish for me between pondosa and Pinus monticola.

A. Pinus monticola is a true five-needle white pine of Idaho, just the same, Mr. Sheppard, as strobus is the true five-needle white pine of Minnesota, Wisconsin, and Oregon.

Examiner SHEPPARD. All right; pardon that interruption.

By Mr. MATTHEW:

Q. Mr. Lindsay, do the grading rules for pondosa pine more nearly resemble the grading rules for Idaho white pine than they resemble the grading rules for southern pine?

A. That is a technical question, and I am not personally familiar with the grading rules; I would be somewhat familiar with them in the North, but out there in the West I would rather have one of our men more capable of answering that.

Q. You have never seen a booklet of grading rules?

A. Oh, yes; and I have studied the booklet of grading rules.

Q. You know that the grading rules for Idaho white pine and pondosa pine of the same section are just the same rules in a single book?

A. I am of the opinion that they were separated at one time. It would seem to me there was a discussion two or three years ago as to the dividing of those grading rules, because there were shad-
157 ings of differences which would not apply to all cases. In fact, the grading rules of all those woods come back to the white pine of Minnesota and Michigan. They are all founded on that, so also is douglas fir.

Q. The grading rules for southern longleaf and shortleaf are quite different, are they not?

A. Quite different; yes. I might say in that regard, you undoubtedly know Mr. George S. Long, who is the father of the grading rules of white pine, and he has had more to do with the grading rules of all those western woods than a dozen men.

Q. I am sorry I have not the pleasure of his acquaintance, but I have seen a recent copy of the grading rules of the California white pine and pondosa pine in a single booklet.

A. Do not think that I am contradicting that.

Q. I know you stated that you are not certain of the facts. The southern yellow pine, both shortleaf and longleaf, is characteristically much harder, denser wood than the pine lumber obtained from either northern white pine, Idaho white pine, or the ponderosa pine, is it not?

A. Did you say both long and short leaf?

Q. Yes.

A. I would beg to disagree with you on that.

Q. All right, let us take the longleaf first, if you please.

A. Yes.

Q. The longleaf pine lumber is much harder and denser?

A. Much more pitchy.

158 Q. Much more pitchy than either of these three varieties to which I have referred?

A. Yes.

Q. As far as quality and utility are concerned, the pondosa pine which you have described more nearly resembles Idaho white and strobus pine than it does longleaf yellow pine?

A. Than longleaf yellow pine? Yes; decidedly so.

Q. Now, coming to the shortleaf pine, again pondosa pine more nearly resembles the northern Idaho white pine than it does the shortleaf pine?

A. I question that a little. If there was a thousand feet of Arkansas shortleaf yellow pine put in one pile, pondosa or Idaho put in another pile, and California white pine put in another pile, I doubt if there is any human being who could pick out which was which.

Q. The Arkansas pine, shortleaf pine, is characteristically a soft pine?

A. The Arkansas shortleaf pine is distinctly so.

Q. And is usually marketed as Arkansas soft pine?

A. Arkansas soft pine; that is its name.

Q. Take the other shortleaf pine of other States in the South; how does it compare with Arkansas pine?

A. Arkansas, southern Missouri, and just a shade in Texas, takes the whole belt of the shortleaf; other than that you are in the
159 Gulf States with the longleaf belt, Georgia, Mississippi, Texas, and all along, as we call it, the Gulf State group. The percentage in the South or shortleaf yellow pine or what is commercially known as Arkansas soft pine, is very small. Botanically, as you appreciate, Arkansas soft pine is in another family than pondosa; it is not the same botanical species, but it has almost identically the same qualities.

Q. I understand it is not botanically the same?

A. No.

Q. Can you give us the botanical name of the Arkansas soft pine?

A. Echinata.

Q. I take it, Mr. Lindsay, that you have not familiarized youreslf with any of the Government publications, showing the comparative characteristics of these pine lumbers?

A. Oh, at various times it has vaguely, but my feeling is that I don't want to say mislead but they are founded on so much that is difficult of analysis that I do not give much credence to them, if you will allow me to put it that way.

Q. You have never seen the publication of the United States Department of Agriculture, dated June 1929 entitled "Miscellaneous Publication No. 46, on the Strength of North American Woods"?

A. I have not.

Q. Would you be surprised that it appears from that publication that the Pinus ponderosa is found to be a softer wood
160 than Pinus monticola?

A. All I can say as to that is that I would like to see the lumber that they examined. There is where the difficulty comes in. We could give them white pine to examine that was all sap; we could give them white pine to examine that was all heart. If they will take the run of the log on any of these analyses, and if you can find an analysis by the Government in Washington where they have taken the run of the log instead of boards, why, then, I am willing to argue with you, but on boards, we can furnish any kind of board out of any kind of lumber almost that you ask for.

Q. Including Idaho white pine, isn't that true?

A. Yes, any kind; it would not make any difference.

Q. In some sections of the Idaho white belt, you will get lumber which is quite hard and flinty, would you not?

A. I have not seen it, but I presume so; you will in the strobus belt.

Q. You do not know that the specific gravity of the ponderosa pipe was found by the Government to approximate very closely the specific gravity of Idaho white pine and northern white pine?

A. I would not believe it. I may be wrong on that, but that is merely my opinion, but I know so much of the way those analyses are made, and they are made from boards and you can furnish
161 boards of all sorts and of all types and kinds of hardness and softness that I cannot think that there is any way to discuss a matter of this kind on a basis of average.

Q. I agree with you on that, Mr. Lindsay, entirely.

Just one or two more questions, and I am through.

Is the percentage of shop lumber in Idaho white pine as great as the percentage of shop lumber yielded by either strobus pine or California white pine, Pinus ponderosa?

A. That is a technical question that I would rather not answer.

Q. You do not know?

A. I do not know; but I have an opinion, however, we have a man that would answer that definitely.

Q. I would not care for a mere opinion unless you had some information about it.

Do you know whether the Idaho white pine sap lumber is any more durable than the sap lumber from the pondosa pine?

A. The sap lumber of Idaho and the sap lumber of pondosa? I could not say authoritatively on that. From opinion I would say it was, but that would be purely opinion.

By Mr. BURR:

Q. What was?

A. That the sap lumber of Idaho white pine or monticola was longer lived than the sapwood of pondosa; I think it is, but where anybody could get anything authoritative on that I would want to see it.

162 By Mr. MATTHEW:

Q. You have nothing authoritative on it?

A. I have not; no.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Mr. Lindsay, has sugar pine, as far as you know, ever been marketed from any locality as white pine?

A. Not to my knowledge. Sugar pine, as I understand, was selected as a trade name for that wood, that is called sugar pine generally in California, and as far as I know, that is a technical question and my familiarity with California is a bit vague. I believe sugar pine has always been sugar pine and has never been called white pine in California, so far as I know.

Q. What is the botanical name of that species, sugar pine?

A. Lambertiana.

Q. Do you regard that as a true white pine?

A. Yes.

Q. So far as its being a true white pine is concerned, it is as much so, you think, as monticola?

Mr. MATTHEW. I will stipulate that, Mr. Burr, that the Pinus lambertiana is I think uniformly classified by botanists as a true white pine.

Mr. BURR. How about the commercial qualities, will you
163 stipulate that also?

Mr. MATTHEW:

A. I cannot say that I can stipulate that very well, that is a material point in issue. It is botanically a true white pine; it is a five-needle pine.

Q. I would like to ask that question, confining it to its commercial character; is it as much a true white pine, having in view its utility as monticola?

A. It has always been considered so.

Mr. BURR. That is all.

Re-cross-examination by Mr. MATTHEW:

Q. Mr. Lindsay, if you consider California sugar pine commercial to be a true white pine, of course, there could be no objection to terming it California white pine on the market?

A. There could be no objection to marketing it as California white pine, you say?

Q. Yes.

A. No.

Q. How long have you been familiar with the term "California sugar pine," commercially?

A. Why, I should say twenty years, maybe, but that is a rank guess.

Q. That is a well-established trade name for that lumber?

A. No question about that.

164 Q. How long have you been familiar with the term "California white pine"?

A. I would say just a little lesser time. That does not mean that it was not used at the same time, I do not know, but I knew of sugar pine before I knew of white pine, but it was just a bit beyond us because we had no interest in California.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Before you knew of California white pine, you mean?

A. California white pine, surely. I knew of our white pine a whole lot longer than that.

Q. Do you recall a time when in certain parts of the country the products of ponderosa pine was designated as western white pine?

A. Yes.

Q. Would you state about when the name "western white pine" fell into disuse; that is, comparative disuse?

Examiner SHEPPARD. There is no need to go into that; that came out yesterday; that is already in the record.

Mr. BURR. All right, I shall not press that.

Q. At the same time that the inland empire was calling it western white pine, were California producers of ponderosa designating it as western white pine or California white pine, or how?

165 A. California white pine.

Q. For how long a period have they been calling it California white pine that you know of?

A. I don't know, but I understand thirty or forty years, maybe longer than that.

Q. When you say it would be appropriate or proper to designate sugar pine as California white pine, are you referring to the commercial situation or are you referring to the practical situation in view of the fact that California white pine has for a long time been designated pine, a trade name for ponderosa? Is my question clear?

A. I will attempt to answer that in saying that there would be no objection on the part of any white-pine manufacturer to see California take the name "California white pine" for their sugar-pine product if there was any such thought in their mind, but I had always assumed that that name of sugar pine was taken as a trade name because they more or less had in mind a specialized wood and they seem to have preferred the name sugar pine to white pine. Why, I don't know. Maybe the name white pine had been absorbed by that time, I don't know.

Q. Would there be a danger of confusion, in your judgment, if sugar pine were called white pine or California white pine, in view of the fact that California white pine, as you have testified,

166 for many years has been the trade name for ponderosa white pine?

A. It would be most hazardous for sugar pine to adopt the name "white pine", I should think. California white pine is botanically a yellow pine, and now if sugar pine were to take the name of California white pine and tried to get themselves on the map as a true white pine instead of sugar pine, I don't know how long it would take them to do that. There would be tremendous confusion there.

Q. There would be confusion, in your judgment, if the sugar-pine men began to adopt the name of California white pine?

A. It certainly would. That is almost self-evident, it seems to me.

Mr. BURR. I think that is all.

Examiner SHEPPARD. Mr. Lindsay, you may stand aside and hold yourself in readiness for further questions.

(Witness excused.)

T. E. GAVIN was thereupon called as a witness, and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your business, Mr. Gavin?

A. Retail lumber.

Q. How long have you been in that business?

A. Fifteen years.

167 Q. You are with the Norwood Lumber Company, are you?

A. Yes, sir.

Q. Located in Norwood, Massachusetts?

A. Yes.

Q. How far is that from Boston?

A. Twelve miles.

Q. You deal in white pine, do you?

A. Yes, sir.

Q. You buy so-called Idaho white pine, do you?

A. Yes.

Q. You buy the so-called California white pine, do you?

A. Yes.

Q. When a man comes into your establishment and he says that he wants a certain designated specification of lumber, and does not tell you what he wants it for, and asks that the order be filled in white pine, he may get either California white pine or Idaho white pine as your yards are stocked, would he?

A. He very seldom orders it that way.

Q. If he does?

A. Yes.

Q. He would? I see. Suppose a man comes in and asks for clear white pine, he is more apt to get California white pine, is he, than Idaho white pine, is he?

A. Yes.

168 Q. Where do you get your Idaho white pine from?

A. From Potlash, Idaho, or Lewiston, Idaho.

Q. Can you give us the name of the company?

A. It is the Weyerhaeuser Sales Company.

Q. One of the Weyerhaeuser companies?

A. Yes.

Q. Where do you get your California white pine?

A. From the Algoma Fruit Company and the Fruit Growers Supply Company.

Q. Where are they located?

A. I don't know.

Mr. MATTHEW. They are in Susanville.

Q. In your trade, you come in contact with competitors, do you; that is, you take orders from competitors occasionally and sometimes competitors take orders from you?

A. Yes.

Q. So far as you know, in their way of selling white pine, it is the same as you have testified, as to your method?

A. As far as I know.

Q. That is your experience for fifteen years, is it?

A. Yes.

I would like to say at this time that pine is bought here—that is, from my experience—as either pine or soft pine; it is not bought as white pine.

Q. Not so much?

169 A. Not at all.

Q. You do not specify when you buy it?

A. When the consumer buys it from the retailer, he buys it as either pine or soft pine and does not specify it as white pine.

Q. Do not specifications from architects read white pine in many cases? Do not the contractors bring in their specifications for white pine for certain purposes?

A. Very seldom.

Q. Do not specifications sometimes read "California white pine"?

A. Yes; the architects' specifications do, but the big bulk of the retail business is with the contractor and builder, and he purchases as either soft pine or just pine.

Q. When the architect's specifications read white pine, he comes and asks for pine?

A. Yes.

Q. And soft pine on occasion?

A. Yes.

Q. You do have times, though, when they ask for white pine, but that is the exception?

A. Yes.

Q. Have you had any questionnaire on this subject recently come into your office?

A. Not that I have seen; no, sir.

Q. You have talked with no Government man on the subject?

170 A. No.

Q. Except myself over the phone; is that right?

A. Are you, Mr. Burr?

Q. Yes.

A. Yes, sir.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. Do you deal in southern yellow pine?

A. Yes, sir.

Q. Under what name is that lumber ordinarily ordered by your purchasers?

A. Southern pine?

Q. Yes.

A. Generally called hard pine or North Carolina pine.

Q. So when a customer desires hard pine, you will supply him with southern yellow pine?

A. Yes.

Q. You would not think of supplying such an order with either California white pine or Idaho white pine?

A. No, sir.

Q. There are marked differences between the hard pine of the Southern States and the California white pine lumber, are there?

A. Yes, sir.

171 Q. Southern yellow pine which you handle is harder, more dense, and much stronger lumber, is it not?

A. Yes, sir.

Q. And the California white pine is more ordinarily used for shop purposes? And sash, door, frames, and so forth?

A. Yes.

Q. And for finished lumber?

A. Yes.

Mr. MATTHEW. That is all; thank you.

Redirect examination by Mr. BURR:

Q. Sash and door material is often white pine, is it not; that is, monticola; that is, Idaho white pine? Idaho white pine goes into sash and doors, does it not?

A. We have not used it.

Q. Are you a millworker?

A. Yes, sir.

Q. Do you make those things?

A. Yes, sir.

Q. Do you use California white pine for that purpose?

A. We use either California white pine or so-called "pondosa" pine from Oregon.

Q. Do you distinguish any difference between those two types of wood?

172 A. No.

Q. You think for the uses for sash and door they are virtually the same thing?

A. If they come from the proper section.

Q. What section do you think is best for California white pine, for example, as far as your experience goes?

A. There is a section, I think they call Mt. Shasta, that we have had the best success with for soft texture.

Q. That is California white pine?

A. Yes.

Q. What section have you had good success with, with pondosa for sash and door?

A. Why, there is a section called Klamath Falls where we have had the best.

Q. Don't they sell it as California white pine from Klamath Falls?

A. We have not bought it as such.

Q. You have bought it as pondosa?

A. Pondosa.

Q. Can you state whether your competitors in the sash and door business make their sashes and doors from California white pine in this section mostly?

A. I could not say.

Q. You could not say as to that?

A. No, sir.

173 Q. Do you have competitors in this business who ship their mill work from the Middle West into this territory?

A. Not in the type of business we do.

Q. What is your type?

A. It is all custom business; that is, the sash and door we make are all custom made.

Q. It is all made to order?

A. Yes.

Q. Not stock?

A. No.

Re-cross-examination by Mr. MATTHEW:

Q. Just one further question, if you please, Mr. Gavin; from what company have you bought pondosa coming from the Klamath Falls section, if you can tell me?

A. We buy it, as you probably know, through brokers, all through brokers.

Q. Yes; I know that.

A. I have had it from this so-called Shevlin Hickson Company.

Q. The Shevlin Hickson Company are at Bend, Oregon; you understand that?

A. I understand that.

Q. That is some distance removed from the Klamath Falls section, or don't you know that?

174 A. I do not know.

Redirect examination by Mr. BURR:

Q. Did I understand you to say that your best section—rather your best success with pondosa pine for these purposes was with materials that come from Shevlin Hickson at Bend, Oreg.?

A. No.

Q. Did you not say that on recross-examination?

Mr. MATTHEW. No; I did not ask him that. I simply asked him from whom he purchased the lumber in that section.

Q. From the Shevlin Hickson Company have you been buying pondosa pine?

A. We bought it from the broker, who buys it from the Shevlin Hickson Company.

Q. But it comes from Shevlin Hickson?

A. Yes.

Q. Is it your desire to change your testimony from the testimony that you gave a moment ago that your best success with the lumber of the pondosa trade name came from Klamath Falls? Are you now changing to Shevlin Hickson as the best source of supply for pondosa pine, is that your idea?

A. No. Perhaps I misunderstood; I understand Klamath Falls is in Oregon, am I right?

Q. Right.

A. I understand Shevlin Hickson people ship pondosa pine
175 from Klamath Falls and we bought it and that is the way it was represented to us as coming from Shevlin Hickson Company, of Klamath Falls, and that section is the best pondosa that we, in our judgment, get.

Mr. BURR. That is all.

(Witness excused.)

176 H. A. FALES was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Fales, you are in the lumber business, are you?

A. Yes.

Q. What is the name of your concern?

A. The Framingham Lumber Company.

Q. You are located at Framingham, Mass.?

A. Yes.

Q. You are in the retail trade?

A. Retail.

Q. You carry the so-called Idaho pine, do you?

A. Yes.

Q. Where do you get that from?

A. Well, various mills; at present I buy it from Weyerhaeuser mostly.

Q. The Weyerhaeuser Company?

A. Sometimes from the Weyerhaueser Company and sometimes from Coeur d'Alene and Potlash.

Q. You buy also the so-called California white pine, do you?

A. Yes.

Q. Whom do you buy that from?

A. Long Bell.

Q. The Long Bell Company?

177 A. Yes.

Q. Suppose someone comes into your place and asks for certain lumber of certain specifications, and asks for white pine, you may sell either of those two (Idaho white pine or California white pine), may you?

A. Yes.

Q. If he asks for clear white pine lumber, he is more apt to get the California white pine, is he, than the Idaho?

A. Yes; in that particular instance, because we carry more of the clear grade of the California than we do of the Idaho.

Q. Do you come in contact with other retail lumber dealers to the extent of knowing whether that is the general practice of the trade?

A. I should say yes; although not authentically.

Q. That is your best judgment, is it?

Mr. MATTHEW. If he does not know authentically, I do not think the answer should stand, and I move to strike it out.

Q. What do you mean when you say you don't know authentically?

A. I imagine the other yards in town handle the situation the way we do, sell the pine with regard to the quality.

Q. You say you imagine that, what do you base that view upon, that you express?

A. By the opinion of the builders, that is the inquiries we have, must be similar to what they give to the other yards.

178 When they inquire for pine, we must have the same inquiries as the other yards; they do not specify or state——

Q. You just assume that as to the other yards?

A. I assume that, because that is the way it is handled in our yard.

Mr. BURR. I think that is a little indefinite and I shall not object to a motion to strike.

Examiner SHEPPARD. My methods of doing business, Mr. Matthew, is to give what I call probative value to a statement of that kind, and you know what the probative value of that would be.

Mr. MATTHEW. I think I understand.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. You say that it is the practice to sell lumber by quality primarily?

A. We do.

Q. How does it happen that you carry more of the clears in the California white pine than the Idaho white pine?

A. Because I think the texture is a little softer in the California white pine.

Q. When a customer comes to your yard and orders pine, does he ordinarily request it as white pine or Idaho white pine or California white pine or by some other term?

179 A. Just by pine.

Q. He just asks for pine?

A. Yes.

Q. He does not use the word "white" ordinarily, just "pine"?

A. It is according to what the customer is going to use it for; if he is going to use it for outside, he calls it white pine.

Q. Ordinarily the request is just pine?

A. I would say ordinarily they would say white pine, if they want to use it for outside trim.

Q. And you use your discretion as to whether it is Idaho white pine or California white pine which is to be supplied?

A. We ask what grade he would like in the white pine.

Q. You ask for the grade. How do you determine whether you will furnish him with Idaho pine or California pine?

A. In that particular instance, we carry a no. 2 common Idaho; of course, it has some knots and we say, "Do you want clear grade or some with knots?" and he will say, if he wants Idaho pine—he won't specify it as Idaho pine, but if he says with some knots, we give him Idaho pine, because that is the grade we happen to carry.

Q. If he asks for a clear grade, you think the proper thing is to furnish him with California white pine; if he asks for pine with knots in, you give Idaho white pine?

A. In our situation.

180 Q. Do you carry any southern pine?

A. To a small extent.

Q. Is that the longleaf hard pine, so called?

A. We do not carry the longleaf, we carry the Arkansas yellow pine.

Q. That is a relatively soft pine?

A. It is softer than the so-called North Carolina pine.

Q. But it is not as soft as either Idaho or California white pine?

A. No.

Mr. MATTHEW. That is all, thank you.

Redirect examination by Mr. BURR:

Q. You say that you think that the California white pine is a little softer than the Idaho?

A. I do.

Q. As an average run?

A. As an average run and in the one's and two's.

Q. You think that is the question of quality that enters in there, do you?

A. I do.

Q. Do you notice any other differences in quality between the two types of lumber, the Idaho and the California?

A. It is a hard question; what you call other differences.

181 Q. Is there any difference, so far as you know in the durability characteristics of the two lumbers?

A. I could not say that I know there are; no.

Q. You think, for exterior use, the California white pine is as suitable for building purposes?

A. Yes.

Q. For outside work it is as durable as the Idaho; is that right—do you think it is as durable?

A. One is just as durable as the other.

Q. Have you had any experience so that you could check up on the durability?

A. We have not absolutely checked up on the durability.

Q. You haven't had any experience so that you could check it up?

A. No; but by observation, you might say, not particularly checking up every piece, I would say one would last as long as the other.

Q. When you consider the quality of the California white pine, do you ever notice any difference between the heartwood and sapwood of the lumber that comes to you?

A. Oh, yes; we have.

Q. Is the heartwood of this California white pine easily distinguished by the eye from the sapwood?

A. I think so; yes.

Q. What is it?

A. I think there is a small flaky part in the center of the
182 heartwood that is more prominent in the California.

Q. Is it a different color at all?

A. It is a little brownish texture.

Q. In considering the quality of the California white pine which type of—well, is there a heartwood in most of the boards that you receive?

A. No.

Q. It is mostly sapwood, is it?

A. Some sapwood and some heartwood.

Q. Is it mostly sapwood or mostly heartwood?

A. More sapwood than heartwood, I should say.

Q. And you say the sapwood is darker in color?

A. The heartwood is darker in color.

Q. I mean the heartwood is darker in color; that is a smaller percentage now, is it?

A. Smaller percentage?

Q. Smaller percentage of the total run of the California white pine?

A. I should say yes.

Q. Did you ever notice the difference between the sapwood and heartwood of Idaho white pine or is not that distinguishable?

A. I would not say so much.

Mr. BURR. That is all.

(Witness excused.)

183 C. E. LINDSTROM was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your business, Mr. Lindstrom?

A. Salesman.

Q. For whom?

A. Weyerhaeuser Sales Company.

Q. How long have you held that position, sir?

A. Approximately five years.

Q. Will you state whether or not you have had experience in the theoretical part of the study of forestry?

A. Yes, sir, I have.

Q. That was obtained how?

A. How do you mean?

Q. Have you ever taken any courses in forestry?
A. Yes.
Q. At any educational institution?
A. Yes; at the University of Idaho.
Q. When was that?
A. 1924.
Q. Have you ever had any lumber experience prior to taking that course?
A. Yes, sir.
Q. What was that, in logging or what?
184 A. Both logging and lumber.
Q. Please be a little more specific about what your experience has been.
A. The various steps in the woods that a man would come in contact in logging operations, and, aside from that, at the mill, as a grader and a roundabout man at the mill.
Q. You had a job first as a logger in a logging company?
A. No; the first was in a lumber mill, and I migrated from that to the woods.
Q. How long was the logging and milling experience?
A. From the time I was twelve years old up to the present.
Q. That covers how long a period, approximately?
A. About fifteen years.
Q. What woods were you in?
A. In the inland empire, the woods that grow there, and it was those woods that I spent my time among.
Q. Following that experience in the mills and in the forest you took this course that you referred to in the educational institution?
A. Yes, sir.
Q. Following that you went into the lumber business as an employee, did you?
A. Yes, sir; following that, when I was through school, I did.
Q. You have been with the Weyerhaeuser interests ever since?
A. Ever since; yes, sir.
185 Q. In connection with your forest experience, did you have experience in examining microscopically or otherwise the lumber of different species?
A. In a few instances.
Q. Is it possible to distinguish Pinus ponderosa from white pine?
A. Yes, sir; it is.
Q. What do you understand by white pine, the genuine white pine?
A. I mean Pinus ponderosa from genuine white pine.
Q. By genuine white pine what species do you refer to?
A. I refer to the three, Pinus strobus, Pinus monticola, and Pinus lambertiana.
Q. Have you had occasion as recently as yesterday to visit the Charles Street Meeting House in this city?
A. I didn't quite get that question. Read the question, please.
(The question was thereupon repeated by the reporter as above recorded.)

A. Yesterday was the first time I was down there; is that what you mean?

Q. You visited the Charles Street Meeting House yesterday?

A. Yes, sir; I did.

Q. Would you state whether you examined certain urns on or about the roof of the structure?

186 A. Yes.

Q. Where is that meeting house; do you remember the corner of what streets?

A. The corner of Charles Street and Mt. Vernon, I believe; yes, I am certain it is.

Q. That is in the neighborhood of Beacon Hill?

A. That is in the neighborhood of Beacon Hill.

Q. Will you state what the result of your examination of these urns was?

A. What do you mean, what I found on examining them?

Q. Yes; did you examine the type of wood in one or more of those urns?

A. Yes, sir; I examined the wood in two urns.

Q. Did you make any cutting from any of the wood that you found there?

A. Yes; I did.

Q. Will you state what you found the condition of those urns to be?

A. Not in very good condition.

Q. About how tall an urn would you say those were?

A. Possibly the height of this table.

By Examiner SHEPPARD:

Q. Please indicate about how high.

A. Approximately thirty inches.

By Mr. BURR:

187 Q. Will you state what the situation of those urns was, as regards exposure to the weather?

A. Well, of course, they were urns stuck right out there exposed to all atmospheric conditions.

Q. Outside, were they?

A. Yes; they were outside, exposed right to the raw atmospheric conditions.

Q. To all the elements, rain, snow, and so forth?

A. Yes; rain, snow, sleet.

Q. Were those hollow urns or solid urns?

A. I believe they were solid urns.

Mr. MATTHEW. Does he know whether they were solid or not?

By Mr. BURR:

Q. Do you know whether they were solid urns or not?

A. From indications, they were all solid, as far as I could see.

Q. You do not know of your own knowledge that they were?

A. The only way I could find out was to take an axe and cut them in two, but I imagine that would be prohibited.

Q. The urns are in full sight of the passers-by on the street?
A. Yes.
Q. They are there for ornamental purposes?
A. They are there for decorative purposes; yes.

Q. You looked at the top of the urn and there was no
188 aperture on the top to the base?

A. Not that I could see.
Q. You looked down from the cupola above, did you?
A. Yes.
Q. And they were solid in appearance across the top?
A. Yes, sir.
Q. You say that you made cuttings from the lumber of which the urn was in part composed or wholly composed?
A. I made a cutting of two of the urns; I made a cutting of the base of one and the top of the other.
Q. You examined them through a microscope, did you?
A. Yes; through a hand lens, not a microscope.
Q. Through a hand lens that you carried with you?
A. Yes.
Q. Will you state what type of wood you found those to be.
A. Pinus ponderosa.
Q. Did you bring those with you this morning?
A. Yes, sir. Do you wish to see it?
Q. Yes; if you please.
(Sample handed to counsel.)

Mr. BURR. I ask that they be received in evidence jointly, with the receptacle as Commission's exhibit no. 5.

Mr. MATTHEW. I shall object unless this lumber is identified as lumber furnished by one of these respondents.

189 Examiner SHEPPARD. Yes; I think that is proper.

Mr. BURR. If the examiner please, we can not prove, nor it is pleaded nor is it proper to expect us to prove the durability characteristics of the Pinus ponderosa produced by any specified respondents or any specified producers. It is making a case as regards the durability or the relative durability, where exposed to the weather of Pinus ponderosa as contrasted with other white pines if we make proof with regard to Pinus ponderosa, irrespective of who is the producer. It is to be presumed that the species is the matter at issue as to durability rather than the actual lumber produced by any one producer of that species, otherwise it would be prohibitive to attempt to prove anything as regards durability of any class of wood that may be made.

Mr. MATTHEW. If the examiner please, we have very specific issues in this case. What may be the quality or durability of lumber produced of Pinus ponderosa in some sections may not be at all determinative of the quality or durability of Pinus ponderosa in other sections. In fact, this very complaint alleges that this Pinus

ponderosa varies very materially throughout this range, the range alleged to be extremely great, from Canada through the United States into Mexico and perhaps beyond. If it is true that this lumber is extremely variable throughout this range, certainly
190 these respondents who are represented by us cannot be precluded by some lumber produced from some entirely different section.

Examiner SHEPPARD. I have no special objection to the samples going in for whatever consideration the Commission may want to make of them, Mr. Burr, but it seems to me, in order for the samples to be of any value, in this case, it has got to be shown whence they came and by whom they were produced, and so forth. Merely bringing into this case any sample of ponderosa is, in my judgment, a little bit too broad to be of any material use.

Mr. BURR. If the examiner please, counsel himself has argued here as to figures of the Government with regard to this species of lumber. Why, counsel's own argument here will mean that the figures of the Federal Government with regard to tests that they made with Pinus ponderosa are not material at all unless the Government happens to know whether that Pinus ponderosa that was then examined was produced by these respondents. We have got to prove the characteristics of the species, and when we prove the characteristics of the species we will admit that there are some variations, but the characteristics of the species are placed in issue by the Federal Government's complaint in this case, and we can not be precluded from proving the characteristics of the species by be-
191 ing burdened with the laboring oar of proving where each particular piece of wood or white pine or ponderosa was produced.

Examiner SHEPPARD. I will let the exhibit go in for what it is worth.

Mr. MATTHEW. You think it goes to its weight rather than admissibility?

Examiner SHEPPARD. Absolutely, and I am going to give it probative value. I will tell the Commission that here is an example of ponderosa but there are other samples of ponderosa that are not here, and let them take it for what it is worth.

Mr. MATTHEW. May I say, Mr. Examiner, with respect to producing samples which are entirely representative, as far as the suggestion of counsel, respecting the difficulty of proving his case as the quality of these various woods is concerned, of course, the Government did specifically identify the lumber as being produced from different sections. It seems to me that a Government publication which reports the results of independent, and of course, impartial tests has far more value than you can possibly find in producing these two little splinters of wood of some particular job, without any evidence and without any assurance as to the source of the wood.

Examiner SHEPPARD. That is my point exactly. While I
192 have no objection to it going in, I see no special benefit in it, as it is only one of many samples.

Mr. MATTHEW. I think almost anybody can go out and take a particular piece of wood on some job and perhaps find some defect and deficiency in it. I think that these samples should not be admitted. I think not only on the ground that they are irrelevant and immaterial, but I think in addition, there is not a proper foundation laid; they are not identified with any lumber produced by these respondents, and I desire to stand on the objection, if Your Honor please.

Examiner SHEPPARD. Your objection will be noted. Mr. Burr, if you desire, I will let them go in.

Mr. BURR. All right, I desire to have them go in.

Examiner SHEPPARD. Mark this exhibit the appropriate number and let it go in for the information of the Commission, and let the record show that the examiner states that he will give it probative value.

(The sample was thereupon received in evidence and marked "Commission's Exhibit No. 5.")

By Examiner SHEPPARD:

Q. Mr. Lindstrom, I would like to ask you if you could give me some idea of how long these urns have been sitting up on that meeting house.

A. That I could not tell you.

Q. Is it a number of years or do they appear to be old?

A. Why, I really could not say exactly; I do not know.

193 Mr. BURR. If the Examiner please, this is an offer as a sequel to the testimony of the witness who was on the stand yesterday, Mr. Bourne, who testified with regard to certain urns on the Charles Street Meeting House.

Examiner SHEPPARD. Yes; I remember the testimony.

By Mr. BURR:

Q. Mr. Lindstrom, you were not present during that testimony and I would like to ask you if in the basement of the same meeting house there were encountered certain urns of ancient character, apparently, when you were there yesterday?

A. Yes, sir; one.

Q. One urn down there?

A. One urn.

Q. Did that break open while it was being examined there?

A. Yes, sir.

Q. Was that of ancient character?

A. You mean the urn?

Q. Yes.

A. Yes, sir; it was.

Q. Did you look at that urn to ascertain whether it was composed of white pine or not?

A. I did, sir.

Q. Was it white pine?

A. Yes, sir; it was also solid. That urn was solid. It was broken up, with the exception of a little part in the end.

194 Q. And that was in decayed condition?

A. In decayed condition, part of it, and parts of it were in pretty good state of preservation.

Q. It was decayed so it broke up without any force?

A. Yes, the center section broke open; the portions where the atmospheric conditions could not get at it and continuously work at it, those parts were in a nice stage yet.

By Examiner SHEPPARD:

Q. Let me ask you this, were the urns from which you took the cuttings which appear in the exhibit, were those urns substituted in a latter day for the ancient urns that you have been speaking of?

A. Yes, sir, they were.

Q. And these urns that you have testified about, I mean that you have taken the cuttings from, were made from the ponderosa pine?

A. Yes, sir, they were pondosa pine that we found on the urns up there now, which I understand were substituted for the old, ancient urns that had been up there.

Q. You don't know how long the later urns were up there?

A. I don't know if that pondosa as one day or old, or five years, or what it is. I was asked to identify that as a species, and it is Pinus ponderosa.

195 Cross-examination by Mr. MATTHEW:

Q. Mr. Lindstrom, where do you reside?

A. At present?

Q. Yes.

A. Belmont, Massachusetts.

Q. How long have you been a resident there?

A. In Belmont, Massachusetts, about two years.

Q. How long have you been a resident of New England?

A. Approximately three years—three and a half years.

Q. Upon whose request did you make this visit to the Charles Street Meeting House and examine these urns?

A. The Commission.

Q. That is Mr. Burr, counsel for the Commission, do you mean?

A. Yes.

Q. At the request of Mr. Burr, do you mean?

A. Yes, sir.

Mr. MATTHEW. That is all.

(Witness excused.)

WILLIAM W. LUNT, was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You live in Hingham, Massachusetts, do you?

196 A. Yes, sir.

Q. How long have you been a resident there?

A. Probably forty-two or forty-three years.
Q. You are the town treasurer of Hingham, are you?
A. I am.
Q. Is there a historical society in that town?
A. There is.
Q. Do you hold any office in that society?
A. President.
Q. How large a membership have you?
A. About 370.
Q. How long has that society been in existence, if you know?
A. Since 1914.
Q. How long have you been president?
A. Since last June.
Q. In connection with the study that the society makes, have you ever had occasion to look into the historic houses of Hingham?
A. I have.
Q. Can you refer to any structures there of ancient character?
A. Yes; there are several. There is the house used as a headquarters of the Colonial Army, known as the Old Ordinary; the General Lincoln House—the William Otis Lincoln House; the house known as the Old Garrison House; the Old Mill, the Old Ship
197 Church, the Shute House at South Hingham, and then the house known as Roseneath.

Q. You do not know of your own knowledge, I suppose, when those houses were built—you were not there at the time they were built?
A. Hardly.
Q. They are old structures?
A. Yes.
Q. Can you tell me whether you are familiar with the tradition and reputation of those houses in the city of Hingham?
A. Yes.
Q. How old, according to reputation, is the Old Garrison House?
A. 1640.
Q. How old, by reputation, is the William Otis and Lincoln House?
A. 1753 or 1757.
Q. And the Old Mill?
A. The Old Mill is not the original building. I cannot tell you the date of this one.
Q. That is an ancient structure, is it?
A. Oh, yes.
Q. Runs back in the 1700's, somewhere?
A. In the old 1700's; yes.
Q. How about the Ship Church?
A. That is 1681.
198 Q. The Shute House is how old?
A. That is not known. It goes probably somewhere about the date between 1720 and 1740.

Q. The Roseneath House is how old?

A. About the same date as the church, about 1680 or '81.

Q. Are these buildings constructed of white pine externally?

A. So far as I know. That is only by hearsay. I am not an expert on white pine.

Q. That is their reputation, is it?

A. The reputation of the builders. The builders down there pronounce it white pine.

Q. The exterior finish of these houses, do they show age to the eye?

A. The siding exposed to the weather in some places show age, but not enough to deteriorate in their soundness at all.

Q. Are all of these structures painted on the outside or is any one of them unpainted?

A. I think they are all painted—I am quite sure they are.

Q. Referring to the Old Ordinary House there, what kind of condition is that in?

A. In very good condition.

Q. Is there any part of it where the lumber is actually exposed or is the paint in good repair, too?

A. The lumber has not been exposed for, I should say
199 twenty years; it was shingled right over the old siding clapboard.

Q. Then the original white pine clapboards are not exposed to the weather?

A. Not now.

Q. How long has that been the case that you have been familiar with it?

A. I have been familiar with the house ever since I have been in Hingham. I think it was in 1904 that it was shingled.

Q. Up to that time, the original white pine had been exposed but painted?

A. No; it was not painted during that period.

Q. From your experience, beginning 43 years ago, up to about 20 years ago, the exterior of that building was left exposed to the weather, without protection of paint; is that it?

A. Yes, sir.

Q. Is that reputed to be the original siding?

A. Yes, sir.

Q. How familiar are you with the William Otis Lincoln House?

A. Well, not so very familiar with that house, but the party who has lived there, I have been in communication with him ever since there has been a historical society.

Q. Is he living?

A. He is living; yes.

200 Q. I guess I better not ask you to give us what he told you.

A. Well, that would be hearsay.

Q. That is painted, is it?

A. That has been painted.

Q. Has that been painted during all of your recollection of it, if you can give your statement on that?

A. No; I am not sure about that.

Q. How about the Old Garrison House; what sort of condition is that in?

A. That is in very good condition.

Q. Any rotting?

A. No.

Q. That has been painted?

A. That has been painted.

Q. And that has been painted, as far as your recollection goes, has it?

A. As far as my recollection goes.

Q. The Old Mill; how about the condition there?

A. I could not state.

Q. Is the original material exposed there?

A. Yes.

Q. And painted?

A. No; it has not been exposed; it is shingled.

Q. It is shingled over with more recent material?

A. Yes, sir.

201 Q. Do you know when that was shingled?

A. I do not.

Q. It has been shingled, as far as you know, so long as you know the building?

A. Two or three times.

Q. So the original white pine lumber is not now and has not been exposed to the weather; is that right?

A. Yes, sir.

Q. The Old Ship Church, how about that; can you answer the same questions with regard to that as I have asked you as to the other buildings?

A. That has been painted ever since I have been there.

Q. Is it shingled over and protected?

A. It is protected by clapboards.

Q. That is the original clapboards?

A. No.

Q. That is modern clapboarding?

A. Yes. I think that was about sixty years ago that it was clapboarded.

Q. That is the reputation, that it was boarded sixty years ago?

A. Yes, sir.

Q. Prior to that, the clapboarding was the original clapboarding?

A. I do not know.

202 Q. You cannot testify on that point?

A. No; I cannot say.

Q. The Shute house, what is the exterior of the Shute house at the present time?

A. You mean in regard to painting?

Q. Yes, with regard to painting and as to the original clapboarding there or outside cover?

A. I doubt it. That is a question which has been discussed.

Q. You think the chances are that it is not?

A. I think it is not. I think it is more modern. It is old, but it does not go back to the original.

Q. The Roseneath house, can you state what the situation is there with regard to the original character of the present outside covering?

A. The outside covering there is modern.

Q. Have you any recollection as to when it was put on?

A. I think it is about thirty-two or thirty-three years ago. It is not on its original site, and when it was moved it was reclapboarded.

Q. You think that removable is about the period that you have given, as your best judgment?

A. Yes.

Q. Where were you born, sir?

A. Charlestown.

Were you familiar with these Hingham matters before you
203 went there?

A. Yes; I spent my summers there from boyhood.

Q. Your recollection then goes back how far in that Hingham neighborhood?

A. About sixty-five years.

Q. Are you familiar with the Third Unitarian Church in Hingham?

A. Yes.

Q. When was that built?

A. In 1807.

Q. How about the siding boards there; are they the original ones?

A. They are the original boards.

Q. They have been covered over by external covering?

A. They have been covered over by exterior covering; the present covering, about twenty-two years ago was put on the clapboarding.

Q. The siding parts are original?

A. Those are original, the side boards.

Q. And they are not exposed at the present time to the weather?

A. No; they are not exposed.

Q. Are you familiar with the Molly Wilder house?

A. Yes.

Q. Is that in Hingham?

204 A. Yes; that is in South Hingham.

Q. When was that constructed?

A. I cannot give you the date, but it is a very early house. That is the house where Jane Austen's "A Nameless Nobleman"—where the instance of that story took place. The incidents of the "Nameless Nobleman" are taken from that house, which dates back previous to 1700; as to the original part of it, I do not think there is any way of telling.

Q. Is there any part of the original structure there?
A. Oh, yes.
Q. Is the original clapboarding exposed to the weather in any part of the structure?
A. No; I do not think any of the original is exposed to the weather.
Q. Can you tell when the original siding there or clapboarding was covered?
A. No, sir.
Q. You cannot give us that?
A. No.
Q. Are you familiar with the Jabez Wilder or Rainbow Roof house?
A. Yes.
Q. Where is that?
A. That is in South Hingham.

205 Q. What is the situation as to the age of that house, by reputation?

A. I could not tell you. I know very little about that other than recently it has been restored.
Q. About how many years ago?
A. Two years ago.
Q. Up to that time was the original material exposed to the weather?
A. So far as I know.
Q. That is the reputation it has, is it?
A. That is the reputation.
Q. Was that painted?
A. Yes.
Q. Prior to its restoration?
A. Yes; it was painted.
Q. Are you familiar with the house known as the Cushing house?
A. Well, there are so many Cushing houses——
Q. There is one on Main Street of Hingham.
A. There is a regular Cushing colony of houses there, and it is hard to tell which you refer to.
Q. Are they all old structures?
A. They are all old; yes.
Q. Is there any special Cushing house on Main Street?
A. I think the house referred to there is not in existence now, unless Mr. Birks, you can refresh my memory.

206 By Mr. Birks:

Q. Mr. Burr is referring to the Cushing house on Main Street, which has just been taken over by this old lady—I have forgotten her name—who is having it done over, taking off the outside boards——
A. Do you mean the house that is painted black?
Q. I do not think that was a Cushing house.
A. That was the Thaxter.

Q. Tell us about the Thaxter house.

A. The Thaxter house was built somewhere in the 1740's or '50's, if I remember correctly, and I think the original siding is still there; it has been exposed to the weather now perhaps six months, but there was some clapboarding on it and they took it off. That is perfectly sound; I went up there and looked at it when they were making alterations in the spring. It is now painted.

Q. Is that reputed to be white pine?

A. Yes; that is reputed to be white pine, so Hardy said.

Q. The exposed pine boards of that house now are reputed to be white pine and the original boards?

A. Yes, sir; those are the original boards.

Q. What is the name of the woman who has taken the house?

A. Chamberlain.

Q. She removed the boards of the house, and the architect found the original pine boards that were put on the house,

207 as originally built?

A. Yes.

Q. What is the reputation of the house for age?

A. I could not say.

Q. It goes back to the early 1700's?

A. No; it is not as early as that; it is along about the middle of the century.

Q. That was unpainted up to two years ago?

A. No; it was painted and had clapboards from the original siding.

Q. The old original siding, was it painted when it was uncovered?

A. It must have been, because it does not show any signs of being painted at all.

Q. You indicated that you are familiar with the Old Ordinary, and you testified concerning it. Is there an ancient colonial porch on the street side of the Old Ordinary?

A. Yes, sir.

Q. Are the pillars of this porch reputed to be of white pine?

A. So I am told.

Q. And these pillars are still standing?

A. Yes.

Q. And are painted?

A. They are painted now; yes.

208 Q. Can you give us any idea concerning the age of these pillars—what is their reputation for age?

A. Those, without doubt, were put there in 1711 when the front porch was erected, before the house was built; that is, the newer portion.

Q. You have seen a blueprint of this house, haven't you?

A. No; I don't think so.

Mr. Birks. Mr. Examiner, I offer this picture in evidence—first, I will have it identified by the witness.

Q. This picture which I have handed you, Mr. Lunt, you identify that as being what?

A. The porch of the Old Ordinary on the south end of the Old Ordinary.

Q. This is the porch concerning which you have just testified?

A. Yes.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. None.

(The picture referred to was thereupon received in evidence and marked "Commission's Exhibit No. 6.")

By Mr. BURR:

Q. Mr. Lunt, can you identify the picture which I now hand you?

A. Yes; that is the southern end of the Old Ordinary.

209 Q. That is a photograph of the southern end of the Old Ordinary, is it?

A. Yes.

Mr. BURR. Mr. Examiner, I wish to offer the picture which the witness has just identified as Commission's exhibit no. 7.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. No; let it go in.

(The picture referred to was thereupon received in evidence and marked "Commission's Exhibit No. 7.")

By Mr. BURR:

Q. In connection with your historical society, have you had any point of contact and cooperation with other historical societies in this part of Massachusetts?

A. Oh, yes.

Q. There are other ancient structures in the various parts of the vicinity of Boston, are there?

A. Oh, plenty of them.

Mr. BURR. That is all.

Examiner SHEPPARD. Any cross-examination?

Mr. MATTHEW. No cross-examination.

(Witness excused.)

Mr. BURR. At my request and by agreement of counsel, arrangement has been made, which I understand the examiner is

210 apprised of, that we have one day's intermission besides Sunday before we open in New York.

I therefore move that this proceeding do now adjourn until ten o'clock of Tuesday, October 8th, 1929, at New York, at the office of the Federal Trade Commission, at 45 Broadway.

Examiner SHEPPARD. We will now take an adjournment of this proceeding to reconvene in the city of New York at 45 Broadway, at the office of the Federal Trade Commission in room 803, on Tuesday, the 8th of October 1929, at ten o'clock a.m.

(Whereupon, at 12:00 m. an adjournment was taken to October 8th, 1929, 10:00 a.m., 45 Broadway, New York City, New York.)

211 Before the Federal Trade Commission

Docket Nos. 1620 to 1669

In the matter of the White Pine cases

NEW YORK CITY, NEW YORK,
*Room 803, 45 Broadway,*
*October 8th, 1929.*

Met pursuant to adjournment, 10:00 a.m.

Before: William W. Sheppard, examiner.

Appearances:

Eugene W. Burr and J. G. Birks, attorneys for the Commission; McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Company, et al.; Davies-Johnson Lumber Co., et al.; Diamond Match Company, et al.; California Fruit Exchange, et al.; Penman Peak Lumber Co., et al.; Feather River Lumber Company, et al.; Kesterson Lumber Company, et al.; Hobart Estate Company, et al.; Fruit Growers Supply Company, et al.; Quincy Lumber Company, et al.; Spanish Peak Lumber Company, et al.; Lassen Lumber and

212 Box Company, et al.; Red River Lumber Company, et al.; Owen-Oregon Lumber Company, et al.; Big Lakes Box Company, et al.; Ewauna Box Company, et al.; Klamath Lumber & Box Company, et al.; Lamm Lumber Company, et al.; Pelican Bay Lumber Company, et al.; Algoma Lumber Company, et al.; Shaw Bertram Lumber Company, et al.

Jesse Andrews, attorney for the respondents, Pickering Lumber Company and the Forest Lumber Company, et al.

213 PROCEEDINGS

Examiner SHEPPARD. Do I understand, Mr. Andrews, that you represent anybody that Mr. Matthews has not made an appearance for?

Mr. ANDREWS. I should like my appearance noted on behalf of the Pickering Lumber Company and the Forest Lumber Company.

Examiner SHEPPARD. It may be so noted.

SAMUEL J. RECORD was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you please state your full name?
A. Samuel J. Record.
Q. Professor, your occupation is what?
A. I am professor of forest products in Yale University.
Q. Yale has a school of forestry?
A. It has.
Q. Who is at the head of that school?
A. General Henry S. Graves.
Q. How long has that school been conducted, if you know?
A. Since 1900.

Q. How long have you been connected with it?

A. Nearly twenty years.

Q. Will you state whether you have made a lifelong study
214 of forestry?

A. Well, since 1903, I have.

Q. Will you sketch your experience in the study of forestry, both practically and theoretically, from 1903 to the present time, just briefly, giving us an outline of it?

A. I had some forestry training in Wabash College in Indiana; I had training at the Yale School of Forestry as a student and I entered the U.S. Forest Service and was there a little over six years, after which I entered the Yale School of Forestry, first as instructor and later as assistant professor and eventually as professor.

My first position in the Forest Service was the study of western yellow pine in the inland empire, particularly monticola and Idaho, and since then I have devoted most of my attention to the study of woods, both of the United States and foreign woods.

Q. In what part of this country have you studied forestry, Professor?

A. I have studied the forests in almost all parts of it except California, Arizona, and northern New England.

I have studied particularly in the inland empire, as I mentioned, through the Middle West and in the South and parts of the East.

Q. Are you an author on forestry matters?

A. I have published three books and numerous pamphlets
215 and articles.

Q. Are you the author of a book entitled "Identification of Economic Woods of the United States"?

A. I am.

Q. That was published about 1919, was it?

A. The first edition was in 1912 and the revised edition in 1919.

Q. Are you a member of the committee for cooperating with the Federal Trade Commission on nomenclature matters in forestry?

A. I am chairman of the committee to advise the director of trade practice conferences in matters of trade nomenclature of woods.

Q. And you have so advised in said matters, have you?

A. I have.

Q. Now, Professor, I wish you would state, first, what are the general distinguishing characteristics between the so-called white-pine group and the so-called yellow-pine group, if you will, please, sir.

A. There are several differences in the trees and also in their woods.

One of the most conspicuous differences in the foliage is that the leaves of the white-pine group have one strand or leaf or needle, and those of the yellow pines have two strands or bundles. The so-called true white pines have their needles in clusters of three;
216 the others, almost without exception, have them in clusters of two or three and occasionally more or less.

The cones of the white pine are thinner, scaled, and do not have the sharp points that you find on the pitch pines or hard pines.

By Examiner SHEPPARD:

Q. Are you speaking of strobus?

A. Strobus is typical of the white-pine group.

Q. When you say white pine, you mean strobus?

A. I meant the more general term, including strobus, Idaho white pine, monticola, and California, representing the groups of white pines or soft pines, while the hard pines are often spoken of as pitch pines, including most of the southern pines and the Pinus ponderosa, which is in question here.

Q. You do not call Pinus ponderosa a pitch pine, do you, or is it in that class?

A. It is in the pitch-pine group; its name is not pitch pine but it belongs to that group.

Q. All right, proceed.

A. There are also differences in the woods, so that these main groups of pines can be separated fully and as readily from the structure of the wood as they can from any other characters, which a systematic botanist might use.

217 These structures are different for the two groups, so that if you use a small specimen under a microscope, you can separate the two groups.

In turn, these groups can be further divided, but the divisions do not carry very far, and the most we can do is to think in rather large groups, unequal groups.

These differences are represented by certain outward and inward characters, extending further to what you might say the quality and texture of the wood.

The white pines or soft pines being ordinarily softer, much more uniform in texture and growth, and less highly resinous than the pitch pines and hard pines. Those are the principal differences.

By Mr. BURR:

Q. Is there a difference between the ponderosa or western yellow pine and the white pines as regards its uniformity?

A. Yes.

Q. And of quality?

A. If I understand you correctly, the wood of Pinus ponderosa, the tree which produces what is frequently called western yellow pine, shows greater variation—very much greater variation—due to its range of growth and age and particular conditions of growth than you find in the white pine or in any one of the white pines.

That is, whether you take eastern or northern white pine or Idaho white pine or the sugar pine.

218 Q. Taking as nearly as you can, the conception of an average ponderosa tree, will you state whether it has as high a degree of uniformity of texture and character of wood as the average of the three species of so-called white pines?

A. It does not.

Q. In what respect, Doctor?

A. There is greater contrast between the portions of the growth layers, depending on whether it was produced in the early part of the season or the latter part—the so-called spring wood and summer wood.

The contrast is greater, while in the white pines, the contrast is moderate and the transition from one to the other is uniform, so that the wood cuts more smoothly.

Q. Is there a greater uniformity or less uniformity as between heartwood and sapwood in the genuine white pines than in the ponderosa?

A. I believe there is greater uniformity in the white pines than in the ponderosa.

Q. In color or texture or what do you refer to—where is the contrast—in both those characters, in one or which?

A. Principally in color, but also in the amount of resin contained in the wood. It is ordinarily greater in the ponderosa than it is in the white pines.

Q. Taking up the question of color, will you describe wherein the difference in color in the heartwood and sapwood of
219 white pine and the difference in color in the heartwood and sapwood of the ponderosa, lies?

A. There is only a small contrast, as a rule, in the color of heartwood and sapwood of the white pine; when it is fresh, the heartwood being light brown or slightly pinkish and the sapwood being yellowish.

Later, as the wood becomes older, it deepens in color, taking on a reddish color.

Q. That is the white pine?

A. That is the white pine. The heartwood, in time, would take that color in lumber form.

Q. For how long a period?

A. It is usually a long period, of many years. Very old white-pine furniture and lumber usually shows a rich red, which is not pronounced when it is fresh.

It is usually a light color; in the ponderosa the contrast is usually sharper. It varies with different trees in different positions; sometimes the contrast is very sharp, the wood being brown or reddish brown. In general, the contrast is considerably sharper in the ponderosa than it is in white pine.

Q. What is the effect upon softness of texture of the presence of resin or rosin in the wood?

A. The abundance of resin tends to increase the hardness of the wood somewhat. The amount of it, if there is a very
220 large amount at all, will increase its hardness and weight very materially.

Q. There is an appreciably larger amount in the heartwood of ponderosa, taking it as an average, than there is in the white pines?

A. I should say so.

Q. Have you observed the relative amount of heartwood and sapwood in the genuine white pines as contrasted with the ponderosa trees?

A. I have no definite measurements in mind, but I have a very definite impression that—

Mr. MATTHEW. Pardon me just a moment. I have no objection to Professor Record testifying to anything within the realm of his actual knowledge, whether it is gained by observation or otherwise, but I doubt very much whether his impressions ought to go into the record.

The WITNESS. These impressions, I might say, are based on my own experience.

Mr. MATTHEW. If it is based on experience, I have no objection.

By Mr. BURR:

Q. Go ahead.

Will you read the professor's answer as far as he has gone?

(The question was thereupon repeated by the reporter
221 as above recorded.)

A. (Continuing.) That the sapwood in the white pine is narrower than in the Pinus ponderosa for the large trees. It is considerably narrower, in general, with the possible exception of sugar pine, where the contrast is not so great as I recall, although I have not seen very many cross sections of sugar pine, never having studied that tree in the forest.

Q. Referring to monticola and strobus, as contrasted with ponderosa, will you state whether there is a considerable difference in the average proportion of the sapwood and heartwood, leaving out of consideration the third variety or lambertiana.

A. I think there is considerable difference, the lesser amount being in Idaho or northern white pine.

Q. The least amount of which?

A. Sapwood in Idaho or nothern white pine.

Q. Will you state whether or not it is possible for an expert wood technologist to take miscellaneous yellow pine specimens and state whether they belong to one or another species of yellow pine, by microscopic tests?

A. Well, in general, I fear he cannot. Some species he can separate out with more or less assurance, but in general, that is very difficult if not impossible.

Q. How about the white pines; can you differentiate by the miscroscope in all cases, specimens or small cuttings, we will
222 say, of monticola, lambertiana, and strobus?

A. Not always, with real assurance, I am sorry to say.

Q. Can you always tell by the microscope, whether a given sample, say a very small piece, belongs to the yellow pine group or white pine group?

A. Yes; very definitely.

Q. Would you undertake to say, if you had a carload of any one of the white pine species, if it had not been selected in order to deceive the eye, would you be able to tell which carload was monticola and which carload was strobus and which was lambertiana, infallibly?

A. I do not know whether I could tell Pinus monticola from Pinus strobus or not, but I think I could tell a sugar pine from the other.

Q. From either of the others?

A. Yes, sir.

Q. That is on account of pitch pockets that exist in sugar pine, is it?

A. Partly that and partly its odor. It has a very pronounced odor, if you have it in quantity, and as a rule it runs coarser texture and has more prominent resin ducts. Those are relative things, but as you get enough of those together, you can draw your conclusions.

Q. How about the yellow pine group; would it be possible always to differentiate ponderosa from the other specimens of the
223 species of the yellow pine group if you had it in quantity?

A. I do not think I could tell it from Arkansas soft yellow pine, for example, which is a southern pine.

Q. Is Pinus jeffreyi recognized as a separate species from Pinus ponderosa?

A. Yes.

Q. In what respect does it differ from ponderosa?

A. Mostly a matter of cone. That is the most outstanding feature. I have forgotten what all the technical differences are, because I never made a special study of that either.

Q. Does the lumber differ materially from Pinus ponderosa?

A. The specimens I have seen of it do not differ very materially.

Q. You have examined that type of wood frequently, have you, doctor?

A. Not frequently, but I have examined it.

Q. Now, will you state what is the difference in the life of the tree between heartwood and sapwood, for the information of the examiner and Commission?

A. Sapwood is the living part of the wood; the heartwood is dead wood.

The heart at one time, of course, was sapwood. The structural differences are ordinarily not great, hardly appreciable. The sapwood usually contains free resin which will exude, run out,
224 when the tree is cut, while the resin in the heartwood is fixed, the volatile portions having disappeared; the color deepens, largely due to chemical changes, I presume, as well as possibly the greater amount of resin, or its distribution is changed.

As far as the pines are concerned, the most outstanding feature is the color and that is largely due to chemical changes, as I understand it, which take place in the substance, such as resin.

Q. Which is the durable portion of lumber in general, when exposed to the weather, the heart or the sap wood?

A. The heartwood.

Q. That is largely true throughout the lumber world, is it?

A. In no instance that I know of is the sap part of any tree durable when exposed to conditions favorable to decay. The heartwood may or may not be durable.

Q. Did you say may or may not be?

A. Yes.

Q. Do the white pines differ from ponderosa in their ability to stay in place as regards shrinkage, if you know?

A. I know that the white pines are noted for their ability to stay in place, with small amount of shrinkage. Some of the other pines are not so well known for that purpose, but I would prefer not to make any statement.

By Examiner SHEPPARD:

Q. You mean by staying in place, when it is used in a
225 building as lumber?

A. When it is finished, it does not shrink much or swell much as a result of absorbing moisture from the air.

Q. That particular kind of lumber is characterized by that feature?

A. White pine is noted for its ability to stay in place after it is manufactured.

By Mr. BURR:

Q. What is the reputation of Pinus strobus as a building material?

A. Excellent.

Q. And for how long a time has that been the case?

A. Ever since they began to use it in the country, as far as I know.

Q. Is it excelled by reputation of any other wood for durability, where exposed to the weather?

A. Possibly by such woods as heart cypress, redwood——

Q. Cedar?

A. And cedar.

Q. When you say heart redwood, or did you say heart cypress?

A. Heart cypress.

Q. Lambertiana or sugar pine and the monticola, the northern white pine, came onto the American market much later, did they not, than strobus?

A. Yes.

226 Q. Do those woods share in any of the reputation for durability when exposed to weather conditions that strobus has enjoyed?

A. So far as I know, they do.

Q. They haven't had as long a test as strobus, have they?

A. No; but I know of no instance where they have failed, but instances of other failures come to my attention frequently.

Q. Have instances of failure come to your attention as regards yellow pine, when exposed to the weather?

A. Yes.

Q. Which varieties?

A. I think I have had more cases of Pinus ponderosa than any other.

Q. Can you mention any specific instances?

A. One instance I had a few years ago, perhaps three or four years ago. I do not recall the firm, but they were called upon to replace a sash in a house because the inside had turned blue and had stained the color through the paint, and the sash was supposed to be white pine and it proved to be Pinus ponderosa.

The explanation seemed to be that the drying out of the plaster had caused the condensation of moisture which ran down the panes and caused the frames to blue badly and start incipient decay.

Mr. MATTHEW. Pardon me a second, do I understand the
227 professor to say that he could not recall the firm?

The WITNESS. I do not remember the name of the firm.

By Mr. MATTHEW:

Q. But you know the place; you can identify the place?

A. I cannot identify it now.

Q. This is an incident within your own knowledge and you cannot identify the structure, and so forth?

A. No; the frames were sent to me by some lumberman here in New York.

Mr. MATTHEW. All right, I will pass that for the moment.

By Mr. BURR:

Q. How long ago was that, Doctor?

A. I think it was about three or four years ago.

Q. Have you any other instance that you could call to mind?

A. I have had numerous instances where this question was brought up, but they sort of blend together in my mind so that I cannot put my finger on the individual cases very distinctly.

Q. Have specimens of the wood been sent to you to analyze or determine the identity of the wood?

A. Yes; they usually come in as a piece of wood that has rotted or stained, and the question is whether this is white pine or not, and they usually do not go much further than that, so I only learn about the details casually. They simply want to know what
228 the wood is, and I noticed there have been more cases of that sort than any other one wood that has come to my attention.

Mr. BURR. I think you may cross-examine.

Cross-examination by Mr. MATTHEW:

Examiner SHEPPARD. Professor Record, I would like you to give me the botanical name of the so-called yellow pine or long leaf pine found in the South.

The WITNESS. There is more than one. There is one called the long leaf, which is the hardest and the heaviest, and that is Pinus palustris.

There is another one called the short-leaf pine; that is, Pinus echinata.

Examiner SHEPPARD. That is sufficient on that line. What Mr. Burr asked you about this Pinus jeffreyi, is that a yellow pine?

The WITNESS. Yes; it falls in that group, but it is a California tree.

Examiner SHEPPARD. It is a California tree, and belongs to the ponderosa?

The WITNESS. It is more closely related to ponderosa.

Examiner SHEPPARD. Than it is to Pinus strobus?

The WITNESS. Yes.

By Mr. BURR:

Q. Do not some of the specialists class Pinus jeffreyi as a
229 subspecies of ponderosa?

A. Some do.

Q. Do you?

A. I never went into the matter.

By Mr. MATTHEWS:

Q. You have stated, Professor, that Pinus ponderosa belongs in the pitch pine group; is that justified by consideration of its essential mechanical and physical properties?

A. The pitch pine group is the name for a general group to contrast it with the so-called soft pine group, which includes the white pines.

The pitch pines include not only the hard pines but certain other pines, like the Norway or red pine and some of the pines that would not be called hard pines.

Q. So some pines which you would not call hard pines are classed in the pitch-pine group?

A. Yes.

Q. Then if we address ourselves to a consideration of the mechanical and physical properties of the lumber and ignore such considerations as the number of needles in the strand or the number of needles in the cluster, would you say that Pinus ponderosa can be more nearly assimilated to the pitch pines or white or soft pines?

A. I should say that some grades of it, so far as the organic properties are concerned, are like the hard pines, pitch pines,
230 and some more like the soft pines.

Q. Let us get something as definite as we can upon the record, professor, let us take the general run of the lumber which has been marketed under the name of California white pine or some similar name for a great many years past and I will ask you this question:

Whether when we consider the mechanical and physical properties alone of lumber yielded by Pinus ponderosa, is it more nearly to be assimilated to the lumber yielded by white pine trees or the lumber yielded by the general group of hard or pitch pines?

A. Under those conditions I would say it is more nearly like the white pines.

Q. You know that by numerous tests which are quite well known to technologists that the lumber yielded by Pinus ponderosa is generally very much softer than the lumber yielded by the long-leaf yellow pine of the South?

A. Yes.

Q. As far as the quality of softness is concerned, the Pinus ponderosa lumber generally is very close to the lumber yielded by the true white pines?

A. The lumber that comes on the market is generally selected from the outer part of old matured trees and is generally quite soft and more like the white pine.

Q. You have referred to the resinous properties of these
231 various woods; addressing yourself to that feature alone, would you say that Pinus ponderosa lumber more nearly resembles true white pine lumber or the long-leaf yellow pine lumber of the South?

A. True white-pine lumber.

Q. Considering the same element again, namely the resinous property of lumber, I will let you contrast the Pinus ponderosa lumber with sugar-pine lumber, which you have stated is yielded by the tree known botanically as Pinus lambertiana.

A. I am not sure that I quite understand your question.

Examiner SHEPPARD. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. Do you understand it now?

The WITNESS. Yes; I should say that the lumber commonly sold as California white pine is about the same in resin as the sugar pine.

Q. Although the sugar pine is botanically a true white pine?

A. Yes.

Q. Counsel for the Federal Trade Commission inquired as to the so-called pitch pockets which he stated or suggested are characteristic of sugar-pine lumber; do you recall his inquiry along those lines?

A. I do not know that I do recall it.

Q. Suppose I make the inquiry myself then.

The sugar-pine lumber which is a pine yielded from Pinus
232 lambertiana, is characterized by little deposits of resin which not infrequently come to the surface and are known as little pitch bubbles, is that true?

A. That is true, I think.

Q. That is true of the sugar pine lumber?

A. Yes.

Q. That is not characteristic of lumber which we have designated here as California white pine, is it?

A. It is less common.

Q. It is more truly characteristic of sugar pine lumber?

A. I think so.

Q. Counsel asked you as to the distinction between Ponderosa pine and Jeffreyi pine, and you stated that they had certain botanical differences, but that by some botanists the Pinus jeffreyi is classified as a subspecies of Pinus ponderosa, as I recall your testimony?

A. I think that is true.

Q. I think you likewise stated that the lumber yielded by Pinus ponderosa and Pinus jeffreyi is quite the same?

A. I based it upon my studies of small samples, they are very similar.

Q. Has your study been confined to small samples?

A. So far as jeffreyi is concerned; yes.

By Examiner SHEPPARD:

Q. I do not quite get that. The testimony, as I get it, is
233 that Pinus ponderosa—if I understand the matter correctly—is more like white pine, and the Pinus jeffreyi is more like yellow pine; am I mistaken in that respect?

A. No; I do not think that I should place one ahead of the other. They are very close together. There seem to be more varieties perhaps than the separate species. I do not pretend to be an authority on Pinus jeffreyi at all.

By Mr. MATTHEW:

Q. Do you know whether Pinus ponderosa yields turpentine?

A. It does; yes.

Q. Do you know whether the Pinus jeffreyi yields turpentine?

A. I do not know.

Q. You have no information at all as to the relative turpentine producing qualities of those two species of pines?

A. Nothing definite.

Q. In answer to my inquiry as to whether the Ponderosa pine yields turpentine, do you mean to imply that it yields turpentine commercially, in a practical sense, or that it has a turpentine content just theoretically?

A. A number of tests were conducted by the Forest Service a few years ago as to the possibility of using western yellow pine in the Southwest for turpentine, in the same way that they do the pine in
the South, and their conclusions were, if I may be permitted to
234 state that, that while the yield was less, it was feasible under certain conditions.

Q. But you do not know whether the jeffreyi pine yields turpentine?

A. I simply do not recall that.

Q. Did you state that you would have no difficulty or that any wood technologist would have no difficulty in distinguishing jeffreyi pine lumber from ponderosa pine lumber?

A. I did not make any statement like that intentionally.

Q. May I ask that question, whether you have any difficulty in distinguishing or whether a wood technologist generally would have any trouble in distinguishing lumber yielded from ponderosa from a lumber yielded from the jeffreyi pine?

A. I do not know.

Examiner SHEPPARD. The witness stated that he does not know anything about jeffreyi, and I do not think his testimony along that line would be of any value to me.

By Mr. MATTHEW:

Q. Do you know what the commercial practice is as to the grading of jeffreyi pine and ponderosa pine?

A. I do not know anything about jeffreyi pine.

Q. You were asked by counsel as to the relative durability of heartwood and sapwood, and your reply was, as I recall it, that the sapwood of pines generally is far less durable than the heartwood?

A. That is so.

235 Q. And the sapwood of the Idaho white pine, pinus monticola, then, is certainly less durable than the heartwood?

A. Yes.

Q. Can you state whether or not the sapwood of the Idaho white pine is more or less durable than the sapwood of the ponderosa pine?

A. I have no data upon which to draw a definite conclusion.

Q. Then we shall not ask you to make a statement.

The principal pine lumber yielded by the Southern States is the so-called "longleaf yellow pine", is it not, professor?

A. That is one of them; there are three usually sold together.

Q. Which is produced in the largest volume?

A. I am not sure. I should say long leaf; probably the other two, short leaf and loblollies are usually classed together.

Q. You mean that shortleaf yellow pine and the loblolly pine are simply mixed for purposes of commercial distribution?

A. Generally so.

Q. What is the common trade name for that particular lumber?

A. It depends somewhat upon the part of the country. In some places it is known as North Carolina pine, in other places as shortleaf pine, and when you get in Arkansas it is called Arkansas soft pine.

Q. In each instance, is that pine lumber yielded by the tree, described botanically as pinus echinata?

236 A. By that and another.

Q. The lob'olly pine is not found in Arkansas commercially, is it?

A. Yes.

Q. Is the lob'olly pine lumber intermingled with the lumber yielded by the short-leaf pine?

A. Yes; in the South, because lob'olly does not grow in the north part of Arkansas.

Q. The North Carolina pine is both lob'olly pine and short-leaf pine; that is true, is it not?

A. Yes, sir.

Q. Is there any difference between the properties of the lob'olly pine and the short-leaf pine?

A. Sometimes.

Q. Will you please state what, in your opinion, are the outstanding differences?

A. Usually lob'olly pine is of coarser grain; it is a tree of more rapid growth, but when the two trees are grown together, in old matured stands, there is no appreciable difference.

Q. You are now referring to the lumber?

A. To the lumber; yes.

Q. You have in mind not only the appearance but the quality and utility of the lumber as well?

A. Yes.

Q. Are all three of these pines used for the production of
237 turpentine?

A. The longleaf is used for that. Only rarely do they use short leaf or lob'olly.

Q. But the short leaf and lob'olly are used to some extent in the production of turpentine?

A. They have been, but not commonly now.

Q. Do you know whether commercially longleaf yellow pine is identical with short-leaf pine botanically?

A. Sometimes I think it is in commercial grade.

Q. What do you mean by "commercial grade"? How do you distinguish commercial grades of longleaf yellow pine from short-leaf pine botanically?

A. Longleaf pine botanically sometimes produces wood, particularly in the case of young lumber, which would be classed as short-leaf or lob'olly, because it does not have the physical characteristics of the first-growth longleaf. In that event it is normally graded and classified as short-leaf pine and sold as such.

I do not want to make a statement too positively on that, but the dealers and inspectors here seem to decide that question on the appearance of the lumber rather than the source.

Q. In other words, they are not interested in the botanical species of the tree, but they are interested in the appearance and quality and utility of the lumber?

238 A. Yes, sir.

Q. So that if the particular lumber coming from southern yellow pine is in appearance and presumptively in its botanical properties assimilated to the ordinary shortleaf pine lumber, it is classified and distinguished as such?

A. I think so.

Q. Is it also the fact that some of the pine lumber which is marketed and distributed as longleaf pine is obtained from trees which are botanically shortleaf pine—that is, Pinus echinata?

A. I can only voice my suspicions.

Q. Well, never mind answering then. If you do not know the facts, I do not want you to testify.

A. I cannot say positively.

Q. You do not know the facts.

Then you do not know it to be a fact that commercial longleaf yellow pine is the correlative of commercial shortleaf pine, as you have described it a moment ago; that is, that the lumber is classified and distributed in accordance with its appearance and apparent qualities and utility?

A. I think that is true.

Q. Of commercial longleaf yellow pine?

A. Yes.

Q. Now, the characteristic longleaf yellow pine is used essentially for what purposes, Professor?

239 A. For heavy and durable construction.

Q. It is a structural timber primarily?

A. Yes, sir.

Q. It is not used very largely for shop purposes, is it, Professor?

A. Less so than the others?

Q. It has far greater structural strength than the white pine?

A. Yes, sir.

Q. It has far greater structural strength than ponderosa pine, has it not?

A. Yes, sir.

Q. It is used not only for structural purposes, framing, but also for flooring?

A. Yes, sir.

Examiner SHEPPARD. The examiner at this point indicates to the respondents' attorney and the Commission's attorney whether or not an inquiry in this case should be broadened so as to include the longleaf yellow pine of the Southern States.

Mr. MATTHEW. The obvious purpose of the complaints which are being heard before the examiner is to throw the lumber yielded from ponderosa pine into the yellow-pine group, and the prayer of the complaint is that we be required to cease and desist from using the term "white" in describing our product.

240 Professor Record has testified on his direct examination as to the distinction and the differentiation between the white-pine group and the yellow-pine group; he has thrown ponderosa pine into the yellow-pine group, which he further characterized as a group of hard or pitch pines, whereas white pines are commonly known as white or soft pines.

Now, the purpose of my interrogation is to show that commercially speaking at least, the lumber yielded by Pinus ponderosa does not

belong at all in the yellow-pine group, and should not receive a trade name which associates it with or identifies it with yellow-pine lumber.

Stating that, perhaps, in a little different form, we want to show that the mechanical and physical properties of our lumber are such that it will be trade deception to call it anything but California white pine.

Examiner SHEPPARD. In other words, you want to show, if I understand you right, Mr. Matthew, that the qualities and so forth of ponderosa are more like the Pinus strobus than like longleaf yellow pine?

Mr. MATTHEW. Or any other yellow pine, if Your Honor please, known to the trade.

Examiner SHEPPARD. It is a matter of comparison?

Mr. MATTHEW. It is a matter of comparison with these various lumbers.

I think, if we can show, as I believe we are showing very
241 satisfactorily here, that our lumber does not have the properties of the lumber that has commonly been known as the yellow pine, and marketed throughout the United States for scores of years, and that our name has been adopted because it properly characterizes by its appearance and botanical and physical properties those of the white pines, I think we are going to the very heart of the case.

Mr. BURR. I should like to be heard on that, if the examiner please.

We are almost arguing the case now, and I would like to make a statement, which I think can clear this up.

Examiner SHEPPARD. Gentlemen, the reason I raised the point here is, as I told you in Boston, it is my purpose to keep the record as short as possible and confine it to its exact issues.

Mr. BURR. I would like to have the examiner hear me on this.

Mr. MATTHEW. The language of the complaint—Your Honor has read that paragraph—clearly contemplates that we belong in the yellow-pine group. Let me state very definitely that we concede, and we have stated right from the start, that Pinus ponderosa has normally been classified in the so-called yellow-pine group, but unfortunately a very misleading group from our point of view, and considering the physical properties of the lumber, it does not
242 belong in the category of yellow-pine lumber, but belongs in the classification of white-pine lumber, and that is what we are undertaking to show.

Mr. BURR. If the examiner please, I would like to be heard, and I think I can clear the situation up without difficulty.

Counsel, in his remarks, has indicated that it would be erroneous to class ponderosa with the yellow pines. The complaint itself, in order to avoid this very thing of taking testimony with regard to yellow pines of the South—which, in our judgment, is immaterial—

the complaint itself, in order to avoid this very thing that counsel is now trying to inject in the case, uses the following language:

(Whereupon counsel read from paragraph VIII of the complaint.)

We also say here somewhere that ponderosa differs more markedly from the southern yellow pines than it does from the white pines as regards certain qualities.

Now, then, I do not believe that these gentlemen should be required to call their product western yellow pine. The Government has not taken one step or made one single attempt to introduce evidence in this case which could be construed as forcing or attempting to force the Pinus ponderosa interests to call their product western yellow pine or anything else with the name "yellow pine" in it.

243 I should be opposed to such an order.

Furthermore, the Commission has no authority to make a positive order or tell them to call it anything in particular affirmatively. They have the power to tell them not to call it by a certain name, if they find that name to be misleading. I concede that the name "western yellow pine" would be an inappropriate name; I concede, further, that Pinus ponderosa differs markedly from the yellow pine in the South.

If, however, there is confusion and misconception and perhaps deception of the public—if "deception" is not too strong a word—I am satisfied, although this pine is not a hard pitch pine but is, nevertheless, not a white pine; if there is misconception from calling it white pine, there should be an order requiring them not to call it white pine. That is what we are aiming at.

We do not aim to force them into a class of wood in which they do not belong.

Examiner SHEPPARD. Mr. Matthew, you have stated a few moments ago that it was your purpose to attempt to show the Commission that the class or classification that technologists in lumber or lumber experts had graded this Pinus ponderosa and placed it into a wrong designation or grade.

Did I get you correctly?

Mr. MATTHEW. No, sir; I did not say that, Mr. Examiner.

Examiner SHEPPARD. I understood you made a remark simi-

244 lar to that in purport.

Mr. MATTHEW. No; I made the observation that I thought it was rather unfortunate and misleading that ponderosa pine had been classified in the group of pines which are referred to commonly as hard or pitch pines, because it is neither hard pine nor pitch pine.

Mr. Examiner, if you would indulge me just another moment——

Examiner SHEPPARD. Yes; go right ahead.

Mr. MATTHEW. The paragraph from which counsel read, paragraph VIII, is a direct charge or conveys the direct charge that we have been reluctant to use the name western yellow pine as a commercial or trade name because we desire to avoid market disadvantages, and so forth.

That is one of the claims.

Now, then, there is not a line in the complaint which shows, which I think should be shown, that we adopted that name for the legitimate purpose of letting the trade and the consuming public understand that our lumber in mechanical and physical properties is really a white-pine lumber rather than a yellow-pine lumber.

The complaint does not concede that, and counsel will not concede it now.

Mr. BURR. No; I will not concede it.

Mr. MATTHEW. If I can show, as I believe we can, as far
245 as appearance, quality, and utility are concerned, our lumber is closely to be assimilated to the lumber yielded by the so-called "genuine white pine" and is radically different from the lumber yielded by the ordinary hard or pitch pine, I think we are addressing ourselves to the real issue in this case, an issue which I believe will be the determining one.

I had nothing more to ask of Professor Record along these lines, but I think that is material, if your honor please.

Examiner SHEPPARD. I will let you proceed.

I am particularly trying to guard against the dangers of interpleader, because I don't want any of the yellow-pine manufacturers to feel that it is necessary to interplead in this case.

Mr. MATTHEW. I think there is nothing that will be developed that will necessitate that.

Mr. BURR. No one is attacking yellow pine for the purposes for which it is best adapted, I take it.

Mr. MATTHEW. Just a question or two further.

Examiner SHEPPARD. Go right ahead.

By Mr. MATTHEW:

Q. Is the general quality of the northern white pine—that is, the lumber yielded from Pinus strobus, as high as it was twenty or thirty years back?

A. That for first growth may be.

246 Q. Board for board we will assume that it is; let us take the white pine lumber that is generally known on the market as strobus pine lumber.

A. There is some lumber on the market now of strobus that is of much lower quality than that of many years ago.

Q. Is that not generally true of strobus lumber that is on the market today?

A. I am not sufficiently versed with the marketability or markets to be sure of that.

Q. As a matter of fact, there is comparatively little strobus lumber left; is that not true?

A. There is comparatively little first growth.

Q. There is comparatively little second growth of merchantable character, is there?

A. There is probably as much pine lumber in Maine now as there ever was, but it is second growth.

Q. Of merchantable quality?

A. It is merchantable quality for certain purposes.

Q. For what purposes, would you say?

A. For match stock, pail stock, crating, and boxboards.

Q. For match stock, you mean for making matches?

A. Yes; match sticks.

Q. By "pail" you mean for constructing wooden pails?

A. Yes; where you can cut out clear lumber between the knots, not for the large boards, though.

247 Q. Do you get a high proportion of so-called clears from Maine white pine lumber now?

A. No; a low proportion.

Q. Very low indeed, is it not?

A. Yes, sir.

Q. Do you get very much shop lumber?

A. Some shop lumber; yes.

Q. It is mostly common, is it not?

A. Yes; it is mostly common.

Q. Rather low grade common; is that not a fair characterization of the Maine pine lumber?

A. I think so.

Q. You stated that white pine lumber is characterized, among other things, by the fact that the shrinkage is relatively small?

A. Yes.

Q. When the lumber is in place?

A. Yes.

Q. How does it compare with ponderosa pine lumber in that respect?

A. I have no definite data upon which to make such a comparison.

Q. Then you are not to be understood as stating that as far as the quality of shrinkage is concerned, that either strobus pine or monticola pine is superior to pondosa pine?

248 A. No; I did not make that statement.

Q. You said that two or three incidents had been brought to your attention where some lumber had failed, when put to certain uses, and you referred to one case where some sash had been replaced, the inside of it having turned blue; that was some three or four years since?

A. Yes.

Q. You said that you could not name the firm; can you identify the particular case sufficiently so that it could be checked up in some fashion?

A. I cannot offhand.

If it were of sufficient importance, I might be able to run it down.

Q. You said that you were not able to identify any other individual cases, but you just had the impression that there were more cases where ponderosa pine had failed under these conditions than other lumber?

A. In matters of this kind that come to my attention, I am interested in them as cases, and remember details of them, but I am not at all interested in them from the standpoint of the firms, so I am perfectly willing and glad to forget who they are.

Q. You do not know whether in any of these cases to which you referred, ponderosa pine lumber was supplied in response to
249 specifications for northern white pine? If you do not recall, I shall not ask you any further.

A. I am not sure.

Q. Coming back now to this first case which you brought to our attention, where the sash was replaced, can you tell us whether that sash was constructed of sapwood or heartwood?

A. Sapwood, I should say.

Q. And it had not been properly protected against dampness?

A. I should assume that.

Examiner SHEPPARD. Professor Record, I am going to authorize you to look up your records regarding the incident you have just testified about, concerning which Mr. Matthew has been questioning you, and I will request you to write me a letter addressed to my office at the Federal Trade Commission, Washington, D.C., and set out all the details that you can find from your records about that matter.

You may send Mr. Burr a copy and me the original, and Mr. Matthew, after I get that letter, if there is any information which will enable you to make further inquiry about that incident, I will allow you to do it.

Q. I think you stated, Professor, that you were not certain that you could readily distinguish sugar-pine lumber from lumber that is yielded by either monticola pine or strobus pine?

A. Not in small sizes or in small pieces.

Q. Let us take large boards; do you think then that you can readily differentiate or distinguish between them?

250 A. I think I can.

Q. Take a four-foot board, a board four feet long by perhaps two or three feet wide, or one foot wide.

A. I think I can.

Q. There are certain pieces that are quite difficult to distinguish, are there not?

A. That is my experience.

Q. That is, there is quite a resemblance between the lumber yielded by each of those three pine trees?

A. Yes.

Q. It is also true, is it not, that much of the lumber yielded by the ponderosa pine is difficult to distinguish from the sugar pine, Idaho white pine, and northern white pine?

A. Some of it is difficult to distinguish from casual inspection, but not from microscopic examination, certainly.

Q. You think you can always make a distinction by microscopic examination?

A. Yes, sir.

Q. You stated upon your direct examination, professor, that you had had some experience in practical forestry in the inland empire section; did that experience carry you both into the production of lumber of Idaho white pine and ponderosa pine?

A. Not very much in Idaho white pine, only casually in that. I was interested at one time in the study of so-called western
251 yellow pine, and the other time in the study of western red cedar and the Idaho pine came in only casually.

Q. How close was your contact with this Idaho white pine? You say you came in contact with it only casually; tell us to what extent your experience was limited.

A. It was very limited.

I was in the country where it was being used and saw it, but I was making no special study of it.

Q. Do you know whether or not the lumber yielded by Idaho white pine or Pinus monticola has a considerable variation, depending upon the elevation and character of the soil and climate and other conditions?

A. There is some variation, but it is not very great.

Q. Don't you know that a considerable quantity of lumber yielded from Idaho white pine is of a hard, flinty type, not at all like the lumber characteristic of the true white pines?

A. I never knew that.

Q. Do you know whether the lumber yielded by the monticola pine is characteristically a clear type or shop type?

A. It is perhaps more shop type than it is clear.

Q. Does it yield proportionately as much shop as is yielded by ponderosa pine?

A. I cannot state positively.

Q. Does it yield proportionately as much shop as is yielded
252 by the strobus pine?

A. I haven't sufficient data to answer that accurately.

Q. One further question, Professor:

I think you stated that your studies had not carried you into California?

A. That is true.

Q. I assume that likewise you have not been in southern Oregon, which is the territory that produces the lumber marketed in California under the name of California white pine?

A. That is true.

Q. You are not familiar with the grading of California white pine and California sugar pine, are you?

A. No; I am not.

Q. Your studies did not carry you into a consideration of commercial grading to any considerable extent?

A. Not now, they do not.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Professor Record, you testified, I believe, that you had considerable experience in Oregon at one time, practical experience in forests; is that true?

A. Perhaps not considerable, but some.

Q. At that time you knew the ponderosa of southeastern
253 Oregon, did you?

A. Southeastern? No; I have not been in southern or southeastern Oregon.

Q. What part of Oregon have you been in?

A. Northern and the northeastern part.

Q. Is there a Pinus ponderosa there?

A. Yes.

Q. And you studied it on the ground at that time, did you?

A. Some, but not extensively.

Q. Have you studied it since you devoted your time to forest products from a scholastic point of view?

A. I have studied the woods from time to time in connection with my work as a teacher.

Q. You have had opportunity to acquire information about Pinus ponderosa, together with other woods, during that long period?

A. I did.

Q. For the purpose of writing your books on lumber products, you have familiarized yourself with the subject matter of which you write, I assume, did you?

A. I tried to.

Q. This strobus that is brought in from Maine, will you state whether any of it is lumber that is matured under the economic lumber methods that are adopted in Maine? Is my question clear?

254 A. Most of it is wild second growth, although there are places where they are trying to practice forestry regulations and methods.

Q. Those forestry regulations and methods require the cutting only of the mature growth, do they not?

A. Not necessarily mature, they cut it at such time as it will be practicable, whenever that might be, that is, the maturity from the standpoint of the forester is likely to be when he can get the largest return, that is, financial return for his timber.

Q. It is cut more economically under forestry regulations than it is where there are no regulations and the land is slashed off entirely, is that true?

A. That is true.

Q. And those regulations call for the leaving of many trees that would be hewn down if the unregulated production of lumber and logs were permitted, is that true?

A. The regulations try to protect the forests and assure a continuation of it, whatever that might be.

Q. You mean a continuation of the supply?

A. Yes.

Q. The original lumber operations in certain parts of Maine were conducted under the protective regulations of scientific forestry, were they not?

A. The original? In certain parts of Maine. I do not
255 know whether the original forests were so protected, unless it is comparatively recent. As I understand, the cutting off of timber in Maine was without much restriction.

Q. I suppose that they had State regulations up there that covered part of the original virgin growth, although I may be in error.

A. They do not undertake this regulation usually until after the damage is done.

Q. In other words, they close the barn door after the horse is stolen.

Do you know whether or not there is virgin strobus coming out of the Canadian market at this time?

A. There is.

Q. Is that of high grade?

A. I have seen some of high-grade timber.

Q. How recently?

A. Within a year.

Q. That is, a large-sized virgin strobus coming from Canada?

A. Yes.

Q. How large in diameter have you seen them run?

A. That is a rather difficult question to answer.

Q. Well, is the virgin timber comparable with the early New England virgin growth?

A. I should say so, in the quality of the lumber.

Q. How about Minnesota, is not Minnesota still producing
256 virgin Pinus strobus in considerable quantities?

A. It is producing it, but I do not know how much, but I should say in considerable quantities.

Q. That is a high-grade virgin timber, is it, of large size?

A. Yes.

Q. The soft pine of Arkansas is called "Echinata"; I believe you defined that as that, and what is the other term?

A. Pinus taeda.

Q. The Echinata, however, is the larger bulk of the so-called soft pine of Arkansas?

A. It is made up of growth in the northern part of the State and a considerable portion, perhaps the bulk of that, in the southern part of the State.

Q. Is that a soft pine?
A. Not in the technical sense, certainly.
Q. Is it comparable to ponderosa as to softness?
A. Some of it is—decidedly so.
Q. Does the soft pine of Arkansas differ markedly from the southern pitch pine, or is it a pitch pine itself?
A. It is the same pine, but seemingly growing in different conditions. It is softer and less resinous than that growing farther south, although you occasionally find trees that are quite hard and full of resin; but, on the whole, it is lighter, softer, and less resinous than the timber growing farther south.
257 Q. Referring to the lumber from ponderosa, coming down from the outside or near the outside of the tree, that would be sap lumber, would it?
A. Yes.
Mr. BURR. I think that is all, if the examiner please.
(Whereupon a recess was taken until 1:30 o'clock p.m.)

258 AFTER RECESS

1:30 P.M.

M. W. WILLIAMSON was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Williamson, your line of business is what, sir?
A. I am district manager of the Weyerhaeuser Sales Company in this city.
Q. How wide is your territory?
A. It comprises northern New Jersey, eastern New York State, and all of New England.
Q. How long have you held that position?
A. Four years.
Q. What were you doing prior to that?
A. I was a road salesman for the same company, in St. Louis, Missouri, for two years.
Q. Have you ever had any practical experience in the forests as a logger or lumberman?
A. Not as a logger but as a manufacturer.
Q. What positions did you hold and when?
A. I was assistant sales manager up at Potlatch, Idaho, for twelve or thirteen years, prior to going to St. Louis, with the Potlatch Lumber Company.
Q. Did you have anything to do with the logging operations, so that you were brought in the woods at all?
259 A. Yes.
Q. Where was that.
A. At Potlatch.
Q. For how long a period was that?
A. About thirteen years.

Q. I wish you would tell us just what your duties there were—it will be shorter to do it that way than by asking you these various questions; just tell what you did there, please.

A. In a general way it was sales manager's work, directing the policies and prices of our products and following the manufacture of the lumber through the woods, cutting the orders; that is, the logging lengths and checking them and going through that work in the woods.

Q. Potlatch, Idaho, was pretty close to your lumbering operations, was it?

A. Oh, yes.

Q. Did you have an opportunity there to observe the actual logs and did you ever do any grading?

A. No; I never did any grading, other than in a superficial way—but we were holding our grading clinics at various times with the graders, and I was always in on those meetings.

Q. How much opportunity did you have to observe the actual logs and the actual way in which the logs were milled?

A. A great deal. I was in the sawmill, and was there a great part of the time, so I had a great deal of opportunity to
260 observe that.

Q. Pretty much every day, you mean?

A. Practically every day I was in the mill at some time or other.

Q. Those operations were not under your instructions, of course, as sales manager?

A. No.

Q. Now, what type of lumber were you handling?

A. Lumber or timber?

Q. Was it monticola or Idaho white pine?

A. Idaho white pine—Pinus ponderosa, cedar, large [larch], white fir, and a small amount of spruce—those mixed woods that are common in that region.

Q. Will you state when they start to cut up a log of ponderosa what happens? How is it handled? The first thing is to take the slabs off, is it; that is, do some slabbing?

A. That is right.

Q. Will you describe that, please.

A. Well, the operation in connection with the pondosa logs is not very different than the manufacture of any species, as far as that is concerned.

Q. All right, tell us that.

A. The log is slabbed and the lumber is immediately produced. The log is turned as the sawyer finds it to his advantage in getting the most out of the log.

261 Q. How does slabbing result; do they take off the bark as part of the slabbing, and what else, if anything?

A. They usually try to just skin the bark, and then they come along and take another cut until they face the log.

Q. What do you mean, they square it up?

A. Not necessarily square it up, but in a general way, yes—of course, the cuts that come off the log first drop off and go through the edger, as the log becomes square sawed to the proud edge.

Q. What do you mean by the "proud edge"?

A. Where the bark has been eliminated, in other words, the lumber as it comes from the head rig, the band mill edger requires no further manufacturing——

Q. It is a straight edge?

A. Exactly.

Q. Is there any contrast between the result that occurs from slabbing a ponderosa tree, as compared with an Idaho white pine tree or monticola?

A. In the first place, I will say that the monticola tree is known commercially among timbermen as a small commercial timber, not a heavy growth, if you know what I mean, whereas the pondosa or ponderosa pine—Pinus ponderosa—is a heavier tree, much larger, runs considerably larger in diameter than the Idaho white pine or Pinus monticola.

Q. And the same is true of strobus, is it—strobus is a smaller tree?

262 A. Yes.

Mr. MATTHEW. The witness has not qualified on strobus, has he?

Q. Have you ever been in the forest where they were cutting strobus?

A. Yes, sir.

Q. Where?

A. Minnesota.

Q. How long were you up there?

A. My experience in Minnesota—I was born in Stillwater, and I have seen Pinus strobus logs ever since I saw anything, as far as that is concerned, yet my actual working experience has never been in Minnesota, but I have visited our plants at Cloquet many times, during which times, I, of course, paid a good deal of attention to the method of manufacture.

Q. How long ago were you there?

A. The last time I was there was about a year ago today.

Q. Cloquet, that is in Minnesota?

A. Yes.

Q. The monticola and strobus, as an average, the logs run smaller, do they, than Pinus ponderosa?

A. Yes, sir.

Q. That is true in the inland empire as well as California, is it?

A. Oh, yes.

263 Q. In fact, in California they run still larger than the inland empire, or don't you know?

A. I would say they do; yes.

Q. When you have taken a slab off of one of the trees of monticola or strobus have you taken anything besides the bark off? In other words, you have taken part of the sapwood, have you?

A. Why, certainly.

Q. The same is true, you have taken part of the sapwood of the ponderosa tree too, have you?

A. Yes.

Q. How about the relative amount of sapwood that is taken off from the monticola and strobus on the one hand and the Pinus ponderosa on the other when you have taken the slab off?

A. You have affected the sap area the most in monticola and strobus by far than you have the Pinus ponderosa on account of the heavy sap line in Pinus ponderosa. The very fact that Pinus ponderosa logs are larger, and the saw passing through the log as it does, naturally leaves a greater area of sap and a greater percentage of the original area of sap in the ponderosa log than it does in monticola or strobus; many times it practically wipes out the sap line in monticola and strobus. I don't know whether you know just what I mean or not.

What I am trying to convey is: You take a small log, and,
264 of course, it is naturally going to produce a smaller sized lumber commercially, and therefore the average size of logs is much smaller in monticola than it is in ponderosa, and also strobus is much smaller than it is in Pinus ponderosa.

Therefore, when you take a small log you will eliminate the sap area which is in that species to a larger extent as compared with the species in a bigger log—in other words, you are leaving more sap—or rather eliminating more sap from strobus or monticola than ponderosa.

Q. When you have eliminated the sap [slab] of monticola or strobus you have eliminated a greater percentage of the sapwood from the log than you do when you have taken the slab from the average ponderosa tree; is that true?

A. Absolutely.

Q. Did you ever have any experience in any millworking company?

A. Yes.

Q. Where and when was that?

A. From 1902 to 1909 I was with the Curtiss Company in Clinton, Iowa, and had a lot of experience in millwork there.

Q. What were you doing for them?

A. I was shop grader as a boy out of school, then became lumber buyer for that company——

Q. Just a moment; by a shop grader, what do you mean by that, please?

265 A. Shop grader is a grader of that class of lumber products that is used very largely by sash, door, and blind and millwork concerns.

Q. All right, proceed.

A. And as lumber buyer for that company, naturally it took me into California.

Q. Now, that concern was buying shop lumber for making into sash, doors, and blinds, is that right?

A. Yes.

Q. Did they have any other products?

A. Yes; they had many other products that are found in factories of that kind, specialty work and all that, but in those days, it was very largely a stock proposition—stock windows and doors.

Q. And they bought what classes of supplies, I mean what classes of lumber?

A. Shop lumber, factory plank, as it is known.

Q. I mean what species of lumber?

A. Very largely California white pine.

Q. They bought California white pine or Pondosa pine?

A. They bought California white pine.

Q. They bought it from California, did they?

A. Yes; they buy Pinus ponderosa in various parts of the country but very largely from California.

Q. Did they also buy any of the monticola or strobus?

266 A. Some strobus but very little monticola.

Q. Did you ever have occasion to see the orders that were coming in for this class of goods from the retailers? Were retailers your customers?

A. Retailers and sash and door jobbers.

Q. The retailers as customers would write in for certain specifications for sash, door, and blind material?

A. Certainly.

Q. And you had occasion to see those orders?

A. Certainly.

Q. Did those orders call for white pine material or California white pine, or what did they usually call for?

A. Just white pine.

Mr. MATTHEW. Just a moment, before that is on the record, does that affect these respondents?

Mr. BURR. I am trying to prove a custom, sir. I am trying to prove that when white pine was called for, Pinus ponderosa or California white pine was sent. If the examiner were to rule that I had the burden of tying this up to each respondent, instead of only one, I would have to get evidence from fifty different respondents and I think that is more than you will ask the examiner to require of me.

Under that theory it would not be possible to charge the Long Bell Lumber Company unless I had instances in which the Long

267 Bell Lumber Company were a party and the same would be true of the Algoma Lumber Company and all the rest of the fifty concerns, which is more of a burden than ought to be imposed on me.

Mr. MATTHEW. All that you are trying to do is to establish a trade practice custom?

Mr. BURR. Oh, no.

Mr. MATTHEW. I thought you said so.

Mr. BURR. In a sense; yes.

Mr. MATTHEW. Well, I shall not object; just go ahead.

By Mr. BURR:

Q. Did you have occasion to know what type of material was furnished to those who ordered white pine for sash, door, and blinds?

A. California white pine.

Q. You saw the invoices, did you?

A. Yes, sir.

Q. And it was invoiced to them as white pine, was it?

A. Yes.

Q. On occasion, they would invoice it as California white pine, would they, or was that the exception?

A. I would say no, because all of the material possibly would not be California white pine.

Q. What else might it be?

A. It might have been Pinus ponderosa, of which, as I explained before, a small percentage existed.

268 Q. Occasionally a customer would demand strobus, would be?

A. Yes.

Q. And then your company was able to furnish strobus pine in such exceptional demands, was it?

A. We had the same trouble back there, where the three-needle variety showed failure, and certain architects and builders simply tied the specifications up by calling Pinus strobus in that case——

Mr. MATTHEW. Just a moment. I move to strike that out on the ground that it is not responsive to the question.

Mr. BURR. I think that an answer is not responsive to the question is an objection which adheres to the man who asks the question rather than opposing counsel. I was very much surprised by a ruling which was made by Mr. Bennett to that effect, and upon investigation, I found that he was right.

Mr. MATTHEW. I understand the objection may be made by opposing counsel.

Mr. BURR. But it will not be sustained.

Mr. MATTHEW. That is entirely up to the examiner.

May we have the question read?

Examiner SHEPPARD. Read the question and answer.

(The question and answer were thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. You may go ahead.

The WITNESS. There is no question but what in that case

269 Pinus strobus was furnished.

By Mr. BURR:

Q. In other words, you would make a sash, door, or blind out of genuine strobus for those who actually insisted upon it, would you?

A. Why, certainly.

Q. Where they ordered white pine and did not say "strobus", they got California white pine; is that true?

A. Yes, sir.

Q. Was that true during your entire period with the Curtiss Company?

A. Yes.

Q. And that was how long?

A. Seven years.

Q. When did you leave them?

A. 1909.

Q. As I understand, your present duty is to sell the products of the Weyerhaeuser interests in the territory that you have named, is it?

A. Yes, sir.

Q. And you have how many salesmen under you?

A. Eighteen.

Q. You are handling what types of lumber in this market; strobus and what else?

A. Pinus strobus and the mixed woods common in the Min-
270 nesota territory.

Q. What pine, I mean?

A. Pinus strobus, Pinus monticola, and Pinus ponderosa.

Q. You sell your Pinus ponderosa under what trade name?

A. Pondosa pine.

Q. How long has that been the case; ever since you have been here?

A. No; I think it has been only about two years.

Q. Two years?

A. I think so.

Q. Up till that time, what did you call it?

A. Western soft pine and western white pine.

Q. And what time was it that you eliminated the word "white" from the name?

A. As I say, about two years ago.

Q. You think it is only two years ago?

A. I think so; as I recall it. I could not give you the exact date, but my company instructed me to sell Pinus ponderosa only as pondosa pine and I have it understood so in all transactions.

Q. You are competing with other dealers, other manufacturers carrying pondosa pine, are you?

A. Yes, sir.

Q. And some who are calling their ponderosa pine California white pine; is that true?

271 A. Yes.

Q. And others sell strobus, I presume, in this market, or are there not any?

A. Yes.

Q. Do you have occasion, when you lose an important order, to ascertain for what reason you lost it?

A. Yes, sir; I am supposed to; that is part of my duty as a salesman.

Q. Do you occasionally lose orders to California white pine manufacturers?

A. Yes.

Q. I wish you would tell me for what reasons you lose sales of Pondosa pine as contrasted with California white pine competitors?

Mr. MATTHEW. I think that is asking the witness to give us hearsay testimony, Mr. Burr.

Mr. BURR. I am going to ask this, to be frank with you, and you may make whatever objections you desire, but I am going to ask for what reasons they lose their sales, and the only way in which we can find out how they come to lose sales and to prove the allegations that we have here, as to the state of mind of these customers and the effect upon the trade of a certain line of competition, is to find out from these men what the reasons are that they lose the trade to competitors and I think it is competent.

272 Examiner SHEPPARD. Do I understand that there is a formal objection?

Mr. MATTHEW. I shall object to anything in the nature of hearsay testimony.

If he wants to introduce such testimony——

Examiner SHEPPARD. I understand, Mr. Williamson, of course you being the witness know that they want facts here and not hearsay.

I will let you testify in answer to this question, and if objection is made, and if upon consideration of the objection I deny the motion and let you testify, it is because I believe that you know what you are talking about and it is not hearsay.

Now, let us have the question read.

(The question was thereupon repeated by the reporter as above recorded.)

By Examiner SHEPPARD:

Q. Do you understand that?

A. Yes, sir.

Mr. BURR. I suggest that we have the question read again.

Examiner SHEPPARD. Yes; read the question.

(The question was thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. If you know that I shall allow you to
273 testify, if you know the reasons why; but if you are going to tell me what you heard someone else say about this, I do not want it.

A. Well, if dealers have told me these things that I am about to say, would you consider that hearsay?

Examiner SHEPPARD. No; I would not.

The WITNESS. Would I be required to go through a long list of customers who have made such statements?

Examiner SHEPPARD. No; I consider that any knowledge obtained by you in the due course of your business you may relate.

The WITNESS. Absolutely, and I shall only speak the truth.

We have lost and are losing a very considerable amount of business in [error for "to" ?] California white pine, for one of three reasons in each case:

There is a certain line of dealers that think that California white pine is better than pondosa pine so called. They have told me that.

Another class of dealers have told me that they believe that I cannot convince them, if you please, that California white pine is not a true white pine. That class of dealers, I will say, according to my observation, are in the minority.

There is another class of dealers that tell me that they know that California white pine is not a true white pine, but it
274 is invoiced to them as white pine and they sell it to the trade requiring white pine as white pine and because it is invoiced to them as white pine, they can pass it on as white pine and do it with just a little safer feeling than they would if it was invoiced as something else besides white pine, and buy it at considerable less than they would have to pay for true white pine.

These are undoubtedly some of the best known facts in the lumber industry today, and it is just as I have told you in regard to this white-pine situation.

By Examiner SHEPPARD:

Q. Is there much difference in price, Mr. Williamson?

A. Yes; there is.

By Mr. BURR:

Q. Between pondosa and California white pine?

A. Oh, no.

Between California white pine and true white pine, I thought that was your question.

Examiner SHEPPARD. Yes; that was my question.

The WITNESS. It is there.

Q. I was just going to ask him this very question, Mr. Examiner. I was going to ask him this: When they say they want white pine, and that their trade that calls for white pine, why do you not offer them Idaho pine instead of pondosa, or do you?

A. We do, but it is a price proposition with them. If in
275 four cases out of five, they can give the three needle variety to the public and make them think that they have gotten a real white pine, they will sacrifice the one time where they had trouble because it is more profit to them to be able to do so and that is only natural.

By Examiner SHEPPARD:

Q. You are talking about retailers, are you?

A. Yes, sir; that is my contact with the retailer; the ethics of the business call for me to approach only the retailer.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. Throughout what period have you been dealing in Idaho white pine?

A. From 1909 to the present date.

Q. And you have been selling Idaho white pine in this vicinity for the past four years, approximately?

A. Four years; yes, sir.

Q. You have likewise been selling your pondosa pine and your northern white pine or strobus during the same period?

A. Yes, sir.

Q. Is the volume of your Idaho white pine sales increasing?

A. Yes, sir.

Q. Is the volume of your strobus pine sales increasing?

A. No, sir.

276 Q. The sale of that particular lumber has been falling off during the past four years, has it?

A. I would say it has.

Q. Is it being displaced in considerable measure by Idaho white pine?

A. Yes; I would say that it is.

Q. What reasons do you ascribe the increase in the sales of Idaho white pine to and correlatively the decrease in the sale of northern white pine?

A. I did not say that northern white pine had increased.

Q. No; you said that it had been decreasing.

A. I did not say that either.

Mr. BURR. He said it had not been increasing, and he did not say it was decreasing; he said nothing about its being stationary at all.

Mr. MATTHEW. I thought he said it was falling off.

The WITNESS. I said that strobus had not increased.

Mr. MATTHEW. You also said it was falling off. That was the last answer that you have just given. I would like to have those last questions and answers with regard to that read, if the examiner please.

(Questions and answers were thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. That is exactly the impression I got.

Mr. MATTHEW. Certainly, it is right there in the record

277 definitely.

The WITNESS. Yes; it is.

Q. Do you intend to stand by that answer?

A. That is all right; yes.

Q. My question now is to what circumstances do you ascribe the increase in your sales of Idaho white pine and correlatively the decline in your sales of strobus pine?

A. For one reason, our production of Idaho white pine has a greater range; we can take care of a greater amount and our chances of handling an order of Idaho white pine are greater, very much, at present, than in handling orders for Pinus strobus.

Now, you are asking me my experience—and I am speaking of this that I have described as having been my experience in that locality——

Q. My question was directed to that very thing.

A. Yes; but you may not find that to be true in other parts of the country.

Q. I am not suggesting that, Mr. Williamson; let us keep together.

A. That is all right; I am not speaking for all Pinus strobus.

Q. I have not so understood it.

I am asking you to what circumstances you ascribe the increase of sales of Idaho white pine and the falling off of strobus, in
278 this territory over which you have had jurisdiction and having had jurisdiction in the past four years.

A. Because this is an Idaho white pine territory. They never did buy from us Pinus strobus in any quantity. Our sales of Pinus strobus are very, very small, and there is no real reason why Pinus strobus should take the position of falling off in this territory particularly.

Q. Then, why does it fall off in this territory?

A. I do not know. It is so trivial that it really does not matter much. My men have never been able to sell much Pinus strobus from Minnesota in this territory.

Q. Then, it is only your Minnesota lumber that is sold here; that is, the only strobus lumber?

A. That is the only strobus lumber that we have.

Q. You have never been able to sell it in this territory, have you?

A. Not since I have been here; no.

Q. But why should it decline in sales volume?

A. Well, one very good reason for the slight difference between what we have sold and what we may be selling at this time might be because of stock conditions.

Q. Are you pushing the sale of Idaho white pine preferentially over the sale of your strobus pine?

A. I would not say preferentially, but it naturally does, because of greater production.

Q. Is there a difference in price of Idaho white and your
279 strobus pine, grade for grade?

A. I would say not to any extent whatever.

Q. You are selling your strobus pine to the retailer at the same price f.o.b. New York, at which you sell your Idaho white pine?

A. Yes. There may be some slight difference, but it would not amount to anything.

Q. Even at that substantial parity of prices, the sales of Idaho white pine are mounting and the sales of strobus are declining?

A. That merely is answering that same question over again; yes.

Q. I take it that you do not regard the strobus pine lumber as being superior to the Idaho white pine?

A. No; I would consider one just as good as the other.

Q. Do you sometimes receive an order for white pine, as such, without any qualifying term, such as "northern" or "eastern white pine" or "Idaho white pine"?

A. Do we just receive orders for white pine?

Q. Yes.

A. Yes.

Q. In such event what pine do you supply?

A. We usually get in contact with the buyer and ask him just exactly what he wants—Pinus strobus, Pinus monticola, or Pinus ponderosa and in a surprisingly large number of cases, he says "I am talking about California white pine."

280 Q. You do not deal in California white pine?

A. No, sir.

Q. If you got an order for white pine, do you feel free to supply that order with either Idaho white or with northern white?

A. If he calls for what?

Q. White pine.

A. Why, no; not unless we question him.

Q. And then you try to find out whether he wants Idaho white pine or your northern white pine?

A. Absolutely; because we have a pretty good idea that he is not sure just what he does want.

Q. I take it that you do not deal at all in sugar pine?

A. No, sir.

Q. Have your sales of pondosa pine been increasing during the past four years?

A. I think I answered that question "no" before.

Q. I did not ask you as to pondosa pine before, as far as I can recall.

A. I would say that our pondosa pine business is not as great as it was four years ago.

Q. What has been the course of your sales during the past four years with respect to pondosa pine, that is to say, has there been a gradual decline during that four years' period, commencing in 1925 and running down to date?

281 A. If there has, it has been very slight. I have not the figures.

Q. So far as your general information goes, there has been, you think, merely a slight falling off in sales of pondosa pine from 1925 to 1929?

A. I would say, slightly; yes.

Q. There has just been a gradual falling off from year to year, you think?

A. I would say so.

Q. You have noticed no particular change, when you changed the name; that is, the commercial name of that lumber from western white pine to pondosa pine, in 1927?

A. Well, there has been that decline; I would not say it has been exactly over any particular date, but it has been within that period; yes.

Q. That decline has extended over the entire four-year period, you say?

A. Yes.

Q. You stated that when you were engaged in purchasing shop lumber for the Curtiss Company that, to a large extent, you bought California white pine?

A. Yes, sir.

Q. Will you tell us why you bought that lumber in preference to any other?

A. Price, I would say, basically; we bought it very cheap.

282 Q. You could buy the ponderosa lumber from the Inland Empire at still lower price, could you not?

A. No; I would not say so. In that particular case, it was a matter somewhat and very largely, perhaps, of the concern buying the lumber and being interested in the supplier, if you know what I mean—they were interested in the concern from whom they bought. I do not think that was the cause of going into California and buying California white pine——

Q. Just give me the reason why you went to California and bought California white pine rather than the inland empire; was it regarded as superior for mill-work purposes?

A. No; I think not.

Q. You say you bought a little strobus pine during that period for the Curtiss Company?

A. Yes, sir.

Q. And no monticola pine?

A. No, sir; not that I can remember. If there was any, it did not amount to anything at all.

Q. Was the monticola or Idaho white pine on the market at that time?

A. That is another point. You see, Idaho white pine was just coming on about 1900, 1901, and 1902 or 1903, in there.

Q. You were acting as the purchaser of lumber for the Curtiss Company from 1902 to 1909?

A. No; I gradually grew into that position. I was only

283 rated as a lumber buyer, I would say, for only about two years, from 1907 to 1909. I really had not thought of it particularly, but it was about that time.

Q. Idaho white-pine lumber was on the market in some volume at that time, was it not?

A. Yes; but we did not hear of it in the Middle West at that time.

Q. As a matter of fact, Idaho white-pine lumber does not produce a very large proportion in the shop grades, does it, Mr. Williamson?

A. It is rated as a small producer of shop lumber; yes, sir.

Q. Could you tell us about what proportion of the lumber yielded by an ordinary or average Idaho white-pine tree would be of a shop grade?

A. It would take a pretty good run of logs to make ten percent of shop.

Q. Shop or better?

A. No; I would not say shop or better because that is taking in a lot of territory when you say "shop or better."

Q. Let us take the clears then.

A. That is a different proposition. If you want to say factory plank or factory stock, why, it would run considerably more than that.

Q. Are you including all of the common grades in that designation?

284 A. No, sir; because you cannot—there is no common grades.

Q. You are just talking of the shop and clears?

A. Just the shop and clears?

Q. What would be your figure, taking the shop and clears together?

A. That is what I say; it would run considerably more than ten percent, but just how much I don't know.

Q. Would it be as much as 15 percent?

A. Oh, yes; it would be more than that; it would probably run to 25 or 30 percent.

Q. You have also testified that if one of the customers of the Curtiss Company demanded sash or door blinds manufactured from strobus lumber entirely the Curtiss Company would comply with that order?

A. Absolutely.

Q. Will you explain the composition of the sash and door and blinds that are manufactured by that plant during the period of your connection with them; that is, what I desire particularly to ascertain, Mr. Williamson, is whether or not it was customary to make doors out of the particular grade of lumber or a particular variety of lumber?

A. You can make door from no. 2 shop, and so forth, right through the upper grades.

Q. Let me reframe my question. I take it that the factory would have on hand at all times a supply of California white

285 pine and perhaps some northern white pine, possibly some Douglas fir, and occasionally, at least, some Idaho white pine; now, these various quantities of lumber would ordinarily be just used together in making up doors, would they not?

Q. In other words, you would not make a straight door out of California white pine?

A. Oh, yes.

Q. Was that the customary practice?

A. Yes, sir; absolutely.

Q. You would not mix the lumbers of various varieties in the making of pine doors?

A. No, sir.

Q. Or sash or frame?

A. No, sir.

Q. How did they keep their lumber separate—the different varieties separate—do you know?

A. That is a very simple thing. You get a pile for each one. Did I understand you to ask how they stored these different kinds of lumber?

Q. How did they keep them distinct for the purpose of remanufacture into doors of a particular type?

A. Well, to get at it in a very simple way, a car of lumber is received and is put in this bin, we will say, and if genuine
286 white pine is ordered for a particular job, it is put in another bin and it is handled very much the same way.

Q. You do not know whether that same practice still obtains in the Curtiss plant?

A. No, sir.

Q. Can you give us any approximate figure as to the amount of northern white pine—I mean by that your strobus pine—which is sold in the territory in which you have your jurisdiction?

A. No, sir.

Q. Can you tell us the proportion of your total sales represented by your sales of strobus pine lumber?

A. No, sir.

Q. You have told us that it is relatively a small part of the total; at least, that is the implication I got.

A. That is right.

Q. Would it be as much as five percent of your total?

A. I could not say; I just do not know.

Q. You say there is no particular reason for expecting a very large sale for northern pine here, and as I recall your reason for saying that was that this is an Idaho white pine territory; is that what you said?

A. So we find it.

Q. Can you tell us whether the northern white pine sales and Idaho white pine sales are in the proportion, say of ten to one or two to one, or any figures that you can name?

A. No; I could not tell you with any certainty at all.

287 Q. All you can tell us is that the sales of Idaho white pine greatly exceed the sales of northern white pine?

A. Yes.

Q. I am not sure whether you told me whether you sell more of pondosa pine or Idaho white pine?

A. I could not tell you that, either; we sell much of both.

Q. Do you face any competition from California sugar pine in this territory?

A. I would say not.

Q. This sugar pine does not compete with any of your grades of lumber?

A. I presume it does, but it does not stand out as a highly competitive wood to us.

Q. Would it be a more formidable competitor if it were sold here under the name of California white pine? You know that it is a white pine botanically?

A. Precisely.

Q. You know that it is produced largely in California?

A. Yes, sir.

Q. With that as a background, will you answer my question, whether you think it would be a more formidable competitor if it were sold as California white pine?

A. There would have to be some other things to go along with that; do you mean at its present price?

Q. You may put it with any qualifications you want.

288 Mr. BURR. It seems to me, if the examiner please, that that is a wildly hypothetical question, is it not?

Examiner SHEPPARD. I think so myself, but if he can answer it, I will allow him to.

A. I prefer not to answer it.

By Mr. MATTHEW:

Q. Let us make it on a parity of price with Idaho white pine.

A. At a comparative price with Idaho white pine?

Q. No; I said a parity of price; that is to say, the same price.

A. And call it California white pine?

Q. Yes.

A. I would say no.

Q. Then you have no objection to the dealers California sugar pine offering that wood to the trade under the name of California white pine?

A. Not as long as it is sold as white pine, which it naturally would.

Mr. MATTHEW. That is all.

Further cross-examination by Mr. ANDREWS:

Q. Mr. Williamson, you have been in the lumber business practically all your life, have you not?

A. Yes, sir.

289 Q. And in that time you have acquired a general knowledge of the history of the lumber business in this country, have you not?

A. Yes, sir.

Q. It began in the Northern States, did it not? They were the States in which lumber was first produced, I mean, from Maine extending around to Michigan?

A. Yes.

Q. Those States have been pretty well cut out?

A. Yes, sir.

Q. You have no competition in your business on lumber manufactured in any of those States?

A. Oh, yes.

Q. Do you have any competition in your sale of pondosa pine from lumber manufactured in those States?

A. I would say none.

Q. That is what I am talking about.

Those were the States in which what has been referred to here as the Pinus strobus was cut?

A. Yes.

Q. The lumber resources of Minnesota are fast being depleted, aren't they?

A. How fast, I do not know.

Q. But they are being depleted?

A. I think there is no doubt about that.

290 Q. Do you know how much lumber, that we have referred to here as Pinus strobus, is produced annually in Minnesota?

A. No, sir.

Q. The fact is, is it not, that our principal sources of lumber supplies are now in the West and Northwest, with a considerable stand of timber still left in the South; that is true, is it not?

A. Yes, sir.

Q. You say that you began buying lumber for the Curtiss Company about in 1907?

A. Yes, sir.

Q. And in 1927, your company discontinued the name western white pine and adopted the name of pondosa pine?

A. Yes.

Q. So we may account there for 20 years of your own active experience in which you knew this lumber that botanically is Pinus ponderosa as having been sold as either western white pine or California white pine?

A. Yes, sir.

Q. And that terminology had been there prior to the time that you began buying lumber, had it not?

A. I think so, yes.

Q. Can you tell us at what earlier date the practice sprang up of calling the lumber botanically Pinus ponderosa, California white pine?

291 Mr. BURR. I object, if the examiner please. Let us prove it by someone whose memory goes back further. Why ask someone if he knows, except by hearsay?

By Examiner SHEPPARD:

Q. If you know that, you may answer.

A. I cannot answer that question.

By Mr. ANDREWS:

Q. It was a well-established practice when you became acquainted with it in 1907?

A. Yes, sir.

Q. It was well established for that lumber to be called California white pine or western white pine?

A. Yes, sir.

Q. So that when you were asked by counsel in the beginning of your examination what lumber you sold, you said Idaho white pine, among others?

A. Yes, sir.

Q. And you attached to white pine the name of the State of Idaho in order to identify it; that is it, is it not?

A. Presumably so; I do not know. I did not coin the name.

Q. It is known, then, that the name has been coined, and the coined name is Idaho white pine?

A. Yes, sir.

Q. Not just "white pine", but "Idaho white pine"; that is correct, is it not?

292 A. Yes, sir.

Q. You said that sometimes you get orders for simply white pine, but that you contacted with the persons placing those orders with you in order to ascertain what they wanted—whether they wanted what you sell as pondosa or whether they wanted what has been referred to here botanically as Pinus strobus; in other words, during this long period of years in which the name white pine has been used in connection with the California timber and the inland empire timber, it is true, is it not, that white pine has become, in connection with the word "California" to indicate Pinus ponderosa, and in connection with the name "Idaho" to indicate Pinus monticola; that is true, is it not?

A. It must be; yes.

Q. And the white pine has lost its original specific signification, if it ever had any, is that not true?

A. No.

Q. That is not true?

A. No.

Q. Then why is it when a dealer places with you an order for white pine, as you previously testified, you contacted with him to ascertain what it is that he wants?

A. Well, in the first place, we know much of the minds of the people that are buying lumber, and we know this confusion ex-
293 ists to a very marked degree, and our good common sense permits us to ask the man if he really means white pine or does he mean something else.

Q. You are not sure but what he may mean California white pine, are you?

A. No, sir.

Q. And that is true, is it not, because of this long period of years in which this lumber has been referred to as California white pine; is that not true?

A. What is the question again?

Q. I say you are not certain what he wants, because of the fact that for a great many years white pine has been applied both to the California product and the Idaho product?

A. That could be true in certain cases; then there are other cases that it would not apply to at all.

Q. I am speaking of each instance in which you go back to the dealer and contact with him to ascertain what he wants.

Now, you do that, do you not, because you are not certain, when a man uses the term "white pine" alone, whether he wants California white pine or whether he wants Idaho white pine; is that not true?

A. That is true.

Q. Can you give us the names of some of the dealers who have told you that they prefer to buy from your competitors California white pine rather than your so-called "pondosa" pine, be-
294 cause they could more easily pass it off to their customers or buyers; will you give us the names of some of those customers?

Mr. BURR. If the examiner please, the Federal Trade Commission Act precludes the requirement of furnishing names of customers, as I recall it, and it seems to me that ought to apply in principle, unless the witness is agreeable to giving the names of customers, to the defense as well as to the Commission itself; may we not consult that part of the statute that I have in mind, unless the examiner is more familiar with it than I am?

Examiner SHEPPARD. Mr. Burr and Mr. Andrews, let me say this: Where the giving of a name by a witness would tend to give away some trade secret we do no require the witness to divulge such name.

Mr. ANDREWS. I do not want to do that, of course.

Examiner SHEPPARD. As I have just stated, when a witness is asked to produce the names of certain customers and in the giving of such names he would jeopardize some trade secret that he may have or may be existing between them, it has been my rule always not to allow that, but, Mr. Williamson, if you have no objection to it, I shall allow you to testify to it.

A. I prefer not to.

Examiner SHEPPARD. When the witness objects, I will support him.

295 Mr. ANDREWS. If the witness objects, I shall not press it.

Mr. MATTHEW. But, your honor, you understand there is no way for us to check up on such testimony.

Examiner SHEPPARD. I always give that testimony probative value. Before you proceed further, I would like to ask one question.

By Examiner SHEPPARD:

Q. Mr. Williamson, you spoke of selling pondosa lumber but under the trade name of pondosa; what do you mean by pondosa; is that California white pine sold under the name of pondosa?

A. I understand so; yes, sir.

Q. Then I understood you to say that you did not handle California white pine?

A. Not within the bounds of the State of California.

Mr. BURR. May I clarify that by a question?

Examiner SHEPPARD. Yes.

By Mr. BURR:

Q. Is there any difference in the species between that is sold on the market as California white pine and what is sold on the market as pondosa?

A. I understand there is none.

Q. When you say pondosa, you mean the product made from the ponderosa species but sold under the trade name pondosa?

296 A. Yes, sir.

Q. When you refer to California white pine, you mean products made from ponderosa, which is made and sold under the trade name of California white pine; is that true?

A. That is right, as I understand it.

Q. Now, then, when you say that you do not sell California white pine and you do not make California white pine, you do not mean that you do not make ponderosa, but you do not use the term California white pine, but you do use the term pondosa in lieu thereof?

A. Precisely.

By Examiner SHEPPARD:

Q. You do, then, sell California white pine under the name of pondosa?

A. Yes, sir.

Mr. BURR. He sells the product of ponderosa—that is, from pinus ponderosa trees; however, that does not grow in California.

Q. It grows in Idaho?

A. It grows in Idaho, in Oregon, in Montana, and in Washington. If I am asked if I sell California white pine, I may think of it in geographical terms and not botanically.

By Mr. MATTHEW:

Q. You do not handle any lumber that originates in California?

297 A. No, sir.

Q. Your pondosa pine originates in the inland empire; that is, Idaho, eastern Washington, and eastern Oregon?

A. Yes.

Examiner SHEPPARD. I understand that.

Redirect examination by Mr. BURR:

Q. When you say that you do not handle California white pine, do you mean that you do not handle the same product under a different name or do you mean you handle the same product but you do not call it California white pine?

A. We regard it as handling the same product under a different name and try to so explain to our customers.

Q. Are you always successful in explaining that situation to your customers?

A. Not always; no.

Q. When you have a customer who wants white pine, and you ask him whether what he wants is Idaho white pine, or what he does mean by white pine, that is for the reason that he may mean California white pine, is that true?

A. Yes, sir.

Q. Then there is a confusion between the two terms that you have to clear up by getting that information, is that true, Mr. Williamson?

A. Every time.

298 Q. Some customers answer, "We want California white pine"; some answer, "We want Idaho white pine"; is that true?

A. Yes, sir; most generally they will say, "We want California white pine", or "we want real white pine."

Q. What do they mean by "real white pine"?

A. Idaho white pine.

Q. You find out by further questions that it is Idaho white pine or strobus is what they want?

A. That is true.

Q. That is one class; others want California white pine?

A. Yes, sir.

Examiner SHEPPARD. One more question, Mr. Williamson——

Mr. BURR. Will you excuse me just a moment, Mr. Examiner, before you put another question?

Examiner SHEPPARD. Yes.

Q. Is it true or not that you make more of an effort to sell northern white pine, or is it Idaho white pine; which do you push?

A. Neither. We are equally responsible for both.

Q. Do you have any competition here with Canadian white pine?

A. Oh, yes.

Q. I believe one of opposing counsel asked you whether the word "white pine" has lost its significance; there are those who refer to "real white pine", are there?

299 Mr. ANDREWS. I suggest, if your honor please, that counsel do not lead him so much.

Mr. BURR. I think you are probably correct in that; that is rather leading.

Mr. MATTHEW. Then do not lead him.

By Mr. BURR:

Q. I believe you testified that you have customers who respond to a query which you named, as to what they meant by saying that they wanted the real white pine; has that question any significance to you?

A. It certainly has.

Q. What did you find it to mean on further pushing of your sales efforts? What did you find it means when he asks for real white pine?

A. That durability and all of the qualifications that white pine possesses.

Q. And has a reputation for?

A. No question about that at all.

Q. What species does "real white pine" signify?

A. What is that?

Q. What species does "real white pine" signify?

A. Pinus strobus, Pinus monticola, and Pinus lambertina.

Q. How about Pinus ponderosa? Does it signify Pinus ponderosa?

A. Never.

Q. When they come back and say "real white pine", they
300 do not mean Pinus ponderosa?

A. No, sir; when they say that, they know what they want.

Q. And do you give it to them?

A. Give them ponderosa?

Q. Do you give them what they want?

A. Absolutely.

Q. And if they say California white pine, what do you give them then?

A. We try to sell them Pinus ponderosa—pondosa pine.

Q. With the experience you outlined in your direct testimony in the beginning?

A. Precisely.

Re-cross-examination by Mr. MATTHEW:

Q. Mr. Williamson, when a customer insists upon what has been called real white pine, does he sometimes mean Pinus strobus only?

A. I presume there are cases where he does; yes.

Q. That is, he uses the term real white pine, referring to northern white pine, to the exclusion of Idaho white pine and everything else?

A. When you say exclusion of Idaho white pine and everything else, I would say no. Everything else does not fit in with real white pine.

Q. Did you not just state that when customers ask for real
301 white pine, they mean Pinus strobus?

A. Oh, yes; but in a general way; he wants five-needle pine.

Q. So he is interested in the needles and not in the lumber?

A. Yes.

Q. So he sometimes says to you, "I want five needle pine"?

A. Oh, yes.

Q. He never says, "I want Pinus strobus and I don't want Idaho pine"?

A. You are talking about specific cases?

Q. I am talking about any specific case, and occasional cases.

A. We have all kinds of cases like these, all meaning the same thing.

Real white pine—they do not all call for five needles and they do not all call for Pinus strobus, but there are all kinds of cases.

Q. But in some instances, at least, some customers do ask for real white pine, meaning Pinus strobus?

A. And sometimes they mean the Idaho white pine.

Q. Sometimes they mean Pinus strobus?

A. Sometimes they mean Pinus strobus.

Q. Do you know whether your pondosa pine is ever resold by your customers as white pine?

A. I have no doubt that it is.

Q. How can you prevent that?

A. I suppose that is why we have jails in the country, I do
302 not know.

Q. In other words, you are not in a position to prevent your customers from selling pondosa pine for real white pine?

A. No, sir.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. If one of your customers asks for California white pine, do you ever tell him that you have lumber to sell that is made from the same species?

A. You mean ponderosa?

Q. Yes.

A. Certainly.

Q. And when you sell him that, do you ever tell him that he is buying the same thing as California white pine?

A. Yes, sir; every time we get a chance.

Q. Then when he sells it, he may sell it as California white pine or not, in competition with yards that sell California white pine, may he?

A. Yes.

Mr. BURR. That is all.

By Examiner SHEPPARD:

Q. Mr. Williamson, as you do not handle California white pine and the customer asks for California white pine, you could not deliver it, so you would try to sell him something else?

303 A. I would try to sell him the same lumber from the same botanical tree, but I am given positive instructions from my company to describe it and invoice it as pondosa pine.

Mr. SHEPPARD. That is all.

(Witness excused.)

C. H. CULLEN was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Cullen, you are an architect, are you, sir?

A. Yes, sir.

Q. How long have you been in that business or profession?

A. Twenty-eight years—more than that.

Q. You are with what concern?

A. Charles A. Platt.

Q. He is in business for himself, is he?

A. Yes.

Q. May I ask whether or not Mr. Platt's concern is not one of the larger ones among the architects here in the city?

A. Yes, one of the largest; you might say one of the most important offices.

Q. Just to get oriented, can you give me any of the important jobs that he has been architect of here?

A. In New York City do you mean?

304 Q. Yes, or in the vicinity, but preferably New York.

A. Well, for instance, the Astor House Building; the Astor Court Apartments; he is just finishing two large apartment houses for Mr. Astor on the East Side; architect for the Freer Gallery in Washington; the Corcoran Gallery in Washington; a number of buildings at Philips-Andover; the Hanna buildings in Cleveland, besides a number of important country residences.

Q. All right, that will be sufficient I am sure.

Do you have occasion to specify lumber for outside purposes in your profession?

A. Very little for outside work; it is confined mostly to window and door frames and sash and blinds.

Q. By the by, do you have anything to do with preparing specifications for Mr. Platt?

A. I did, up to within about ten years.

Q. You do not have much to do with it now, I take it?

A. No.

Q. Do you happen to know how your specifications read with regard to the material for sash and frame construction?

A. We had a specification man who was thoroughly competent and an expert mechanic, originally a carpenter by trade, who became an architect's superintendent, and he always specified in good work, I mean the highest quality of work, as a matter of fact that is about the only kind we do, he specified old white pine for window
305 frames, door frames, doors, sash, and blinds.

Q. Did he ever specify that by botanical names?

A. No.

Q. Let me ask you, do architects understand wood technology sufficiently themselves to verify the species of the various woods?

A. No, sir.

I am not talking for all architects, but I am simply talking for all that I know, and I know I personally would not know the difference between the different varieties of white pine.

Q. And if you were specifying a certain wood, there was no way of checking?

A. I would not know it even then.

Q. They leave that to the integrity of the contractor, do they, Mr. Cullen?

A. Of the contractors; yes.

Q. Did you ever have an experience as regards specifying white pine and finding that other material had been furnished?

A. No.

Q. You never have had that?

A. There might have been an odd case but I would not know about it.

Q. It did not come within your recollection?

A. I do not know it of my own knowledge.

306 Q. You have come here under subpena addressed to Mr. Platt, did you not?

A. Yes.

Q. Do architects have rules or a code of any sort whereby they specify what the duties and relations of architects and the contractors on one side, and to the owner or client on the other?

A. Oh, yes.

Q. Do those rules, if you know, specify whether or not the architect is charged with the responsibility of identifying and detecting the substitutions in wood?

A. I would say that basically he was charged with that responsibility.

Q. He was?

A. Yes.

Q. It is expecting too much, is it not, to have the architect a technologist in wood?

A. Absolutely.

Q. Just how does it work out? But I think you have described that and I will waive that.

A. I would say this: The way it operates is this:

To begin with, we employ only the best and most reputable contractors. Our experience with those contractors is that we can depend upon them. In case any change has to be made, and
307 they cannot comply entirely with the specification, they come and explain to us and ask us if we will approve the specification; furthermore, a general contractor will depend to a great extent upon his inspectors to examine all this stuff, where it is made in the mill, watch it in the course of fabrication and inspect it.

So they have their inspection as well as our knowledge of the particular contractor, who is doing the work for us.

Q. Are those inspectors technologists in wood sufficiently so that they would be able to tell the difference California white pine, for example, and other white pine?

A. I should doubt it.

Q. Then again it would go back to the contractor's integrity?

A. Yes.

Q. And picking out and selecting out reputable contractors who will actually make good on the specification?

A. The contractor himself.

Q. Has your firm had occasion to reject pine lumber that you know of?

A. That I would not know.

Mr. BURR. That is all.

Examiner SHEPPARD. Any cross-examination?

Cross-examination by Mr. MATTHEW:

Q. Some reference was made to specifications that contem-
308 plated the use of old white-pine lumber, was that the term?

A. Old white pine.

Q. By "old white pine", just what is meant?

A. I do not think I can answer you that. My only theory is that it referred to the old or first-growth white pine. That is the only thing I can say and the only explanation that I know.

Q. That would mean the original white pine of the eastern country?

A. Rather than second growth.

Q. You mean old trees?

A. That is as far as my knowledge of things goes?

Q. Would it necessarily mean that it was the white-pine lumber of the Northern and Eastern States?

A. Our original source of supply theoretically comes from the East and we theoretically expect it when we call for it and think that we are getting eastern pine.

Q. And you would expect pine of that particular species?

A. Yes.

Q. Those specifications, then, would not be satisfied by supplying lumber which is known as Idaho white pine?

A. That I would not know.

Mr. MATTHEW. That is all.

309 Redirect examination by Mr. BURR:

Q. You would not know whether California white pine would be accepted?

A. That I would not know.

(Witness excused.)

A. W. BROWN was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Brown, your occupation is that of a lumber salesman, is it?

A. Yes, sir.

Q. You work for what company?

A. The Weyerhaeuser Sales Company.

Q. How long has that been true, sir?

A. Since they started.

Q. Since they started where?

A. About ten years ago.

Q. Where have they been located during that ten years' period?

A. In Illinois, northern New York, and New Jersey.

Q. Have you ever had any experience in the forest?

A. Yes.

Q. Whereabouts, how much, and with what lumber?

310 A. With the Potlash Lumber Company, Potlash, Idaho; I was in the woods for them two years, graded the lumber at the sawmill for four or five years.

Q. That was what species of lumber or timber, I should say?

A. Mixed woods of the inland empire.

Q. What kind of pine did that include?

A. Idaho white pine and pondosa pine.

By Examiner SHEPPARD:

Q. I wonder if you make any distinction——

A. Between Idaho white pine and pondosa pine? Very decidedly.

Q. I beg pardon. I thought you meant strobus.

By Mr. BURR:

Q. There is not any strobus in there, is there?

A. No, sir.

Q. You had not been in California?

A. No, sir.

Q. What are the duties, if you please, sir, of the office that you call a grader; what do you do?

A. It is inspecting lumber; I inspected lumber in the yard, rough lumber—I inspected lumber behind the planer after it was dressed, and in the shed.

Q. Do they grade the logs before they take the strip off?

A. Not necessarily.

Q. In other words, it is the grading of lumber rather than of the timber or logs?

311 A. Yes.

Q. How many thousand feet a day would be a fair output for a grader—for his particular duty?

A. That would depend on how ambitious he was.

Q. What I mean is, do you inspect for grading purposes a large volume during the course of a month?

A. Yes.

Q. I wish you would state what the first operation in the mill is after the log is brought in and they are preparing to turn the log into lumber.

Mr. MATTHEW. Has that not been fully described?

Mr. BURR. Did you hear the description of Mr. Williamson?

The WITNESS. Yes.

By Mr. BURR:

Q. I will shorten the matter by asking you whether that was a correct description, or if not in what respect you would modify it if I would ask you the questions in detail; did you notice any flaw or anything that might be clarified?

A. No; that is just about the same thing that I would know about it.

Q. Again to shorten the questioning, did you hear Mr. Williamson's testimony with regard to his experience in meeting competition here in the city of New York?

A. Yes, sir.

312 Q. Did you hear his testimony with regard to the reasons why sales are lost by the Weyerhaeuser sales forces?

A. Yes, sir.

Q. Did you hear anything in that testimony that you think should be modified if the same questions were asked of you, and, if so, I would like to have the modifications.

Mr. MATTHEW. If the examiner please, I do not think that there should be any such general corroboration of the testimony of another witness. I think this witness ought to be asked some specific questions.

Mr. BURR. I am perfectly agreeable to ask the same questions that were asked of the other witness, but I thought that you would be agreeable to have a corroboration of the questions in this fashion.

Mr. MATTHEW. I never intended any such thing.

Examiner SHEPPARD. Go on and examine this witness just as if he had not heard the testimony.

By Mr. BURR:

Q. Mr. Brown, referring to the slab operation, does that affect the Pinus ponderosa log and the Idaho white pine log in the same fashion, or if it differs please state how it differs.

A. The operation is exactly the same, only the size of the log has a great deal to do with it.

Q. Please describe how the operation differs and what the result is in each case.

313 Mr. MATTHEW. I am willing to stipulate, Mr. Burr, that the testimony of this witness regarding the slab operation and the effect on the logs of the two species of pine is the same as the testimony given by the other witness.

Examiner SHEPPARD. I will allow it.

Mr. BURR. I would rather have it in the other fashion because counsel can only stipulate as to his clients, and we have other respondents who are not present at this hearing.

If the answers were acceptable to the other respondents, then, of course, if they made the same stipulation, they would have to stand by it; otherwise, I am afraid I will have to go through the same questions with this witness.

Examiner SHEPPARD. Very well, go ahead and examine him as though the other man had not testified.

Mr. BURR. Will you read the last answer.

(The answer was thereupon repeated by the reporter as above recorded.)

Q. What is the difference, in average size, if any, between the Pinus ponderosa and Pinus monticola, as you have experienced it?

A. The pondosa logs run quite a lot larger than the white-pine logs; the white-pine tree is a smaller tree.

Q. Then what effect does the slabbing operation have upon the white-pine log which it does not have on the Pinus ponderosa

314 log as regards sap and heart of the log?

A. If you are squaring for your log, naturally in the small log you are going to reduce your sap area practically entirely by slabbing, whereas in the case of the pondosa log, on account of the size, there will be quite a lot of sap left after the first slab is taken off.

Q. How long were you a grader?

A. I graded for four years.

Q. How long have you been in the lumber business altogether?

A. I started to work in 1909.

Q. And you have been in the lumber business continually since?

A. Yes, sir.

Q. In your sales efforts you have competition from what types of lumber, particularly of the pine genus or variety?

A. We have California pine, sugar pine——

Q. Do you lose sales——

Mr. ANDREWS. I think you interrupted him; I do not think he finished his answer.

Q. Have you finished your answer?

A. Where did I leave off?

Mr. BURR. Read the answer as far as it has gone.

(The answer was thereupon repeated by the reporter as above recorded.)

The WITNESS. We have California pine and sugar pine,
315 and any other varieties we have, and there is competition in those same varieties.

Q. You have other ponderosa manufacturers competing with you, do you?

A. Yes.

Q. And you have manufacturers competing with you in the manufacture of strobus?

A. Yes.

Q. What other manufacturers are manufacturing strobus lumber; do you recall any?

A. There are different ones; I cannot name them.

Q. Does Canadian strobus come in competition with you?

A. Some.

Q. When you call upon the trade, do you have occasion to find out the reasons why you lose sales to manufacturers of California white pine?

A. We try to find out.

Q. Do you succeed in finding out what the reasons are for the losses of sales?

A. Yes; the reasons are, in some cases, price.

Other cases we have some of the dealers who feel that the California white pine is better than our pondosa pine; we also have cases where some other dealers demand it because it is called white pine and they feel that they can pass it on to their customers with clear conscience as a white pine.

316 By Mr. MATTHEW:

Q. That is, they tell you that?

A. Yes.

By Mr. BURR:

Q. Do you offer them the pondosa under those circumstances or do you push the Idaho white pine?

A. If it is a price proposition we are entirely out on Idaho pine, and we go after it on pondosa.

If we are not sure, we try to find out what species he wants.

Q. If you fail to sell pondosa under those circumstances, and it is not a price consideration, what is the consideration?

A. There are different reasons; some absolutely demand it over pondosa. They think, as I said before, that it is better and others on account of its being called white pine.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Brown, were you employed in this area at the time when the name of your inland empire pine was changed from western white to pondosa?

A. No; I was in northern New York, northwestern New York, at the time.

Q. During what years were you in the inland empire section
317 in the lumber business?

A. From 1908 to 1915.

Q. Was that prior to the opening up of the Weyerhaeuser lumber operation in what is called the clear water district?

A. Yes.

Q. The bulk of your Idaho white pine comes from the clear water district in Idaho, does it not?

A. Not necessarily.

Q. What other sources have you for Idaho white pine?

A. The Potlatch Lumber Company, the Humbird Lumber Company, and the Edward Rutledge Lumber Company.

Q. Are those Weyerhaeuser companies?

A. So I understand.

Q. Then the Weyerhaeuser companies have been engaged in the production and marketing of Idaho white pine for a considerable number of years, more than 20 years, say?

A. Yes.

Q. Has this particular lumber, that is, the lumber yielded by Pinus monticola been sold during all that period as Idaho white pine?

A. Yes.

Q. You do not know just how far back that practice has existed?

A. I do not.

Q. You stated that you had some competition from Cali-
318 fornia sugar pine?

A. Yes.

Q. In what respect?

A. Very little. Some of it is on account of dealers or industrials who demand a heavier lumber, a wider lumber than we can get in Idaho white pine.

Q. You believe the California sugar pine is heavier lumber than Idaho white pine?

A. I mean they can produce it in sizes that we cannot produce in Idaho.

Q. That does not mean that the specific gravity is greater?

A. No.

Q. The principal reason for the competition that you feel from California sugar pine is the larger sizes that can be obtained from California sugar pine?

A. Yes.

Q. Would that competition be any more servere, in your opinion, if California sugar pine were marketed under the term California white pine?

A. No.

Q. Suppose, for any reason, the lumber which is now marketed as California white pine, and which comes from the ponderosa tree, were to be hereafter sold under another name, and California sugar pine should adopt the name of California white pine,
319 would that make any difference in your competition?

A. I do not know.

Q. You have no opinion to express as to that?

A. No.

Q. Would it cause any confusion in the trade if California sugar pine were marketed under the name of California white pine?

A. Yes.

Mr. MATTHEW. That is all.

Further cross-examination by Mr. ANDREWS:

Q. You market your Idaho pine, that is, this Pinus monticola as Idaho white pine, do you not?

A. Yes, sir.

Q. I noticed, when you were asked by counsel for the Commission what product you sold, you said Idaho white pine and pondosa pine; I observed that you did not say white pine and pondosa pine, but you qualified it by calling it Idaho white pine?

A. My particular district here uses nothing more than Idaho white pine in the products that I sell.

Q. You have known of ponderosa pine being sold for many years as California white pine or some other qualifying white pine?

A. Yes.

Q. When you sold your own ponderosa pine as western
320 for many years——

A. Western white pine, western pine, and western soft pine.

Q. Did you feel that you were assisting in deceiving anyone by doing so?

A. I do not understand that.

Q. I say, in selling your ponderosa white pine as western white pine, did you feel that you were misleading anyone by what you were selling?

A. None whatever.

Q. Is it not true that when you sold it as western white pine the purchaser knew what he was buying?

A. At that time I was selling further in the West and they did know what they were buying.

Q. You said that you were selling in western New York.

A. That was—it was called pondosa when I was in northern New York.

Q. You think that the expression, "California white pine" or "western white pine" is better understood in the Middle West than on the Atlantic seaboard?

A. They have used it longer and they know what they are getting.

Q. What is your opinion with respect to the Atlantic seaboard on that subject; if you come to a dealer and sell him California white pine, the average dealer, does he know he is getting ponderosa pine?

321 A. He knows it now; that is, on the seaboard, on the Atlantic seaboard.

Q. Is there any section of the country in which that is not true?

A. I do not know.

Mr. BURR. If the examiner please, this man has not been qualified to testify as to that, and I move that it be stricken out.

He is not qualified to answer for the entire United States.

Mr. ANDREWS. The witness has said that there is no section in the United States—that was his answer in the last question—in which the dealer does not well understand what is sold.

Mr. BURR. That is the question I move to strike out. He has not been qualified to answer for every case.

Examiner SHEPPARD. That is just the question; is this witness competent to testify what people do really believe about it?

I would a great deal rather have men come before me and testify themselves than have one man say that his opinion is so and so—I think his opinion is subject to probative value only.

Mr. BURR. If the examiner please, I move to strike the
322 answer that he just gave on the ground that he has not shown any knowledge of any other section except those in which he has actually been selling the pine.

It seems to me it is difficult enough to know what the trade thinks. That has been admitted, and properly so, when testified to by salesman who are familiar with the territory, but this witness has not qualified to testify for the entire country.

Examiner SHEPPARD. I think so. Strike from the testimony all of this witness's testimony as to any section of the country except that in which he does his work.

By Mr. ANDREWS:

Q. In what sections have you worked?

A. I work Manhattan Island now.

Q. Have you worked anywhere else?

A. Northern New York.

Q. Your answers are true as to those sections in which you have worked?

A. Yes.

By Examiner SHEPPARD:

Q. I take that as being based on your intimate association with your customers?

A. Yes, sir.

323 Redirect examination by Mr. BURR:

Q. I think you testified a little differently as regards northern New York and Illinois, did you not?

Did you not draw a distinction between New York and the trade in the Middle West, and that as far east as northern New York, or am I in error?

A. Yes; there seemed to be some difference in their opinion there.

Q. The term "western white pine" was continued by Weyerhaeuser Sales Company up until what time, according to your best recollection?

A. I think it was about three years ago—three or four years ago, something like that; I do not know positively when that time was.

Examiner SHEPPARD. That is already in the record and if it is not, the Commission has a record of it and there is no use questioning witnesses on that any more.

Q. Did the Weyerhaeuser interests and sales company discontinue the words "western white pine" and substitute "western soft pine" as a trade name for a while; do you recall anything of that kind?

A. Yes; a number of years ago.

Q. Was that true up until the time when the word "pondosa pine" was coined?

324 A. I do not know what their name was up to the time pondosa pine was designated.

Q. But you do recall a time when they were referring to it as soft pine rather than white pine?

A. Yes.

Mr. BURR. That is all.

Re-cross examination by Mr. MATTHEW:

Q. Was the term "western white pine" discontinued because the Weyerhaeusers considered if they could have the name Idaho white pine exclusively for the Pinus monticola lumber, they would have a marked advantage as against the producers of lumber from ponderosa pine in the inland empire?

A. I do not know.

Q. You never heard any discussion in the Weyerhaeuser Sales organization as to the occasion for dropping the term "western white"?

A. No.

(Mr. MATTHEW. That is all.

(Witness excused.)

325 JAMES W. O'CONNOR was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. O'Connor, you are an architect, are you, sir?

A. Yes, sir.

Q. How long have you been an architect?

A. Twenty years.

Q. What concern are you affiliated with?

A. Myself.

Q. How long have you been in the independent practice of your profession?

A. Twenty years.

Q. Where are you located?

A. 162 East 37th.

Q. You have been on Manhattan Island during the entire twenty years?

A. Yes.

Q. What type of work do you specialize in?

A. Fine residential work.

Q. Could you name any particular work that you have handled?

A. Yes; the S. C. Mitchell Electric Bond & Share Co.; W. R. Grace & Co.; George Whitney, of Pierpont Morgan & Co.

Q. That is sufficient. Those are residences, are they?

326 A. Yes.

Q. Do you have occasion to specify from time to time various types of lumber for exterior purposes?

A. Interior and exterior; yes, sir.

Q. Do you have any preferences for exterior use in your specification, and, if so, I would like to know what they are, sir?

A. I use white pine.

Q. You use white pine and some cypress, or does not that come into that class of work?

A. No.

Q. When you specify white pine, do you qualify that in any fashion?

A. There are so many trade names; I do not qualify it; I say white pine, sample to be submitted, and when the sample comes in——

Q. When the samples comes in, what do you do with it?

A. When the sample comes in, I look it over to see that it has not any sap, has a straight grain, has no flat grain. I use it a lot for interior panels, and so on.

Q. Do you know what kind of white pines are acceptable to your firm?

A. I know that California is not.

Q. How do you find out if it is California or not?

A. When they bring it in, I ask them. It is always so full

327 of sap—this is my experience—and full of grain, that it is not acceptable.

Q. Do you think you can tell it when it is brought to you?

A. No; I am not an expert on wood; no.

Q. You inquire whether it is California pine—California white pine?

A. Yes.

Q. And if it is California white pine, you reject it, is that right?

A. That is right.

Q. Have you ever had this experience, that California white pine would be delivered on the ground and you would have to reject it on the ground, or do you forestall that?

A. I have rejected some, but I do not know whether it comes from California or not.

Q. I mean, do you have to reject it after it was delivered on the ground?

By Mr. MATTHEW:

Q. California white pine?

A. I am not an expert enough to know.

By Mr. BURR:

Q. You have rejected pine after it was delivered on the job?

A. Yes.

Q. On what ground have you rejected it?

A. Too much sap and too much grain.

328 Q. It was delivered under a specification for white pine, was it?

A. Yes.

Mr. MATTHEW. My objection may be reserved as to this?

Examiner SHEPPARD. Yes.

Q. As a matter of fact, you did not know whether it was ponderosa, California white pine, or what it was?

A. No; I did not know what the name was.

Mr. MATTHEW. Your Honor, I move to strike the testimony of the witness.

Mr. BURR. If the examiner please, this whole soft-pine industry is entirely confused, and I think that anything which shows that the actual consumer and his representatives are confused on this situation is proper to remain in the record.

Examiner SHEPPARD. That is something, Mr. Burr, that the Commission has to determine by the facts in the case.

Mr. BURR. I think so.

Examiner SHEPPARD. It is not a question to argue before me.

It is a matter that witnesses have to testify to, and the Commission draw its conclusion.

Mr. BURR. But Your Honor has to report.

329 Mr. MATTHEW. Your Honor understands that there has been no identification of this rejected lumber as California white pine.

Mr. ANDREWS. For all Your Honor knows, it may have been Pinus strobus.

Mr. BURR. That all goes to the weight.

Mr. MATTHEW. It has no weight.

Examiner SHEPPARD. There is no use discussing that at this time.

By Mr. BURR:

Q. Do architects generally have their rules as to what their responsibilities are in these matters?

A. Yes.

Q. Is it one of the professional requirements of architects in the city of New York that they themselves be qualified to detect blunders on the part of those who are contractors and who deliver lumber?

A. I do not think that there any architects who are expert enough enough on lumber to be able to tell the different names of the lumber.

Q. You have never specified the species in the specifications that you make for residences?

A. No; all I know is that when they come in with Idaho, it is more satisfactory to me than the others.

Q. You do know that?

A. Yes.

330 Q. You have used white pine that was not Idaho, have you?

A. Yes; I have used Norway.

Q. But you have not used California white pine to your own knowledge?

A. No.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Do I understand you to say that you have used Norway pine?

A. Yes.

Q. And accepted that as satisfactory compliance with specifications calling for white pine?

A. Yes.

Q. You know that Norway pine is not a soft pine?

A. I know.

Q. I take it from that that you are not interested in the botany or the species of the lumber?

A. No; I am not. I am interested in the effect.

Q. You are interested in——

A. In the quality—the lasting quality.

Q. The utility of the wood?

A. Right.

Q. Your particular desire is to avoid getting sapwood for these purposes, and in addition to that, you are interested in

331 the grain?

A. Right.

Q. If your requirements in those respects are met, you do not care what particular species of wood is presented?

A. No.

Q. Have you ever had any contact with California sugar pine?

A. No.

Q. You do not know whether or not you would accept sugar pine upon specifications calling for white pine?

A. I could not say that. I would not say that I would; I would have to see it.

Q. It all depends on inspection and such information as you may obtain about it?

A. Yes.

Q. If you were supplied with Idaho white pine and you found it contained too much sap, or the grain was not correct, you would reject it, I take it?

A. I would.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Did I understand you to say that you had used California pine?

A. Yes.

Q. On the outside of the building?

332 A. No; for interior work.

Q. Did you refer to a substituted wood—did I catch you right—that Norway pine had been furnished as a substitution?

A. Yes.

Q. What do you mean by "substitution"?

A. Because the cabinetmaker brought in this Norway. I rejected the sample he had of the white pine, and he brought in a piece of Norway and he said he could furnish the Norway and it suited me very well, so I let him use it.

Mr. BURR. I think that is all.

333 J. M. BRADY was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are in the lumber business, are you?

A. Yes, sir.

Q. And you are an employee of what concern?

A. The Weyerhaeuser Sales Company.

Q. You have a sales territory, have you?

A. Yes, sir.

Q. What part do you cover?

A. Kings County and part of Queens County.

Q. How long have you been in the lumber business?

A. Six years.

Q. Prior to that, did you have any lumber experience as a logging man or anything of that kind?

A. No, sir.

Q. You have competition, as has already been shown, on the part of California white pine—and other manufacturers besides yourself, with Idaho pine and pondosa pine?

A. Yes, sir.

Q. Do you have occasion to find out what the reason is for losing sales, Mr. Brady?

A. Yes, in some instances.

Q. What do you find those reasons to be?

334 A. They differ. Some of it is due to price, others in regard particularly to this California white pine, some claim they

prefer California white pine—some from a price standpoint; others say it is better and softer, and its name, white pine. Their specifications call for white pine and they buy California white pine and sell it as white pine on these specifications.

Q. Do you recall any particular instance that you could give, and that you would be willing to state, specifiying any particular case where you lost sales of that kind?

A. Yes; I have got one case in mind. A few years ago this man asked me for prices on Idaho white pine. I understood him to say that the contract he was bidding for called for genuine white pine. He got the contract, and when I went back to him to try to get the order out of him, he told me that he had bought California white pine.

Q. Do you mind stating who that was?

A. The Brooklyn Lumber Company.

Q. Do you have these reasons for failing to make sales of ponderosa pine comes to your attention quite often, or is it an exceptional situation, or how is it?

A. Usually if I cannot get the business, I want to know why.

Q. And you quite often find out why, don't you?

A. Quite often.

Q. And the reasons are those that you stated before?

335 A. Yes.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Brady, this case of the Brooklyn Company arose some six years ago?

A. No,

Examiner SHEPPARD. Three years ago, he said.

The WITNESS. I think as near as I can remember it is about three years ago.

By Mr. MATTHEW:

Q. I misunderstood you. Can you give us the date a little more definitely?

A. No, sir.

Q. Under what name were you then selling your ponderosa lumber?

A. If it was three years ago, we were selling it as pondosa, and I believe it was not prior to selling it as pondosa, I am pretty certain of that.

Q. You are sure at that time, that you were selling this lumber as pondosa pine lumber?

A. Pretty sure.

Q. I take it then that you are not absolutely definite on the point?

A. No.

336 Q. Do you know the date definitely?

A. I do not know the date definitely; no.

Q. Can you give us the name of the representative of the Brooklyn Lumber Company who told you that he had purchased California white pine in preference to your kind?

A. Mr. Beres.

Q. How do you spell it?

A. B-e-r-e-s.

Q. I suppose he is the manager of the lumber company?

A. He runs that yard; I do not know just what his title is.

Q. Do you know his initials?

A. A. M.

Q. He is still a customer of your company?

A. We call on him.

Q. Have you sold any Idaho white pine to the Brooklyn Lumber Company?

A. No, sir.

Q. Or pondosa pine?

A. I do not recall. I have not sold them any in a couple of years. I am certain I did sell one car of pondosa pine; whether that was as pondosa or western soft pine, I am not certain.

Q. That sale was made prior to this particular incident to which you have referred?

A. Yes, sir.

337 Q. Have you sold him any of the northern white pine—that is, the strobus pine?

A. No, sir.

Q. Do you sell much of that to anybody?

A. Not a great deal; no, sir.

Q. Your principal sales are represented by your Idaho white pine?

A. To a large extent. I do not know whether they are greater than pondosa.

Q. You think they are perhaps equally divided between Idaho white pine and pondosa white pine?

A. I think Idaho would be a little more.

Q. Is the price of Idaho white pine higher than pondosa white pine?

A. Yes, sir.

Q. Do you know whether you dropped the price on your pondosa pine when you changed the name from western white to pondosa?

A. I was not with the sales company when they called it western soft. I do not remember that name with the Weyerhaeuser Company.

Q. How long have you been with them?

A. Six years.

Q. When you first came with the company, what name was used by the company for the wood which you now sell as pondosa?

338 A. Western soft pine.

Q. Can you tell when you changed from western soft to pondosa?

A. My recollection is three or four years.

Q. Was there a change in the price when you changed from western soft to pondosa?

A. I do not remember.

Q. Do you meet with any competition from California sugar pine?

A. Very little.

Q. Do you meet with any competition from Arkansas soft pine?

A. I have heard of only one or two instances of competition with the Arkansas and that was some time ago.

Q. Then your principal competition is simply from California white pine and from other dealers in northern white and pondosa pine?

A. And Idaho white pine.

Q. Do you recall whether you had any objection to the use of western soft pine for your ponderosa pine products?

A. I beg your pardon?

Q. Do you recall whether you had any objection, from a market point of view, to the term western soft pine during the period while you used it?

A. Did I have any objection?

389 Q. Yes.

A. No, sir.

Q. That term was entirely satisfactory to you?

A. It was the term in general use.

Q. That was entirely satisfactory to you, as a salesman?

A. Yes.

Q. Would you prefer it to the term pondosa pine?

A. No, sir.

Q. You would prefer pondosa pine?

A. Yes.

Q. Is that because you have got it quite well established now?

A. No; it is because it more satisfactorily identifies the lumber.

Mr. MATTHEW. That is all, thank you.

Redirect examination by Mr. BURR:

Q. In the choice of a trade term, as a salesman, you want to have—and your desire is to have an identification of the lumber?

A. Yes, sir.

Q. Have you any other desire?

A. No, sir.

Q. Do you regard the proper identification of lumber as an advantage to sales?

340 A. Yes, sir.

Q. Can you explain that a little more fully?

A. Well, a lot of these retail dealers that we call on ask the price for a certain grade of white pine, and I always feel that they are not talking of real white pine. I have learned that in the beginning, when they asked for a price of white pine, and I have given them a price on Idaho white pine, they would say that the price was too

high and that they could buy it from so and so at a lower price, and the price they gave was the price at which pondosa pine was selling at.

I would say, "It is pondosa pine you want." And they would say, "Yes; that is what I am talking about."

Q. Pondosa pine?

A. Yes.

Q. Pondosa is actually identified in the minds of some, even under the trade name of pondosa, as white pine?

A. Pondosa and California white pine.

Q. Both?

A. Yes.

Q. Has it come to be known in the trade that California white pine and pondosa pine are from the same tree?

A. I would say it has.

Q. That has got to be known?

A. Yes.

341 Q. In competition with California white pine, you tell them that, do you?

A. Yes.

Recross-examination by Mr. ANDREWS:

Q. Mr. Brady, I take it from your last answer, when they talked of white pine, they referred to pondosa more particularly than to Idaho white pine?

A. Yes.

Q. In other words, white pine has become more prominently identified with pondosa than sugar white pine?

A. Among some of them.

Q. I am speaking generally.

A. No, not in general. There is a certain percentage of the dealers—a good many of them, that told of white pine—they say—"white pine" and mean either pondosa or California white pine. They do not mean Idaho or the northern white pine.

Q. Is my recollection correct of your testimony, that when they said "white pine", that you generally found, in a majority of instances, that they were referring to ponderosa pine?

A. Yes, sir.

342 Redirect examination by Mr. BURR:

Q. And by ponderosa pine, you mean under either of these trade names, pondosa pine or California white pine?

A. Yes.

Q. When somebody asks for genuine white pine, what does he mean?

A. He means either Idaho white pine or northern white pine.

Q. So you have white pine, meaning one thing very often, and you have genuine white pine meaning something very different?

A. Yes.

Mr. MATTHEW. Isn't that rather leading?

Mr. BURR. Yes, it is. Strike the last question and answer.

Mr. ANDREWS. I prefer to leave it in.

Mr. BURR. Very well, leave it in.

(Whereupon, at 4:00 p. m. an adjournment was taken to October 9th, 1929, at 10:30 a.m.)

343 Dockets Nos. 1620 to 1669, inc.

NEW YORK, *October 9th, 1929.*

Met pursuant to adjournment, 10:00 a.m.

Before William W. Sheppard, examiner.

Appearances:

Eugene W. Burr and J. G. Birks, attorneys for the Commission.

McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Co., et al., Davies-Johnson Lumber Co., et al., Diamond Match Company, et al., California Fruit Exchange, et al., Penman Peak Lumber Co., et al., Feather River Lumber Company, et al., Kesterson Lumber Company, et al., Hobart Estate Company, et al., Fruit Growers Supply Company, et al., Quincy Lumber Company, et al., Spanish Peak Lumber Company, et al., Lassen Lumber and Box Company, et al., Red River Lumber Company, et al., Owen-Oregon Lumber Company, et al., Big Lakes Box Company, et al., Ewauna Box Company, et al., Klamath Lumber & Box Company, et al., Lamm Lumber Company, et al., Pelican Bay Lumber Company, et al., Algoma Lumber Company, et al., Shaw Bertram Lumber Company, et al.

Jesse Andrews, attorney for the respondents, Pickering Lumber Company and the Forest Lumber Company, et al.

344 M. W. WILLIAMSON, recalled, further testified as follows:

Redirect examination by Mr. BURR:

Q. Mr. Williamson, I believe you testified yesterday that you worked for a time for Curtiss in the millwork line.

A. Yes, sir.

Q. And I believe you testified that the firm for which you worked was accustomed to purchase, in the main, California white pine, and in part, the so-called "genuine white pine"; did both of those types of lumber as purchased contain both heart and sap wood?

A. Well, in the genuine white pine that we received from the north at that time there was very little sapwood in the lumber. I could not say that there was not any, but there certainly was a very small amount.

By Examiner SHEPPARD:

Q. What time are you talking about?

A. This was during the period of 1900 to—well, it was during the time I was with these people; that was perhaps from 1900 to 1909.

I may explain this by saying that it was a shop type of lumber, no. 1, 2, and 3 shop, obviously coming from that part of the log which was practically devoid of sap.

By Mr. BURR:

Q. It was white in color?

A. Certainly.

345 Q. Was it possible for you to so cut the shop lumber as to prevent the exposure to the weather of such portions of sap as there were in the Idaho white pine?

A. I don't believe I understand that question.

Mr. BURR. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

Q. Was it not Idaho white pine that you used there?

A. No, Pinus strobus.

Q. Very well; let me start that question again. You say that part of your Pinus strobus would be composed of sapwood, here and there, in minor portions; is that true; is that your testimony?

A. Yes, sir.

Q. That sapwood where exposed to the weather, would be less durable than the heartwood, would it?

A. I would say so.

Q. Was it so possible for you to cut that strobus shop lumber in the mill, that the sap portions would not be exposed to the weather, but would be protected?

A. Absolutely.

Q. The California white pine that you used, that was white in color, was it?

A. The sap was white in color, and oftentimes the heart was more of a reddish cast.

346 Q. Was it possible for you to so cut the shop lumber, made of ponderosa pine and California white pine so as to protect the sap portions from the weather?

A. I would say that no attention was paid to that in the cutting of California white pine.

Q. Was the major part of it, heart or sapwood of the California white pine, made in millwork products?

A. There was an enormous amount of sapwood, and it would have to be—what proportion, I could not say.

Q. Was it a larger or smaller proportion of sapwood in the California white pine that you used, as contrasted with the strobus that you used?

A. Very considerably more.

Q. In which?

A. Very considerably more sap in the California white pine than the strobus, naturally.

Mr. BURR. That is all.

Re-cross-examination by Mr. MATTHEW:

Q. Do the shop grades of lumber come largely from the heart of the trees?

A. I would say they do; yes.

Q. That is the fact, both with respect to Pinus strobus and ponderosa, is it not?

A. Very much more so in the case of strobus than ponderosa.

Q. Is it not likewise the fact with respect to the California
347 white pine?

A. Sir?

Q. I say, is it not likewise the fact with respect to California white pine?

A. To a degree; yes.

Q. Let us take your pondosa pine—you make a considerable amount of pondosa pine in the shop grades, do you not?

A. Yes, sir.

Q. And your shop lumber pondosa pine comes largely from the heart of the tree, does it not?

A. Yes, sir.

Q. Is there a great proportion of sap in the pondosa pine shop lumber which you market?

A. There is some; yes.

Q. Well, is it relatively large or relatively small?

A. As compared with what?

Q. As compared with anything you want; compared with Idaho white or northern white.

A. Very much more so than Idaho white pine.

Q. You have the greater percentage of sap——

A. In the pondosa.

Q. In your pondosa shop lumber than you find in Idaho white or northern white?

A. Very much more so.

Q. Is it your best judgment that the California white cor-
348 responds closely to pondosa white?

A. There is no question about that at all.

Q. What was the actual practice of the Curtiss Company in the cutting of shop lumber for the purpose of obtaining materials for doors, sash, and frame; did they make any differentiation between sap and heart wood?

A. Not any.

By Mr. BURR:

Q. In cutting which?

A. He asked about shop lumber, and I said, "Not any, sir."

By Mr. MATTHEW:

Q. Irrespective of the species of wood which they were using——

A. Not irrespective of the species of the wood they were using. In cutting clear white pine, true white pine, sap was eliminated.

Q. They did that of purpose?

A. I presume they did; yes. That is part of the specifications, as I recall it, at that time.

Q. That is, for a clear northern white pine, for doors and things of that character?

A. Yes, sir.

Q. So it is your best recollection that the Curtiss Company would, of purpose, cut out the sapwood when using northern white pine in the use of sash, doors, and frames?

A. Because of——

Q. No; just answer the question.

349 A. Yes.

Q. They did it?

A. Yes.

Q. All right. But in handling the California white pine shop lumber they made no distinction between that and heartwood?

A. Not any.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Why was it? You wanted to add something to your answer. Counsel wanted merely your answer of "Yes." Now, will you continue your answer.

A. Because in the specification of white pine it was clear that was called for, and the specification of clear eliminated the sap. Therefore any sap traces that were found in the plank were eliminated; but that was not a difficult task, because, as I explained yesterday, in slabbing the white pine logs you pretty nearly wipe out the sap area on account of the very small sap line in the true white pine log, such as you find in strobus.

Q. This, perhaps, is not proper redirect, but I would like to ask, if the examiner is willing, just what type of lumber is supposed to be shop lumber; can you tell me that briefly?

A. What type of lumber is shop lumber?

Q. Yes; is it thicker stuff, or just what do you cut?

A. Very largely 5/4, 6/4, and 8/4—6/4 is 1½ and 8/4 is 2

350 inch.

There is one grade recognized as inch lumber, which is recognized as inch shop common; in the old days that was established because they made inch doors, a very light, white door; but that has been practically eliminated now, and it is just the one grade of shop lumber in inch, known as inch shop common. The grade is established by a certain percentage of cuttings—five inches or six inches and wider, and thirteen feet or longer, and nine inches wide or wider, and so on.

Q. Shop lumber, then, refers to the grade and quality of it more than it does to the dimensions, or do you include both?

A. I would not say quality. A piece of sash or trim or style of panel for a door can come from a low grade of shop and be

just as high grade quality as might come from no. 2 shop; the piece itself is of the same quality, grade for grade. One might be obtained from no. 2 shop; the other might be obtained from no. 1 shop. One to sell at a higher price than the other, but the value of one as compared to the other is established from the amount of cuttings one produces over the other, which makes one more valuable than the other. Is that clear?

By Examiner SHEPPARD:

Q. You do not want any sap lumber to go into shop lumber, do you?

A. Sir?

Q. Do you use sap lumber for indoor work?

351 A. For indoor work sap is being put in in Pinus ponderosa; yes, sir. So far as I know, nobody is making any distinction between sap and heart in the so-called "manufacture" of sash, doors, and blinds in Pinus ponderosa. I believe that is a correct statement, all right.

Re-cross-examination by Mr. MATTHEW:

Q. You know, Mr. Williamson, that sap lumber is greatly preferred for some interior work, do you not?

A. Yes.

Q. It is very valuable for certain purposes?

A. It is very satisfactory for certain purposes, yes.

Q. Are we to understand from one of your answers that the term "clear", as applied to lumber, means that it must be free from sap?

A. It was for that period that I referred to.

Q. Does it mean that today?

A. Yes; I would say that it does, but how closely it is followed, I do not know.

Q. In the term "clear", as you understand it, there must be no sapwood in the lumber?

A. As applied to true white pine.

Q. Let us compare it as applied to your pondosa pine?

A. No, sir; it does not.

Q. Applying it to Idaho white pine?

352 A. It does not.

Q. It does not imply that it must be free from sap?

A. As a matter of fact, the grade of clear, as established in the present groups, there is no grade of clear white pine.

By Mr. BURR:

Q. You say there is no grade of clear white pine?

A. No, sir; it is a grade of B and better, but when an architect's specification comes in asking for true white pine clear, it is understood in that case that sap must be eliminated, that is, for the millwork it must be eliminated, but not the lumber manufacturer. We may ship white pine with a small amount of sap, but it is shipped on our grade specification of B and better; the millwork takes the

architect's specification for clear and eliminates that sap, if there is any there.

By Mr. MATTHEW:

Q. As far as your grade rules are concerned, the word "clear"——
A. Does not exist, to my belief.
Q. You do not find that in the grading rules?
A. I think not.
Q. What is the highest grade of lumber in Idaho white pine?
A. B and better.
Q. And so specified in the grading rules?
A. Yes.
Q. Briefly, what is the meaning of B and better; what are the specifications?

353 Mr. BURR. I think we better have the specifications in rather than this witness's testimony as to that.

Mr. MATTHEW. All right; it will all be covered later on.

The WITNESS. It is all written in the book; it is a matter of record, anyhow.

Mr. MATTHEW. That is all I have.

(Witness excused.)

A. EMBURY, II, was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Embury, you are an architect, sir?
A. Yes, sir.
Q. How long have you been in the profession of architect?
A. Since 1901.
Q. Have you been in New York City all that length of time?
A. Yes, sir.
Q. How long have you been an architect for yourself?
A. Since 1905. The first house I did was in 1903 or 1902.
Q. What is the nature of your work; is it residences largely?
A. I have done more residences than any other one class of building, but I have done all sorts of buildings.
Q. You are in business for yourself, are you, or is there a firm name?

354 A. No; by myself.

Q. You are located in what place in New York City at the present time?
A. 150 East 61st Street.
Q. Now, Mr. Embury, have you had occasion, from time to time, to specify pine lumber for your clients in the construction of residences and other structures?
A. We almost always specify it for exterior trim, cornices, sash, and doors—exterior doors.
Q. Do you specify what kind of pine?

A. I specify at the present time "C" select northern white pine, free from sap.

Q. Do you ever, in your specifications, say strobus?

A. No. We find that the mills do not know what it is. They do know what northern white pine is.

Q. Are you a student of the technical and botanical distinctions between white pine and other varieties of pine at all?

A. No; I am not.

Q. You do not pretend to that class of education along that line?

A. No; I do not know much about it.

Q. That is a profession independent of yours, is it?

A. I suppose so; yes.

Q. After you specify northern white pine, free from sap, what are your methods of assuring yourself that that type of lumber is laid on the ground; do you rely on the contractor, or how is

355 handled?

A. As a matter of fact, we have it soft and unprimed—we look at it, and if it is decent looking, and it is not too suspicious looking, we place it, because you cannot do very much else, in doing a great many houses, we cannot stop to analyze every piece of lumber that comes to your job.

Q. In other words, you cannot send it to a forest laboratory every time you turn around; is that what you mean?

A. As a matter of fact, usually they bring the material the very day they are about to be put up, and I haven't time to look it up.

Q. In point of fact, do the exigencies for the necessity of immediate work have an effect on the material that is used?

A. Do you mean affect the specifications or affect the actual use?

Q. Affect the loyalty of the contractor, or whoever it is you purchase from, to the specifications.

A. No; we can get pine quickly enough.

Q. You can get the northern white pine quickly enough?

A. Yes; if the mill will take the trouble to get it for us.

Q. You do turn down pine occasionally, if it is not up to specications?

A. Yes; we have from time to time—but from time to time we used material that we knew was not pine because we did not have time to change.

356 Q. What do you mean by that? I don't quite get that.

A. We permitted the use of millwork that was not up to specifications——

Q. What do you mean by "pine" in that connection?

A. We mean what you people speak of as northern white pine; I think it is Pinus strobus.

Q. When you said "pine", you did not mean yellow pine?

A. No; I meant strobus.

Q. Now, will you finish your last answer?

A. Because we haven't time to reject it, or send the work back.

Q. Have you had any experience in having specified northern white pine and finding that Pinus ponderosa—that is to say, California white pine, or pondosa pine, from the Pacific Northwest—had been brought on the job instead of northern white pine?

Mr. MATTHEW. If the question will be confined to California white pine, I have no objection. I move to strike "pondosa" from the question.

Mr. BURR. All right.

The WITNESS. May I qualify my answer?

By Mr. BURR:

Q. Please answer the question with reference to white pine, disregarding the other part of the question.

A. The answer is, I don't know what is substituted. I cannot say that we had California white pine substituted, because I do not know the varieties.

357 Q. You don't know whether there has been any attempt to substitute California white pine for northern white pine in your specifications?

A. You see, I do not know your names. We have had what we know as western soft pine substituted for what we believe is white pine a number of times.

Q. It was furnished under that name, was it?

A. No; it was furnished under the name of white pine.

Q. Just what would do to try to find out what happened?

Mr. MATTHEW. I will object to these questions unless the witness identifies the lumber which is understood to have been furnished as California white pine. There isn't any objection to it if he identifies it, otherwise I have not anything to base a cross-examination on.

Examiner SHEPPARD. The witness has said nothing yet as to California white pine. His answers have been "soft pine", I think he said.

The WITNESS. May I explain my knowledge of the thing?

By Mr. BURR:

Q. Please?

A. My real trouble is that I don't know what I am getting. That is the real trouble in your work right straight along. As far as I know, there are three woods which we get as white pine, when we specify white pine—I may be entirely wrong in the names, but we call them as western soft pine, California sugar pine, and

358 northern white pine, and we quite often get woods which we believe to be the other woods. When we can, we check back, because I had one very bad experience about fifteen years ago.

By Examiner SHEPPARD:

Q. Those are the things you get when you order white pine?

A. Yes; those are what the mill people call them.

By Mr. BURR:

Q. Do you regard sugar pine as compliance with your northern white pine specifications?

A. No; I do not.

Q. Do you know where the material that you have referred to as western soft pine comes from?

A. No.

Q. Did you ever have occasion to go into the matter of the building erected for Yale & Towne Corporation?

A. I guess you are referring to the dwelling house of Henry Towne, in Litchfield, Connecticut.

Q. In that case, will you describe how you came to learn anything about that so-called "Towne house"?

A. I built the house just before the war, I think in 1913, and just after the war I suppose probably in 1919—because I was not back until 1919, Mr. Towne called me up and said his millwork was rotting. Mr. Towne was particularly fussy—he was a fussy gentleman—we had all the millwork come to the job unprimed, so
359 that we could see any knots which were found standing there, and the wood looked to me beautiful before we primed it. This was in 1913 or 1914, but I think it was 1913.

About six or seven years afterwards I was up there and I found the bases of all the columns, the lower parts of all the sash, the water table and a large part of the cornice, certain parts of the trim, the ornamental carved trim around the windows had all rotted away. And when I say "rotted", I do not mean little rotted parts; it was literally rotted away; the bottom parts you could squash like that [indicating]. You could imagine the position I was in.

Here I had specified something, which had rotted out in seven years, while there were old houses in Litchfield, Connecticut, which had stood from a hundred and twenty to a hundred and thirty years, presumably built of the same material.

I took one of the boards—took a piece off and brought it to the white pine bureau and said, "Look at that white pine." I said, "This is what we specified and this is what we got from a reputable mill."

Thereafter I sent it to the Forest Products Laboratory, and they reported that it was western soft pine.

Q. Western soft pine?

A. I think that was the report. You have a copy of their letter.

Q. Their letter or your letter?

A. I think their letter.

Q. You are referring to the letter I handed you a few
360 moments ago for the purpose of refreshing your recollection?

A. Yes. I don't know what I should have done about the thing, but Mr. Towne died shortly afterwards. Fortunately, I was not sued, but they had a good case against me or the contractor.

Mr. BURR. I will endeavor to get the original of this letter, if counsel insists upon the original.

Mr. MATTHEW. Is there an offer of the letter in evidence?

Mr. BURR. Yes, if you are agreeable to waive objection to producing a copy instead of the original.

Mr. MATTHEW. Certainly I object to it. I do not see why any letter from Madison, Wisconsin, is admissible in evidence here, with as little identification or foundation laid for it.

Mr. BURR. I guess I will have to get the original, then.

Mr. MATTHEW. I guess you will. That is a sad fact.

Mr. BURR. If the facts in that letter are true——

Mr. MATTHEW. According to the letter and according to the witness's testimony, it is very possible that this might have been your pondosa pine.

Mr. BURR. It says ponderosa.

Mr. MATTHEW. That does not prevent it from coming from the inland empire and marketed under that name.

Mr. BURR. In my judgment, that is evidence——

Mr. MATTHEW. Certainly the letter is not admissible.

Mr. BURR. I admitted it is not admissible over objection, and I will ask to have it marked for identification.

361 Examiner SHEPPARD. Offer it in the regular way, and I will rule on it.

(The document was thereupon marked "Commission's Exhibit No. 9" for identification.)

By Mr. BURR:

Q. Handing you now a paper, which I wish you would describe briefly—it purports to be a copy of a letter written to you, does it?

A. Yes, sir.

Q. Do you remember receiving any such letter as that, Mr. Embury?

A. Yes; I do.

Q. Would that be in your files?

A. I doubt very much if it would.

Q. You doubt if it would?

A. Yes.

Q. How far back do you keep your files?

A. Oh, three or four years, as a rule.

Q. Will you be kind enough to look——

A. I have changed offices since that date and I tucked everything away since that time.

Q. And you are sure that it is gone?

A. I am not sure, but I do not know where to find it.

Q. Will you be kind enough to have someone look over your files and make sure whether that letter is still to be found?

362 A. I see that was written by the stenographer Katherine Drake.

Q. You are referring to the initials up on top of the letter?

A. Yes.

Q. Are those initials in pen or are they typewritten?

A. Typewritten.

Q. That is her initial after typewriting it, is it?

A. Yes.

Q. Will you be kind enough to look that up [redacted] telephone me at the Hotel Martinique?

A. Yes, sir.

Q. If I am not there, leave word as to whether or not it is available.

A. Yes, sir.

Q. Do you recall the substance of the letter now, sir?

A. I recalled the substance of it before I saw the letter. I was very clear on it; the only thing I could not tell was whether it was California white pine—whether that is western soft pine or not, I do not know.

Q. The letter, however, designates the species, does it?

Mr. MATTHEW. I will object to that.

Mr. BURR. I withdraw it.

The letter is not admissible, but I request that this be marked "Commission's exhibit" for identification, merely, as no. 9.

Q. Have you had the same experience of having material
363 furnished under specifications for white pine which subsequently failed to stand up under the wear and tear of time?

A. I have had a number of them, but the Towne house was the worst.

Q. Now, in any of these cases, did you check up with the Forest Products Laboratory to ascertain what the material was?

A. Yes; in two or three cases I have, then I gave it up, because I was pretty sure that was the trouble, and there was no use checking it—just made contractors correct it at their expense, without going through the formality of sending out there to find out.

Q. How recently have you had an experience of that kind?

A. I think the last one was on the Richardson house in Atlanta, Georgia, about two years ago.

Q. You say that was in Atlanta, Georgia?

A. Yes, sir.

Q. Will you describe what happened there?

A. The sills on some of the windows and blinds rotted, not very badly, because the house was comparatively new, and Mr. Richardson called my attention to it.

Q. How old was it; can you be a little more specific as to that?

A. About four years old.

Q. You say he called your attention to it, did he?

A. Mr. Richardson did, and I spoke to him and called his attention to some correspondence we had with the contractor who
364 built his house, in which we were very careful to insist on northern white pine, and the contractor corrected the faults without expense to Mr. Richardson.

Q. Did you check up to ascertain the nature of the wood that you had received?

A. No; I did not.

Q. Have you had several such instances?

A. Yes; I have had a number of them. I think in three cases I have checked them with the Forest Products Laboratory.

Q. Have you any of those answers in your files?

A. I might have; I am not sure.

Q. Will you be good enough to check up on that and let me know at the hotel?

A. Yes. I might say, in connection with the Towne house, one part of the exterior trim which did not rot were the columns, and that struck me as very curious; the caps of the columns and bases should have rotted while the shafts did not, for which reason I took the base of the column and sent it out at the same time, and found that the column was of northern white pine, where the others were western soft pine. The columns were Pinus strobus, whereas the others were not.

By Examiner SHEPPARD:

Q. That was the part that did not rot?

A. It did not rot, although the cap and base, which were manufactured by the millman—you see, the shaft was bought of
365 Hartman & Sanders.

By Mr. BURR:

Q. Did you check up to ascertain what concern furnished the western soft pine?

A. I tried to. The mill manufacturer was Patterson, of New York, I think they call it the Patterson Mill Company or Millworking Company; and they said they had a number of carloads come in, and they could not tell from which manufacturer it was bought. They said it was bought as northern white pine. We got as far as that. We tried to find out——

Mr. MATTHEW. Just a moment. I shall object to this continued indulging in hearsay.

The WITNESS. That is hearsay.

Mr. MATTHEW. I move to strike out the last statement.

Mr. BURR. I shall not object.

Examiner SHEPPARD. I was permitting him to go on in the hope of getting something definite for the benefit of all of us.

By Mr. BURR:

Q. Do you regard Pinus strobus as a superior variety of pine for exterior purposes?

A. Yes; I do.

Q. Do you regard Pinus strobus as superior for interior finish?

A. No; we do not.

Q. You never specify that?

A. No.

366 Q. What do you specify in the nature of pine, if you use pine at all, for interior finish?

A. We specify western soft pine, sometimes Arkansas soft pine—any pine which is easily worked and which is fairly free from knots. Of course, the knots would interfere in the carving or molding and painting.

Q. Pinus strobus you find to be of higher market price than other interior pine that you do specify?

A. I do not know that, because we do not require it for inside work.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. When you specify northern white pine, would you regard Idaho white pine as being satisfactory compliance with those specifications?

A. We believe it to be.

Q. And you will accept Idaho white pine in response to specifications calling for northern white pine?

A. Yes.

Q. Would you accept California sugar pine in response to specifications calling for northern white pine?

A. No.

Q. Do you know whether the sugar pine is a white pine or not?

A. No; I do not. I am told by the mill people that Cali-
367 fornia sugar pine stands up fairly well.

Q. If you do not know of your own knowledge what it is, we will not go into that.

A. I do not know.

Q. I take it from your direct testimony, Mr. Embury, that you know of no case which you can state with any positiveness that California white pine has been supplied in response to specifications calling for northern white pine?

A. I did not know that there was such a thing a California white pine.

Q. Let me explain this situation to you for a moment; if I may, to make this clear.

I want to get the matter before you for the purpose of my inquiry. There is a variety of pine tree which is common to the Pacific slope, which is known as Pinus ponderosa, found in California, Mexico, Arizona, Idaho, and elsewhere. The lumber that is manufactured from the Pinus ponderosa in the inland empire section—that is, eastern Washington, portions of Idaho and Oregon—is marketed under the term of ponderosa pine; the lumber manufactured from the same species of tree in California and southern Oregon is, I think, marketed under the name California white pine; the lumber manufactured from the same species in Arizona and New Mexico, under different names, sometimes Arizona white pine or New Mexico white pine. What I am asking you is whether or not you can state that California white pine lumber has at any time been supplied in response to your specifications calling for northern white pine?

A. Yes; I think it has. I think it was supplied in—yes; I am sure is was supplied in the Mid Pines Country Club, where
368 the material was supplied by the Morgan Lumber Company.

Q. Where are they, can you tell?

A. I don't know where their head office is, but that came from the Baltimore office.

Q. That is, the White Pines Country Club?

A. The Mid Pines Country Club, Moore County, North Carolina.

Q. Northern white pine was specified?

A. Yes.

Q. How do you know that California white pine was furnished?

A. Because I went on an inspection visit of the club when the material came in, and I noticed one of the doors and blinds, which you see most readily, were made of several different varieties of wood. I took one of the pieces and sent it to the Forest Products Laboratory, and they said it was made of three different varieties of wood in one blind.

Q. There was western soft pine in it?

A. To my remembrance, they said what is known—my remembrance of the letter is they said what is known as California white pine, what is known as California sugar pine, and what is known as northern white pine. The California sugar pine has a little flash in it which makes it reasonably easy to identify. The others are very difficult to identify by inspection.

Q. How do you know that this other pine lumber in that article came from California?

A. I only know what they said about it.

Q. That is all that you know about it; it might have been pine sold under the name of pondosa pine coming from the inland empire section, for aught you know?

A. Yes; my concern is not where the material is manufac-
369 tured, but what it will do.

Q. In other words, you are not interested in the place of origin nor are you interested the botany of the species; your interest is in the quality and utility of the wood; is that true?

A. Yes; we have found also that Pinus strobus will stand up and substitute whatever they may be, won't.

Q. Usually when you get Pinus scrobus, you get heart wood?

A. We get very little sap in it, and we specify that it shall be free from sap.

Q. Do you find that the heart wood of any one of these pines will have greater durability when exposed to conditions promoting decay than sapwood?

A. I do not think we get much heart wood in the soft pines; I think we get almost entirely sap. We use that mainly for interior work, where it has been furnished in substitution, and I would say it is almost all sap.

Q. You know that sapwood is more likely to decay than heart wood?

A. Yes.
Q. In almost any species of tree?
A. Yes.
Q. Did you ascertain whether or not the wood in the Towne house which had decayed was sapwood or heart wood?
A. No.
Q. You did not go that far?
370 A. No.
Q. Was this wood painted?
A. Yes.
Mr. MATTHEW. I think that is all.

Cross-examination by Mr. ANDREWS:

Q. Mr. Embury, I believe you said you did not know from what state or section of the country Pinus strobus comes; is that correct?
A. I do not know; no. My understanding is that it was common to the northern part of the United States. At the present time, most of it is marketed, I think, in Idaho, and we still get occasional northern white pine from Maine.
Q. That is just occasionally true, is it not?
A. Yes.
Q. If you know—I will ask you if you do know whether much lumber in the commercial sense comes from Maine now?
A. Not much; no.
Q. Do you know of the relative durability of ponderosa heart lumber and Pinus strobus heart lumber——
A. No; I don't.
Q. I have not finished yet—is when exposed to the elements?
A. No, sir.
Q. You do not know. Therefore you would not say, if you had Pinus ponderosa heart lumber, it would not be just as dur-
371 able as Pinus strobus heart lumber?
A. I would not permit it because——
Q. That is not answering the question, Mr. Embury. You stated you did not know, and I am now putting the question in different form. I am asking if it is true, therefore, that you would not say that Pinus strobus heart lumber was Pinus strobus heart lumber?
A. Is not the question confusing?
Mr. BURR. Do not answer it until you understand it. I think Mr. Andrews used the words "Pinus strobus" twice.

By Mr. ANDREWS:

Q. Do you know of the relative durability of Pinus ponderosa heart lumber and Pinus strobus heart lumber when exposed to the elements?
A. No.
Q. Then you are not in a position to say, is it not true, that Pinus ponderosa heart lumber is less durable than Pinus strobus heart lumber?

A. If you mean that in a purely technical sense, I am not in a position to say, but if you mean as to practical work, I think I am in a position to say that Pinus ponderosa—that is a species of yellow pine, isn't it?

Q. Do you know it when you see it?

A. No. I think that no hard yellow pine will stand up as well as heart white pine—as that is the type of pine which we have through the South, where we have done a great deal of work
372 and used it, and if the other is of the same species or variety, I would be afraid of it.

Q. I simply want to know, if you are in a position to state, whether if you take heart lumber of both kinds, Pinus strobus and Pinus ponderosa, if Pinus strobus was more durable than Pinus ponderosa?

A. No; I cannot answer that yes or no. I do not know.

Q. I believe you stated that in the Towne house you did not know and now do not know whether the lumber that decayed was sap or whether it was heart.

A. I do not know, but my belief was it was probably sap because most of the substitutions are made of sap, because it looks more like the heart of white pine, and I believe it was probably sap for that reason. I do not know.

Redirect examination by Mr. BURR:

Q. As a practical proposition, the yellow varieties of pine, so-called yellow pine, are regarded by you as different in their durability from the genuine white pines?

Mr. MATTHEW. I wish you would not lead so much, Mr. Burr.

Mr. BURR. I will try to avoid it.

Examiner SHEPPARD. It is a little leading; but go ahead; the question is on the record, and I will let him answer.

A. I know the so-called North Carolina yellow pine and the longleaf yellow pine—what is sold in the South as longleaf yellow pine—very well, and the heart lumber there does not last at all
373 well. Eight or ten years is enough to rot out a cornice.

Q. Now, as a practical proposition, when you obtained the so-called "western soft pine" that you referred to in your direct testimony, do you obtain heart wood of that type of lumber or sapwood of that type of lumber?

A. I think it is sapwood, but I do not know.

Q. What leads you to say you think it is sapwood?

A. It looks like sap; it does not have the solidity and the tightness of heart lumber; but I do not know the tree well enough to say. I do not know the Pinus ponderosa at all.

Q. By botanical name?

A. By botanical name.

Re-cross-examination by Mr. MATTHEW:

Q. You say that you are quite familiar with the yellow-pine lumber of the South?

A. Yes.

Q. You spoke particularly of North Carolina pine lumber?

A. North Carolina, what is sold as North Carolina, and it is actually cut there.

Q. Is that shortleaf pine or longleaf pine?

A. Shortleaf.

Q. There is practically no heart stock in it, as it is received?

A. Yes; you can get it cut within a few miles of where it is
374 grown, and have the heart cut in it.

Q. Is it quite easy to distinguish this southern yellow-pine lumber, this Carolina lumber, as you call it, from northern white pine?

A. Yes.

Q. And likewise is it easy to distinguish it from western soft pine?

A. Yes.

Q. As far as appearance is concerned, this western soft-pine lumber more nearly resembles the northern white pine, does it?

A. Yes.

Q. Than it resembles southern yellow pine?

A. Yes.

Q. And for purposes of general utility is it more commonly used for the same purposes for which northern white pine is used?

A. I beg your pardon—it depends on the section of the country. In the South it is not so much——

Q. Take it in this district with which you are familiar, New York and its environs; is the western soft pine commonly used for structural purposes?

A. It is used for trim, and it is not used for framing.

Q. Is southern yellow pine used for structural purposes?

A. It is used for trim.

Q. Then the western soft pine is more commonly used for the same purposes for which the northern white pine is used?

375 A. Because it works more easily.

Q. It is so used?

A. In the Towne house it was used for that reason.

Redirect examination by Mr. BURR:

Q. Does the term "northern white pine" have a definite meaning to an architect, or to the architect profession here?

A. Yes.

Q. What does it mean?

A. It means to us the same sort of pine which was used in New England in the old days.

Q. Does it carry with it a reputation for durability or the reverse?

A. It carries with it a reputation for durability.

Q. Do you know whether the architectural profession here generally accepts Idaho white pine on specifications calling for northern white pine?

A. I believe they do; yes.

Mr. BURR. That is all.

Re-cross-examination by Mr. ANDREWS:

Q. Mr. Embury, you specify northern white pine, do you?

A. Yes.

Q. You stated that had a definite signification.

376 A. It has; yes.

Q. Has white pine alone a definite signification?

A. It used to have, but with many architects, white pine alone today still means what we specified as northern white pine, because since this Towne house disaster I have been a little more careful in specification than a good many people, but most of the people, when they specify white pine, mean and expect to get exactly the same thing that was used in New England in the colonial houses.

Q. You said that used to be the case, did you not?

A. Substitutes are gradually becoming known, and the men are changing the specification as they are becoming known. You see, a lot of us had the same difficulty in this matter.

Q. In your specifications for the Towne house, you stated that you specified "C select northern white pine", did you not?

A. I do not think so. I don't think I said that. I say that we now specify C select.

Q. Northern white pine?

A. I do not believe in the Towne house I specified anything but white pine—that was sixteen years ago.

Q. Do you now specify northern white pine?

A. Yes.

Q. You are not very familiar with the extent of the use of California white pine, are you?

A. May I ask you to put that in terms that I know? No,

377 I will answer that, no, because I do not know just what California white pine is.

Q. But it is your opinion that if you just use "white pine" that means northern white pine?

A. At the present time you get a lot of things that we did not use to mean by it.

Q. And so it is ambiguous now; is that right?

A. It is becoming so; yes.

Q. And within what period of years?

A. The last ten years.

Q. It may be now either what you referred to as northern white pine or it may mean some other white pine; is that correct?

A. It means that to the millman, apparently, but it does not mean it to the architect, and that is the reason we qualify it by the word "northern."

Q. To avoid any doubt or misunderstanding or possibility of mistake, you specify northern white pine?

A. Yes; very often we don't get it.

Redirect examination by Mr. BURR:

Q. Did you ever see in a specification the words "genuine white pine"?

A. Yes.

Q. What does that mean?

A. That means northern white pine.

378 Q. Do you ever specify genuine white pine?

A. No.

Q. You do not use that phrase?

A. No.

Q. Do they have an architects' association here?

A. Yes.

Q. Are you a member?

A. No. They have three associations. I am a member of two, but I am not a member of the American Institute.

Q. Are there any practices in the associations that you are a member of giving any advice or instructions as to how to specify in order to get genuine white pine?

A. Not as far as I know.

Mr. BURR. That is all, I think.

(Witness excused.)

SIDNEY B. MILLER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your full name?

A. Sidney B. Miller.

Q. You are president of the Harlem Lumber Company, are you, sir?

A. Yes, sir.

Q. You are located at 101 East 112th Street, New York

379 City, are you?

A. 112th Street and Park Avenue.

Q. In your business you retail pine lumber, do you?

A. Yes.

Q. From what localities do you buy it?

A. This is a hard question, sir, because the shipper, as a rule, cuts out of the bill of lading the name and the origin of the shipping point. You can never establish the facts where it comes from. We specify California white pine, and you might get pondosa pine, or we might specify pondosa pine and get California white pine. We take it from the railroad companies, and they say that the Interstate Commerce Commission allows them to erase the name of the company and the shipping point, so we can never establish the fact.

As a matter of fact, we got a car of pine within the last six months—we ordered pondosa pine and it was from all appearances a California pine, hard knots and more reddish color—you could never establish the fact where it comes from.

Mr. MATTHEW. Will you read that answer, please? I did not get it at all.

(The answer was thereupon repeated by the reporter as above recorded.)

By Mr. BURR:

Q. Whom do you deal with; do you buy from wholesalers, or how do you get your supplies?

380 A. Wholesalers.

Q. Are they located here in the city, or where?

A. In the city; some are out-of town, but most are in the city of New York.

Q. They are really brokers?

A. Yes.

Q. They forward the orders and the shipment comes direct from the West to you?

A. It is shipped direct to us and they make the charge to us.

Q. In other words, it is a brokerage proposition; it does not come to their yards, but the shipment comes to you?

A. Yes.

Q. When you order from the wholesalers with whom you do business, do you order by trade name or botanical name? You order by trade name, do you not?

A. Trade name.

Q. Do you order the product known as California white pine, on occasion?

A. Yes.

Q. Do you order the product named commonly Idaho white pine on occasion?

A. Yes.

Q. Do you order northern white pine?

A. Pondosa.

Q. Are those the only soft pines you order?

381 A. Right.

Q. Or do you order Arkansas soft?

A. Those names are not known in the trade.

Q. What, Arkansas soft?

A. Arkansas is not a northern pine. It may be called that by some of the out-of-town concerns, but it is not known as that in the city of New York. We know Idaho, California sugar, California white pine, and pondosa, that used to be called the western. Very seldom we order by any other name—pondosa, California, and California sugar.

Q. Do you have customers who come in and ask for white pine?

A. Yes.

Q. Do you have customers who call for Idaho white pine or California white pine?

A. The average person, as a rule, orders white pine—white pine clear or common or soft or hard.

Q. Then what do you give them, Idaho, or California, or what?
A. Well, in the common we give the Idaho.
Q. Do any of your customers get California white pine, if you happen to be stocked up with that, when they ask for white pine?
A. Yes; we do give California white pine, but if they ask for Idaho white pine, that is, door manufacturers or the store manufacturer may ask for Idaho pine, when he wants to make doors or sashes or things like that.
Q. You carry a stock of Idaho pine, do you?
382 A. Yes.
Q. Which do you carry more of, California or Idaho?
A. In inch thicknesses, the Idaho white pine, mostly; in the five quarters and up we carry both California and California sugar—mostly sugar.
Q. You carry more sugar than Idaho, you mean?
A. Yes; in the five quarters and up thickness.
Q. When your customers come into your place and ask for white pine and your stock carries more California white pine than Idaho——
A. No, Idaho white pine mostly in the inch thickness.
Q. In the larger thicknesses you carry a stock of——
A. Of the better grades in California and sugar.
Q. When that grade is asked for, and he asks for white pine of those thicker dimensions, he gets California white pine or sugar?
A. I always ask whether he wants hard or soft. They don't know the difference as a rule; they ask for soft usually.
Q. When they ask for soft white pine you give them sugar pine?
A. When they ask for soft white pine I give them sugar.
Q. If price is the determining factor, the sugar pine is higher, is it?
A. The sugar pine is higher.
Q. And in such event they would get what if they——
A. California white pine.
Q. (Continued.) In answer to a request for white pine?
383 A. White pine.

By Examiner SHEPPARD:

Q. Who is it that you say doesn't know the difference, the customers?
A. The customers.
Q. Who are they; what is their business, mostly?
A. Carpenters, manufacturers, and architects.

By Mr. BURR:

Q. Do you carry pattern stock for manufacturers?
A. Yes; moldings.
Q. Patterns for moldings; what kind of moldings?
A. We carry California white pine and pondosa pine for moldings.
Q. Do you use the sugar pine for molding stock at all?

A. Once in a white, for a little molding.

Mr. BURR. I think that is all, sir.

Cross-examination by Mr. MATTHEW:

Q. Do you carry any pondosa pine moldings?

A. No; pondosa.

Q. Why don't you carry any Idaho white pine moldings?

A. Because it is a little more expensive.

Q. That is the only reason?

A. The only reason.

Q. Do you carry any pondosa pine moldings?

A. Yes, sir.

384 Q. And also California white pine moldings?

A. Yes.

Q. You have customers who order white pine, and you say that then you undertake to ascertain if they want a common grade of lumber, in which event you give them Idaho white in the commons?

A. In the commons; yes.

Q. But in other instances you give California white pine?

A. Not in inch thicknesses—are you talking about inch thicknesses?

Q. How do you fill these orders, how do you determine whether you are going to furnish Idaho white pine or California white?

A. As a rule they ask for either soft or hard pine, and the price is different. Idaho white pine is better than pondosa or California in the no. 3 grades.

Q. Now, when he wants a soft pine, you give him what?

A. I give him Idaho.

Q. And when he wants a harder pine, what do you give him?

A. Pondosa or California.

Q. How do you determine whether you will give pondosa or California pine?

A. Generally what we have most in stock of.

Q. You furnish and you feel free to furnish either pondosa pine or California white pine in response to an order for white pine?

A. Yes. They ask for pine.

Q. They just ask for pine?

385 A. Yes.

Q. They are not asking for white pine?

A. Yes; white pine they ask for.

Q. Well, which is it; do they ask for pine or white pine?

A. White pine.

Q. When they ask for white pine, you feel free to furnish pondosa pine in response to such an order?

A. Yes.

Q. In other words, you think the name has nothing to do with it, but you try to give the customer what you believe he wants?

A. What he asks for.

Q. He asks for white pine—

A. Yes.

Q. You feel free to give him either?

A. California or the pondosa.

Q. There the trade name has nothing to do with it; you furnish pondosa as freely as California white?

A. Exactly.

Q. If California white pine bore some other name, you would still feel free to furnish that lumber in response to such an order?

A. Yes, sir.

Q. How does it happen that you so seldom order Michigan pine?

A. To be frank with you, the California sugar dominates the market. Customers are educated to ask for soft sugar pine, therefore we don't handle the Michigan.

386 Q. And the California sugar pine takes the market for that particular class of pine lumber?

A. Yes; right.

Q. I suppose by the term "Michigan pine", you mean this so-called northern white pine?

A. Northern white pine; soft pine.

Q. Do you purchase any lumber from the Weyerhaeuser lumber interests?

A. Yes.

Q. I take it that you obtain your Idaho white pine lumber from the Weyerhaeusers?

A. Some genuine white pine——

Q. My question is, You get your Idaho white pine lumber largely from the Weyerhaeusers?

A. In Idaho; yes.

Q. Most of it?

A. In Idaho, most of it.

Q. How about pondosa pine?

A. From different dealers.

Q. Do you purchase some of that from the Weyerhaeusers interests?

A. Yes; once in a while.

Q. Are you willing to let us know the names of wholesalers from whom you purchase California white pine lumber?

A. The Red River Lumber Company.

Q. That is, you buy directly from the Red River Lumber Company?

387 A. Directly from the Red River and Lumberman's Exchange.

Q. The Lumberman's Exchange?

A. Yes; in California.

Q. When you order lumber from either of those concerns, do you order it under the name of either California white pine or California sugar pine?

A. Either one; either California or sugar.

Q. You are a retailer, I understand, Mr. Miller?

A. I am a retailer.

Q. And the term "California white pine" has been known to the retail trade here for a considerable period of time, has it?

A. Oh, yes.

Q. And it is clearly understood?

A. It is clearly understood, California white pine.

Q. How long has it been known to the trade as California white pine?

A. I should judge about five or six years, perhaps longer.

Q. How long have you been in this business?

A. 22 years.

Q. And throughout what period have you been dealing in California white pine?

A. For the past eight or ten years.

Q. Do you purchase any of your pine lumber from eastern wholesalers?

A. You mean New York City?

388 Q. Yes.

A. Yes.

Q. Would you mind letting me having the names of some dealers that you purchase of?

A. Walker Brothers, West 34th Street.

Q. Here in New York?

A. Yes; and J. Herbert Bate Company.

Q. New York?

A. New York, and Chanady & Parker, of Saginaw, Michigan.

Q. I am talking about New York wholesalers.

A. I cannot recall any others. Oh, yes; Arthur E. Lane—I buy a good deal from him.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Do you understand whether or not the pendosa pine and the California white pine is cut from the same variety of tree?

A. The same species.

Q. You knew that to be the case before you came into the room and gave testimony this morning, did you?

A. Yes, sir.

Q. You buy pondosa from the Weyerhaeuser people, don't you?

A. Yes; but we refrain from buying the California no. 3 grade, because it does not compare with the pondosa grade; it has larger knots, and we get a little better grade in no. 3 in pondosa.

389 Q. On what ground do you call pondosa pine, white pine, in filling some of these requests for white pine?

A. It used to be western white pine, but it was changed to pondosa. We used to say pondonsa white pine, that is all—no particular reason.

(Witness excused.)

S. A. McGUIRE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are an architect in the organization of Mr. Cass Gilbert, are you?

A. Yes.

Q. Is that the firm name, Cass Gilbert?

A. He has a corporate name, known as Cass Gilbert, Incorporated.

Q. How long has that concern been in the architectural line here in New York City?

A. Thirty-five to forty years.

Q. How long have you been with them?

A. Going on 11 years.

Q. How long have you been engaged in the profession of architect?

A. About twenty.

Q. Were you in New York City all that time?

A. Yes, sir.

390 Q. It is your duty to draw specifications for Cass Gilbert, Incorporated?

A. Yes.

Q. How long have you been drawing their specifications?

A. Ever since I have been there.

Q. Do you have occasion to specify soft pine lumber?

A. Our work has been and is of such a high character that we use very little lumber except rough lumber. The buildings here require steel trim or fireproof stuff, and we usually prefer the steel.

Q. Can you give the names of some jobs that Cass Gilbert, Incorporated, have served as architects for—a few of the important ones, so that we can just get a picture of it?

A. We have just completed the New York Life Building.

Q. The New York Life Building here in New York?

A. Yes; Twenty-sixth Street and Madison Avenue; the Woolworth Building, the United States Customhouse, the Rodin Studios, the Union Club.

Q. Do you do any work outside of the city?

A. Yes.

Q. You say you generally specify steel rather than varieties of lumber, but you do have occasion to specify lumber, do you?

A. Yes; we do.

Q. Do you specify white pine at all for exterior work?

A. Occasionally.

391 Q. How do you specify it?

A. Well, we have been designating it as clear white pine.

Q. Clear white pine. Do you specify anything as to its heart or sap character?

A. Free from sap, free from imperfections generally.

Q. Do you know how Cass Gilbert, Incorporated, ascertain whether what they get is really white pine, or whether it is some substitute article?

A. We make careful inspections both at the mill and at the building.

Q. Do you have a wood technologist or do you just make a practical inspection?

A. Just a practical inspection.

Q. Have you had any occasions when other wood than northern white pine was furnished or attempted to be furnished on any of your jobs?

A. Yes. I do not recall what job it was, but I know there was something else substituted of loblolly character.

Q. More of a loblolly character?

A. Yes.

Q. Do architects generally have any means of checking up the variety of lumber that has been specified, as to whether it is actually furnished, according to specifications?

A. I do not think there is any standard practice along that line.

Mr. BURR. That is all.

392 Mr. MATTHEW. No cross-examination.

(Witness excused.)

LEONARD MORGENTHALER was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will your full name, please?

A. Leonard Morgenthaler.

Q. You are connected with the firm of Jacob Morgenthaler Sons?

A. I am a partner.

Q. You are located in Brooklyn?

A. Yes.

Q. 663 Sackett Street; is that right?

A. Yes.

Q. How long has that concern been in business?

A. Since 1846.

Q. What is your line of business?

A. Manufacturer of doors, sash, and trim.

Q. You have orders for white pine, sash, door and trim, do you?

A. Yes; and in specialty work.

Q. Where do you get the lumber that you manufacture into the final product?

A. Mostly California sugar pine is used.

Q. You use mostly California sugar pine; from what con-

393 cern do you buy that from, if you do not mind telling me?

A. The California White & Sugar Pine Company, Stanton & Company, of New York, and Payne & Payne.

Q. Do you handle Idaho white pine?

A. Yes.

Q. Do you handle California white pine?

A. Yes, sir.

Q. When you have inquiries calling for white pine, which do you furnish, sugar pine, California white pine, or Idaho white pine?

A. If they just ask for white pine, we generally give them the California sugar pine.

Q. You say generally, but they may receive either of the other two; is that so?

A. If anybody comes to us, we will ask them what they want, and they get what they ask for, Idaho, pondosa, or Canadian.

Q. Do you handle pondosa pine, too?

A. Yes.

Q. You handle Canadian northern pine, do you?

A. Yes.

Q. From whom do you get the Canadian northern pine?

A. From Payne & Payne.

Q. Do you order any Minnesota white pine, northern white pine, from Minnesota?

A. No; not much; very little.

Q. Do you get any of your northern material from the Weyerhaeusers?

394 A. I never get any white pine from Weyerhaeusers; mostly cedar.

Q. You get cedar from them?

A. Yes.

Q. From whom do you get your pondosa pine?

A. Herbert Turner.

Q. You say sometimes they ask for California white pine and sometimes they ask for Idaho white pine?

A. Yes.

Q. You say, furthermore, if they ask for white pine, they generally get sugar pine?

A. That is right.

Q. You say generally, if they ask for white pine, and you do not furnish sugar pine, what are you furnishing; either of the other two, or which one?

A. If they ask for clear white pine, why, we give them California sugar pine.

Q. Without any variation or difference in practice?

A. Why, we set a price, and we know very well when we put that price what they are asking for.

Q. What if they object to the price of sugar pine; then what do you give them?

A. We ask them if they can use California white pine—it is a little harder in texture than the California sugar pine.

By Examiner SHEPPARD:

Q. And a little cheaper?

395 A. And a little cheaper; yes, sir.

By Mr. BURR:

Q. California white pine, is that cheaper than Idaho white pine?

A. I think the Idaho is just a wee little bit more expensive than the California white.

Mr. BURR. That is all, sir.

Cross-examination by Mr. MATTHEW:

Q. Is the term "California sugar pine" quite well known to the lumber manufacturing trade?

A. Everybody knows it, I imagine, California sugar pine.

Q. And the term "California white pine" is likewise well known to the trade?

A. Well known; yes, sir.

Q. And has been for many years past?

A. Yes.

Q. About how many, would you say?

A. I should judge fifteen years or longer.

Q. I take it from your answers upon the direct examination, Mr. Morgenthaler, that it is your effort to supply your trade with exactly what it wants, and that when you furnish the California sugar pine it is because you understand that they desire the sugar pine for doors, sash, or trim, as the case may be?

A. Yes. If they want Michigan pine, you can tell by the price, and usually the price is too high, and the customer won't pay

396 for that, but they will want something just as practically as good, and we give them California sugar pine, and we think that is the nearest thing you can come to Michigan pine.

Q. And that does satisfy them?

A. Everybody seems to be satisfied.

Q. I understand further from your testimony that it is not your practice to furnish California pine——

A. Unless it is specified.

Q. Unless it is specified, that is your practice?

A. I try not to give anybody anything they don't ask for. If they want ponderosa shelving or no. 2 Idaho shelving, we give them what they ask for.

Q. And if they ask for California white pine you give them that?

A. Yes, sir.

Mr. MATTHEW. That is all; thank you.

Redirect examination by Mr. BURR:

Q. Is it your understanding that California white pine is the same variety of tree as the Idaho white pine or is it different, or don't you know?

A. I could not answer that very good—I mean I really don't know.

Q. What is your best judgment?

A. From what I understand California sugar pine——

Q. No; I did not ask about sugar pine.

397 A. Well, the white pine is harder texture pine—yes; it is a harder texture than California sugar pine.

Mr. BURR. Read the question, please?

(The question was thereupon repeated by the reporter as above recorded.)

A. I could not answer that.

Q. Is it your understanding that California white pine and ponderosa or pondosa comes from the same tree?

A. I could not answer that.

Q. You don't know that. Is sugar pine a distinct species from any of those that you have just named, or don't you know?

A. I would not want to answer that.

Q. You would not want to answer it for what reason; because you are not posted?

A. I am not thoroughly posted. I have never been in the woods really to learn the woods. I have worked the wood in the manufacturing end of it for about twenty-eight years; and if we buy California sugar pine, I know California sugar pine, and I know California white pine, and I know pondosa, and I know Canadian white pine.

Q. Can you distinguish those apart?

A. Yes.

Q. Is the pondosa different from the California white pine—does it come from a different tree, would you say?

A. Yes, sir; it is.

398 Q. It is a different tree, you think?

A. Yes.

By Mr. MATTHEW:

Q. Lumber or tree?

A. Lumber.

By Mr. BURR:

Q. It comes from a different tree, does it?

A. I do not know whether it comes from a different tree or not.

Q. Is it a different type of lumber?

A. Yes; it is a little different; it has more of a closer grain, and I can tell the difference.

Q. Is California white pine preferable to pondosa for the purposes you use in manufacture?

A. No, sir.

Q. Which is preferable?

A. The California sugar pine.

Q. I am speaking of those two; I only asked about those two types—I did not ask about the sugar; which is preferable, pondosa or California white pine, or don't you find any distinction between them?

A. I would prefer California white pine to pondosa.
Q. For what reason?
A. It works a whole lot better.

By Examiner SHEPPARD:

Q. You can get a better cut from it, can you?
399 A. Yes; it is a wider lumber and you can get more for your money.

By Mr. BURR:

Q. The representatives of the wholesalers call upon you, do they?
A. Yes, sir.
Q. And try to sell lumber to you?
A. Yes, sir.
Q. Do they represent that the California white pine is genuine white pine or don't they ever go into that?
A. Well, I have had some of them tell me that California white pine was genuine pine.
Q. Genuine white pine or genuine pine; it is pine, of course?
A. Genuine white pine.
Q. Has Idaho white pine been represented to you as genuine white pine?
A. I never heard anybody say that.
Q. You get specifications for white pine, and do you fill those freely with sugar pine, without consulting the buyer?
A. If he just asks for white pine——
Q. You would, is that right?
A. If it is to be used for doors, or the like of that, where you want something that is not going to warp or twist, we use California sugar pine, and we know we won't have any come-back, but the California white pine has a tendency to warp and twist.
Q. Is the same true of pondosa?
A. Yes; I think it is.
400 Q. When you get an order for white pine, would you feel free to furnish Idaho white pine products?
A. I don't know. I believe I would tell the party I was going to give Idaho white pine.
Q. That you were going to substitute it?
A. Yes, sir.

Recross-examination by Mr. MATTHEW:

Q. Mr. Morgenthaler, I take it you are not interested in the botanical species of these trees, but as a practical manufacturer you are interested in the quality and utility of the woods?
A. And what we can get for our money. That is the reason we cannot use Michigan white pine today, because it is too high in price to compete against your competitior.
Q. Is there much Michigan white pine used in this territory?
A. I should think very, very little.
Mr. MATTHEW. That is all.

(Witness excused.)

CHARLES GROSSKURTH, Jr., was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are with what concern, Mr. Grosskurth?

A. The A. P. Bigelow Company.

401 Q. They are located at 215 Harris Avenue, Long Island City?

A. Yes, sir.

Q. You are engaged in what line of business, Mr. Grosskurth?

A. Retail lumber.

Q. Do you buy Idaho white pine?

A. Yes, sir.

Q. Do you buy California white pine also?

A. No, sir.

Q. None at all?

A. None at all.

Q. How long has that been the case?

A. Always.

Q. How about sugar pine; do you handle that?

A. Yes, sir.

Q. Do you specialize in any line, or is it the retail trade generally?

A. Industrial trade, retail, jobbing, and specialty work.

Q. You do the specialty work yourself?

A. No; we do not manufacture.

Q. You are not running a specialty mill of any kind?

A. No, sir.

Q. But you sell to those who do specialty work?

A. Yes.

Q. Millwork?

A. Well, manufacturers; yes.

402 Q. Do you sell any stock for pattern purposes?

A. Some; yes.

Q. What do you use for that?

A. Sugar pine.

Q. Exclusively?

A. Yes.

Q. Have you tried any other variety of pine for pattern work?

A. Soft Idaho; yes.

Q. But you prefer the sugar pine, do you?

A. I do in widths; yes.

Q. Is that a big branch of your work in point of bulk or return financially?

A. No; I should say not.

Q. Is it the small end of it?

A. Small.

Q. You say you have never dealt in Idaho white pine?

A. We do in Idaho white pine.

Mr. MATTHEW. I think he has already testified to that several times.

Examiner SHEPPARD. You want the witness to admit that they don't know anything about California white pine?

Mr. BURR. If that is the case; yes.

Mr. MATTHEW. He has already testified to that.

By Mr. BURR:

Q. When people ask for white pine what do you supply them?

403 A. Idaho white pine or sugar pine.

Q. You feel free to meet those orders with either one?

A. Yes, sir.

Q. And you regard that as compliance with specifications without special permission, do you?

A. Yes, sir.

Q. Do you have competition on the part of retailers furnishing California white pine?

A. We do in common grades; yes.

Q. Do you handle any pondosa pine, so called?

A. No, sir.

Q. Do you understand that to be different or the same species as California white pine?

A. The same as California white pine.

Q. Do you find that you are able to sell your white pine in competition with California white pine sold by your competitors, readily?

A. No, sir.

Q. I wish you would state your experience without any further questions on my part in connection with that.

A. We only cater to the better trade that insists on using soft white pine instead of pondosa.

Q. In place of pondosa or what?

A. California white.

Q. What kind of trade is that which draws that discrimination?

404 A. Why, the pondosa is what I would say, a species of yellow pine; not a true pine.

Q. A true white pine, you mean? It is a true pine, is it not? I don't think that answer is responsive to the question. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

By Mr. BURR:

Q. What kind of trade is it that draws the distinction between white pine and the California white pine or ponderosa?

A. Pattern making, exterior work, door fronts, and the refrigerator trade.

Q. Would it be possible for you to sell California white pine to that trade?

A. I imagine so.
Q. You think it would be?
A. When they specify white pine, we give them true pine.
Q. True pine? What do you mean by true pine?
A. Real Pinus strobus.
Q. You sometimes sell as white pine the Idaho white pine, don't you?
A. That is a true pine.
Q. Is that a true strobus, in your judgment?
A. Yes, sir.
Q. You have competitors who are selling California white
405 pine; is that true?
A. Yes, sir.
Q. Will you state whether that is sold at a lower price than either northern pine or sugar pine?
A. It is.
Q. Is it a lower priced lumber than Idaho white pine?
A. Yes, sir.
Q. How are you able to sell your trade those varieties of pine in competition with California white pine, at a cheaper price?
A. We do not enter into competition.
Q. I thought you said you had competitors?
A. We have.
Q. I wish you would explain your answer a little more fully.
A. We have steady accounts on our books and have had for a great many years that buy all requirements from us. Occasionally they tell us that we are high priced on pine, which is due to the fact that others are offering pondosa in place of Idaho or sugar.
Q. How about those that are offering California white pine; are there such?
A. Also cheaper, and when I explain the difference between pondosa and Idaho, they preferably buy the Idaho for their work, for its lasting qualities, and so forth.
Q. Do you ever lose any customers because of their being offered California white pine——
A. We do for a while.
406 Q. But they come back?
A. As a rule, they do.
Q. Have you lost customers to retailers who were selling California white pine?
A. Not that I can remember.
Q. Have you lost trade to those who were selling pondosa pine?
A. Occasionally; yes.
Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:
Q. You said you regarded Idaho white pine as Pinus strobus?
A. Yes.

Q. How do you classify California white pine; do you call that Pinus strobus, too?

A. No; it is not Pinus strobus according to the laboratory tests; it is a species of yellow.

Q. It is not a true white pine, you mean?

A. Yes.

Q. But Idaho you consider Pinus strobus?

A. Yes.

Q. You say you occasionally lose customers to retailers who are selling pondosa pine?

A. Yes—I do not say we lose customers; we might lose an occasional order.

Q. All right; put it that way. You do lose occasional
407 orders to retailers who deal in pondosa pine?

A. Yes.

Q. You do not recall losing any customers to retailers who deal in California white pine; that is what you said, isn't it?

A. Yes, sir.

Mr. MATTHEW. That is all.

(Witness excused.)

JOHN BOSSERT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are president of Louis Bossert & Sons, Inc., are you?

A. Yes, sir.

Q. How long has that concern been in existence?

A. About fifty years.

Q. You are located at 1301 Grand Street, Brooklyn, are you?

A. Yes, sir.

Q. You are engaged in the manufacture of sash, doors, blinds, moldings, and things of that kind?

A. Yes, sir.

Q. Where do you buy your supplies for that work?

A. Mostly through wholesalers.

Q. Do you buy direct from the manufacturer at all?

A. In some cases.

408 Q. What types of pine do you handle?

A. California white, sugar, pondosa, and Idaho.

Q. You are also a retailer, are you?

A. No.

Q. No retail work at all?

A. No.

Q. In your millwork, you use all of those varieties of lumber, I suppose, that you have mentioned?

A. Yes.

Q. Do your customers generally specify the variety of pine that they desire?

A. No.
Q. Do you have customers who ask for white pine?
A. Very little.
Q. What do they ask for?
A. Pine.
Q. Has the term "pine" any significance in this town, as distinguished between white pine and other varieties of pine?
A. I do not know. I would not be able to answer that.
Q. When they ask for pine, what do you furnish; are you free to specify any of the types of wood you say you handle?
A. Yes.
Q. You have no specifications asking for white pine at all?
A. Very little.
Q. You do have it then occasionally?
409 A. Yes.
Q. What do you supply, then?
A. We tell them what we give them.
Q. You tell them what you give them?
A. Yes.
Q. When they order pine you tell them what you are giving them?
A. Yes.
Q. You always say what variety of pine you are furnishing, no matter what they order; is that right?
A. In most cases the pondosa.
Q. In most cases you supply pondosa?
A. Yes.
Q. The bulk of your purchasers call for pondosa, you mean?
A. Yes.
Q. When they ask for white pine they get pondosa, on those rare occasions that they ask for white pine?
A. In most cases we show them the lumber we are going to give them.
Q. That is so, whether they ask for white pine or pine?
A. Yes.
Q. Do you sell to the general trade or do you have some specialty?
A. No.
Q. No specialty?
A. Mostly builders and contractors.
410 Q. When you get your pondosa pine and your California white pine in do you put them in the same bin or the same stacks, or whatever you call them?
A. No, sir.
Q. You keep them separate, do you?
A. Yes.
Q. That is true of the Idaho white pine also, is it?
A. Yes.
Q. Do you regard pondosa pine and California pine as different types of lumber, or the same, or what?

A. Practically the same.

Q. Is the Idaho white pine a different type of lumber from the other?

A. Yes, sir.

Q. Did you say you dealt in sugar pine?

A. Yes, sir.

Q. Do you regard that as a different type from Idaho pine, or practically the same?

A. Practically the same.

Q. Which of those varieties of wood do you regard as genuine white pine, if any?

A. Idaho, I think.

Q. Idaho?

A. Yes.

Q. Is the California white pine a genuine white pine, in
411 your judgment?

A. I do not know. I could not answer that.

Q. Do people ever ask you whether these varieties, or which of these varieties are genuine white pine; are you ever asked that question by your customers?

A. No, sir.

Mr. BURR: That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Bossert, are the terms "California white pine", "sugar pine", "pondosa pine", and "Idaho white pine" well known to the trade?

A. Not to our trade.

Q. Are they known to all these manufacturers of sash, doors, and blinds, moldings, and so forth?

A. Yes, sir.

Q. And they are thoroughly understood in the trade, generally, I mean, the manufacturing trade?

A. Yes, sir.

Q. I take it, Mr. Bossert, it is your effort in every instance to supply your customers with the material which you understand they desire?

A. Yes, sir.

Q. And which is best adapted to their purposes?

A. Yes, sir.

412 Q. And if you are furnishing them with California white pine, you explain that to them?

A. Yes.

Q. So there is no deception practiced on your part on your customers?

A. No, sir.

Mr. BURR. I object to that question. That is one of the issues in this case, and he is asked for a conclusion.

By Mr. MATTHEW:

Q. I will put it this way: You state, in response to occasional requests which you receive for white pine, that you will confer with your customers and not infrequently supply pondosa pine?

A. Yes, sir.

Q. The customer understands that?

A. Yes, sir.

Q. Suppose if there were any change made in the trade name of California white pine, would that make any change in your practice?

A. No, sir.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Have you customers who are willing to pay a little higher price to get the Idaho or the sugar pine?

A. No, sir.

413 Q. Do you buy the Idaho and sugar pine at the same rate that you buy California white pine?

A. No, sir.

Q. But you do dispose of the Idaho white pine; you do sell it, do you not?

A. Yes, sir; in some cases where I can buy it as cheap as pondosa; there are sometimes occasions where I can buy Idaho as cheap as pondosa.

Q. You do not deal in Idaho unless you can buy it as cheap?

A. It is a matter of price only.

Q. That is, you deal in it on a price basis?

A. Yes.

Q. You regard those various woods as of the same quality?

A. Practically, yes; whichever one is the cheapest, I buy.

Q. And you do not buy sugar pine unless the salesman meets the same price?

A. On the same dimensions and in grade.

Q. As compared with California white; is that true?

A. Yes.

Q. That is your uniform policy, is it?

A. Absolutely.

Q. They have to get right down to brass tacks on price?

A. Yes.

Q. The bulk of your lumber, I believe you said, was California white pine and pondosa?

414 A. No, sir; mostly pondosa, very little California white or sugar or Idaho.

Q. You say these various terms of sugar pine and Idaho white pine and pondosa pine are understood in the trade generally, I think you so testified on your cross-examination?

A. Not amongst the speculative builders.

Q. By that you mean that they are familiar with those terms and that they know each variety is a genuine white pine, or what do you mean?

A. I mean that they will accept most anything that is cheap.

Q. Most anything that is cheap?

A. Yes, sir.

Q. They are familiar with those names; is that it?

A. No; they are not.

Q. They are not familiar with the names at all?

A. No.

Q. What did you mean when you testified on cross-examination that these terms, "Idaho white pine" and "sugar pine" and "California white pine" and "pondosa" were well understood with the manufacturing trade with whom you dealt?

A. That means people like my competitors. I do not mean the man that buys the stock from us. I do not refer to the builder who buys the material.

Q. Your are referring to your competitors rather than your customers?

415 A. Yes.

Q. They understand those terms?

A. Yes.

Q. You mean they understand them better than the customer who buys the material; that is your understanding?

A. Yes.

Re-cross-examination by Mr. MATTHEW:

Q. If there were to be any change in the practice of naming the lumber—if there were any change in the names of this lumber, you would continue to sell it as you do now?

A. Yes, sir.

By Examiner SHEPPARD:

Q. If you had a cube of pondosa here and a cube of California white pine here, could you tell me the difference in them?

A. Sometimes.

Q. What is the difference?

A. The California might be a little softer than the pondosa.

Q. Which is the cheapest?

A. In some cases pondosa is cheaper and in some cases the California white is cheaper; it depends on the man selling it.

Q. They are both cheaper than the Idaho white pine?

A. Yes, sir.

416 Redirect examination by Mr. BURR:

Q. I would like to return to the direct examination for a moment, if the examiner will permit.

Examiner SHEPPARD. Very well.

Q. Mr. Bossert, some years ago there was a lawsuit, was there not, with regard to the name "California white pine", in which you were somewhat involved; is that not so?

A. No, sir.

Q. In which you were a party—was not your concern a party to the lawsuit?

A. No, sir.

Q. Over a consignment of California white pine or western white pine?

A. Not that I remember.

Q. Was it Idaho white pine?

A. No, sir.

Q. Were you ever involved in a lawsuit as to the character or identity of wood furnished?

A. No, sir.

Q. By you or anyone else?

A. Not that I know of—not by me.

Q. You have never been in a lawsuit concerning lumber?

A. No, sir.

(Witness excused.)

417 EDWARD ALPERT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your line of business, Mr. Alpert?

A. Manufacturer of sash, doors, and trim.

Q. You are located at 410 Snedeker Avenue, Brooklyn?

A. Yes, sir.

Q. You are connected with the Alpert Woodworking Company?

A. Yes.

Q. You are the manager, are you?

A. President of it.

Q. How long have you been engaged in business there, Mr. Alpert?

A. Twenty years.

Q. Just what line of woodwork do you do, if you please, sir?

A. We manufacture mostly moldings, closets, special doors, and sash.

Q. Where do you get your lumber from?

A. From the coast.

Q. A good deal from Klamath Falls?

A. Mostly from Klamath Falls.

Q. That is California white pine?

A. California white pine.

Q. Do you also deal in Idaho white pine?

A. No, sir.

418 Q. None at all?

A. None at all.

Q. Do you get any northern white pine?

A. No, sir.

Q. Do you buy any pondosa pine?
A. In shelving grade—only common grades.
Q. Do you carry any sugar pine?
A. Yes, sir.
Q. Is that a small item in your business?
A. A small item; it is mostly California white.
Q. For what purpose do you carry sugar pine?
A. For special doors that people want sugar pine for.
Q. They call for sugar pine and you furnish it when you have a call for it?
A. Yes.
Q. Do you have calls for white pine from your customers?
A. Most of them just specify pine.
Q. Is pine used by many customers interchangeably with white pine, in this town?
A. It all depends on what kind of work. If it is speculative work, they use the cheaper product, which is California pine or pondosa. For special work or special contracts, which call for a better grade of pine, they specify sugar pine and Idaho.
Q. They sometimes specify white pine, do they not?
A. Yes; occasionally.
419 Q. You then furnish which?
A. If they specify white pine, we supply sugar pine.
Q. Do you ever supply California white pine on a specification of white pine?
A. No, sir.
Q. You are sure you have never done that?
A. No, sir. Most of our jobs do not specify; they just ask for pine—speculative work.
Q. What do you mean by speculative work, putting up houses to sell?
A. Yes; apartment houses—mostly apartment houses.
Q. How long has that been the case? Has there ever been a time when you supplied western white pine or western soft pine?
A. Years ago they used to use a lot of this western pine, but now they call it pondosa. In those days they used a lot of western pine.
Q. Western white pine, you mean?
A. Western pine. Now, California white pine is coming into vogue, and most of them use California white.
Q. Do you regard California white pine as equal to the Idaho white pine in its quality?
A. No, sir.
Q. You do not. What difference is there between the two?
A. Idaho is softer and it will stand up better; it won't warp and twist, such as California white will.
420 Q. But your speculative trade asks for pine merely?
A. They want the cheapest you can give them.
Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Then you also furnish this cheap stuff for sash, doors, and trim, only in response to orders for pine; and if white pine, you furnish sugar pine?

A. Yes.

Mr. MATTHEW. That is all.

(Witness excused.)

W. E. MURCHIE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Murchie, what is your business, sir?

A. I am in the retail lumber business.

Q. How long have you been in that business?

A. Personally?

Q. Yes.

A. Since 1909.

Q. What is the name of your firm?

A. Cross, Austin & Ireland Lumber Company.

Q. Are you a member of the firm?

421 A. Yes; vice president.

Q. How long have you personally been engaged in the lumber business?

A. Since 1909.

Q. Do you have any specialty in your trade, or is it a general trade?

A. Ours is a general retail lumberyard, but we run a mill in conjunction with our trade that makes up doors and trim to architects' specifications largely—not stock. We do not run stock and patterns, but work to architects' specifications.

Q. Do architects specify pine on occasion?

A. Very often.

Q. Do they specify white pine on occasion?

A. Very often.

Q. Does the term "pine" here have any significance as regards the type of pine?

A. We do not run into that, so I do not know whether you want me to answer that question or not.

Q. No; I do not want you to speculate on this thing. Whenever they specify white pine—by the way, do they specify it that way?

A. Some of them say white pine. Once in a while we run into specifications which say, "Must be Pinus strobus."

Q. Must be Pinus strobus. Do they specify northern white pine on occasion?

A. Yes.

422 Q. What type of lumber do you carry?

A. We carry a little of the northern white pine, quite a quantity of the sugar, some of the Idaho, and some pondosa in inch boards.

Q. And some California white?
A. No California white at all.
Q. No California white?
A. Unless pondosa can be termed that.
Q. Do you understand California white and pondosa to be the same variety of lumber?
A. That is my understanding.
Q. Do you distinguish any difference between grade and quality in these two?
A. We do not carry California white, but I understand it is the same variety but grown under different climatic conditions. They say the California white makes bigger widths; that I understand to be the difference.
Q. Those men who come in and specify strobus, you give them the old-fashioned white pine?
A. If we possibly can.
Q. If you cannot, what do you give them then?
A. If we cannot, we submit samples of what we can furnish to the architect, and they will take it in some cases; sometimes we have a little Pinus strobus over there, but usually not much.
Q. Where do you buy that from?
A. That Pinus strobus was cut from the William Rocke-
423 feller's estate, just the other side of Utica in New York; they are cutting Pinus strobus on his estate.
Q. Do you ever handle the Canadian strobus?
A. In boards; we have some coming down from Canada now.
Q. From whom do you get that?
A. From Guy Robinson.
Q. Is that virgin timber, do you understand?
A. I haven't any knowledge of that.
Q. Is it large stuff?
A. No; ten-inch boards.
Q. Your specifications call for ten inch?
A. I beg your pardon; this was a car of eight-inch boards, this particular car.
Q. Is that largely heartwood strobus, do you know?
A. It would be from small trees; yes, it would be.
Q. When they specify white pine, without mentioning strobus, what do you furnish them?
A. We give them strobus, Idaho, or sugar.
Q. Do you ever give them pondosa under those circumstances?
A. Only after taking it up with them is for our mill—the pondosa we have is largely used for shelving boards; we haven't it for millwork.
Q. Shelving boards would be for inside work?
A. Yes; for regular shelving work, for industrials, store fixtures, indoor work.

424 Q. Do you regard pondosa pine and California white pine as having a different character or quality in its value as lumber from the other species that you mentioned, the sugar pine and the northern white pine?

A. We do; yes.

Q. In what respect?

A. For the higher grade work.

By Examiner SHEPPARD:

Q. Which?

A. I figure the pondosa and the California white pine are of less value for the making of doors, and so forth.

Q. Of less value?

A. Yes.

Q. Why?

A. I think they stain more easily and pull out of shape more easily, and they are of harder texture.

By Mr. BURR:

Q. Which type of work do you prefer for exterior use, if either?

A. Between what?

Q. Between white pines and the pondosa, or California white pine?

Mr. MATTHEW. He does not deal in California at all, he said.

The WITNESS. I do not deal in California.

Mr. BURR. I still think he can express an opinion as to it, whether he deals in it or not.

425 Mr. MATTHEW. So long as he does not handle California white pine, I submit he should not be asked as to that particular lumber.

Examiner SHEPPARD. I think he testified that he regarded them as the same thing. Did you ask him whether the two would give the same result precisely?

Mr. BURR. Read the question.

(The question was repeated by the reporter as above recorded.)

The WITNESS. The white pines.

Mr. BURR. That is all.

Mr. MATTHEW. No questions.

(Witness excused.)

(Whereupon, at 1.00 o'clock p.m. an adjournment was taken to reconvene at 2.00 o'clock p.m.)

426 AFTER RECESS

2.00 P.M.

ISAAC BAER, was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Baer, you are engaged in what line of business, sir?

A. Sash and doors.

Q. You make them, do you?
A. Yes.
Q. How long have you been engaged in the millworking business?
A. Twenty-five years.
Q. And you are with the Weisberg-Baer Company, are you?
A. Yes.
Q. Located in Long Island City?
A. Right.
Q. How long has that firm been in business?
A. They have been in business since 1903 or 1904, something like that. They have been in business under a different style; they have only been called Weisberg-Baer since 1912. Before that it was Weisberg-Mark, but the same company.
Q. Have you been connected with the firm for that length of time, since they began?
A. Yes.
Q. In that millwork business, your customers are contractors and builders?

427 A. Yes.
Q. And owners?
A. Yes.
Q. Who need this millwork material?
A. Right.
Q. Where do you get your material from?
A. All over the country.
Q. Do you buy northern white pine?
A. Some of it.
Q. From whom do you buy that?
A. We have been getting some from Canada. We have been getting some recently from the pulp company—I forget what they call themselves—it is a big lumber company making pulp; I have forgotten the name. It is the International something.
Q. The International Pulp & Paper Company; is that it?
A. Right.
Q. Have you also bought northern white pine from Minnesota recently?
A. No; I used to buy some years ago from an Albany concern—northern pine, but lately we cut out a lot of it on account of price.
Q. It is higher priced?
A. Yes.
Q. But you still can get it, but it is at a higher rate?
A. Yes, sir.

428 Q. How about the Idaho white pine; do you carry a species known as Idaho white-pine lumber?
A. Yes.
Q. From whom do you buy that?
A. From local dealers.
Q. Wholesalers?

A. Wholesalers. Some of them we have an account with somewheres in Idaho, a party by the name of White Lumber Company, A. C. White, if I remember.

Q. That is shipped direct to you from the West, rather than to the wholesalers and then to you—shipped direct?

A. Shipped direct.

Q. That comes from what part of the West; do you know where your shipments actually come from?

A. Somewheres in Idaho. I haven't got the memorandum with me, and I could not recall.

Q. Do you also buy what is called pondosa pine?

A. Yes.

Q. And California white pine?

A. Yes.

Q. When your orders come in for this class of work that you have described, do the orders ask for California white pine sometimes, or how are they asked for?

A. White pine.

Q. Then what do you supply on that request?

429 A. Why, mostly pondosa.

Q. Mostly pondosa pine?

A. If they do not specify northern, I give them pondosa.

Q. What do you do if they ask for California white pine? I understand you sell that, too.

A. The customer is not educated to that extent that he specifies what State it should come from. He usually calls it white pine, except where they are very particular, such as the State of New York or in Government work, I dare say they specify strobus, which means northern pine; otherwise it is a very rare case.

Q. They actually put the word "strobus" in the specification?

A. Only once in my experience. I then did not know what it was myself.

Q. Then you found out that it meant northern white pine?

A. Yes; and I want to tell you, I had a run for my money.

Q. When they ask for white pine, do you ever give them Idaho white pine?

A. Either Idaho or California or any of those States; Oregon——

Q. You give them California white pine and sometimes Idaho white pine, do you?

A. It all depends what we have in stock or are able to get.

Q. And sometimes pondosa?

A. Yes.

Q. How long have you been buying what is known as pondosa pine?

A. Many years; I dare say about fifteen years, anyway.

430 Q. Do you recall a time when that material was known as western soft pine, or do you not remember that?

A. No. To be honest about it, originally we would rather have the northern pine that we were buying at the early stages; we were

buying northern pine from Kibbe & Son in Albany, and we used to get northern pine. After awhile, the Pacific coast people come around and they showed us inducements, so we naturally switched to the Pacific coast people.

Q. What were their inducements?

A. Price.

Q. A lower price?

A. Yes.

Q. Is that true of each of the products from the Pacific coast?

A. All this pondosa belt—I do not know particularly what States.

Q. All right; go ahead.

A. I do not specify any particular State, but, of course, we have distinctions. The Oregon is softer, and California is supposed to be a softer pine, but some of it is harder.

Q. By "California" what do you mean—California white pine or sugar pine?

A. California white pine.

Q. Do you deal in sugar pine also?

A. Not so much.

Q. Is the California white pine, in your experience, quoted
431 to you as cheap or cheaper than the Idaho white pine?

A. I believe it is.

Q. Which?

A. California is a little cheaper than the Idaho.

Q. Do you find that the Idaho is cheaper than the northern, on the whole?

A. Yes.

Q. Quite markedly so?

A. No question about it.

Q. When the California white pine was represented to you as cheaper than the northern, therefore you were solicited as a customer for the California white pine; did they represent that that was a true white pine, do you recall?

A. They did not use the term "true", but they called it white pine; you were supposed to find out the difference, and——

Q. Did you yourself regard it as white pine?

Mr. ANDREWS. Let him finish; I do not think he finished his answer.

The WITNESS. We tried it out, and found in some cases that we did not fare so well; it did not stand up so good. The doors which were made, particularly in exposed work, did not stand up so well. Some of it has the characteristic grain that looks like yellow pine, and for a time we stood by it. We found some concerns that pro-
duced good, soft-textured pine, also from the same neighbor-
432 hood in California, and we are getting along pretty well.

Q. Where are you getting it from now?

A. We are getting some sizes here.

Q. Do you know where from the West you are getting it?

A. I could not say, because I do not follow it up. I presume California or Idaho. We are buying better grades, that more particularly protect you, and we are also buying lower stock cars in no. 3 common grades. That stock we are not so particular as to the texture, and that we are not getting from the Long Bell Lumber Company. I heard one of the gentlemen mention something about it. We are getting direct, quite a little from them.

Q. California white pine you are buying from the Long Bell Company?

A. Pondosa they call it, but we like it all right; we haven't any trouble with it.

By Examiner SHEPPARD:

Q. Who calls it pondosa?

A. I do not suppose, to be honest with you, whether their bills and invoices specify the name. They call it white pine. We know what it is; we have been using it right along; we tested it out, and we get along all right.

Q. The Long Bell people do not call it pondosa, do they?

A. Well, in the first place, I could not say that, because I was not getting it direct. I was getting it from some local dealers.

Q. I understood you to say that you bought some direct from
433 the Long Bell?

A. I know it came from the Long Bell, because the salesman followed it up and wanted to know how it was, and I told him that I was satisfied.

By Mr. ANDREWS:

Q. Mr. Baer, you said the Long Bell Company invoiced it as white pine?

A. Not to us.

Q. You did not see the invoices?

A. No; I recall getting some from Long Bell direct, some years ago, but I would not recall the nature of it.

By Mr. BURR:

Q. The strobus or the northern white pine that you got, why did you regard that as preferable?

A. On account of the texture; it does not twist or warp as bad as the others.

Q. Which others do you refer to?

A. The Pacific coast products.

Q. Including which varieties?

A. Mostly the western white pine, I would say.

Q. Western white pine?

A. They give it titles as California——

Q. Are you referring to pondosa or California white pine?

A. It is all pondosa, in my estimation—it comes from Wash-

434 ington, California, Idaho—in fact, they all call it pondosa, as I understand it.

Q. Do you regard the California white pine and Idaho white pine as all belonging to the ponderosa species?

A. That I am not a good judge of.

Q. Do you regard them as the same type of lumber?

A. In a general way I would, but they also differ in texture.

Q. In what respect does Idaho white pine and California white pine differe in texture?

A. I find Idaho is softer, and so is some of the Oregon. We have had some very good Oregon white pine in the Pelican Bay section, where we are very well satisfied with the texture.

Q. That is in the Klamath Falls section?

A. Klamath Falls section; right.

Q. Do you recognize a distinction between pondosa pine and California white pine, such as you have described, between Idaho white pine and California white pine?

A. You see, pondosa is the general name for it. You cannot say from what particular State it comes—I would not know how to distinguish between the two. Pondosa, as I take it, is all of these—in fact, to be honest about it, it was explained to me since I had a little trouble with this strobus, which don't belong to this action—but I had a run-in with the State of New York, and after a six months' fight. I took it that Pinus strobus means white pine.

Q. Yes; go on.

435 A. In fact, it was a little comical. I had a young fellow, a student from college, a college graduate, and I showed him the specifications from the State of New York, which calls for Pinus strobus, and he said, "What do you call this?" So I said to him, "You ask me? You are a college graduate; you ought to know better than me what these Latin names mean." So he said, "I will tell you what you do, you better look it up in the dictionary." So we looked it up, and it was white pine; that is all there is to it.

I sent an order to Hotchkiss Brothers in Connecticut asking for a certain amount of sash white pine, and of course Hotchkiss naturally gave me the pondosa, since I did not ask for anything else.

The architect of New York State turned it down and would not accept it. I argued my head off, telling him that I understood it was white pine, the same as the others, but they argued that it wasn't. It took me several months; I wrote to different colleges and many lumber men—I inquired of American people raised in the lumber business, and they did not know the distinction about what strobus meant at the time, so finally I went to the librarian in this city to look through their definitions, and they found that it described the strobus as a kind of pine growing this side of the Rocky Mountains and called northern white pine; west of that they called it pondosa or ponderosa.

Q. Did you have any lawsuit about that?

436 A. Why, no, we patched it up; we had to make an allowance after this sash was delivered, and that ended it. The State allowed us to deliver it and they made it up by taking an allowance from us.

Q. In other words, you did not get quite the contract price?

A. At one time it looked as if I would have to make new sash, and that they were going to reject it entirely. I had to go on my knees begging them and telling them that it would stand up; 90 percent of the people of the country are using it, but they argued that they ordered strobus, and they wanted it.

They were nice enough later on and put it through by an allowance.

Q. Is this the mix-up that you referred to a minute ago?

A. That is it; and I learned the meaning of the word "strobus."

Q. You never had strobus specified again by any of your customers; is that right?

A. Except only today, I was estimating a job. I cannot tell what it is; it was some hospital; whether it was Government or State, I could not say; but they called for northern pine.

Q. Did they say strobus?

A. They didn't have to this time.

Q. You do not distinguish at all, then, between Idaho white pine and California white pine as to their characteristics and quality, do you; or do you make a distinction?

A. I do.

437 Q. That, you testified to, was a matter of stability or of staying in place; in that respect it is preferable to California white?

A. Correct. We are mostly interested in seeing that it should stand up, not warp or twist.

Q. When people ask for some variety of white pine that is good for outside, exterior purposes, to be placed where it is going to be exposed to the weather, do you make any distinction between these varieties of western wood?

A. No.

Q. You don't?

A. Except widths. They nail us down and we have to guarantee the quality of the workmanship to stand up for a certain period, then we have to watch our step and buy such pine as we think will stand up better than the other.

Q. Is that often done?

A. In every case. When I buy some lumber I am very particular to find out where the lumber comes from, and the shipper must write on his order slip, "soft texture."

Q. Would the matter of texture make any difference regarding the durability of the wood?

A. No; it would not have to do with the durability, but it would have to do with twisting and warping.

Q. What is the reputation of northern white pine as to its ability to stand up under weather conditions, if you know?

438 A. They claim that it is a very long-lived wood. These northern men who used to sell me this wood used to make statements——

Q. Never mind their statements.

A. But they represented that it lived 150 years, and one salesman told me that he knows some tombstone made of this white pine which lasted for such a long time, but I was not there, of course, to see.

Mr. BURR. You may cross-examine, sir.

Cross-examination by Mr. MATTHEW:

Q. You stated, Mr. Baer, that frequently when you have orders for white pine you furnish pondosa?

A. Yes.

Q. Why do you feel free to furnish pondosa, in response to orders for white pine?

A. Because since they do not specify strobus, then I am legally on my rights to furnish pondosa.

Q. And your customers are ordinarily satisfied with what you furnish to them?

A. They are.

Q. You have had no complaints?

A. No, sir.

Q. You said that you have obtained very satisfactory qualities of lumber from the Pelican Bay Lumber Company?

A. Yes, sir.

439 Q. You use that largely in your sash and millwork?

A. Right.

Q. Is the term "California white pine" quite well established in the trade here?

A. I believe it is.

Q. You have known it during the entire period of your business experience?

A. Yes.

Q. The trade generally knows what that lumber is?

A. Well, the trade in New York in particular, but when you are dealing with laymen they are not judges of lumber.

Q. Then, they really depend on you to furnish lumber of the quality and character——

A. To stand up. If it does not, they will come back on me.

Q. You undertake to satisfy the requirements of your trade?

A. That is right.

Q. And you find that your product stands up quite satisfactorily?

A. We have to.

Q. You find that to be the fact?

A. Yes. We had some very slight cases where we have to replace a few doors occasionally, but they are so rare that it does not pay

to use higher priced lumber like the northern for that particular purpose. I would replace a half a dozen or a dozen doors every once in a while than to spend a lot more money for the lumber.

440 Q. You think that is the interest of your customers, as well?

A. Of course.

Q. I take it, that as a practical manufacturer, you are not interested in the botanical names of trees, but rather in the quality and the usefulness of the lumber?

A. That is right.

Q. That is your test?

A. But we are also counting yield, how much percentage we can get out of the lumber, compared to one that has more knots and has to go to the boiler room to burn up; if it is a poor grade of lumber, we don't want it; if it is clearer, we like it better, and that is what we are watching out for.

Q. You find that you get a quite satisfactory grade of shop lumber from the Pelican Bay Lumber Company?

A. Oh, yes. We buy a little grade in the shop. We buy C selects—D selects and C selects.

Q. If any change were made in the trade name of California white pine, would that bring about any change in your practice, as a business man?

A. No change at all.

Mr. BURR. If the examiner please, that question is objectionable as calling for a conclusion.

Mr. MATTHEW. I think not.

Mr. BURR. Under varying circumstances, what change he would make in his practice, without specifying what change

441 in the trade name resulted, I think a question of that kind is very theoretical and highly speculative.

Mr. MATTHEW. I submit to the examiner that I am not asking for a conclusion. I am asking if it would bring about any change in his practice if there were any change in trade name.

Examiner SHEPPARD. I heard the questions this morning, Mr. Matthew, and I did not exactly get the significance of it at that time. I do not know whether there is any objection to it or not, but I do not see that there is very much purport to it. The individual witness to whom such a question is directed, for instance, Mr. Baer here, I do not know whether his answer one way or the other would help. However, I will let it stay in.

Mr. BURR. If the examiner please, I should have objected two or three times when it was asked heretofore. Now, it looks as though he is making a strong point of it. I think it is seriously objectionable along this line. I do not think that it is appropriate unless the change in the trade name was specified, and, furthermore, he does not build up any foundation which might possibly call for such a speculative trip as that; he should state in his question what the change might be; what the lumber was called for when it reached him, or

what change might result, and what effect such a change might have on buyers if they came and asked for strobus, if they called for strobus, and whether he would immediately change is practice and carry strobus.

442 If they came and asked for Idaho white pine, it would change his practice, or if they only asked for California white pine, that might change his practice. All those considerations are appropriate as preliminary before such a question ought properly to be put.

It is a generally a leading question and calling for a conclusion and a speculation on the part of this witness under circumstances of a change in the trade, as to which he is not invited to consider the various elements.

It seems to me it is wildly speculative and quite objectionable and misleading to the Commission if they rely on this kind of question and answer. I do not think it is worth much as evidence, but it is objectionable and calls for a conclusion, and it is a speculative situation, which is not explained to him, nor can it be in the nature of things.

Mr. MATTHEW. It is quite obvious that this question does not call for a conclusion at all. I can simplify my question a little, which will obviate, if possible, any objection counsel might urge.

The witness has described what his practice is. He said when he received orders for white pine he ordinarily furnishes pondosa. He says he is familiar with the term "California white pine", and that term has been well established as a trade name in the territory, according to his experience.

The WITNESS. That is right.

443 By Mr. MATTHEW:

Q. Now, I will ask you this question: Let us assume that the name "California white pine" were replaced by the name "California pine", that is, merely by eliminating the word "white"; would that change make any difference in your practice?

A. No; it would not make any change in my practice. I would furnish it to the customer who called for white pine, relying on the lumber as being the same, and I would supply it as white pine.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Let me ask you this, Mr. Baer: Suppose the Federal Trade Commission, which is taking this testimony here, and the courts were to hold that the so-called California white pine was misnamed, and that it had resulted in deception of the public and deceiving of the public into the belief that California white pine was a white pine, when the Federal Trade Commission and the courts held that it was not a white pine; would you still, on occasion, furnish that to your trade, if the Commission so held, and the name "white" had dropped out of the trade name for that product?

A. It would not affect me at all.

Q. Would you still continue to furnish that to them?

A. I would, because the trade relied on me to furnish a
444 lumber that would stand up, and would expect that the product would up.

If the shippers shipped it to me without the word "white" it would not mean a thing to me.

Q. If it was required that the word "white" was to be cut out, would you still do so?

A. I would, because they do not know the difference and would not understand the difference; it is a technical name, and they don't know what the species of lumber is now. There are so many different States where this lumber comes from, if I have to specify California or Idaho or Washington, or wherever it is that it is shipped from, I would have quite a job on my hands.

Q. Suppose they began to say to you not to furnish California pine, as a result of this?

A. That is another issue.

Q. Then you would not furnish it?

A. Then I would have to watch my step. If they nail me down to certain technical names, to jump on me at a certain time for technical reasons, but if in good faith the customer wants a door or sash, or whatever it is, we understand that our plant is responsible to supply that, and we have to give him another door, if it does not stand up.

Q. If it does not stand up, you give them another door?

A. If it does not stand up, we have to give him another door.

Mr. BURR. That is all.

(Witness excused.)

445 ALFRED BUSSELLE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Busselle, you are in what line of business?

A. Practicing architecture independently for twenty-five years.

Q. You have been in New York City all that time?

A. Yes.

Q. What line of architecture do you go in for most, or have you no specialty particularly?

A. Mostly residential work.

Q. Is it in the city of New York or outside?

A. Mostly outside.

Q. Do you have occasion to order lumber for exterior building purposes?

A. Yes, sir.

Q. And do you have occasion to order pine for that purpose?

A. I do. I beg your pardon, would you like me briefly to state my experience?

Q. Yes; I would very much like to have you do that.

A. All right. In my experience, there is a great deal of confusion in the pine market, due to the terminology, and some of the confusion is quite honest. An architect, in getting the result he wants in his building, with regard to the character of the wood, has
446 three dealers to rely on—the lumber producer, the lumber merchant or millman, and the contractor.

Now, whatever the producer may know, the millman and contractor are often quite honestly confused as to supplying white pine, because they say, especially those in smaller lines of business, that "This was sold to me as white pine."

Now, I endeavor to safeguard my outside millwork by the use of the words "Pinus strobus" in the specification, but occasionally, either through honest ignorance or otherwise, I do not get it.

California white pine looks a good deal like Pinus strobus in parts, and in parts it does not. It is likely to run off into yellow strips, which have the characteristics of yellow pine, and upon one such occasion where I found a lot of apparently yellow pine sold as California white pine, I had it analyzed—I believe by the Federal Forestry Bureau or the State bureau of forestry; I cannot say for the moment which—and the record was that it was botanically yellow pine.

Q. Do you remember which yellow pine it was?

A. It was sold to me as California white.

Q. Which yellow pine did it turn out to be, do you remember?

A. The report was "yellow pine." They did not give the botanical name, and I was not interested in that. It was not Pinus strobus.

Q. All right, go ahead.

A. Yellow pine will not hold paint outside, and I have had a job of outside work, which was painted several times, the
447 paint coming off. It was sold as California white pine, and afterwards had to be rejected because I could not get paint to stick on. Substitutions are more apt to occur for inside work than they are for outside work, because the California white pine is better for inside; at least, it is less objectionable for inside—I will put it that—than it is for outside, where it is not exposed to the weather.

However, it exhibits in parts, in any lot of California white pine which you get, you will see among it characteristics of yellow pine in the larger pieces, as in panels of doors or panels of rooms, and if you are attempting to make a white pine panel room, you will get pieces that exhibit the coarse grain of yellow pine.

Q. That is, pieces of what?

A. California white.

Q. All right, sir; go ahead.

A. That, briefly, is my general experience. In every job I endeavor to discuss with those concerned, that is, the contractor and the millman, if I can get back to him, the wood which is to be supplied, and I sometimes feel—I sometimes find an honest ignorance,

which is due to the use of the words " white pine ", when western or California or wherever else it might be, to apparently cover the ground of what is wanted, which particularly or usually it does not do.

Q. Do you occasionally employ Idaho white pine?

448 A. Yes; Idaho white pine.

Q. Do you accept that?

A. Yes; Idaho white pine is a larger tree than the Michigan tree, and is the same kind of wood; it is coarser in grain and not so wide apart, and if you want clear material, you get a greater proportion of it.

Q. Did you accept that when you asked for strobus? Would you accept that in place of it, if you know what is furnished?

A. Yes; if you mean by your question what is known as Idaho pine, within the designation of Pinus strobus. I understand that all the forests of Idaho are not Idaho pine.

Q. Yes; I understand that to be the case. Not all the forests in Idaho are Idaho white pine, but when you get Idaho white pine, are you willing to accept that as a substitute for northern white pine, or strobus?

A. It is strobus.

Q. The record shows there is an Idaho white pine that belongs strictly to the white pine family, but carries the botanical name, not of strobus, but of monticola; that is what the record shows that you are buying when you get Idaho white pine.

Mr. MATTHEW. The witness apparently does not understand that.

By Mr. BURR:

Q. You do not understand that to be the case?

A. It is not within my experience. I define it as Pinus strobus.

449 Q. And you would accept it as such?

A. I would accept it as Idaho strobus.

Q. Do you ever have any contact with sugar pine?

A. Yes.

Q. Do you accept that as complying with a specification for strobus, or do you regard that as a variety of strobus; or how do you handle that?

A. I do not know whether sugar pine is strobus or not. It is a good pine for interior work, and I allow it.

Q. What you have been testifying about, does that relate to outside work, as well as inside work, in part?

A. I distinguish by saying that the pine which has the characteristics of yellow pine would not stand paint while used outside, but it will stand paint while used inside, but its defect then is in the coarseness of the grain, the flatness of the grain and inferiority for stained work, if you want to produce a stained room.

Q. Do you recognize any difference in your experience between the strobus and the California white pine as regards durability where used outside, where it is exposed to the weather?

A. Did you say strobus and the California?
Q. Yes.
A. Yes.
Q. Which do you regard as more durable?
A. Strobus is the only one that will hold paint, as far as I know.

450 Q. That is what you think of in connection with durability, is it?

A. Within my experience; yes. The rest is hearsay, the California pine going to pieces outside.

Q. You need not go into that further, that is all right, sir. Then you testified that there were certain parts of the lumber that you received of the California white pine, that resembled white pine, and other parts that did not resemble white pine, or did not resemble it so closely; is that true? I think that is your testimony.

A. Yes, sir.

Q. Did you ever notice whether there was any distinction between heartwood and sapwood, as to the degree of resemblance afforded to strobus in appearance, or did not that particular distinction come to your mind?

A. I have never seen any sample of what I knew to be Pinus strobus which exhibited the characteristic hard grain of the yellow pine which the white, which has been represented to me to be California white pine, did.

Q. Is there not some very soft California white pine, too?

A. Sure; the ends of the same stick are soft; they are very white and soft, and very dry in appearance.

Q. You never ascertained whether one end of the stick was sapwood and the other end heartwood, or the contrary, did you; has that come within your experience?

451 A. No.

Q. Do you mean the edge of the same stick or end of the same stick?

A. The end of the same stick.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. You have stated, as I understand you testimony, that you ordinarily accept Idaho white pine upon specifications calling for strobus pine?

A. Idaho white pine within the classification of strobus.

Q. In other words, you understand there is some strobus pine produced in Idaho?

A. Yes.

By Examiner SHEPPARD:

Q. And some pine there that was not strobus?

A. That is as I understand.

By Mr. MATTHEW:

Q. If you were told that there is no strobus pine whatever produced in Idaho, would you still be disposed to accept Idaho pine upon specifications calling for strobus pine?

A. Not if I knew it to be a fact that there was no strobus pine in Idaho.

Mr. MATTHEW. Counsel for the Government will tell you that there is no strobus in Idaho.

452 Mr. BURR. That is true; there is no strobus in Idaho. There is genuine white pine there, known as monticola, but no strobus. There is a botanical distinction.

By Mr. MATTHEW:

Q. Were you under the impression that there was some strobus pine produced in Idaho?

A. I was under this impression, that the term "strobus" designated the kind of pine with the characteristics I wanted to get. But I am not interested in anything except the means to the end, and that is to get the kind of pine which I understood was covered by the term "strobus", and the kind of white pine which I understood is a true white pine; that is the kind I am talking about; when I make a distinction between strobus and otherwise.

Q. Then you are not interested in its botanical name, but you are interested in the quality and utility of the wood?

A. That is all.

Q. Did you state whether or not you would accept sugar pine in response to specifications calling for strobus pine?

A. Yes; I did. I would accept sugar pine, particularly for interior work.

Q. It does not make any difference, then, to you, whether sugar pine happened to be strobus pine botanically or not?

A. Not a bit.

Q. Again it is the quality and utility of the wood that you are interested in?

453 A. Exactly.

Cross-examination by Mr. ANDREWS:

Q. Mr. Busselle, strobus to your mind represents a distinct type of wood; is that not true?

A. It represents a distinct quality of wood; a quality which is durable, which will take and hold paint, and which will produce a satisfactory job in interior work when stained as well as when painted.

Q. And your efforts are directed to get that kind of pine furnished for your work?

A. Yes.

Q. Have you ever had an opportunity to form an opinion as to whether heart California white pine would hold paint or not, as distinguished from sap California white pine?

A. This one job I spoke of, where it seemed all to come off, I do not know which came off last, but I say the paint came off.

Q. Do you know whether it was heart or sap?

A. It was both, I should say, in different parts of it.

Q. You do know then that it was partly heart and partly sap?

A. Yes; I think it was both.

Q. You think it was both?

A. In places.

Q. Let me repeat my question——

A. I am not sure. I cannot testify positively on that point.

454 All I was interested in was the fact that it did not hold paint; then I found that it was described to be California white pine by the man who sold it.

Q. But it might have been the sap; that is true?

A. Yes; I won't say that it might not have been.

Q. Do you know where sugar pine grows?

A. It is commonly called California sugar pine; that is all I know about it.

Q. Do you know whether or not it is grown in any other State?

A. I do not know.

Q. Do you know in what part of California it is grown?

A. No; I do not.

Q. Do you know anything about the size or characteristics of the tree known as sugar pine?

A. It comes in pretty good-sized sticks; that is all I know about it.

Q. Have you ever been in the forest where it grows?

A. No, sir.

Q. Have you ever seen a picture of forests where sugar pine grows?

A. Not that I know of.

Q. Your interest never carried you to the extent of making a study of the wood, in that way?

A. No; only the characteristics that affect my work.

Q. To repeat, you had in mind a definite kind of wood that you wanted and you attempt to use a word in your specification

455 that will assure you that that kind of wood will be furnished?

A. That is it.

Q. Do you know where California white pine is grown?

A. No.

Q. You would assume it was, or some of it at least, was grown in California?

A. I should, but I should not care anything as to whether it was or not.

Q. I am interested in finding out whether you are or not and to what extent you made a study of these woods; I will ask you this question: If you know that California white pine is grown in any other State than California?

A. I do not.

Q. You do not know in what State or in what area this wood, giving it its other name, Pinus ponderosa, is produced?

A. No, except in general; I know that Pinus ponderosa occupies a large place in the lumber market. What it occupies geographically I do not know.

Q. You do not know that. Do you know whether it is grown in Minnesota?

A. I do not.

Q. Do you know whether it is grown in the South?

A. No.

Mr. BURR. I object to all this. It seems to me that we have
456 gone too far already. This witness has not pretended to that kind of knowledge. If it is for the purpose of testing his credibility, it seems to me to be out of place.

Examiner SHEPPARD. Mr. Andrews is simply testing the witness's knowledge of the various woods. I will let it go in.

Mr. BURR. He has not laid claim to any knowledge of the trees.

By Mr. ANDREWS:

Q. Mr. Busselle, one more question along that line: Do you know the relation between the amount of California white pine that is produced and the amount of Idaho white pine that is produced?

A. I do not.

Q. Do you know the extent to which the name "California white pine" has become generally established as a trade name and as connoting a distinct type of board of wood?

A. I know something of that. In this day I know that California white pine connotes to some people a distinct type of wood, but it connotes to other people white pine in general, and therein lies the confusion.

Q. Who, generally speaking, are those who are confused?

A. The millmen and the lumber dealers, as well as the architects.

Q. You can tell California white pine, referred to as Pinus ponderosa, can you?

A. When I look at it?

Q. Yes.

A. Not always.

457 Q. How, then, do you determine when lumber is furnished for a building that it is what you specified or not?

A. If I have a chance, I go to the mill, and if I see the whole run of stock that is intended for that job, and see that it looks to me like white pine—I think it pretty well is; if I see some that does not, I may decline it, because when I see what I should call yellow pine in with some material which looks like white pine, and when I know that yellow pine and white pine in appearance run along the same lines with so-called "white pine" in appearance, I am suspicious of the whole lot, although as to some pieces themselves I could not tell the white pine from the other.

Q. You rely on visual test?

A. Well, in part, I try to deal with those who know and who will furnish me with what I want and who intend to do what is right

along the line, and intend to do what is right and give me what I want.

Q. If you were to specify white pine and were furnished California white pine, would you say that it was not white pine?

A. Yes. When I specify genuine white pine——

Q. I did not say "genuine"; I said if you specify white pine?

A. If I specify Pinus strobus——

Q. I did not say that; I said if you specify white pine?

A. If I specify white pine, I would follow up the matter by making sure that I was going to get what I understand to be white pine.

458 Q. Do you specify white pine simply?

A. No.

Q. Why not?

A. Because I want to be sure that I get the kind I want instead of having to worry about it afterward.

Q. Is it not true that to some, and perhaps to a great many, California white pine means white pine?

A. Yes; that is the trouble.

Q. Are those persons in the majority or minority; do you know?

A. Do you mean who are thus confused?

Q. No. Who will accept California white pine as white pine?

A. Oh, I don't know about that; I don't know whether the majority or minority would.

Mr. ANDREWS. That is all.

Redirect examination by Mr. BURR:

Q. You say that when you ask for genuine white pine you regard it as a compliance if you find they are getting ready to furnish you with California white pine; did I understand you correctly?

A. Yes.

Q. Do you regard California white pine as genuine white pine?

A. No; I don't. The reason I don't is I think one name ought to mean one thing and not to describe several qualities.

Q. Is there a lack of uniformity in California white pine as between various portions of the same shipment or the same

459 delivery of lumber at the job?

A. Yes.

Mr. MATTHEW. If the witness knows. I should gather from his answers to Mr. Andrews that he does not know much about it.

Examiner SHEPPARD. I will sustain the objection to that former question.

The WITNESS. What is the question?

Mr. BURR. You have answered it already, thank you, sir.

By Mr. BURR:

Q. Have you been a member of the National Council on lumber matters at one time?

A. I am not exactly sure. I became interested in this white-pine matter some years ago and did some corresponding with the National Research Council, giving them such information and experience as I had. If you mean, if it was a formal body that I was invited to sit down with, I was not.

Mr. BURR. I think that is all.

By Examiner SHEPPARD:

Q. I have only one question, Mr. Busselle: Did you ever come in contact with pondosa pine?

A. No; not to specify it.

Q. Do you know what it is or where it comes from; did you ever hear about it?

A. Oh, yes.

Q. You have heard of it?

460 A. I have heard about it a lot.

Q. You never used it?

A. Not unless it was—not knowingly under that name. I mean to say by this, I am making two distinctions between white pine that I want and the white pine which exhibits or which are to me objectionable characteristics, and which I have called white pine, that might be pondosa or ponderosa pine, as coming under what I have designated as California pine—California white pine, I mean.

Q. If you have not used that particular pine I do not care anything about it.

(Witness excused.)

W. F. YOUNGS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Youngs, you are vice president of the William F. Youngs & Brothers Company?

A. William P. Youngs & Brothers, Incorporated.

Q. 355 Vernon Avenue, Long Island City?

A. Yes.

Q. You are engaged in what line of business?

A. We are principally lumber dealers, and besides we run a mill in which we turn out lumber products; you might say trim

461 and anything that is not put together.

Q. Anything that is not put together, what do you mean?

A. For instance, we would not make a door or window, but we make trim and moldings material for industrial plants.

Q. One-piece stuff, is that it?

A. Yes, sir; and we furnish a lot of material to the trim concerns, that put it together for cabinetmakers.

Q. For doors?

A. Yes.

Q. You purchase what types of pine?

A. We purchase and carry, by trade name, pondosa pine, California white pine, Idaho pine, California sugar pine, eastern Canadian pine, and at times a little Minnesota pine—odd lots perhaps from western British Colombia.

By Examiner SHEPPARD:

Q. Any northern pine?

A. When I say eastern Canadian pine, I mean northern pine in that case, as distinguished from anything grown on the west coast.

By Mr. BURR:

Q. Did you say that you bought any northern pine from Minnesota?

A. Very seldom, occasionally.

Q. In connection with these purchases, have you any line of lumber that is preponderant in your supplies, larger than any other?

A. Well, in different grades, we carry different kinds of
462 pine. For instance, our so-called better grades of pine are carried in the California sugar pine and in the California white pine—not so much in the California white pine as in the California sugar pine. In the California sugar pine we carry grades of 1 and 2 and C selects and D selects.

California white pine, we carry only in D selects.

Q. California white pine, you carry only D selects. Is that all you have orders for, for that?

A. That is all we ever carry.

Q. If customers come in and ask for white pine—you have such customers, do you? Asking for white pine, you carry either California white pine or sugar pine, according to the grade they ask for; is that true?

A. No; the way that works out in the retail lumber business is this—or in the lumber yard—you have your new customers and you have your old steady customers. You know what your old steady customers want. Some use California white pine, some use sugar pine, and you give them what they have been in the habit of getting before.

If it is a new customer, you ask him if he wants California sugar pine or whether he wants California white pine, or whether perhaps he is looking for something particularly soft in northern pine or eastern Canadian pine, and he can take his choice. If he wants good pine, we would only give him the sugar pine, or the eastern or northern Canadian pine.

463 Q. If he wants good pine?

A. Yes.

Q. What in the world might you mean by good pine?

A. If a man wants good pine, if he asks for good pine, he does not want California white pine, because it does not work up and it is not as soft a pine, and it does not answer the purposes for a good

job. It is apt to twist, warp, and it has this heavy grain which is apt to show through paint.

Q. Now you regard it as a reasonably satisfactory wood for inside work, or not even for that, for good work?

A. I do not.

Q. Do you have competitors who are carrying California white pine?

A. Certainly.

Q. Do you know whether you lose orders to those who carry that type of lumber, at times?

A. That is hard to tell just how you lose an order. If we think they are figuring on California white pine and the customer would take it and be satisfied with it, we would figure on it.

Q. That is irrespective of whether he asks for white pine or whether he asks for pine; is that so?

A. In the retail trade, I think, around New York City here, anyway, it is with us, there is a so-called common designation of soft pine and hard pine when speaking of the western pines. When a customer asks for soft pine, he gets the sugar pine, or perhaps some of the California white pine that grows in southern
464 Oregon or around the Klamath Falls section, which is very hard to distinguish at times, especially in the sapwood, from sugar pine, except that it does not show the small sugar streaks.

Q. In that particular case, would California white pine be supplied by you interchangeably with sugar pine, if white pine were asked for?

A. No; I do not think so. We are not in the habit of doing business that way. We try to find out what the customer wants and give him what he wants.

Q. Suppose he does not know exactly what he wants, except that he wants white pine, would you supply that interchangeably with sugar pine and California white pine?

A. We try to tell him something about pine. There are five or six different kinds of pine, and he can have what he wants. I certainly would not supply California white pine to a man who wanted to build a colonial house or antique pattern room, or something like that.

Q. Do you differentiate between California white pine and genuine white pine as regards durability?

A. I do not know much about the durability. After a thing once gets on the job we do not go into that.

Q. You do not get any information on that afterwards; is that true?

A. No; I understand as far as durability goes that any pine belonging to the yellow-pine class or family will not last as
465 genuine white pine. I also understand from people that furnish pine that California white pine will stand and hold paint better than sugar pine on the outside.

Q. You say it will stand paint better?

A. The sugar pine, when subjected to the sun, blisters the paint more than the California white pine, and, therefore, that the California white pine, for outside use, is perhaps better than the sugar pine.

Q. You think it is better than the sugar pine?

A. Simply because the paint will last better in the case of California white pine than it does on the sugar pine. That is not my knowledge; that is hearsay only.

By Examiner SHEPPARD:

Q. What do you mean by "genuine pine"?

A. We think of genuine white pine as the northern or eastern Canadian white pine, Minnesota pine, and Idaho pine. Well, I am not sure about California sugar pine, but I believe that is a genuine white pine.

Q. Do you know the technical name of that pine?

A. We do not go into the technical name. I heard it called Pinus strobus, but that doesn't mean anything to me.

Q. Mr. Youngs, there is one question I want to ask you: I presume that you are more or less familiar with the practices of lumber dealers in your community here, are you not?

A. I think so.

466 Q. Are they in the habit of or do they have the trade practice, trade custom of delivering to customers California white pine when the said customer has ordered white pine?

A. In a great many cases; yes.

Examiner SHEPPARD. All right.

Cross-examination by Mr. MATTHEW:

Q. Mr. Youngs, are the trade names California white pine, pondosa pine, Idaho white pine, California sugar pine, well established and well understood in the New York lumber trade?

A. They are in the wholesale market; that is, where the retailer is buying from, and commission men, or the mill.

Q. You are a retailer, as I understand it?

A. Yes.

Q. And you would say that the retailers generally thoroughly understand those terms?

A. I believe they do.

Q. And know what lumber is being furnished under those trade names?

A. Yes; I am practically sure that every lumber dealer must know that.

Q. Do you happen to know whether you carry a larger stock of pondosa pine than California white pine?

A. We only carry the pondosa pine in the common grades, practically no. 2 and 3 common, shelving lumber and box lumber—

467 lumber of that kind. That is not because the pondosa pine would not do in a great many cases just as well as the California white pine, but it is due to the fact that the pondosa pine is cut scant in thickness, and a great many people want, for instance, a lumber that we would be able to dress 7/8ths, and they cannot dress the pondosa pine 7/8ths, where they can the California white pine.

Q. You carry California white pine, I think you said, only in D selects?

A. Yes.

Q. But you carry the sugar pine in somewhat higher grades, as I understand you?

A. In the D, C, 1 and 2; in the three higher grades.

Q. Is pondosa pine never furnished in response to orders for white pine?

A. We would not take pondosa pine if we ordered California white pine.

Q. Suppose one of your customers should ask for white pine, as the examiner just suggested to you; is pondosa pine ever furnished in response to such an order?

A. In our case, we only carry California white pine in the lower grades. For instance, in the retail business, a man might ask for shelving, for pine shelving, and we would ask him whether he wanted hard shelving or soft shelving; if he wanted soft shelving, he would get Idaho shelving; if he wanted hard shelving,

468 he would get the pondosa shelving.

Q. Does he ever ask for white-pine shelving?

A. Yes.

Q. In which event, you may supply him with pondosa pine shelving, if he wanted the hard shelving or rather a hard white pine?

A. In other words, in dealing with customers, pondosa pine is considered a hard white pine.

Q. Even though it does not bear the trade name of California white pine or any name carrying the name "white"?

A. In other words, any pine in retail dealing with the customer, any pine is considered a white pine except the southeastern yellow pine.

Q. That is the trade custom or trade practice?

A. That is the trade custom or practice. I have at certain times been told by customers where California white pine was furnished that it will run very much more yellow in color than the northern, that we were trying to put something over on him in furnishing yellow pine in place of white pine, which he ordered, understanding that he would get a harder pine than sugar pine.

Q. When you furnish lumber from the Klamath Basin, I take it that you have very little complaint?

A. We have no complaint.

Q. I understand from your testimony, Mr. Youngs, that your purpose throughout is to furnish your customers with the

469 type of lumber which is particularly suited to their needs, as you understand them to be?

A. Certainly.

Q. You are not interested in the botanical names of this pine at all, or in any of their botanical names?

A. No; we are not.

Q. You are interested in the quality and utility of the lumber?

A. Yes, sir.

Q. How long did you say that you had been in this lumber business, Mr. Youngs?

A. I have been in it personally seventeen years.

Q. Has that trade name, California white pine, been known during all that period?

A. Not to me.

Q. How long have you been familiar with the term?

A. Not over five years.

Q. Under what name were you purchasing this lumber prior to five years ago, or do you know?

A. We did not handle this lumber previous to five years ago. That lumber has only been handled by us because of economic necessity of getting the price down.

Q. Is the supply of northern white pine lumber constantly getting shorter?

A. In the good grades it is practically useless for the retailer to try to carry it any more.

470 Q. There is so little available?

A. So little available, and the size of it is so much smaller, and the customers have gotten used to the western pine; first, the sugar pine, then California white pine, getting large-sized diameter of boards, and they have gradually gotten to feel that it is good enough for their work as far as the texture goes, and now we have some stocks of northern pine or eastern Canadian pine, that we cannot sell.

Q. Although it is known——

A. That is, for the good lumber, except in some special grades where they want sound red-knot lumber, something of that kind.

Q. But there is comparatively little demand for it?

A. Yes, practically none.

By Examiner SHEPPARD:

Q. I gather, Mr. Youngs, then, that the California products of white pine, California white pine and sugar pine, these lumbers that have come on in the past ten or fifteen years, have been used as substitutes for the northern pine that have been diminishing in volume and quality during the past decade; is that correct?

A. To meet an economic situation, yes.

By Mr. MATTHEW:

Q. These woods are sold on their respective merits, are they not, Mr. Youngs?

A. They are.

471 Q. And the qualities of the various woods respectively sold best reflect the economic conditions?

A. They do.

Mr. BURR. I object to these questions.

Mr. MATTHEW. That is what he said in his previous testimony, practically.

Mr. BURR. I submit he is not qualified as an economist.

Mr. MATTHEW. But that is his business.

Mr. BURR. No; it is not.

Examiner SHEPPARD. I am going to let the answer stand. I think Mr. Youngs is a man sufficiently versed in the lumber trade to know, and I will let it stay in the record.

Mr. BURR. It is all a matter of conclusion, as well.

Examiner SHEPPARD. Yes; I think that.

Mr. Youngs, there is another question I want to ask you.

By Examiner SHEPPARD:

Q. Do you know anything about pondosa pine?

A. Well, I only know what I see of it by looking at it as it goes through the yard.

Q. Do you observe any similarity to the California pine in that?

A. Well, I would say that as far as looks go, if anything, it will show just a trifle more color to it than the California white pine, and perhaps just a shade more of brownish tinge to it. As far as the commoner grades are concerned, pondosa pine bears a

472 smaller knot than California white pine—perhaps a sounder knot. The trees I do not think grow as big, and the board or plank would not be as big as the California white pine.

Q. Otherwise it is about the same lumber, is it?

A. It is more or less the same. Some pine comes into this market called Westmont pine, from the western part of Montana, that is hardly distinguishable and is about the same as pondosa pine; it more or less runs into the same kind of pine, the same species of tree.

By Mr. MATTHEW:

Q. You have made some reference to the yellow pine of the South, Mr. Youngs, as I understood it?

A. Yes.

Q. And said that they were quite indistinguishable from these other woods?

A. I did not say they were.

Mr. BURR. Mr. Examiner, I wish to object to all of these questions about southern pine. The complaint itself concedes that the southern pines are distinguishable by their comparatively greater density and hardness, and that kind of thing, from Pinus ponderosa. It seems to me that we don't want to try all of the pines in the United States and bring in all of the unfavorable things and all the favorable things with regard to every species of pine and every variety of pine lumber. So why should we encumber the record with it, and, furthermore, it is not fair to the people who are not repre-

473 sented here, and who ought to be given an opportunity to come here and defend their lumber, if it is going to be brought into question—I do not believe we want to get into it.

Examiner SHEPPARD. I called the attention of both of you gentlemen to it yesterday, but I allowed the examination to go on, believing that Mr. Matthew was not going to continue the matter to any great extent. I will say now, that I do not care to go into the pine situation with reference to the yellow pine at all.

Mr. MATTHEW. I have no desire to. You recall that the witness did speak of the yellow pines of the South on his direct examination, and I am very sorry that he did. It was brought out from the evidence that you elicited upon your direct examination. I had only one question to ask about it, but I shall refrain from asking it, because I would rather not spend too much time in more argument about it here. That will save some time on that score, but I want to make this suggestion, if I may, with deference to the Examiner:

I find upon reading the complaint that an effort is very definitely made to assimilate this California white pine lumber, in many respects, to the yellow pines generally.

It is our intention, Mr. Examiner, and it will be our purpose to show that the California white pine lumber in all its essential characteristics is more nearly to be assimilated to the northern
474 white pine and Idaho white pine than to the southern yellow pines. I think that to be a material issue in the case.

Examiner SHEPPARD. As I told you yesterday, Mr. Matthew, for purposes of comparison, I am going to allow you to go into that to that extent.

Mr. BURR. That is admitted in the complaint, if the Examiner please, and I think that that ought to suffice to make it unnecessary to prove, what we have alleged.

Mr. MATTHEW. It is not properly either admitted nor alleged in the complaint, because the complaint definitely charges us with trying to trade on white pine lumber that is yielded by a tree that is a yellow pine species, which causes deception, and so forth; those things are in the complaint.

Examiner SHEPPARD. For purposes of comparison, I am going to allow some of that testimony to go in.

By Mr. MATTHEW:

Q. Mr. Youngs, you have stated that it is your effort throughout to give your customers the lumber which you believe they desire and need?

A. I did.

Q. So far as you know, are your customers misled in any respect by the practice which you follow in furnishing them with these several varieties of pine lumber?

Mr. BURR. I object to that question. The question, whether anybody is misled or anything of that kind is a question of fact to

475 be developed as a conclusion from the facts that are introduced by the Commission itself.

Examiner SHEPPARD. That is the question we have to decide.

Mr. MATTHEW. I withdraw the question.

By Mr. MATTHEW:

Q. Have you had any complaints from your customers, due to the fact that they are being misled by virtue of the lumber which you are supplying in response to requests for pine?

A. No, we have not, because we don't take any chances on that; we tell them what it is going to be.

Q. And accordingly you receive no complaints?

A. No; we do not.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. I believe you testified, Mr. Youngs, that the retailers in New York and in your territory are familiar with the various trade names for pine, did you?

A. I did; yes.

Q. In saying that did you mean that they are familiar with the distinctions in the botanical names or with the distinctions as to the durability and character of the various lines of lumber that are given these various trade names?

A. No; the lumber dealer is not particularly interested in the durability of the lumber. His customers are supposed to know what they want, and all that he is in business for is to give

476 them what they want.

Q. I will say "name", leaving out the word "trade."

A. Certainly.

Q. All right, sir, when the trade terms "California white pine" and "Idaho white pine" are used by manufacturers and wholesalers, and elsewhere, would you say that the trade is familiar with each of those or whether either of those is a genuine white pine?

A. I do not think that they are particularly interested as to whether it is genuine white pine or not.

Q. Do you think that the retail trade generally know which one of those is a genuine white pine in respect to the characteristic of durability?

A. No; I think that perhaps, take the retail trade throughout, they consider California white pine as a white pine. It has been generally sold as white pine; it has not been sold as a yellow pine; and when you come right down to it, basically speaking, there are only two kinds of pine, white pine and yellow pine, that are known in the lumber business, and that is not yellow pine; it is considered a white pine in the trade.

Q. It is considered——

A. It is considered as a hard white pine in reference to the other softer pines.

Q. That is, belong to the white pine group, but a little harder than some of the others; is that the idea?

A. Yes.

477 Q. Do you think they distinguish between Idaho white pine and California white pine, as regards their white pine character?

A. No; I do not think they will, in that particular way.

Q. Do you yourself distinguish between Idaho white pine and California white pine as to say durability features that belong to white pines?

A. When you say "durability", just what do you mean?

Q. I mean being able to stand up against the weather, if exposed to weather conditions in the outside of the building.

A. I believe most dealers would say it would stand weather better—as between Idaho white pine and California white pine, they would say Idaho white pine would.

Q. Do you yourself say that?

A. I think it would.

Q. In selling to the trade, do you think retailers take into consideration the fact that one of these so-called white pines is more durable than the other so-called white pine?

A. No; that is not his business.

Q. His business is to sell white pine, is that the idea?

A. His business is to sell the customer what the customer contracts for. If he asks for white pine, he gets what he asks for—in other words, a customer is not considered a child, he is supposed to know what he wants, and ask for it, and he will get it.

Q. Your retailer does not consider himself a guardian of

478 the general public?

A. He does not, no more than to deal fairly with him.

Q. If they ask for white pine and you are able to furnish something that is called white pine, will that or not suffice to conform to what you regard as fairness to the trade?

A. If a man asks for white pine, if he wants real good soft white pine, we try to find out whether he is particular, or wants to get something cheap—in other words, we try to find out what he wants it for and we then either submit a sample of the pines, but if he is not familiar with them, we tell him that he can buy this for that price or that for this price.

Q. That is, you would quote Idaho white pine and California white pine?

A. Perhaps sugar pine rather than California.

Q. You do carry more California white pine than sugar pine, do you not?

A. No; we carry more sugar than California white.

Q. Are you familiar with the California white pine that comes from southern California?

A. I believe if I saw a good-sized piece from southern California and a good-sized piece from northern California, I could tell which was which.

Q. Do you think you could tell California white-pine say from Madeira County, from white pine below San Francisco?

A. Yes; the southern would have a yellowish tinge to it,
479 while the northern Klamath Falls would have a brownish tinge in the heart and the sap would be white.

Q. Which would be harder, on the average?

A. The further south you go, the harder it is.

Q. I believe you said that you cannot carry northern white pine anymore—in your cross-examination. Will you state whether that is because it is a question of considerably higher price?

A. Yes; it is a question considerably of price, but I noticed this year, that even the price being the same, most of the customers will take western pine, especially the sugar pine, in place of the other, because of size and lack of shake, and they will prefer to take the best grade, that being sugar pine, as being more perfect.

Q. Have you seen anything of the Canadian white pine in recent years?

A. Yes, some—we have some of it.

Q. Is that virgin forest pine, from virgin forest, or is that small stock?

A. It must be virgin timber, we have it as wide as twelve inches wide and sixteen feet long. I would not say that was second-growth stuff.

Q. Is that still obtainable at prices which compete with California white pine?

A. No. I do not think it is, but what we carry mostly is the lower grades.

480 Q. Of the northern pine?

A. Yes.

Q. Did you understand that they are still cutting virgin northern pines in Minnesota?

A. I think there is a little of it there in Minnesota, yes.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. You spoke of "shake" in discussion of your northern or Canadian white pine.

A. I did.

Q. Will you explain what "shake" is, please?

A. That is a kind of a hard thing to explain. It is not the same as split, yet it is an internal shredding of the tissue of the pine; you see on the ends of a plank what you call a broom shake, at times—the whole thing would be kind of torn apart. Then running through you see what you might call a split or shake that long [indicating] now and then, which is different from so-called checking; it does

not always go through the board; it is on one side and the grain kind of lifts up sometimes on the flat grain.

Q. Is that quite frequently encountered in the northern and eastern Canadian pine?

A. Yes.

Q. Is it more frequently encountered during recent years
481 than it was a number of years ago.

A. I do not go back too many years.

Q. I don't want to carry you back too far.

A. I don't know as they encountered it any more in cutting the timber; it occurs more in the timber we get now, because they haven't so much timber to pick from.

Q. The northern pine is not much of a factor now in the New York market, is it?

A. No, sir.

Mr. MATTHEW. That is all.

(Witness excused.)

Mr. BURR. I desire to make this statement at this stage of the hearing:

The record already shows that this practice of calling the ponderosa pine as white pine, California white pine, or western white pine, or Arizona or New Mexico white pine has been a matter of a number of years' standing.

I believe respondents claim it has been of forty years' standing. Now, it is being used by a large number of important manufacturing concerns, who are entitled not to have their business interfered with any more than is necessary.

We allege here that there is deception of the ultimate public—
I should rather say that the ultimate public are misled into
482 believing that this type of lumber is a genuine white pine, as a result of the color.

Now, then, I do not believe that the Commission will desire to curtail too far the calling of cumulative evidence which is intended, if it is important enough and numerous enough and strong enough, to overturn—I do not believe they will be willing to curtail this evidence or consider the issuance of an order to cease and desist the practice of such long standing on the part of so large an industry unless they have overwhelming evidence of someone being misled.

I do not believe that three or four witnesses will make a case of this thing any more than one swallow will make a summer; I believe you have to show the Commission by strong evidence, which the courts will regard as strong, that not only a few witnesses have been misled, because, for all we know, they may think that these witnesses might have been hand picked by the examiner or counsel, who desire to see a trade name changed, or someone benefitted by a trade name change.

Therefore the Commission does not want the witnesses to be so few that they may be held to be hand picked, and it is for that reason

I want to prove confusion exists here; and for that reason I am proving that confusion does exist, and for that reason I am asking the examiner not to curtail me too much in my endeavor to prove confusion, because I do not think a little will do the trick.

Examiner SHEPPARD. I think you are right, Mr. Burr, but
483 do not have so many at one time and in one place. You might desire witnesses in different sections of the country; that is all right. We can put on five or six in each town and pass up twenty that we have here; I think that will be sufficient.

J. O. STEWART was thereupon called as a witness and having been duly sworn testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Stewart, you are president of the Stewart Lumber Company, Metropolitan Avenue and Woodward Street, Brooklyn, New York, are you not?

A. Yes, sir.

Q. You have been in the lumber business for some time, have you?

A. Yes, sir.

Q. How long?

A. Twenty-one years.

Q. Always in Brooklyn?

A. In New York and Brooklyn.

Q. In the retail business?

A. Yes, sir.

Q. What varieties of pine do you carry?

A. Northern white pine, Idaho white pine, pondosa pine, California sugar pine, and long- and short-leaf yellow pine.

Q. Do you carry California white pine?

484 A. No.

Q. Do you use that at all?

A. No.

Q. Did you ever carry it?

A. Yes.

Q. Up till what time or over what period?

A. Date to date, do you mean?

Q. Approximately speaking, how long a period and during what period did you carry it?

A. Some years ago. I can only answer that question generally. Some years ago over a short period.

Q. Why did you cease using California white pine?

A. We experimented with it to find out if it met the requirements we had in lumber in the grade that we tried it out in.

Q. What grade was that?

A. No. 3 common entirely—possibly some no. 2 common.

Q. What happened or what resulted?

A. We found that in the common grades pondosa from the Bend district contains a smaller character of defect than the California white pine. It being coarser in the low grades, therefore we dis-

continued using it in pondosa or in Pinus ponderosa, if that is the proper term. We used pondosa exclusively——

Q. For what purposes do you recommend pondosa?

A. May I change that? Pine from the Bend district.

Q. For what purposes do you recommend Pinus ponderosa
485 from the Bend or pondosa pine from the Bend district?

A. In one word, shelving.

Q. Inside work?

A. Inside work exclusively.

Q. Would you recommend it for outside work?

A. It might be; but we furnish very little lumber for outside work.

Q. You do not furnish any lumber for outside work?

A. No.

Q. Do you know the practice in the retail lumber trade in Brooklyn, in a general sort of way?

A. Yes.

Q. Does the trade, in general, distinguish between California white pine and Idaho white pine?

A. What do you mean by the trade?

Q. As to the type of lumber, I mean competitors of yours?

A. Is your question, Do my competitor generally distinguish?

Q. Between those two types of lumber?

A. Do you mean, do they know the difference between them?

Q. Yes.

A. Yes.

Q. Would you describe the differences between those two types of lumber, California white pine and Idaho?

A. It is different in color, different in texture; as to whether it is hard or soft texture; there is a very distinct difference
486 in what I would term winter and summer wood—there are grain differences.

Q. Which has the greater difference between the summer and spring wood?

A. California white pine.

Q. More than the Idaho white pine; is that true?

A. Oh, yes.

Q. How is the California white pine as to uniformity?

A. I don't know that; I am not experienced in that.

Q. How is pondosa compared with Idaho white pine, as regards uniformity in the shipments received; is it pretty uniform; are they both pretty uniform in type?

A. Do you mean contrasted?

Q. No; is ponderosa pine that you get from the Bend district as uniform by itself as Idaho white pine is by itself?

A. Yes.

Q. Do you have a distinction in mind between the Idaho white pine and the northern white pine?

A. Oh, yes.

Q. Do you have calls from white-pine purchasers who come in and request white pine?

A. Yes.

Q. What do you furnish them?

A. What they ask for.

Q. What is that?

487 A. White pine.

Q. Do you furnish Idaho white pine?

A. Yes.

Q. Do you ever furnish pondosa on that order?

A. Never.

Q. Do you furnish them northern white pine on occasion?

A. Yes.

Q. Or sugar pine?

A. Yes. May I add something there: That we furnish Idaho where thickness is not a question; where thickness is involved, we then go to California sugar or northern white pine, especially in one-inch lumber.

By Examiner SHEPPARD:

Q. Did I understand you to say that you would deliver California white pine under those specifications requesting white pine?

Mr. BURR. No; he did not say that.

The WITNESS. I did not.

By Mr. BURR:

Q. You do not carry it even, do you?

A. We do not carry it; we carry California sugar pine.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Stewart, I was interested in your statement that you carried the pondosa pine in no. 3 common and possible no. 2

488 common and the lumber is used principally for shelving; you also stated that you found that it is superior to the California white pine for that particular purpose. I take it that then you purchase lumber on its merits, irrespective of its particular trade name and the fact that this is called pondosa lumber or given any other trade name, is immaterial to you, because you are purchasing it on its merits?

A. That is not a yes-or-no answer. If I may go into a little detail, I have something I might add in answer to that.

Q. Perhaps I will reframe the question a little bit. California white and sugar pine come in no. 3 common and no. 2 common, just as pondosa pine does?

A. Yes.

Q. The grading rules are substantially the same?

A. I don't know.

Q. You are not familiar with them?

A. No.

Q. You testified, as I recall your direct testimony, that you found that the pondosa pine in these common grades has a smaller knot than the California white pine in the same grades; that is true, is it not?

A. That has been my experience.

Q. And it was for that reason, among others, that you decided to carry the pondosa pine for these particular purposes?

A. Not entirely; that was the reason brought out here.

489 Q. I understood that to be your statement on direct examination.

A. I believe on a direct question I made reply to that, without any explanation. I am not sure that I did give that. I remember saying the difference in defects made it more desirable.

Q. Possibly I misunderstood you. You carried California white pine for a short period several years back, you so stated, as I recall it?

A. Yes.

Q. Since that time you have been carrying pondosa pine for shelving purposes?

Answer. Yes.

Q. I take it from that, because the pondosa pine was found to be more suitable for your purposes than the California white pine; am I right in so understanding?

A. No; it was not more superior.

Q. Let us put it this way, you found it to be a superior lumber in those grades than the California white pine in the corresponding grades?

A. Yes; particularly on the point of uniformity.

Q. You found the pondosa pine more uniform with itself than California white pine with itself?

Answer. Yes.

Q. You carry the Idaho white as well as pondosa pine?

A. Yes.

Q. Through whom do you purchase your lumber; is it obtained through wholesalers here in this vicinity?

490 A. Not entirely.

Q. It is purchased to some extent from producers in the west coast?

A. Yes.

Q. You buy some from the Bend district, you say?

A. Yes.

Q. Do you mind letting us know the names of some of the companies from whom you purchase, if it is not a private business matter?

A. You spoke of the Bend District; we never buy direct from manufacturers in the Bend District on the coast. I will give you the names of the wholesale dealers: Brooks-Scanlan Lumber Company, Shevlin-Hickson Lumber Company; that covers pondosa.

Q. From what companies do you buy the Idaho white pine?

A. The Weyerhaeuser Sales Company, W. M. Crombie & Company, and J. A. Rice Lumber Company; that is all.

Q. Is the J. A. Rice Lumber Company a producing company in Idaho?

A. No.

Q. That is a wholesaler?

A. Yes.

Q. What is W. M. Crombie?

A. The same, a wholesaler.

Q. The only producing company from which you buy white pine lumber is the Weyerhaeuser Sales Company?

A. My understanding is that they are not producers any more than Crombie; they are a sales organization, marketing for several
491 mills.

Mr. MATTHEW. That is all.

(Witness excused.)

JOHN L. MAND was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are secretary of the Tisdale Lumber Company?

A. Yes, sir.

Q. 1000 Boulevard, Astoria?

A. Yes, sir.

Q. You are in the retail lumber business?

A. Yes.

Q. How long a time have you been in it?

A. Personally I have been in it for twenty years.

Q. How long has the Tisdale Company been in business?

A. About seventy-five years.

Q. Entirely in that neighborhood?

A. Yes, sir. The name changed several times; it was started by my great grandfather.

Q. What varieties of lumber do you buy, Mr. Mund?

A. My work is particularly in the millwork division; white pine, cypress, hardwoods, and a little spruce.

Q. What variety of pine do you buy?

492 A. I buy California white, a very little sugar, pondosa pine, Idaho pine, Minnesota, Michigan; that is about all.

Q. What varieties of millwork are you making?

A. Sash and doors, general exterior and interior millwork for residences.

Q. Do your specifications call for white pine, on occasion?

A. They simply say white pine, as a rule. Occasionally they specify the type of white pine that they desire.

Q. Do they occasionally specify California white pine?

A. I do not recall a single instance where they specified it.

Q. Do they occasionally specify northern white pine?

A. Yes; occasionally.

Q. What other specifications do they make with regard to the classification of the words "white pine"?

A. Once or twice I have run across specifications calling for Idaho white pine, with particular reference to the finish in their room.

Q. When they ask for northern white pine, you furnish it from States, what localities?

A. We furnish Michigan white pine or Minnesota white pine.

Q. Do you carry any Canadian?

A. Only what little we buy occasionally, locally.

Q. In that northern variety of white pine, do you deal in that fairly extensively, or is that exceptionally used?

A. It is just an exception use.

493 Q. Do you supply northern white pine under any other circumstances other than direct specification of it?

A. Yes; occasionally, mostly Idaho white pine in that case. If we happen to buy it cheap enough, we buy the Idaho in preference to any other.

Q. What do you mean when you buy it cheap enough?

A. Sometimes mills have a job lot that they dispose of at a very reasonable price, and our preference in that case is for Idaho pine.

Q. Is Idaho pine, in your judgment, preferable to California white pine; or do you not differentiate?

A. We don't differentiate.

Q. If anybody comes in and asks for white pine, he may receive Idaho white pine or California white pine, as the case may be?

A. Yes; indiscriminately.

Q. The Idaho white pine is sometimes specifically and by name requested; is that so?

A. Yes; on occasion.

Q. Under those circumstances, would you ever use California white pine as a substitute?

A. No; we would not substitute; we would sell Idaho white pine.

Q. That is only when it is specified white pine?

A. Then we feel at liberty to give California white, Idaho, or pondosa, whatever the job is intended for.

494 Q. Do you distinguish in your own case, speaking of you personally, do you distinguish as to durability between Idaho white pine and California white pine, where the product is to be exposed to outside weather conditions?

A. Personally, I believe that Idaho would last a little bit longer; its weather-resisting qualities are a little higher rated than California white pine.

Q. Is that the general reputation it has, or would you say that most people do not hold to that distinction?

A. I believe the average builder does not know the difference. I do not think he appreciates that at all.

Q. Do you draw any distinction, in your experience, between pondosa and California white pine?

A. In our specifications they go out as either California or pondosa.

Q. How do you mean, go out for purchasing?

A. For purchasing purposes.

Q. When you send out specifications you send out to various manufacturers, do you, and to producers?

A. To wholesalers and manufacturers.

Q. And you ask them interchangeably what their bid would be on California white pine and pondosa; is that so?

A. We give them the option of quoting on California white or pondosa.

Q. Do you ever send them out interchangeably between either of those two and Idaho white pine?

495 A. No.

Q. Do you regard pondosa and California white pine as satisfactory for interior work?

A. We do.

Q. Do you regard Idaho white pine as preferable to California white pine for interior purposes?

A. Not necessarily.

Mr. BURR. I believe that is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Mand, you stated that when you received orders for white pine, you feel free to furnish either Idaho white pine or California white pine or pondosa pine indiscriminately; you so testified?

A. Yes.

Q. Why do you feel free to furnish pondosa pine in response to an order for white pine?

A. Because it seems to be the general, accepted practice of the builder; he accepts it as white pine; seems to be resigned to the fact that northern white pine is not obtainable for the average speculative use.

Q. Northern pine is diminishing in importance in this market, is it?

A. Yes; it is diminishing and the price for the ordinary speculative use is prohibitive, in his opinion.

496 Q. For that reason he resorts very largely to Idaho white or California or pondosa?

A. Yes; he goes to Idaho white, California, or pondosa. He accepts them.

Q. Has the term "white pine" in this market come to include California and pondosa pines?

A. It has amongst the builders.

Q. Has it in the trade generally?

A. Not amongst lumber dealers, although there are a class of lumber dealers who do not seem to know the difference and don't care.

Q. You personally do distinguish between Idaho white pine and California white pine?

A. Yes, sir.

Q. When you order California white pine, don't you know exactly what you are getting?

A. We do, when we buy it as California white pine.

Q. And you know what it is?

A. We know what it is.

Cross-examination by Mr. ANDREWS:

Q. Do you know what pondosa and California white pines are? Do you know that they are not genuine white pines?

A. Yes; we know that. That is, we know that it is not the botanical species of Pinus strobus—it is Pinus ponderosa.

497 Q. You are not interested in the botany of the tree?

A. We do not, as lumbermen, regard that so much——

Q. From a practical or commercial view, your primary interest as a lumberman is in the quality and use of the lumber?

A. Exactly.

Redirect examination by Mr. BURR:

Q. You do recognize that the genuine so-called white pines have certain qualities of softness and durability that California white pine does not possess; you individually, I mean?

A. Yes.

Mr. BURR. That is all.

(Witness excused.)

JACOB WEBER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are the president of the Weber-Zuck Lumber Company, are you?

A. Yes, sir.

Q. Your place of business is on Eckford Street, Brooklyn?

A. Yes, sir.

Q. How long has your concern been in the lumber business?

A. Since 1919.

498 Q. You are in the retail trade, or do you also do some wholesale business?

A. Only in the retail trade.

Q. How long have you personally been in that business?

A. Close to thirty years.

Q. What varieties of commercial lumber do you deal in?

A. Hardwoods, such as oak——

Q. Never mind the hardwoods; we will make it a little briefer; what kind of softwoods do you handle?

A. Pines of various sorts.

Q. What varieties?

A. California, Idaho, ponderosa; those three.

Q. In the specification for lumber, do you find that your customers on occasion ask for white pine?

A. Yes.

Q. Do you furnish them California white pine or Idaho white pine on those specifications, or both?

A. We furnish what they ask for. Some will ask for California pine; some will ask for California sugar pine; others will ask for the ponderosa pine.

Q. Suppose they call for white pine merely and do not say California white pine or Idaho white pine; which do you furnish?

A. We furnish the pine at the price that their offer indicates.

Q. In other words, the man tells you how much he is willing to pay, and you furnish him the pine that corresponds to that?

499 A. We make a contract in price between ponderosa pine and Idaho pine; that is, in the no. 3 grade, which is usually used for shelving purposes, and California sugar, which we carry only in the better grades of D selects.

Q. That would be three that you would furnish them on specifications calling for white pine, is it?

A. Yes.

Q. It might be either California white pine, California sugar pine, or Idaho white pine; is that true?

A. Or the ponderosa.

Q. Or the pondosa.

By Examiner SHEPPARD:

Q. All go under the name of white pine?

A. All white pine; that is, quite a considerable of our customers will only use the term of pine, others will use the term "white pine"; we have others that will say, "I want Idaho white pine or California sugar pine."

By Mr. BURR:

Q. I was referring to those who did not designate. Of course, when they designate you give them what they ask for; is that true?

A. That's the idea.

Q. If they do not designate, but simply ask for pine or white pine, you give any of those varieties you named?

A. Only in accordance with the price that they pay.

500 Q. What they are willing to pay?

A. Not what they are willing to pay; what I ask for. I have various prices for the various kinds.

Q. How long has that been the case with your company?

A. Oh, ever since we are in business.

Q. You are familiar with trade conditions in the retail business, generally?

A. I am.

Q. Is that true in most of the firms with which you compete?

A. Yes, sir.

Mr. BURR. That is all, sir.

Cross-examination by Mr. MATTHEW:

Q. Mr. Weber, are these terms, "California white pine", "pondosa pine", "Idaho white pine", "California sugar pine", well known to the retail lumber trade?

A. To the larger body; by that I mean the larger manufacturers, they are, but to the small trade like the carpenter and the like they do not know the distinction. With them it is a matter of price, which is the cheapest.

Q. As to them, I take it, that you undertake to satisfy their needs and desires as you understand them to be?

A. Yes, sir.

Q. When I speak of the trade, I mean the lumber retailers themselves, are those trade names for those various lumbers well
501 known to retail lumber dealers?

A. Yes, sir.

Q. And they understand perfectly what lumber is meant by those terms?

A. Yes, sir.

Q. You said that customers sometimes ask for white pine?

A. Yes.

Q. Without any qualifying term?

A. Yes, sir.

Q. Is it more common for them to ask for pine only or just for white pine, or how does the inquiry come to you?

A. They ask for pine in the majority of cases.

Q. When they ask for pine you undertake to determine what kind of pine is desired?

A. In accordance with the prices the are paying.

Q. In other words, you quote prices?

A. Yes, sir; we make a distinction through prices.

Q. You feel entirely free to furnish pondosa pine, for example, upon an order for white pine, at a price which is agreed upon between you?

A. Yes, sir.

Q. How do you determine the particular kind of lumber which your customers desire, apart from this question of price?

A. Just what do you mean by that?

Q. Does the customer indicate in any other way whether
502 he desires Idaho white or California white or pondosa or sugar pine?

A. We ask him usually does he want a harder pine or does he want a softer pine. In a harder pine we can give them a pine at a certain price, but for the white pine, or Idaho pine, as you might call it, we ask them a higher price.

Q. And that is clearly understood by your customers?

A. Yes, sir.

Q. I take it that these woods are selling on their respective merits and their individual prices?

A. Yes.

Q. Have you any complaints from your customers as to your practice in that respect?

A. No, sir.

Redirect examination by Mr. BURR:

Q. You state that the retail trade, as you understand it, know what lumber is, that is named under each of these designations; do you think the retail trade understands whether or not there are important distinctions in the quality of these types of lumber that you have been testifying to?

A. Just what do you mean?

Q. Does the retail trade distinguish, for example, between California white pine and Idaho white pine as regards durability for outside use or anything of that kind?

A. The retailer himself?

503 Q. Yes.

A. What does he care as to the durability? All he knows is he pays more for his Idaho pine than he will pay for his California pine, and, incidentally, he makes his price on the lumber which he claims is better pine; that is, for instance, for Idaho he is getting a better price for it due to the fact that he has paid more for the Idaho pine than he has paid for the California pine.

Q. He does not care particularly about qualities; it is simply a question of being able to get it at a certain price?

A. When you say quality there are two distinctions; quality also means the quality of the lumber.

Q. Texture, you mean?

A. No; no; grades. Quality means grades also in lumber.

Q. I am not referring to the grade.

A. You are not referring to the grade?

Q. No; does the retail trade understand that there are certain characteristics of lumber, setting the entire selection of grades, such as C select and D and better and common—setting those all aside—I see my question was a little ambiguous there—that there are qualities and characteristics in the lumber itself, aside from the grade and distinction between Idaho white pine and California white pine, or does not the retail trade pay much attention to that feature?

A. Oh, yes, sir; they know the distinction; it is easily visible to anyone who knows and has had experience.

Q. You cannot tell by looking at a wood which type is

504 durable, can you?

A. No.

Q. Durability they do not take into account, you think?

A. No; they don't.

Q. It is the sales quality from the appearance of the lumber that they are interested in, together with the price?

A. Together with the price.

Q. The trade understands, then, that there is a difference in appearance and in visible texture of the various classes of western lumber; is that true?

A. Yes, sir.

Q. Will you state whether or not, in your understanding, the California white pine and the pondosa is the same variety of lumber or a different variety?

A. Different variety.

Q. They are a different variety of lumber?

A. Yes, sir.

Q. Different quality and appearance, and so forth?

A. When you say quality, are you getting back to grades?

Q. No.

A. In quality, one is harder; the pondosa is of harder texture than California white pine.

Q. How about pondosa as compared with Idaho white pine?

A. The difference as between day and night.

Q. Which is harder?

505 A. Both on appearance and weight.

Q. Which is the harder and which is the heavier?

A. Ponderosa is the heavier weight.

Q. Which is the harder wood?

A. Ponderosa is the harder one.

Q. How about California white pine and Idaho white pine; which is the harder?

A. Well, the California is somewhat harder, depending upon the grade or quality. When it gets down to the lowef grades in the California, you get it much harder and get more pitch.

Q. There is more difference in the lower grades between Idaho and California white pines than there is in the better grades?

A. That is the idea, although the Idaho is softer somewhat.

Mr. BURR. That is all.

(Witness excused.)

CHARLES H. BLITMAN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are president of the Brooklyn Consolidated Lumber Corporation?

A. Yes, sir.

Q. You are located at the foot of 19th Street, Brooklyn, New York?

506 A. That is right.

Q. How long have you been in the lumber business here in town?

A. About eleven years.

Q. How long has that concern been in existence—the same length of time?

A. No; that concern has only been in business about a little over a year.

Q. The company deals in what varieties of pine lumber?

A. Pondosa, California sugar pine, and Idaho.

Q. Do you handle California white pine?

A. Yes; we do now; we use it in the mill.

Q. You have a mill?

A. Yes.

Q. For sash, door, and blinds, and that sort of similar work?

A. Yes.

Q. Is that your main business, the retail business?

A. We do both retail business and factory work.

Q. Do you sell pattern stock?

A. Not very much.

Q. In the milling business, do you use all of those various varieties of lumber that you referred to, or only which of them?

A. We use all of them.

Q. In the millwork?

A. Yes, sir.

Q. Your orders for millwork come from what class of
507 people? Do you sell to wholesalers or regular builders?

A. We sell to builders, contractors, carpenters sometimes, and also to small yards.

Q. Sometimes you sell to wholesalers and retailers from stock?

A. Yes.

Q. When these gentlemen come to you, these builders, contractors, and the like, do they on occasion ask for white pine?

A. That is about all they know about it; they know it is white pine; that is, the average builder.

Q. They do not specify northern white pine or California white pine or Idaho white pine?

A. You only get that specification from the higher class contractors who work on specifications supplied by an architect.

Q. When these people ask for white pine, do you furnish them Idaho white pine or California white pine, or what do you give them?

A. It all depends on the purpose they want it for. If the builder comes and asks for white pine, he wants a white pine for a certain thing, and we know about what grade he wants and what price pine he wants. As a rule we sell pondosa, unless he wants it for cabinet work or interior finish, something like that.

Q. When he asks for white pine that is what you give him?

A. Naturally, we give him pondosa.

Q. Do you also give California white pine sometimes?

508 A. If he wants soft-textured white pine, and if he asks for soft-texture white pine, we usually give the Idaho or California. We class the Idaho a good deal softer than any of the other white pines.

Q. Is it softer than sugar pine, in your judgment?

A. I think it is slightly so; they seem to like it better.

Q. If he wants a softer white pine, you give him Idaho?

A. That is right.

Q. If you find that there is a question of price, what do you give him?

A. Then it becomes a matter of grade as to what he wants. If a man wants a piece of clear, two-inch, 16 or 18 inches wide, we can't give it in pondosa, because we do not carry it in pondosa.

Q. You do not carry pondosa in that grade and width?

A. No; because a wider and thicker stock, as a rule, is required for a better grade of work and they want a softer texture of white pine.

Q. I am not sure that I get that quite. Here is a man that comes in and asks for white pine, it then becomes a question of what he wants it for?

A. Yes.

Q. And he may get California white pine if the specifications in other respects call for what you have in that grade?

A. Let me make myself clear. If a builder comes in, he wants white pine for outside trim, 6-inch, 8-inch, 10-inch, 12-inch,
509 in 4/4 stock, that is one-inch stock, it is practically an established custom that what he wants is pondosa pine, and that is what he gets unless he asks for softer-textured white pine. In the shop where we manufacture inside trim we add Idaho or sugar pine, depending upon the dimension stock, depending on the class of work we do and what the specifications call for.

Q. Where do you classify in each of those two groups, just where do you classify——

A. Between Idaho and sugar pine?

Q. No, between California now; you say you use the pondosa for the outside?

A. Yes.

Q. Now then, where would you classify the California white pine; would you use that interchangeably with the pondosa or the Idaho?

A. We would use it interchangeably with the Idaho.

Q. Suppose he is interested in the question of price, but still wants a white pine, what do you furnish him under such a specification?

A. If the fellow comes in and wants to buy a no. 2 or no. 1 white pine, why, he will ask what the price of white pine is. We have pondosa pine, which is a little harder in texture; we have an Idaho, which is a little softer in texture; and a sugar pine, which is also a little softer in texture; and so on.

Q. You classify all those for filling an order for white pine?

A. Yes, sir.

510 Q. Pondosa, California white, and Idaho white, and California sugar pine; is that right?

A. That is right.

Q. Is that the practice of millworkers generally in your experience?

A. It has been the practice here for the last five years, when the demand was so great, to pretty near interchange between Idaho and sugar pine and pondosa on lower grades. We do not carry pondosa in higher grade, because when we get into the higher grade class they usually want a softer texture of white pine.

Q. Is it common practice in the trade to interchange those as white pine?

A. Yes.

Q. Various varieties of white pine?

A. Yes.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Why do you feel free to furnish the pondosa pine upon order calling for white pine?

A. Well, because that is what the average builder, that is, the speculative builder, wants, and that is what he expects to pay for, and you could not give the same grade of white pine in that texture as you can in pondosa. If he does not know enough
511 about white pine he will probably be shown what it is, but speculators don't care what it is as long as it is a wood that has small knots, tight knots. They want something that will do the work, and they know that while pondosa pine is not strictly a good, soft-textured white pine, it has been used extensively in all outside facia work, and so forth, window frames, sash stock, a good deal, throughout the entire metropolitan district, on account of price.

Q. So you feel free to furnish pondosa pine under those circumstances?

A. Yes.

Q. Even though the pondosa pine does not carry the word "white" in its trade name?

A. Yes, sir.

Mr. MATTHEW. That is all.

The WITNESS. The man who knows his business, like some of these contractors like Starett and Fuller and those fellows, when they buy merchandise, they know what they are buying, and they specify what they want and get what they want. They don't interchange Idaho for sugar or sugar for Idaho, but the builder who comes in looking for price along, and the best and the cheapest he can get for his money, I think in that case it has been the custom in 90 percent of the yards that they will interchange, without even telling him about sugar pine, because he doesn't know anything about it anyhow.

512 Q. They give the California white pine, too?

A. If he wants to pay for it.

By Mr. BURR:

Q. That is at the same price as pondosa?

A. It is a little higher in price.

Q. You think it averages a little higher than pondosa?

A. Yes. I think a great deal of trouble is due to the fact that a lot of those mills that manufacture both pondosa and California, I mean the ordinary white pine and sugar pine, have been in the habit of selling these yards throughout the metropolitan district the low-grade northern. I don't believe you can walk into twenty yards out of forty and be able to get anything in white pine other than pondosa.

Q. Can you get California white pine?

A. I don't think you could go to a dozen places within a radius of two miles here and buy a piece of California white pine.

Q. Can you buy Idaho white pine?

A. I don't think so. A man who does millwork will go to the average yard that has pondosa, and sell it for white pine. That has been my experience.

By Examiner SHEPPARD:

Q. That they buy it for pondosa and sell it for white pine?

A. That is right.

MR. MATTHEW. I hope Your Honor notices that pondosa pine is being used for that purpose.

(Whereupon, at 5:00 o'clock p.m., an adjournment was taken to October 10th, 1929, at 10:00 o'clock a.m.)

513 Docket Nos. 1620–1669, inc.

NEW YORK *October 10th, 1929.*

Met pursuant to adjournment, 10:30 o'clock a.m.

Before: William W. Sheppard, Examiner.

Appearances:

Eugene W. Burr and J. G. Birks, attorneys for the Commission.

McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Company, et al.; Davies-Johnson Lumber Co., et al.; Diamond Match Company, et al.; California Fruit Exchange, et al.; Penman Peak Lumber Co., et al.; Feather River Lumber Company, et al.; Kesterson Lumber Company, et al.; Hobart Estate Company, et al.; Fruit Growers Supply Company, et al.; Quincy Lumber Company, et al.; Spanish Peak Lumber Company, et al.; Lassen Lumber and Box Company, et al.; Red River Lumber Company, et al.; Owen-Oregon Lumber Company, et al.; Big Lakes Box Company, et al.; Ewauana Box Company, et al.; Klamath Lumber & Box Company, et al.; Lamm Lumber Company, et al.; Pelican Bay Lumber Company, et al.; Algoma Lumber Company, et al.; Shaw Bertram Lumber Company, et al.

Mr. BURR. I would like to say, if the examiner please,
514 in accordance with the suggest which the examiner made yesterday, I believe twice and at least once upon the record, I have this morning arranged to excuse some ten witnesses who were subpenaed for today and have refrained from calling other witnesses whom I expected to call during the afternoon and tomorrow morning, partly in deference to the plan of having some defense testimony taken Friday and partly in deference to the examiner's suggestion.

The understanding I had as to what these men would have testified to, is that it would have been corroborative of one or another of the various witnesses, largely retailers some of whom I just had on the stand in the last two or three days.

Examiner SHEPPARD. The examiner takes this occasion to commend Mr. Burr for this action, believing that any further witnesses such as architects, retail dealers, lumbermen, and millmen, who gave about the same testimony that was had on yesterday would be cumulative, and the examiner wishes to state to counsel on both sides that the preponderance of testimony does not always mean the number of witnesses on the stand; it means the weight of the evidence, not necessarily the number of witnesses produced.

Mr. MATTHEW. May I say, Mr. Examiner, that on our part, we shall defer to Your Honor and shall attempt to exhibit the same restraint as Mr. Burr.

515 Examiner SHEPPARD. That is very fine, and if that policy is continued, we will have an up-to-date and a moderate sized record full of facts, without burdening the record with a great deal of unessential matters.

You may call your first witness, Mr. Burr.

RUSSELL F. WHITEHEAD was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Whitehead, will you state what your business is, please, sir?

A. I am an architect first of all, and an architectural publisher.

Q. As a publisher, will you be kind enough to give me your various publications with which you have been and are connected and your relations to them?

A. Starting in 1910, I was made editor in chief of the Architectural Record.

In 1912 I was promoted to editor of the Brick Builder, now called the Architectural Forum.

In 1915 I became editor of "White Pine", a series of architectural monographs and now called "The Monograph Series."

516 By Mr. MATTHEW:

Q. What year was that?

A. 1915. Simultaneously with the editing of "The Monograph Series" I was made editor in chief of "Pencil Points" in 1925.

By Mr. BURR:

Q. "Pencil Points" is devoted to architecture?

A. "Pencil Points" has the largest circulation among architects in the United States; some twenty thousand circulation.

Q. That completes the list, does it not?

A. Yes, sir.

By Examiner SHEPPARD:

Q. All published here in this city?

A. The Brick Builder was published in Boston by Rogers and Manson.

Q. You are practising to some extent, at least, as an architect?

A. In my small way, I do not like to turn down clients who present themselves, but I do not make an effort to solicit clients, because that is not regarded as professional.

Q. The work that you have done as an editor on these various publications, has that brought you into contact so that you know what the practise of architects is as regards their checking up in a
517 strict way the various types of lumber which they have specified for construction purposes?

A. Yes.

Q. Will you state how far the architect is supposed, by the rules of the architects association or code of ethics, and how far, in practise, he is able to ascertain whether the type of lumber specified is actually delivered on the job—is that a clear question?

A. That is a clear question, and it is one of the great faults of the architect profession that the architect heretofore, up to very recently, has not been able to check his lumber deliveries as he has any other material delivered to the job.

For instance, in the case of the delivery of portland cement, he sees on the bag that what he specifies as portland cement is printed on the bag. He may specify it by the manufacturer's name, and when it is delivered on the job he sees the word, for instance, "Atlas", if he specifies that, or in the case of paint that it shall be of white lead, and he may go so far as to specify the name of the manufacturer of the white lead.

He sees the receptacle on the job with the manufacturer's name on it, but when he goes on the job, so far as lumber is concerned he sees a pile of lumber for the millwork; his specifications have been very definite to start with as to species and grade, but from
518 that time on he simply has his idea of what has been furnished because his technical knowledge of it is very small, and it is very difficult to ascertain what that particular pile of lumber is according to specifications.

In other words, when the mill has made the trim and the moldings and the facia, and so forth, his specifications may have read that it should be white pine, California pine, but, unfortunately, they never, so far as I know, specify California pine, they specify white pine.

Knowing the difference between California pine and the real and the true species——

Q. Just a moment; will you give us first a statement as to California pine; what are you referring to, California white pine or sugar pine?

A. I am referring to the product known as California pine.

Q. To white pine?

A. Yes.

Q. You used the words "California pine" in your answer; you mean California white pine?

A. Yes. The reason I say that is because the California white pine manufacturers have advertised, and they have for a long time used the words "California white pine" and recently they have added the words "trade-name" or "trade-mark", which means nothing to the architect if he has occasion to question the
519 material as delivered on the job.

He simply asks his contractor, "Did you furnish white pine?"

And the contractor says, "I did."

"I don't believe it; show me your invoices", and the dealer through him or the subcontractor in this particular case—not every case—so far as the architect is concerned, produces invoices, and it will not say California white pine, or it will not even say that C.W.P. or W.P., without any adjective defining it.

Q. Did you ever see those?

A. I have seen those.

Q. Does the term "white pine" mean anything to the architect or has that term lost its significance?

A. It means everything to the architect who has had any experience in building.

Q. Will you just describe that, if you please, sir?

A. Of course, when lumber was lumber and during the early days of the lumber industry, the older men in the profession did not have any such substitute words, they simply specified that the material should be white pine and they knew very well they would get it because of the proximity of the lumber, and that is all there was to it.

Recently, however, other woods have come on the market
519 and have been sold by the contractor with whom the architect has dealings—he does not usually have dealings with subcontractors—for a period probably of 16 or 17 years ago, the subcontractors in my own experience, when white pine was specified, would come to your office and say, "We cannot get white pine; it is very scarce; it is very expensive, but we can get cypress. Cypress is just as good a wood, can we substitute cypress?"

"We want white pine. White pine is the only thing we want."

We are then told that it will take from six to eight to ten weeks to get it. The architect, faced with that problem, would say, "Then I guess we will have to take cypress, because the job must go ahead."

Over a period of from five to six years, that was the tale of woe told by the general contractor through his dealings with the architect. The dealer would have to come back and say "we cannot get white pine."

Q. Can they really get white pine?

A. I discovered, after making several investigations of my own, that the dealers would have price preferentials for cypress; they stock their yards with cypress. They had a limited amount of yard room, therefore they did not stock both cypress and white pine—I refer to genuine white pine—and the result was that it served to build up the myth that there was no more white pine.

521 Q. What is your experience; do you know whether there is genuine northern white pine in the market still?

A. I have every reason to believe that there is.

Q. Is that hearsay with you?

A. No; when it is specified and insisted upon it is furnished.

Q. That is, to your knowledge, is it?

A. Yes, sir.

Q. You said a few minutes ago that there was a statement or a myth that there was no more white pine——

A. I amend that to say northern white pine; true white pine can be furnished from Idaho or the Lake States. I had an experience of my own the summer before last when I specified white pine for a country club.

Q. Where was that?

A. In Westford, on Lake Champlain.

Q. Do you know whether you got northern white pine?

A. I know I got local white pine, of which there is plenty in the Adirondacks.

Q. Is that second growth or virgin timber?

A. That is virgin timber.

Q. Is virgin white pine, if you know, coming down from Canada at the present time?

A. It is.

Q. Is it coming down from Minnesota?

522 A. Yes, sir.

Q. That is good-sized growth, is it?

A. I cannot answer that.

Q. You do not know whether that is comparable with the original?

A. I know in the case of New York pine it is the method of small dealers to buy up a tract and carry a travelling saw mill there; they cut over the tract and sell the lumber within easy shipping radius, and that was the white pine that was used in my own job, where I insisted upon white pine, and I got it, notwithstanding the fact that the local dealer in Plattsburg was very insistent upon my taking something else that was all nicely dressed and surfaced four sides, which you can get elsewhere at cheaper prices.

Q. Do you know what that was?

A. California white pine.

Q. California white pine or sugar pine?

A. California white pine, so called.

Q. You said a few moments ago during a part of your testimony, in a rough and general sort of way, "when lumber was lumber"; lumber is still lumber, is it not?

A. It is.

Q. Then what did you mean by that statement? Can you be more specific and tell us what you meant by that phrase?

523 A. I meant when the architect or builder—the builder perhaps was the architect in the very early days; there was no other wood in the market, and when they built a frame house with frame studding and siding and with wood moldings, and so forth, it was all of white pine.

Q. You mean when no other wood was on the market; what do you mean by that—no other wood than what?

A. Than white pine. I mean as a softwood; that is what I am speaking of now.

Q. There was no other softwood on the market?

A. There was no other softwood, except North Carolina pine, which I always specify as N.C. pine, which was used for sheathing and under floorings, and so on, and thereby saving money for the client.

Q. How long ago was it that northern white pine was the paramount softwood in this market?

A. It still is the paramount softwood.

Q. I mean paramount in public consumption.

A. Probably 25 years ago.

Q. Was it as recently as 25 years ago paramount in point of consumption?

A. Yes; to the best of my knowledge.

Q. Do you know of any instances, of your own personal knowledge, where California white pine or western white pine or ponderosa lumber under any other term, including the words

524 "white pine", has been substituted or attempted to be substituted in place of so-called genuine white pine?

A. Yes. When I was publishing the White Pine Series of Monographs as editor, not as a seller of white pine, but as editor of a magazine purporting to show the longevity of the wood, it was brought to my attention once or twice or three times a week by fellow architects that they had reason to believe that the material delivered on the job was not according to their specifications.

Mr. MATTHEW. I object to that, if the examiner please, as pure hearsay.

Examiner SHEPPARD. Yes; that is hearsay.

Mr. MATTHEW. I have no objection to the witness testifying to matters within his own knowledge.

The WITNESS. This was in a direct telephone conversation with the architect; is that hearsay?

Examiner SHEPPARD. Yes; that would be hearsay.

The WITNESS. I can go on, however?

By Examiner SHEPPARD:

Q. Do you know any incidents of that kind, Mr. Whitehead, of your own knowledge?

A. It came to my own knowledge after the conversation over the telephone where I suggested to the architect that he take samples of the material as delivered on the job and send them
525 to the forest products laboratory in Madison, Wisconsin, to ascertain whether this wood that they were getting in each case was the wood that was specified.

Q. Do you know of your own knowledge what answer was made at Madison?

A. Only through conversation with the architect afterwards, as it was not my business to check up.

Mr. MATTHEW. I object to this testimony, if the examiner please.

Examiner SHEPPARD. Yes; that testimony can be obtained from the original source. You better obtain it from the architect himself, than have this witness testify to it as hearsay.

Mr. BURR. Does the examiner think it advisable for us to continue in the Government's case until the rest of the week, until we can get these witnesses down here?

By Mr. BURR:

Q. Let me ask you, can you give me the names of any of those architects, Mr. Whitehead?

A. No; I cannot under sworn testimony because I made no record of it. They were telephoning in and out and in and out all the time.

Mr. MATTHEW. I submit that there is a double objection to the testimony along these lines, Your Honor, and I stand upon my objection.

526 Q. Mr. Whitehead, do you regard California white pine—first, let me ask—from what species of trees is California white pine derived?

Mr. MATTHEW. We will stipulate that it is Pinus ponderosa, Mr. Burr.

Q. Is California white pine or other lumber made from ponderosa, in your judgment, a satisfactory substitute for genuine white pine, and if so, to what extent?

A. No; it is not a satisfactory substitute for genuine white pine to use in exterior of a building, in any way, shape, or form.

Q. Do you regard it as reasonably satisfactory for interior purposes?

A. I do, but not if exposed to the weather.

By Examiner SHEPPARD:

Q. You say it is all right for the interior?

A. For the interior but not exposed to the weather.

By Mr. BURR:

Q. What is the fault of ponderosa wood where exposed to the weather as contrasted with genuine white pine?

A. The fault is that it disintegrates and has a life of from three to five to seven years whereas the life of a white pine is still to be noted. It is still alive in all cases that I have examined.

527 As a matter of fact, it is very difficult to testify as to the life of the California pine because in many cases it is so recent—its use has been so recent, that some of the failures have not been brought to the attention of the profession as yet. It only remains to be seen in how many cases in the near future it will be developed——

Mr. MATTHEW. Just a moment; I suggest that this is all speculative.

Mr. BURR. Yes; I think that is rather speculative.

Mr. MATTHEW. I have no objection to the witness stating facts, but I do object to this sort of testimony.

Examiner SHEPPARD. Yes; that is true.

Mr. BURR. I have no objection to striking out the last speculative remark.

By Mr. BURR:

Q. Of your own knowledge, do you know the result of any ruling or report made by the Madison Laboratory or the United States Forest Laboratory?

Mr. MATTHEW. Of course, I shall object to that as hearsay.

Mr. BURR. I asked of his own knowledge of it. That would be his information, not hearsay.

Mr. MATTHEW. It is hearsay knowledge, and it cannot be anything else.

A. I can think of one that probably is not hearsay.

528 Mr. MATTHEW. I shall object to the witness undertaking to testify to any ruling or report made by the Madison Laboratory upon the ground that it is not the best evidence but is merely hearsay.

Examiner SHEPPARD. The best evidence of it, of course, is the report itself.

Mr. BURR. I was asking for the result rather than the report itself; not what they reported.

Mr. MATTHEW. The result of the report is hearsay as much as the record itself.

Examiner SHEPPARD. Let us see what the witness has to say on that subject.

The WITNESS. Having read a letter, is that bad evidence?

I have read a letter from the Forest Products Laboratory analyzing the specimens. Is that hearsay?

Mr. MATTHEW. It is hearsay, and I object to it on that ground.

Examiner SHEPPARD. If the objection is made, I shall have to sustain it, holding that the report is the best evidence.

Mr. BURR. I am not asking for the substance of the report; I am asking for what followed that.

Examiner SHEPPARD. I understand. That would be hearsay again, Mr. Burr.

529 By Mr. BURR:

Q. Do you know of your own knowledge any specific instance where California white pine, as used in exterior finish, has disintegrated within a comparatively short period?

A. I can testify to my own knowledge where Pinus ponderosa has deteriorated in a short period of time.

Q. Will you relate that experience?

Mr. MATTHEW. Is that California white pine?

Mr. BURR. I changed the question because I do not know whether it was California white pine; it was Pinus ponderosa.

Mr. MATTHEW. I object to his testimony unless it was California white pine.

Mr. BURR. If the examiner please, the question here is as to the durability of California white pine. Now, then, when we show that identically the same species, which is sold as California white pine, is also sold as pondosa, as western white pine, as New Mexico white pine, it seems to me that evidence as regards the character of that species is admissible here, as showing that the species, howsoever it may be named, lacks the ability to stand up under weather conditions.

Therefore I desire to press that question.

Examiner SHEPPARD. I think I will allow the testimony to go in.

530 By Examiner SHEPPARD:

Q. Mr. Whitehead, prior to your answering the question I want to ask you if your knowledge of woods leads you to know that the so-called wood known, manufactured, and sold in interstate commerce called the pondosa pine is of the same species as the wood under investigation in this case, known as California white pine?

A. I do know that it is the same.

Q. You do?

A. I do.

Examiner SHEPPARD. All right.

It has just been stipulated by counsel that it is the same, if I remember correctly, but I just wanted to know if the witness knew it.

By Mr. BURR:

Q. All right; state the specific instance that comes within your knowledge?

A. That specific instance was a job in which white pine, without any adjective was specified; the wood was furnished and milled and put in place, when a rainstorm about six years later blew a shutter off of the building.

The shutter was picked up and broke in the hand, and it was found that the wood was punk and had been held together merely by the pigments of paint.

531 Further investigation showed that the column and bases, cornice, window sills, and siding were in similar condition, but from one of the less exposed surfaces a piece of wood was obtained and sent to the Forest Products Laboratory at Madison, Wisconsin—again comes the report——

Mr. MATTHEW. I object to the report.

A. (Continuing.) The only authority we have—I am not a wood technician and I do not go around with a microscope to see if it is three-inch or five-inch or ten-inch pine, therefore I have to depend on the Government's authority, whether it is according to my specifications, and that is the only redress architects have.

You get no information from the retail dealer, because the retail dealer has no intention of giving any information.

Mr. MATTHEW. I object to the witness making a speech. I made the proper objection, on the ground that I have no way of checking up on mere hearsay, and I object to the witness undertaking to deliver a lecture.

Examiner SHEPPARD. Yes; that is true.

By Mr. BURR:

Q. How long ago was that, Mr. Whitehead?

A. It was five years ago.

Q. What was the name of the architect?

A. The name of the architect was Amar Embury.

Q. The building was what building?

A. The building was the residence of Charles Towne.

532 Q. At Litchfield, Connecticut?

A. At Litchfield, Connecticut. That is the one that I had first-hand information of, because I was interested in it in person.

Q. You went out to look at it?

A. Yes.

Q. That is exactly the same incident that the witness Embury testified to.

Mr. BURR. I have the carbon copy of the letter which was marked for identification and the incident that the witness has just testified to is the same incident which was referred to in the testimony of Mr. Embury.

Mr. MATTHEW. I will stipulate that that is the case.

A. My reason for bringing that in that it is the only one that I have first-hand knowledge of.

Mr. MATTHEW. I am not complaining, Mr. Whitehead, at all. I am simply stipulating that we have the same instances being made the subject of testimony by two witnesses.

The WITNESS. I will try to get the original letter from Mr. Kahler, of Madison.

By Mr. BURR:

Q. What is the reputation among architects of northern white pine for durability and general utility for exterior finish?

533 A. It is the wood preeminent.

Q. What, if you know, is the reputation of Idaho white pine among architects for exterior finish?

A. It enjoys the same reputation.

Q. Over a lesser period of time?

A. Over a lesser period, because it has been a lesser time on the market.

Q. What sort of wood for exterior finish is sugar pine?

A. I never had occasion to use sugar pine, but I understand—again it is hearsay.

Mr. MATTHEW. And I object to hearsay.

By Mr. BURR:

Q. Has sugar pine obtained, would you say, among architects in this section, a reputation for outside finish or is that still got to be won?

A. To my knowledge I have seen sugar pine used for exterior of buildings, and it is still in use.

Mr. MATTHEW. Pardon me; I think that answer is not fully responsive.

Mr. BURR. No; it is not quite responsive.

Examiner SHEPPARD. Mr. Whitehead said, I believe, that he did not know much about sugar pine.

Mr. MATTHEW. I have no objection to his answering that specific question as to the reputation of sugar pine; I think perhaps the question ought to be read to the witness.

534 Mr. BURR. Suppose you read the question, Mr. Reporter.

(The question was thereupon repeated by the reporter as above recorded.)

By Mr. BURR:

Q. Has sugar pine a reputation, and if so, what is it?

A. I think in the minds of the architects sugar pine is known to be a true white pine, and as such, if it is specified and it is used, and it can be checked and the specifications have been fulfilled, there are no condemnation proceedings started on the job.

Mr. MATTHEW. May I ask to have the original question read?

(The question was thereupon repeated by the reporter as above recorded.)

Q. Before you say what the reputation is, will you state whether it has a reputation, that is what I want to get at first.

Has it made a reputation here, or is it too new a wood to have a reputation established here?

A. I think there is confusion in the minds of architects as to whether sugar pine is a true white pine. In fact, I know a great many people have asked me the question, "Is sugar pine a true white pine?"

Q. Architects have asked you that question?

535 A. Architects have asked me that question many times, and I have told them that to the best of my knowledge it is a true white pine and they will make no mistake in accepting it as such.

Mr. MATTHEW. Now may we have an answer to the question?

The WITNESS. I gave you an answer to it right now.

Q. Would you say that sugar pine has a reputation—a general reputation among architects at the present time or not?

A. Not as sugar pine.

Q. Not as sugar pine?

A. No; not as sugar pine, as a true white pine; it would come under the category of a wood to be used for the exterior of a building.

Q. Has it the general character and standing in this community among architects as a true white pine?

A. Yes; so far as an architect has taken the trouble to investigate.

Examiner SHEPPARD. Now, let us get this straight. I do not think he has yet answered the question as to whether sugar pine has a reputation among architects as a wood suitable for exterior finish. I think he ought to answer that.

The WITNESS. I cannot answer that; no.

Q. Will you state whether or not the architects distinguish clearly between various woods known as northern white pine,

536 California white pine, and Idaho white pine, respectively?

A. There is confusion in the minds of the architect as regards those three named woods.

Q. Will you explain that situation, please?

A. The confusion results in the fact that the architect thinks that California white pine is a true white pine, and until he is informed of his mistake he is still in ignorance of that.

By Examiner SHEPPARD:

Q. How about the contractors, Mr. Whitehead; do you know anything about the contractors' knowledge on the same question?

A. I think the contractors' knowledge comes about—a contractor is, in a general way, a middleman. The architect specifies what he wants; the contractors figure on his specifications and plans; the contractor takes sub-bids for mill work and rough lumber, and so on, and theoretically, at least, the subcontractor figures from the same set of plans and specifications that the architect has furnished to the general contractor.

The bids are turned in and assembled, and the general contractor makes his offer based on the sub-bids.

The general contractor looks to the subcontractor to furnish the material as specified. Therefore, if the architect has failed on the contract, and the contractor has failed with the subcontractor,

537 and the subcontractor happens to be a retail lumber dealer, it follows that the architect does not know whether what he has specified is what he is getting—I mean he does not know how

to identify what he has specified on the job, and the subcontractor is very apt to take advantage of that fact in the supply of material.

By Mr. BURR:

Q. When a substitute material is placed upon the ground, is it often used and incorporated in the building, on account of the difficulty and delay which would be incident to changing the material?

A. Very often.

A pile of lumber is delivered on the job; the architect inspects it, condemns it; the subcontractor goes to his office and says he knows that it is not just what is specified, but that is all that he could get and it would take six to eight weeks or whatever length of time, depending on the story that the subcontractor would tell the architect; the architect is the agent of the owner and, knowing that the owner wants his building, takes it up perhaps with the owner and says, "We are not getting what we specified, but I think perhaps, under the conditions, it will have to do because it will be six or eight weeks' delay if we don't", whereupon the owner says to the architect, "Well, is there a price differential?"

538 The architect then takes up with the contractor the matter of price adjustment. He might get $2, $5, or $10 a thousand allowance as a credit on the contract and the owner say, "If there will be such a delay, we will take the credit and let it go at that."

Of course, they do not realize the great harm in taking the cash allowance where they should insist upon the material.

Q. Where it is a question of durability, will a cash allowance take care of the owner's interest?

A. No; it would not take care of the owner's interest. The architect therefore would put it up to the owner before he would accept such an allowance, having given him a fair warning that he would regret it in the long run.

Q. Have you a membership in any architects' organization, Mr. Whitehead?

A. I am a member of the Architects League of New York.

Q. How long have you been connected with the Architects League?

A. Eighteen years.

Q. Have you ever had any official position with the organization?

A. I was secretary two and a half years.

Q. Does any architectural association that you know of have rules that they promulgate?

A. Bylaws and constitution.

Q. I mean rules of conduct to delineate what the duties of
539 architects are to their clients?

A. There is a code of ethics promulgated by the American Institute of Architects setting forth what constitutes professional conduct.

Q. Are there any definitions indicating what the scope of the architect's duties are in the entire picture?

A. Yes.

Q. Do those specifications require that the architect be a judge of the species of lumber that has been delivered on the job, or is that outside of his requirements?

A. He is the judge and arbiter after the contract is let, and he acts in the interest of both owner and the contractor.

Q. Because the code of ethics or rules so provides?

A. There are no such rules; there are no rules prescribing by the American Institute of Architects as to whether architects have to know species of woods.

Mr. MATTHEW. I think the prior answer should go out. The question was whether the rules did so promulgate.

The WITNESS. There are no such rules. Only an organization of that sort would set-up a rule of conduct as regards professional ethics.

By Mr. BURR:

Q. Is such the custom?

A. Yes.

Q. As you described the function of architects in the ques-
540 tion before last, is that the custom, rather than the rule, Mr. Whitehead?

A. The function of the architect is to design, specify, and superintend the erection of the building, and having specified—which is under the head of supervision—it is his privilege to accept or condemn any material that is delivered on the job that is not according to specifications.

Q. The question as to whether or not a given body of lumber delivered on the job is or is not California white pine or is or is not northern white pine, is that up to the architect?

A. It is up to the architect to decide that and to condemn or accept as he sees fit, according to his findings.

Q. Are architects able to judge lumber so as to ascertain whether a species of lumber that resemble one another closely is one thing or another? Are they sufficiently capable wood technologists to be able to know?

A. Not one out of a thousand.

Q. Are you yourself?

A. I am not as an expert, but in special cases in seeing what the market afforded——

Q. Can you tell a delivery of lumber on the job well enough to know whether it is California white pine or whether it is northern white pine?

A. I could not.

541 Q. You could not tell?

A. No, sir.

Q. What protection then has an architect in performing his duty to his client, to tell whether or not the lumber delivered is ponderosa pine or whether it is strobus or monticola?

A. Unfortunately he has none.

Q. Is it in the reliance of the architect on reputable contractors and to endeavor to place the job with reputable contractors?

A. That is his first duty to his client, to ascertain the reputation of the contractor, before the contract is let.

Q. Will you say whether or not his selection of contractors is the method of fulfilling his duty to his client as regards the selection of lumber material?

A. No; his duty goes on beyond that point to the place where and the time when the material is delivered on the job; he also superintends the workmanship in putting it in place. His duty is not over until the job is delivered to the owner.

Q. And it is his business to size up grades of lumber on the job?

A. He has not that technical knowledge. He might question the grade. He might look at the pile of moldings, for instance, and find it full of knots, and so on. He may have specified that
542 the surfaces should be clear, so he condemns that immediately. He wants to know how it was prepared, and he might ask some questions, but his dealings would be through the general contractor and the general contractor's dealings are with the subcontractor; the subcontractor would report to the general contractor, and the general contractor back to the architect.

Q. Do you know of any architectural organization in this city which has given instructions and advice to its members and others as to how the ordering of woods should be specified or recognize them?

A. That information has been given to the architects' profession through the printed word and not through any organization.

Mr. MATTHEW. The answer then should have been "no" to that question.

The WITNESS. No.

Q. Has it been given to the profession in any other fashion?

A. It has been given to the profession through the printed word and mailed to them for their information, if they cared to read it.

Q. Mailed to them by whom?

A. Mailed to them through the publication of the "White Pine Series Monographs", through publication of grading rules and specification data published by the old White Pine Bureau, and
543 through bimonthly advertisements contained in the monograph series.

Q. Is there any uniformity in New York among architects as to how to specify the wood known as Pinus strobus?

A. There is no uniformity of specification.

Q. Have you seen specifications by architects calling for Pinus strobus in any fashion?

A. I have.

Q. In what varieties do they call for it?

A. For the exterior use of the building?

Q. Yes; make it for the exterior use. In what language do they specify it and in what terms?

A. In as many fashions as there are architects.

There is no standard set of specifications. Each architect is the author of his own specifications. He may have help from various sources, but he is the author of the specifications.

Q. Do any of them call for that type of wood under the botanical name of strobus?

A. Occasionally, having been warned many times——

Mr. MATTHEW. Cannot the witness say yes or no to that instead of going into an argument on each question that is put to him?

Mr. BURR. It seems to me he is entitled to explain his answers.

544 Mr. MATTHEW. I do not think that that requires any explanation. He has been asked a very simple question, whether that wood is specified under its botanical name of Pinus strobus. That does not require an extended argumentative answer. Yes or no is all that is asked for.

Examiner SHEPPARD. Just answer the questions as briefly as you can.

Read the question to him.

(The question was thereupon repeated by the reporter as above recorded.)

A. As Pinus strobus occasionally.

Q. Under what other names is the genuine white pine of the northeastern part of the country and the Lake States called for by architects within your knowledge?

A. As white pine.

Q. Any other ways?

A. No.

Q. Do they ever ask for northern white pine?

A. No.

Q. How do you yourself specify white pine for exterior finish when you desire it?

A. I have just copied from one of my specifications just that type which refers to this.

Q. Is this your normal specification?

A. This is my usual specification. I might explain that the
545 architect as a rule, spends a great deal of time and thought in writing what he calls a model specification.

Mr. MATTHEW. There is no objection to your reading the specification.

The WITNESS. He writes and examines it over and over again, because if one mistake gets in the specification it is likely to be perpetuated over a long period of time.

Q. Now, in your particular case what do you specify?

A. "All lumber for any purpose mentioned in these specifications" (that is the general class and refers to lumber for the whole build-

ing) "shall be thoroughly seasoned, carefully milled, and graded in accordance with the Standard Lumber Association grading rules of the producing district from which the particular species of lumber specified has its origin."

That is the general class, referring to workmanship and the species and the grading rules.

Q. I was referring to the way in which you tried to specify that strobus shall be furnished rather than any other type of white pine where you are calling for white pine?

A. According to the specifications I read, under the heading of "Framing, sheathing, window frames, and sash", itemizing the various items——

Q. I do not care for that so much.

A. Window frame and sash?

Q. Yes.

546 A. "All window frames and sash shall be manufactured from genuine white pine of suitable grade, free from sap, and with clear faces wherever exposed, made to sizes as per detail shown on drawing."

Q. You do not say strobus, then, do you?

A. No.

Q. Under that specification would you regard the furnishing of Idaho white pine as compliance with your specification?

A. Yes; the specification says, "genuine white pine."

Q. What do you include under the term "genuine white pine"?

A. I personally include the white pine from the Lake States and from Idaho and sugar pine.

Q. Would you or would you not regard California white pine or pondosa pine as compliance with those specifications?

A. No, sir.

Mr. BURR. That is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Whitehead, you stated that commencing in 1915 you were the editor of a series of monographs known as the "White Pine Series"?

A. The White Pine Series of Architectural Monographs.

Q. Over what period were they published?

A. They were published for ten years, from 1915 to 1924.

547 Q. These publications were sponsored by the White Pine Bureau, and I take it that you were in the employ of the White Pine Bureau for that purpose?

A. For that purpose.

Q. What was the membership exactly of the White Pine Bureau?

A. The White Pine Bureau is made up of manufacturers of white pine. The membership changes from year to year, depending on the attitude of the manufacturers. The McGoldrick Lumber Company, the Edward Hines Lumber Company of Chicago——

Q. I do not care for the names particularly—in general, the membership comprised what?

A. The mills manufacturing genuine white pine.

Q. Were the Weyerhaeuser interests represented?

A. The Weyerhaeuser interests were not represented except one or two of the mills manufacturing white pines.

Q. Then one or two of the mills were members, and I suppose the members of this organization took care of its financial support?

A. It did.

Q. Did the membership comprise manufacturers both of the strobus pine, Idaho white pine, and Califoria sugar pine?

A. I do not think there were any sugar-pine manufacturers represented in the association.

Q. It was limited, then, to the manufacturers of what you should term the true white pines?

548 A. Idaho and Lake States pine.

Q. And the old White Pine Bureau to which you likewise referred in the latter part of your testimony is an organization which printed advice to architects and was likewise made up of white-pine manufacturers?

A. That was likewise made up of white-pine manufacturers.

Q. There again manufacturers of northern white pine and Idaho white pine?

A. Yes.

Q. At the time when you first engaged in your practise as an architect what did the term white pine mean?

A. White pine meant that species of wood which was white pine; in other words——

Q. Never mind; I will reframe my question. Did it denote specifically the northern white pine or Pinus strobus?

A. It denoted Pinus strobus in my own mind.

Q. Gradually did it become enlarged to include the Idaho white pine?

A. Yes.

Q. And more recently did it become enlarged to include the California sugar pine?

A. In those cases where there was a question as to—I mean delivery of lumber—there was a doubt because of its peculiar markings as to whether it was or was not a true white pine—the question

549 came up, as the sugar pine came into the eastern market, was it a true white pine, and the authority of the Government was asked for, and it was found to be a true white pine.

Q. I am not asking for the authority of the Government. I am asking now as to the meaning of the term in your profession. Your answer is that initially it referred to the true white pine or Pinus strobus; that is, northern pine?

A. Yes.

Q. Later on it came to include the Idaho white pine as well, which we recognize to be a true white pine botanically; now I ask you whether it has likewise come in your profession to comprehend the California sugar pine as well?

A. I do not think that sugar pine is generally considered to be a true white pine. In the minds of the profession, I am speaking of now.

Q. That is what I am asking, as to the meaning of white pine in the profession.

A. You mean of architects?

Q. I am talking about architects.

I am talking within the scope of your direct examination. You said, Mr. Whitehead, as far as you are personally concerned, when you prepare specifications calling for white pine, I think your exact term, as you have stated it, is, "genuine white pine free from sap"; were you prepared to accept there northern white pine or

550 Pinus strobus, Idaho white pine, or California sugar pine?

A. The California sugar pine would be accepted in places where the wood was to be painted only.

Q. But you would accept California sugar pine as being in compliance with a specification for genuine white pine?

A. For genuine white pine.

Mr. BURR. May I interrupt just a moment?

If the examiner please, I would move the examiner to excuse all witnesses who may be present here, except those that I shall name: Mr. Andersen, Mr. Baum, Mr. Welsh, and Mr. Danaher.

Any other witnesses who are here may be excused.

Examiner SHEPPARD. Very well, those witnesses that Mr. Burr has named will remain; the rest are excused.

By Mr. MATTHEW:

Q. I take it further, from answers that you gave on direct examination, that some architects would not be willing to accept sugar pine in response to specifications calling for genuine white pine?

A. They would not—can I elaborate that?

Q. I think I understand. If you want to elaborate, you may.

A. Depending on the finish required.

Q. Also, I think you explained in your direct testimony that sugar pine has found its way in this market on an extensive scale rather recently, and is not well known to architects?

551 A. Not very well known.

Q. And is not known as well as Idaho or northern white pine?

A. No, sir.

Q. Does this white pine organization still exist?

A. No.

Q. When was it disbanded?

A. In December 1924 it was disbanded.

Q. Were you associated with it——

A. Up to that time.

Q. What was your relation to it?

A. I was editor of the house organ published by them, but I was not connected with the Bureau as such.

Q. What was the house organ?

A. The White Pine Series and the Architectural Monographs.

Q. Those were the publications of the old White Pine Bureau?

A. Yes.

Q. And you were employed as editor?

A. I was employed in a professional capacity, but not as a member of the Bureau.

Q. How long has Idaho white pine been known in this market, Mr. Whitehead?

A. Fifteen to sixteen years.

Q. How long has California sugar pine been known to this market?

A. That I am not prepared to answer; I do not know.

552 By Examiner SHEPPARD:

Q. More recently, though?

A. More recently.

By Mr. MATTHEW:

Q. You recognize the fact, Mr. Whitehead, that heartwood ordinarily resists decay much more satisfactorily than sapwood?

A. I do.

Q. Do you happen to know whether the ponderosa pine lumber in the Towne house job, which, as you have stated, had decayed badly, was sapwood or heartwood?

A. Sapwood.

Q. You said, Mr. Whitehead, that it was your understanding that lumber which is marketed under the trade name of pondosa pine is yielded by the same species of tree which yields the lumber which is marketed under the trade name of California white pine?

A. Yes.

Q. And we agree that that is the fact.

Is it possible for a contractor or for a retailer to make an effort to substitute lumber which he has purchased under the trade name of pondosa upon pine specifications calling for white pine?

A. It is.

Q. You said architects are not ordinarily wood technolo-
553 gists and they would find it quite difficult to identify a particular lot of lumber as being either northern Idaho or California white pine?

A. It is very difficult for them.

Q. Even expert lumbermen, Mr. Whitehead, sometimes find it difficult to distinguished, say, between California sugar pine and California white pine, do they not?

A. I would not say they would. A lumberman would know the difference right away between California white pine and California sugar pine or Idaho white pine.

Q. Have you not seen some California white-pine boards which closely resemble California sugar-pine boards?

A. I never have.

Q. You think the distinction quite marked?
A. Yes.
Mr. MATTHEW. That is all, thank you.

Redirect examination by Mr. BURR:

Q. Mr. Whitehead, you testified that you would accept sugar pine on a specification such as you wrote, calling for genuine white pine?
A. I do.
Q. That is your personal view as to what you would do, or is that the position that architects generally in this vicinity
554 would take?
A. It is my personal view. I do not think the architects would know the difference.

By Examiner SHEPPARD:

Q. You are not speaking for the contractors?
A. No, sir.

By Mr. BURR:

Q. In your testimony, you are speaking for the architects generally?
A. Yes, sir.
Q. In your work as a writer, I think you testified that you got out a house organ or something that you designated as a house organ?
A. I did.
Q. In that work you were speaking more particularly for a group of genuine white-pine manufacturers, were you not?
A. I was.
Q. In your other editorial work where you were editor of Pencil Points and other magazines that you mentioned in the architectural line, will you state whether you regard your editorial work other than that for the White Pine Association as propaganda work, or it it judicial in character or what?
Mr. MATTHEW. I do not think that is proper redirect. I asked the witness nothing about these other publications.
555 Mr. BURR. If the examiner please, I think counsel's cross-examination was designed to show, and I think in part it was successful in showing that part of the writing that witness had done in connection with this whole matter was that of a protagonist or propagandist for white pine.
Mr. MATTHEW. I did not say that.
Mr. BURR. You did not say it in so many words, but you brought it out, and I want to bring out that he has been entirely impartial in the whole matter and that his views were not colored and his work was not that of a protagonist or propagandist for a species of white pine.
Examiner SHEPPARD. Go ahead and answer the question.
Mr. MATTHEW. There is nothing in any word that I used that was designed to give that impression.
Examiner SHEPPARD. I did not get that impression.

Mr. MATTHEW. It is perfectly legitimate for him to do so if he desired.

Mr. BURR. I submit counsel has brought out facts from which that inference might well be drawn.

A. What is the question?

Examiner SHEPPARD. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

The WITNESS. It is judicial in character.

Mr. MATTHEW. Will the examiner give that question and
556 answer probative value? It seems to me that is rather a conclusion of the Commission to be drawn from the testimony. I should gather from the witness's testimony it was not altogether judicial.

The WITNESS. I referred to my work in the Architectural Record and Pencil Points, and that has nothing to do with propaganda.

Mr. MATTHEW. Nobody has intimated otherwise.

By Mr. BURR:

Q. As regards those works which you have mentioned, will you state whether you regard yourself as stating fairly on their merits the qualifications and utility of all classes of lumber that came for your attention?

Mr. MATTHEW. I object to the question. There is nothing in the record as to what was said in these other publications at all, and it is not for the witness to say how he regards himself.

Examiner SHEPPARD. It is not essential to the case, anyhow.

I have no interest in it whatsoever. I have regarded Mr. Whitehead's testimony from a technical viewpoint and his knowledge of lumber, and so forth, but as to the various periodicals, I am not interested in them at all.

Q. Are the members of the American Institute of Architects paid subscribers to the Monograph at the present time?

A. About 91 percent of the members of the American Insti-
557 tute of Architects are paid subscribers to the Monograph Series.

Q. Is that a house organ at the present time?

A. It is not.

Recross-examination by Mr. MATTHEW:

Q. What is the Monograph Series?

A. It is a continuation of the previous publication, conducted as a personal enterprise.

Q. In other words, the status of these publications has changed?

A. Absolutely.

Q. From 1915 to 1924 they represented the house organ of this old White Pine Bureau?

A. They did.

Q. Since that time you have continued it as an independent publication?

A. As a personal enterprise without the subsidy or anything of the kind.

(Witness excused.)

FRED C. ANDERSEN was thereupon called as a witness, and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

558 Q. Mr. Anderson, what line of business are you engaged in, please, sir?

A. Manufacturer of window frames.

Q. Located where?

A. Bay Port, Minnesota.

Q. How long have you been engaged in that line of business?

A. Twenty-five years.

Q. Are you at the head of the concern at the present time?

A. Yes.

Q. How long have you been so?

A. Fifteen years, just about.

Q. What line of business particularly—only frames; is that right?

A. Yes; frames, just a few moldings, but practically all window and door frames.

Q. How long has that been practically your sole specialty?

A. All the time, during the entire twenty-five years.

Q. How wide a territory does your trade cover?

A. At the present time it is the Rocky Mountain States and all east.

Q. That is to say, you have customers over that area?

A. Yes; when I say all east, there is a State here and there that we do not get into, but as general thing it is the eastern part of the United States.

Q. What type of lumber do you buy for making into your
559 products, Mr. Andersen?

A. Genuine white pine and ponderosa pine.

Q. Where do you buy your genuine white pine?

A. From Lake State mills, Idaho mills, and California sugar pine mills.

Q. What Lake State concerns do you buy from?

A. Our purchases from Lake State mills have been decreasing in quantity, but I get a little still from the Cloquet Mills and Virginia, Minnesota, and the Rainy Lake Lumber Company.

Q. Is that virgin pine, first-growth timber?

A. I suppose part of it is, but that is something that does not come up in our dealings, that is, the wood as to what tree they cut it out of we do not pay much attention to, but I would be of the opinion that they are cut to a considerable extent in smaller diameter, not mature.

Q. How about your Idaho white pine, that is virgin timber, I suppose, is it, or do you not know as to that?

A. I would not naturally know. I do know it is somewhat larger timber than the northern white pine because the plank comes to us wider and we do not find plank with sap on both edges, which is a sign it is cut out of small timber.

Q. The second growth would be quite largely sapwood, would it not?

A. It would have more sap.

Q. Do you have specifications calling for frames of genuine
560 white pine or white pine, or how do specifications read?

A. We make our own specifications.

Q. I mean in selling rather than purchasing.

A. We make our own specifications what we sell. We manufacture stock frames and sell the frames we make according to our ideas of what a frame should be.

Q. What do your customers ask for? You have these varieties of white pines you named, you also have California white pine; did you testify so?

A. No; I did not say that.

Q. I thought you said California white pine, in part.

A. No, sir; ponderosa—I see the point. We use in every frame, some pondosa and some genuine white pine, using the genuine white pine in the exposed part of the frame that goes outside of the building, and is exposed to the weather, but for the unexposed part we use pondosa pine.

Q. When you use the genuine white pine for the exposed parts, are you able to get rid of that sap, I mean, so that the sap is not exposed to the weather in the portions that you have testified to?

A. To a very large extent; yes.

Q. You do send out some frames in which some sap is exposed to the weather, of white pine?

A. They may be.

Q. But to a large extent, you are able to put it on the inside,
561 or how do you dispose of it?

A. We buy genuine white pine because there is less sap in it; we do not want sap in the exposed parts of our frames. In the grades we buy genuine white pine particularly from the mills that are cutting in matured timber, large timber, and in those certain grades there would be no sap except on account of mismanufacture at the mill, yet we occasionally get a plank that was not produced in just according to their rules of practice in turning the log, so we may have a little sap on it.

Q. What do you do with that little sap that there is there?

A. We endeavor, if other conditions are such, that we can turn that sap edge, so that there is just a little streak of sap into the inside of the building.

Q. Are you successful, in general, in doing that?

A. Yes, sir.

Q. But is that impossible to do, as a rule?

A. With the small amount we have in genuine white pine, it is largely possible to do that.

Q. Has white pine lost its significance to the trade to whom you sell, or does it still have a meaning?

A. That is a hard question to answer yes or no.

Q. Answer it the best you can.

562 A. Because it is not the same in all cases. There are customers of ours that are appreciative of the difference between genuine white pine and other pines, but I am sorry to say that quite a large part of the trade does not know or perhaps does not want to know or does not care.

Q. Have you competitors in the frame business who are using California white pine for their frames?

A. Ponderosa pine sold under the name of California white pine? It just happens to be very little used for frames.

Q. There is very little used for frames?

A. Very little used for stock frames, and I think that is because the stock-frame factories happen to be located in the ponderosa region, where they changed the name to pondosa pine.

Q. Are there competitors of yours who are using pondosa pine for frames?

A. Yes, sir.

Q. Do you have to pay more for white pine than you do for——

A. You might make this point, I think it should be made to clarify this, that I am talking of stock-frame manufacturers who make stock frames in carloads.

The small mills that make frames to order for distribution in the localities in which they are situated, I am not in a position to say. I think they do use more California white pine for frames than my previous answer would have indicated.

Mr. MATTHEW. I think the witness should confine his testimony to facts within his knowledge.

563 Q. Now, Mr. Andersen, is the white pine that you buy higher in price or lower in price than the pondosa that you buy?

A. Higher.

Q. In the manufacture of California white pine or pondosa pine into frames without the use of exterior genuine white pine, is the construction cheaper than to make it part of white pine and part of ponderosa?

A. The materials that go into the frame would be cheaper; yes, sir.

Q. Would the cost of construction be cheaper where you make it entirely of the one wood?

A. I do not think so, but I never had the experience.

Q. Throughout your experience as a manufacturer of frames have you always made the frames of the three species of lumber, or did you use at one time but the one species for the frame?

A. We have not always used those same two species; we have always used genuine white pine for the outside parts of the frame in the entire history of our company, but where we now use pondosa, we have used other pines than pondosa—we have used genuine white pine in choice pieces; we have used yellow pine from the South; we have used Norway pine from the North, and it is merely in recent years that we have adopted pondosa pine for the unexposed parts of the frame; I would say ten or twelve years.

564 Q. Why do you regard white pine as better for exposed portions of the frames?

A. The genuine white pine is less prone to split and warp, which are points in its favor for exposed work. However, the big reason we prefer it, the more important reason than those is that it is obtainable practically free from sap.

Q. Is is feasible to make frames from the ponderosa tree, confining yourself to heartwood?

A. I would not consider it so.

Q. The part of the frame that is made out of the ponderosa tree, as you testified, where not exposed to the weather, is that heart or sapwood of the ponderosa?

A. Just as it comes.

By Mr. MATTHEW:

Q. It may be either?

A. Yes.

By Mr. BURR:

Q. It is usually a mixture of the two?

A. Yes, sir.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Andersen, what circumstances led you to resort to pondosa pine for use in making unexposed portions of your frames,

565 that is, why did you change from other woods rather than to pondosa?

A. It is the best pine from a working standpoint, and the factory grades of lumber are best adaptable in pondosa pine, considering the pines in a group, that we might choose from.

Q. That is, the pondosa pine lumber which you use for those purposes more nearly resembles the northern white pine than such woods as yellow pines, for instance, from the South?

A. That happens to be the case; but that is not the reason for our choice.

Q. I am not suggesting that that is the reason.

A. If you were, I should say that it was in spite of the fact that you suggest.

Q. All right; put it this way: At one time you did use some southern pine?

A. Yes.

Q. Was it long leaf?
A. No, sir.
Q. Short leaf?
A. Yes, sir.
Q. At times you have used the Norway pine for the unexposed portions, have you?
A. Yes, sir.
Q. And you decided that pondosa pine was more suitable for the purposes that you required than southern or northern
566 white pine?
A. Strictly from an operating factory standpoint; yes—that it was more acceptable to the trade; I will put it that way.
Q. It is more suitable from a factory standpoint—just what do you mean by that?
A. I mean, as I said before, that the factory grades of lumber can be better secured in pondosa pine. It is a softer wood and nicer wood to work in, a nicer wood to cut and to manufacture into the unexposed parts of frames. I would like to be able to finish that and make the point clear.

By Examiner SHEPPARD:

Q. All right; go on.
A. The reason that I say that is it is not a question of more ready acceptance on the part of the trade——

By Mr. MATTHEW:

Q. I did not suggest that.
A. As that many architects prefer a hard pine for the parts of the frame where the window slides in contact with the jamb of the frame, and the specifications are often written "yellow pine" in architects' work. The idea obtains through the territory that yellow pine is pretty good lumber for what is called the pulley style, or that part of the frame where the sash slides.
We have had in some instances to rather sell the idea of pon-
567 dosa pine being suitable. We ourselves consider it as fully suitable and entirely suitable, and it is so much nicer stuff for us to make, so much better lumber from the manufacturer's standpoint, that we prefer to use it, not because it has a resemblance to white pine, but we are permitted to use it because it bears a faint resemblance to the other pine.
Q. I did not suggest any superficial resemblance. You find it more suitable to the pines that you used ten or fifteen years ago?
A. Yes.
Q. You purchase most of your pine from the inland empire section?
A. I do not know just where the pondosa line is; southern Oregon, Klamath Falls, and the inland empire are our source of supply of pondosa pine.
Q. Do you buy it under the trade name of pondosa pine?

A. Just in the lower edge of that territory that I mentioned some invoice it as California white pine. I do not see the invoices and I do not pay much attention to what they call it.

Q. Then you buy some under the trade name of California white pine and some under the name of pondosa?

A. Yes.

Q. You use it indiscriminately in the factory, irrespective of the trade name?

A. Yes, sir.

568 Q. The trade name has nothing to do with it?

A. Yes; I understand some of the pine is cut from the adjacent timber and if it is sawed north of these mills it is called pondosa, but if it is sawed south it is called California white pine.

Q. You are not interested in the trade name?

A. No, sir.

Q. You are interested in the quality and utility of the lumber itself, regardless of the trade name?

A. So far as our purchases are concerned, yes.

Q. That is what I am talking about.

A. Yes, sir.

Q. So far as you are concerned, in your purchase of lumber, it does not make any difference whether we have a trade name of pondosa pine or a trade name of California white pine or some other trade name as long as you get the lumber of the quality and character which you require for your manufacturing purposes?

A. Because we have the name pines and we advise ourselves of the real facts of the case, that is true; yes, sir.

Q. The answer is yes. Then it is immaterial to you what the trade name is; you are interested in the quality and utility of the lumber.

A. That is true in our case; yes.

Q. That is what I am asking.

569 A. Yes, sir.

Q. Under what name do you sell your frames or offer them to the trade; how do you describe them in your catalogs or advertisements?

A. Andersen window and door frames, outside casings and sills, genuine white pine.

Q. Is that all?

A. Well, we have a lot more to say. Our trade mark was formerly "Anderson White Pine Frames", but we had a call from the Federal Trade Commission, and they questioned whether we could call our frames white pine frames, and after that time we became very specific and adopted the practice of calling our frames "Andersen window and door frames, outside casings and sills, genuine white pine."

Q. And they are offered under that designation today?

A. Yes.

Q. You said, I think, in response to a question on direct examination, that there is very little California white pine used for frames?

A. By stock-frame manufacturers. I should like to add to that, as I did before.

Q. I think you did add that before.

A. Yes, sir.

Q. When you further stated that it happened that most of the firms—that is, these stock-frame manufacturers using this
570 particular lumber—manufacture it in the northern territory, where the lumber is commonly called pondosa pine; is that correct?

A. Yes, sir.

Q. Do you know whether those frames are made entirely of pondosa pine or whether they are in part made of white pine?

A. It has been my observation that until recently they have been made entirely of pondosa pine. Quite recently some of the factories in the Spokane district have offered as an alternative and at a higher price frames of Idaho white pine, outside casings and sills.

Q. I think you made some statement in the early part of your testimony to the effect that your purchasers of the northern white pine lumber have diminished in recent years?

A. Yes, sir.

Q. To what circumstances is that due?

A. I am not a lumber manufacturer; I only know what they have to offer us. There has been a decreasing quantity of the factory grades of lumber, which means grades of lumber that will produce clear cuts offered to us by the northern mills. I am advised that this is because they are cutting in smaller timber than formerly, and consequently what white pine may produce is largely of the common grades and less of the factory grades. There has also been some preference on our part for the factory grades produced
571 out of more matured and larger timber, because such factory grades as are offered to us and are furnished to us by the lake district mills have more sapwood in them than similar factory grades furnished us by the other two groups of mills.

Q. By the other two groups, you mean what?

A. Monticola and lambertiana.

Q. I did not quite finish my question. You mean Idaho pine manufacturers and manufacturers of California sugar pine?

A. Yes, sir.

Q. You purchase some of your white pine lumber from the Weyerhaeusers, did you say?

A. I did not use the Weyerhaeuser name.

Q. You purchased at Cloquet?

A. Very little.

Q. Is that a Weyerhaeuser operation? I think it is stated that it is.

A. I think the Weyerhaeusers own all the mills in Cloquet.

Q. And in the Virginia and Rainy Lake?
A. Very little.
Q. Do you purchase any Idaho white pine from Weyerhaeuser?
A. A small percent.
Q. Can you state what proportion of your purchases of white pine are represented by Pinus strobus?
A. I imagine a fairly accurate guess—and this would only be a guess—not over two percent.
572 Q. What proportion is represented by Idaho white pine?
A. Another guess. I would say 35 percent.
Q. The remainder then is represented by California sugar pine?
A. Yes, sir.
Q. Just one other point. You were asked by counsel for the Federal Trade Commission whether the term white pine has lost its significance and I am not sure whether you completely answered that question, so I shall ask you this question: First, in the early part of your manufacturing experience, what was meant by the term white pine?
A. Strobus.
Q. Later on, was it broadened so as to include the Idaho white pine?
A. Yes.
Q. And still later, so as to include California sugar pine?
A. Yes, sir.
Mr. MATTHEW: That is all, thank you.

Redirect examination by Mr. BURR:

Q. Mr. Andersen, I think you said on your cross-examination that what you were interested in was the quality and character of the wood rather than the trade name; let me ask you this: To the extent that your competitors use California white pine and market their goods as California white pine, will you state how that affects,
573 if at all, your ability to compete with your frames which are also called white pine?

Mr. MATTHEW. Just a moment, if the examiner please, there has not been a word in either direct or cross-examination about competitors of this witness selling any material as California white pine in frames, and my question to the witness had to do with his purchases of lumber, and he specifically repeated that in his answer, and said that was as far as he was concerned, as a purchaser, and that was the import of my question.

Examiner SHEPPARD. I think that is so, Mr. Burr.

Mr. MATTHEW. He said nothing about competition with California white pine.

Mr. BURR. If I recall correctly, the witness testified in general terms that he did not care anything about trade names, so far as he was concerned, as long as he was able to get the lumber which had certain qualities and characteristics that he needed.

Mr. MATTHEW. So far as his purchases of lumber are, concerned, and my question was confined to that. There has not been a word of testimony about competitors selling frames, as California white-pine frames, not a word.

Mr. BURR. Will you stipulate such is the meaning of the testimony, irrespective of the text of the record?

Mr. MATTHEW. Certainly; and I think the witness will testify that that was his understanding of my question.

574 The WITNESS. Yes, sir; I tried, as far as I could, in answering your question, to make it plain that it was only as a purchaser that I would answer that way, but if you were going to discuss with me the matter of selling my product my answer might be quite different.

Mr. BURR. Very good; I must have been a little inattentive and I withdraw the question.

Q. When you testified in regard to the quality of lumber from the Pinus ponderosa tree, under the trade name pondosa, will you state whether you were referring to the qualities of that tree equally, whether sold under the name "California white pine" or whether under the name "pondosa"?

A. There is just a shade of preference, we don't care what the name is, but there is just a shade of preference for the pondosa pine, which happens to grow further south and is sold generally under the name of "California white pine"; it is a little larger lumber, a little softer, a little wider plank, but practically we have no preference between the two.

Q. Where have you bought ponderosa lumber under the name "California white pine" that you most prefer?

A. I would rather not answer that question.

Q. All right, I will withdraw the question.

A. They may raise our price.

Q. I believe you stated that the ponderosa was best from the working standpoint in the respect in which you were using

575 the ponderosa; do you regard the ponderosa better than genuine white pine for the interior of the frame, or do you use it on account of cheapness, or what is the reason you make your frames from two different classes of wood at the same time?

A. My answer would be yes to both of your questions. We use it because it is cheaper, and also it more nearly meets the requirements of that part of the frame-consuming trade, or rather the frame-using trade, who still cling to the idea that their pulley styles should be yellow pine.

Q. In other words, it is not a preference merely for other types of yellow pine, but also a preference over genuine white pine for that part of the frame; is that correct?

A. I would not like to say that, if the price was equal with the other, that the preference for slightly harder wood would influence

us to use ponderosa pine for the unexposed parts, but the combination of the two influences, that of the price and that of the preference in some quarters for the slightly harder wood, is what determines our choice.

Recross-examination by Mr. MATTHEW:

Q. Would you regard pondosa pine as being only slightly harder than the northern white or Idaho white?

A. I think that pretty well describes my idea; parts of it are no harder. Speaking of pondosa, you will find just as soft pieces as in parts of genuine white pine that you ever
576 picked up.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. But there would be a contrast in durability between the sap of pondosa and white pine?

A. Between the sap of pondosa and the heart of the white pine?

Q. Does the heart of the white pine represent the part that you are using in the main?

A. Yes.

By Examiner SHEPPARD:

Q. Mr. Andersen, did I understand you to say that there is no sap in the genuine white pine?

A. No; I did not say that.

Q. There is sap in it?

A. Every tree has sap.

Examiner SHEPPARD. That is my understanding and I did not want to get you wrong.

(Witness excused.)

577 DWIGHT J. BAUM was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your business is what, Mr. Baum?

A. Architect.

Q. How long have you been an architect?

A. In my own practice fifteen years.

Q. You are not associated with another firm; you are in for yourself at the present time?

A. Yes, sir.

Q. Unincorporated?

A. Yes.

Q. Where is your location here in the city?

A. Riverdale-on-Hudson, New York City.

Q. You have been in the vicinity of New York in your entire experience as an architect?

A. All my life.

Q. Mr. Baum, has the term "white pine" lost its significance in the architects' profession in this locality?

A. No.

Q. Why did you hesitate over that answer, sir; can you explain?

A. Because generally the specification writer in the office writes "white pine." They haven't in mind really anything except the Eastern States pine, the Lake States pine, because it has
578 always been the custom of the trade. Specification writing is a sort of hang-over affair. A man is liable to take one specification, and he copies it over and over; he is liable to use old terms. A specification writer, as a lawyer, whom you would consider as a technical adviser, does not really exist. If you ask me personally what white pine means, I can say that I have a house in upper New York 120 feet long, every stick of which is of white pine.

Q. You built that for yourself, Mr. Baum?

A. I built that for myself, and I got the lumber from Tonawanda, New York. I moved over 100,000 feet of lumber to get the siding of that white-pine lumber. I might say that most of my work is along domestic work, along colonial lines, so I use a great deal of lumber.

Q. Will you be kind enough to state, in order to give us a picture, some of the jobs on which you have been the architect?

A. They extend from Maine to California and Florida to Canada.

Q. Will you mention a few notable ones, if there are such?

A. The residence of Cleveland H. Dodge at Riverdale.

Q. That is one of the Dodge Brothers, is it?

A. No; that is Phelps Dodge—I just can't think of any at the time, but I can give you a list of a hundred—Charles Evans Hughes, Jr., my next-door neighbor at Riverdale, William P. Hoffman has a big southern house and the trim and columns are genuine
579 white pine. I am reproducing now in Milwaukee, Wisconsin, the oldest northern white pine house in the United States; that is the old Fairbanks house in Dedham.

Q. Where do you get the northern pine for that job?

A. Usually through distributors at North Tonawanda; most of the pine seems to come from the eastern mills, through that jobbing section near Buffalo.

Q. Why do you recommend northern pine?

A. Because of its great record of durability, of having stood all these years—outside of St. Augustine in southern Florida, they have stood longer than any buildings in the country. Some of the masonry work in the houses in New England have disintegrated and have been torn down, but the Fairbanks house still stands. Of course, that was due, to some extent, to the lime mortar and other conditions, but still the real New England houses are still there.

Q. Were you able in the erection of these residences to eliminate sapwood for exterior exposure?

A. Yes; not only that but knots. We have one knot in the entire house, and we kept that as a curiosity.

Q. Are you able to get northern white pine of good quality now, Mr. Baum?

A. Yes.

Q. Where does it come from?

A. I cannot say that. My work is so varied—I have a specification writer, and I have an office manager—that I only personally
580 take care of the clients and design.

Q. Do you watch the contrast between the sap- and the heartwood of the genuine white pine?

A. When I go to a job, and I see a sash that is not painted, I might pull out my knife and start to whittle a piece off to see whether it appears to be as genuine white pine. Technically, I do not know, only from experience of having seen it.

Q. Do you call it genuine white pine, irrespective of whether it is heart- or sapwood?

A. I suppose I do, to be honest.

Q. That is a rather doubtful answer.

A. Yes; it is. I could not honestly say otherwise.

Q. Going back now to the question which I think you answered only in part, does the profession attach a significance to genuine white pine—I think that answer was interrupted.

A. I say they attach a significance to genuine white pine, yes.

Q. Does that significance include any other variety than the northern white pine or Pinus strobus?

A. I personally have always thought that from the old New England or around the Great Lakes region was the genuine white pine, and in my own specifications, I have warned my specification writer to put in northern genuine white pine, but I have not stated what States it came from or anything else.

Q. Have you had any experience in the substitution of any
581 other wood for northern white pine, when white pine was specified?

A. Only in this way. I have had shutters and moldings in houses that have come loose and apparently had a sign of rot, and I have rejected this and after they had been taken out and replaced I could not imagine that happening to genuine white pine. I do not know from a technical standpoint what the reason is.

Q. You don't know what the wood was that rotted in that fashion?

A. No; I do not. In fact, I have a couple of shutters in my own house, an extension that was added, maybe five years, and some of the moldings that have apparently deteriorated.

Q. For all you know it might be genuine white pine?

A. I do not know, but I have never seen any other get that way.

Q. Any other of what wood get that way?

A. What I considered genuine white pine.

Q. Have you had any experience of being offered California white pine as genuine white pine, or any attempt to sell you California white pine for such a purpose?

A. No, sir. No one has ever endeavored to substitute it to me; they might to my specification writer, but it has never been changed in our specification and we never used any such trade name in our specifications.

Mr. BURR. I think that is all.

582 Cross-examination by Mr. MATTHEW:

Q. You have stated, Mr. Baum, that the term white pine means to you the Lake States pine?

A. Yes.

Q. Do you exclude Idaho white pine, so called, and that would also exclude sugar pine—California sugar pine?

A. I said it meant that to me, but I would not say definitely it would exclude them.

Q. I mean to you.

A. Generally speaking, I had that in mind; yes.

Q. So far as you are concerned it would exclude California sugar pine and Idaho white pine?

A. Yes.

Mr. MATTHEW. That is all.

(Witness excused.)

LEWIS E. WELSH was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Welsh, you are an architect, are you?

A. Yes.

Q. How long have you been such?

A. About twelve years.

583 Q. With whom are you affiliated or connected?

A. No one.

Q. You are in for yourself?

A. Yes.

Q. At what location?

A. 25 West 45th Street.

Q. Mr. Welsh, has the term "white pine" any significance to you as an architect; and if so, what?

A. Well, it means a perfectly good wood that I like to use.

Q. Do you regard California white pine as a fulfillment of your specifications for white pine?

A. No, sir.

Q. Why not, sir?

A. Well, I have the impression that it is not as durable.

Q. Do you specify it at all for inside finish?

A. I have never specified it by name.

Q. Have you ever used it, so far as you know, for inside work?

A. I do not think so.

Q. What do you use in the way of pine, if any, for interior work?
A. White pine.
Q. What do you get for your specification of white pine, the northern or California or sugar?
A. I cannot tell that, because I cannot tell them apart.
584 Q. Do you regard the furnishing of northern white pine as a compliance with your specifications calling for white pine?
A. Yes, sir.
Q. Do you regard the furnishing of Idaho white pine as compliance?
A. I should say yes.
Q. Do you regard the furnishing of sugar pine as compliance with the specifications calling for white pine?
A. I am not familiar with sugar pine at all.
Q. Do you regard the furnishing of California white pine as compliance with your specifications for white pine?
A. No, sir.

By Examiner SHEPPARD:

Q. How about pondosa?
A. I do not know the difference.
Mr. BURR. I think that is all, sir.

Cross-examination by Mr. MATTHEW:

Q. Mr. Welsh, why did you hesitate in response to counsel's question as to whether you regard Idaho white pine as compliance with white pine specifications?
A. Because I am not familiar enough with the various things coming here.
Q. So you are not really certain whether you should regard Idaho white pine as satisfactory compliance with white pine
585 specifications?
A. No; I am not.

Redirect-examination by Mr. BURR:

Q. Are you certain in your own mind as to whether or not California white pine is genuine white pine?
A. No.
Examiner SHEPPARD. Of course, if you don't know anything about it, just say so.
Mr. BURR. If he is certain in his own mind, he knows that.
The WITNESS. No; I am not.
(Witness excused.)
(Whereupon, at 1:00 p.m., a recess was taken until 2:00 p.m.

586 AFTER RECESS

2:00 P.M.

R. E. DANAHER was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Danaher, your business is what?

A. Mostly the lumber business.

Q. What lumber company are you connected with?

A. I am connected with two; I am president of the Booth-Kelly Lumber Company, whose head offices are in Eugene, Oregon; and vice president and in control of operations of the Michigan-California Lumber Company, head offices in Grand Rapids, Michigan, with an office at Camino, California.

Q. Where do you make your headquarters?

A. I live in Detroit, Michigan, but I am away a great deal of the time; I spend a good deal of my time on the coast between those two operations.

Q. How long have you been president of the Booth-Kelly and in charge of operations of the Michigan-California Company?

A. I have been president of the Booth-Kelly since February 1921.

Examiner SHEPPARD. Are both of these companies respondents in the case?

The WITNESS. The Michigan-California is a respondent; the other is not.

587 By Mr. BURR:

Q. Now will you please finish your answer?

A. I have been vice president of the Michigan-California Lumber Company since it was organized in 1918; up until 1923 I was vice president and general manager; in 1923 I went back to Detroit to live and continued to be vice president and have been only active in the operations of the Michigan-California this past year, 1929, because the manager out there died.

Q. I wish you would tell the examiner as best you may, without specific questioning, what your experience has been with forests and with forest products; what species you have been familiar with at the various stages from the beginning of your experience—just give us the outline, I do not mean in great detail.

A. Well, as a boy, before I got into business, I was more or less familiar with the white-pine operations in Michigan. I am of the third generation in the lumber business and I worked as a tally boy when very young, thirteen years old, in Michigan. Our operations were both in the Southern Peninsula and also in the Northern Peninsula. After I left school, in 1901, I spent practically two years in the South with timber cruisers, or estimaters, learning to estimate timber.

Q. What part of the South was that?

A. Mississippi and Louisiana mostly, although I had some experience in Alabama.

588 In 1904, I went up to northern Michigan and took charge of the Danaher Hardwood Lumber Company, which manufactured hardwood and hemlock lumber.

From 1906 to 1909 I was in British Columbia estimating and cruising timber.

In 1910 I started an office in Portland, Oregon, and did timber cruising for banks and trust companies making bond issues on timber. That was continued there in Portland, although I was not there in charge all the time, until 1916, at which time R. E. Danaher Company took over this mill that now belongs to the Michigan-California Lumber Company.

There was a default in the bonds out on the company that owned it, and we made arrangements with the bondholders, and leased the mill paid them for the timber, and in that way started to liquidate the bonds.

We ran that for two years and then formed the Michigan-California Lumber Company—In 1918 joined with Mr. John W. Blodgett, of Grand Rapids, who had purchased a large tract of pine in that locality.

Q. Mr. Danaher, what type of lumber does the Booth-Kelly Company produce?

A. Entirely Douglas fir.

Q. What type of lumber does the Michigan-California Lumber Company produce?

A. California sugar pine, so-called California white pine, a small amount of Douglas fir, white fir, and some incense cedar.

589 Q. When you said, "so-called California white pine", are you selling it under that trade name at the present time?

A. No; not for the past year.

Q. What do you call it?

A. Pondosa.

Q. When you sell it, you name it pondosa, do you?

A. Yes.

Q. In what part of the country is the largest market which you have secured?

A. Will you explain that question, do you mean for pondosa?

Q. Let us divide the question: Where is your principal market, so far as your efforts have gone for the disposal of the pondosa pine that you produce?

A. Mostly in the central west.

Q. Which side of the Mississippi, or both sides?

A. I would say both sides of the Mississippi, but not very much east of a line through Detroit and Cleveland; south from Detroit through Cleveland.

Q. Do you maintain your own independent sales forces?

A. No, sir; we sell through wholesalers.

Q. Where is your principal market for the sale of your sugar pine?

A. East of a line, south from Buffalo and from Pittsburgh.

Q. Your sugar pine gets further east, does it?

A. Yes, sir.

590 Q. Do you make your sales also through wholesalers for the sugar pine?

A. Yes, sir.

Q. Referring now to the Michigan-California Lumber Company, your product also has been sold for how long a period under the trade name pondosa?

A. Just slightly over a year.

Q. Will you state what your trade name prior to that time was?

A. Our trade name for pondosa timber was California white pine.

Q. Did you formerly regard that trade name as accurate and a proper designation of your lumber?

Mr. MATTHEW. Is not that calling for a conclusion?

Mr. BURR. Probably it is.

Examiner SHEPPARD. That is something that we have got to decide in this case.

Q. What led you to change from the name California white pine to the term pondosa pine?

A. The answer to that question would be rather long and involved, because it would take into consideration the things that went through my mind over a long period of years, that is, over a period of several years.

Q. Well, can you not summarize that for me?

Mr. MATTHEW. I am assuming that the witness is going to give statements of facts and not a statement of reasoning.

591 The WITNESS. I am going to state the facts as they appeared to be facts in my mind that led me to make that change.

Mr. BURR. That is quite all right, Mr. Danaher.

Mr. MATTHEW. I just want to suggest not to indulge or argument or that sort of thing.

The WITNESS. I was formerly convinced at one time that California white pine was the proper name for that lumber, and continued to be of that mind until I found—it was called to my attention that we were losing the sale of some sugar pine because California white pine had been substituted for it.

Then, in 1923 the then Secretary of Commerce, Hoover, called a meeting of the lumbermen in Washington to develop an American lumber standard. I attended those meetings regularly for three years, and the more I got into it the more it seemed to me that American lumber standards should mean absolute integrity in grades manufactured and species.

In my own mind I did not think that California white pine, so-called, was as good a wood as Pinus strobus, to which my mind

always goes back when you say white pine. I thought that under these American Lumber Standards, and at the suggestion and instigation of Secretary of Commerce Hoover, that grade-marked
American standard lumber—I felt that such lumber should
592 not in any way—the trade names of any of that grade mark or trade-marked lumber should not be misleading, and I did feel that the name California white pine was misleading to some, at least, of the ultimate consumers and to some architects and contractors. Therefore I took the matter up with the president of our company and we determined to make a change of trade name.

Q. That is the change you referred to before?

A. That was the change to pondosa.

By Examiner SHEPPARD:

Q. I want to know about when that change was made?

A. That change, as near as I can remember it, was made in the spring of 1928. At that time I was not so actively engaged in the management, but I had a cousin who died last December, and I had to go back there.

By Mr. BURR:

Q. Does the term "white pine" retain any significance in the lumber industry at the present time?

A. I think it does.

Q. What is that significance, briefly speaking?

A. To my mind that means that in the New England States and in some of the Lake States the term "white pine" means Pinus strobus alone to a great many of the architects and to most of the consumers.

Q. Does the term "white pine" have any significance outside of that territory that you have mentioned?

593 A. I do not believe that I understand the question.

Mr. BURR. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. I think it does, in a broader way.

Q. Do you regard Pinus monticola or northern white pine as a genuine white pine?

A. Yes, sir.

Q. Do you regard Pinus lambertiana or sugar white pine as a genuine white pine?

A. Botanically, yes.

Q. Do you regard it as a genuine white pine from the standpoint of practical utility, and, if not, to what extent do you regard it to fall short of genuine white pine?

A. I think Pinus lambertiana has all of the attributes of the genuine white pine, Pinus strobus, but it has a defect to a slighter degree to Pinus strobus in the fact that it does show traces of sugar or pitch coming through it at certain times.

Q. Turning to the Pinus ponderosa, will you state in what localities you have had an opportunity to study it on the ground as a growing timber or as felled logs?

A. I have been in the forest where ponderosa grows in British Columbia, Oregon, California, and New Mexico.

Q. What parts of California?

594 A. In the northern part of California, in the Siskiyou Mountain District in the Feather River part over near Loyalton, California, in central California, in our timber, which lies between the forks of the American River near Lake Tahoe, also south of there on the Stanislau River, the forest that now belongs to the Pickering Lumber Company; again south of there to the forests that were until just recently the property of the Yosemite Lumber Company, which now, I understand, belong to the Sugar Pine Lumber Company.

Q. Will you state what your experience is as regards the uniformity of Pinus ponderosa as between the various sections of its range? That is a rather broad question, but I wish you would say briefly what you can say to clarify that situation.

A. The size, quality, or texture of the timber differs very greatly in different localities. In some localities it is apparently young timber and quite small; in others, it is medium-sized timber with a fairly good texture; in others, it is very large timber with a comparatively poor texture. If you will let me explain what I mean——

Q. Yes; go ahead.

A. The timber of southeastern Oregon is a medium-sized timber to a great extent, with a very good texture. It grows at comparatively high altitudes and on the tableland. The ponderosa growing along the Feather River in the Feather River country in Cali-

595 fornia, for some reason that I do not know, was of better texture, that is the majority, and that also holds good of the timber east of the mountains in Lassen County, California.

Q. Is that particularly large growth also?

A. That is quite large and of very good texture.

Q. All right, proceed.

A. The timber in central California, well, I might say, from the operation of the Michigan-California Lumber Company, beginning a few miles north of there, and south, as far as I know, which will include the old Yosemite, is very large. A considerable proportion of it is a fairly good, soft texture, and also there is a portion that is hard and flinty.

Our own timber, to that extent, is so hard and flinty that we have never been able to market it in the eastern part of the country, where they are used to demand a soft pine.

If you want me to continue to New Mexico, that lumber is small, defective, and fairly soft in texture.

Q. How is it in Arizona, have you been familiar with that?

A. I have never been in the timber country in Arizona.

Q. What part of New Mexico are you referring to?

A. To the Zuni Mountains in New Mexico. I was chairman of the board of the American Lumber Company there, and I spent considerable time in the Zuni Mountains in logging operations.

Q. I wish you would describe in the same way the uniformity or lack of uniformity of the sugar pine over the district with which you are familiar with that tree?

596 A. I am familiar with the sugar pine in the Siskiyou Mountains in northern California down to the Yosemite country. That is the Yosemite Lumber Company's timber.

Q. That is the main habitat of the tree, is it not?

A. Yes; that is the main habitat of the tree. The heaviest growth tree is again from the operations of the Michigan-California Lumber Company, or a few miles north of there, down through to the operations of the Sugar Pine Lumber Company down near Fresno.

There is sugar pine found up in southern Oregon, west of Klamath Falls and mostly in the country west of the Southern Pacific Railroad, although there is some sugar pine found between there and the Klamath Falls—the city of Klamath Falls and the lake.

Q. Is there not some sugar pine up east of Eugene and Albany, and in that district?

A. An occasional tree you may run on there, but it is not in commercial quantities. There is some difference in the texture of sugar pine, but the difference in texture and in size is not nearly so notable as is the difference in ponderosa. In my opinion, the sugar pine of the north extremities to where it grows in commercial quantities is slightly harder than it is in its main habitat. The size of the trees may be on an average slightly smaller, but there is no great variation in size or texture.

597 Q. What would you say as to the uniformity or lack of uniformity of sugar pine as regards the wood to be found in the individual tree, taking as near as you can conceive of it the average tree; is there a wide variation between various parts of the lumber in the individual tree, or what is the situation?

A. Well, there is a variation, of course, between the sapwood and heartwood, which is true in all trees.

Q. On appearance, is there much difference in appearance between heart and sap?

A. Yes; there is a difference in appearance; it is easy to distinguish between the heart and sapwood. The sapwood is lighter in color and there is generally a fairly well-defined line between the two.

Q. How is the difference in texture between the sapwood and heartwood; is there much variation?

A. The sapwood is lighter and softer than the heartwood, but not to the extent that it might be in other woods.

Q. Will you state what the uniformity or lack of uniformity would be in the Pinus ponderosa, taking as nearly as you may aver-

age conditions as between the heartwood and the sapwood in the Pinus ponderosa, in texture, appearance, and so forth?

A. I could not take to the average of conditions in ponderosa until I take the average of districts. The districts in which this softer grade of ponderosa timber grows there is not such a big variation——

598 Q. As there is in the others, you mean?

A. As it is, we will say, in the central California district, where there is on the average a very wide differential between the texture of the sapwood and the heartwood.

Q. In what respect?

A. The heartwood being heavier and harder.

Q. Referring to the ponderosa which grows in the district that you have described, as not the soft-texture ponderosa, will you say whether the heartwood and sapwood differ as regards the pitch that is to be found there more than it does in the fine-textured ponderosa belt; is that clear?

A. Yes. I could not say.

Q. You could not say as to that?

A. No, sir.

Q. Referring to the finer-textured ponderosa lumber that you described, would you say whether the difference in texture between the heartwood and the sapwood is about the same as the average difference in texture between the heartwood and sapwood of sugar pines, or how would you say it varies?

A. About the same. I would describe it by saying, in my opinion, there is a little bigger variation, I think, in ponderosa than I think there is in sugar pine.

Q. Have you noticed in your studies of these lumber differences between the summer and the spring growth in the annual rings?

A. No, sir; I cannot say that I have. I have never been
599 that technical.

Q. Is there a difference in the utility of sugar pine and of Pinus ponderosa for exterior use, in your opinion?

A. Yes, sir.

Q. Will you describe what that distinction is?

A. It has been my experience in watching this lumber in the piles than ponderosa is more liable to warp, twist, and cup than sugar pine.

Q. Is that when exposed to the weather, or is that for inside finish also?

A. That would be exposed to the weather, in my experience—I am not a builder, and I do not know much about it, but I have seen it in the yards—in piles where we are drying it out—drying the stock.

Q. Is that same thing true of the lumber of the two species referred to in the process of kiln drying?

A. I would not be qualified to answer on that, because it is not usual to kiln dry sugar pine to any great extent, or it has not been until the last year or so.

Q. Have you seen any cases of Pinus ponderosa warp, twist, or get out of shape in process of kiln drying or as a result of it?

A. Very decidedly; yes.

Q. Your answers as to this quality in ponderosa, of greater likelihood of warping and twisting, is that true of the better grades of Pinus ponderosa to the same extent as harder grades, or
600 is it less true?

A. I could not say definitely.

Q. You have seen evidences of it in both qualities of lumber, have you?

A. Yes, sir.

Q. Have you had experience in the durability of the two woods where exposed to weather?

A. No, sir; I have not; that would be hearsay.

Q. Do you know what the rules of your Michigan-California Lumber Company are as regards the length of time that a sugar pine tree may properly be left in the log stage before cutting?

Mr. MATTHEW. Can you not ask that question as to the witness's own views? You ask for the views of the company. I would like to have his own experience.

Mr. BURR. All right; I will qualify him in better shape.

By Mr. BURR:

Q. Have you had an opportunity to observe the sugar pine trees and the ponderosa trees after they have been felled and before they have been transferred into lumber?

A. Yes, sir.

Q. Have you noted the length of time that can elapse in the sugar pine log before it is brought in and cut up without evidences of decay?

A. I would have to answer that by saying this: That after a year of being down, the sapwood of the ponderosa is practically
601 worthless; it is all rotten, while the heartwood has become infected with rot, so that it is practically worthless to bring it into the sawmill and cut it into lumber.

On the other hand, sugar pine, we have cut the sugar pine logs, and I have seen them cut of timber that has been down so long that small trees were growing out of the dirt that had accumulated on the butt of the log. The sapwood of that sugar pine was entirely worthless, but there was a lot of good lumber in the heartwood.

Q. For how long a period would that type of log have lain on the ground before those circumstances of growth from the butt would take place?

A. At least ten or twelve years. I want you to understand, of course, that that is an unusual case. But sugar pine on Government contracts—we are now working on a Government contract, forest surveys—the Government contract demands that you bring in all down sugar pine, but it is not necessary to bring in all down ponderosa pine or western yellow pine, as is specified in the contract.

Q. Within what period?

A. They have been down a year and a half or two years, where the sap has gone.

Q. What is the significance of that difference in the rule or contract?

602 A. I would say the significance of that rule is that the forest surveys recognize the fact that the heartwood of sugar pine will last and be good, sound wood for a considerable length of time after the sapwood has rotted.

Q. In the Klamath Falls district in southern Oregon near the State line, do you know whether the ponderosa trees are occasionally called pondosa and sometimes California white pine, right from the same district, irrespective?

A. Well, the Shevlin-Hickson Company with mills at Bend, Oregon, are logging south from Bend, practically to the upper reaches of Klamath Lake and their ponderosa timber from that locality is marketed under the name pondosa. Numerous Klamath Falls mills are logging practically up to the line to which the Bend operations reach, and ponderosa from that is manufactured at Klamath Falls or at Klamath Lake and is marketed as California white pine.

Q. Do you regard the sapwood of sugar pine as more durable than the sapwood of Pinus ponderosa?

A. I would not say so.

Q. You would not say there was much difference?

A. There is not much difference in any sapwood.

Q. Do you regard that Pinus ponderosa when used for interior finish, as a satisfactory wood?

A. Interior finish, did you say?

Q. Yes; interior finish.

603 A. Yes, sir; I would be perfectly willing to use Pinus ponderosa for interior finish on a job that was being done for me.

Q. How do you get along with this characteristic or tendency to warp; do you handle it faster, or what is the system?

A. When it is thoroughly dry, not exposed to the weather, when it does not get wet and dry and does not absorb the moisture of the air, it will stay put on interior work.

Q. What advantages has it for interior work; will you state?

A. What advantages over sugar pine?

Q. I was speaking more or less in that district, but I imagine it would have to be comparative to be of much value; what advantages has it over other soft pines for interior work?

A. I do not think it has any advantages over other soft pines for interior work, but it is an excellent wood for interior work wherever it is not exposed to the weather.

Q. As contrasted to sugar pine, is it not more reasonable in price to the builder?

A. Very much so.

Q. The same is true of strobus or monticola?

A. As compared with the price of strobus or monticola, do you mean?

Q. Yes.

A. Yes, sir; it is very much cheaper.

Q. You think it is a satisfactory wood at a less price, do you?

A. For certain purposes.

Q. For interior finish we are talking about now, are we not?

604 A. Yes, sir.

Q. Do you know whether these contracts of the Government for the handling of Pinus ponderosa logs within a set period which you testified to, whether that relates to both the softer and the harder grades of Pinus ponderosa?

A. Before answering that, I would like to just correct my testimony on that contract stuff.

Q. Please do.

A. As I think over it, I am not quite sure of the length of time that the Government specifies, but I do know that we are not required to bring in dead and down ponderosa timber after it has reached a certain stage, where we are required to bring in the same kind of timber in sugar pine.

Q. And you are not required to bring in the ponderosa timber for what reason?

A. Because it is practically worthless after a certain length of time. I want to correct my testimony as regards the length of time, because I am not certain.

Q. Do you know, of your own knowledge, whether they make the same requirement regarding dead and down ponderosa in the softer texture that they do in the territory where you are working?

A. I have no knowledge of that.

Q. This contract with the Government that you referred to is a contract for the logging off of some of the lands within the forest preserve; is that it?

605 A. That is for Government-owned land.

Q. That logging is to be conducted under the contract regulations which are imposed in connection with the matter when offered for bidding; is that right?

A. Yes, sir.

Q. As I understand your testimony, it is not necessarily the largest pondosa logs that are the softest?

A. No, sir.

Q. It is not a matter of maturity, but of locality partly; is that true?

A. I think both. I think it is climatic and soil conditions covered with the maturity of the lumber. Mature lumber, in certain climatic soil conditions, can have this hard texture, whereas the matured timber in a different place will have very soft texture under different conditions.

Again, that is a surmise on my part, because I am not a wood technician and do not know the aspects—the scientific reasons for that.

Q. With reference to the situation as regards percentage of heart and sap wood in the ponderosa timber, have you had occasion to observe that?

A. You mean the percentage of heart and sap wood?

Q. I mean the proportion—"percentage" calls for too much accuracy?

A. I have had occasion to observe it; yes.

606 Q. I would like to ask you this: Referring now to the average soft-textured ponderosa tree and comparing it with the average sugar-pine tree, which has the greater percentage of proportion of heartwood?

A. Of heartwood?

Q. Yes, sir.

A. The sugar pine.

Q. Is that a materially and noticeably larger percentage?

A. Yes; I should say quite noticeable.

Q. Referring to the harder texture of ponderosa tree, how does that compare with the sugar pine?

A. The sugar pine has a larger percentage of heartwood.

Q. That is a materially larger percentage, noticeably larger?

A. Yes.

Q. Do you have a substantial outlet for sugar pine for pattern stock?

A. Yes, sir.

Q. I wish you would explain to me what kind of a thing a pattern is for purposes of the trade for which sugar pine is susceptible of use. I do not think that that is very clear in the record, although references to pattern stock have been made frequently; can you give us a little further light on that?

A. Pattern stock is a lumber used for making patterns from which moldings are cast; that is, patterns are built up in any shape desired and planted in the sand in the regular way of casting

607 either steel or brass, whatever you are going to cast to your pattern.

For the main requirements of the stock it has to be workable, soft-texture, fairly straight grain, with the ability to hold its shape under practically all conditions, and also to be decay resisting to a considerable extent, because these patterns are sometimes put away for years and then dug out and casting of that kind made, particularly where it is special work.

Q. Do you have a material outlet for sugar pine for pattern purposes?

A. Yes, sir.

Q. Does your own company sell a good deal along that line?

A. We do not sell it as pattern stock except occasionally we get an order for a carload, which says, "For pattern purposes", and in that case we take care to select, and throw out pieces that we do not believe would be fitted for pattern stock.

Q. The shipments that you make of both products to wholesalers go right to the purchaser, do they not?

A. Generally they go direct to the wholesalers' customer and we do not know who he is.

Q. The wholesaler does not warehouse this material?

A. Not to my knowledge.

Q. It is a brokerage business in the main, is it?

A. Yes, sir.

Q. Sugar pine is, in your judgment, particularly adaptable
608 to pattern work?

A. Yes, sir. That is hearsay, because I am speaking only from what I have been told by people buying it.

Q. You know for what purposes you sell this stock and whether it gives satisfaction, do you not?

A. I know that we sell the stock and I know we have had orders calling for pattern stock, but I do not know to whom that pattern stock went, because as we market our stock to the wholesalers, we are not in contact with the ultimate consumer.

Q. If you ship direct from the mill to the ultimate consumer, on order of the wholesaler, don't you get to know who it is then?

A. You don't do it that way. The wholesaler has it consigned to him, and he diverts it, so you don't know his customer.

Q. Do you ever have orders for Pinus ponderosa or for California white pine when your order calls for pattern-stock purposes?

A. No, sir.

Q. Do you regard Pinus ponderosa as suitable for pattern purposes?

A. No, sir.

Q. Have you ever had occasion to compare or experiment upon the matter of the way in which ponderosa and lambertiana take paint?

A. No, sir.

Q. You do not know which retains the paint better then?

A. No, sir.

Q. Is there competition between California white pine and sugar pine in the parts of the country where you sell?

609 A. Yes, sir; I should say that there was.

Q. Your trade in Pinus ponderosa competes with sugar pine of sap or the heart?

A. Well, without an explanation, I do not believe I could answer that question satisfactorily. A large percentage of the upper grades of ponderosa come from the sap. That is your clears and "C" Select and better in all thicknesses. The lesser percentage, a great deal of the upper grades of sugar pine come from the sap.

Q. Is it or is it not the upper grades of the California white pine and ponderosa that compete with sugar pine?

A. I don't understand the question.

Mr. BURR. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. Yes; in this eastern market.

Q. What do you mean when you refer to "this eastern market", right here in New York or New England, or how wide a territory?

A. My idea of eastern territory is from Buffalo, Pittsburgh, east.

Q. Is it or is it not the light-colored, fine-textured, part of the Pinus ponderosa that competes most strongly with the genuine white pines in markets generally?

A. I am afraid I would again get into hearsay on that, because I am not much of a marketer of lumber, having always sold our product to wholesalers.

610 Q. And you don't get as far east as this, very much?

A. We sell to wholesalers in this eastern territory; yes, sir.

Q. I would like to ask you this: You said something about the integrity of grades and species. Does the preservation of the grade and species constitute an important consideration as regards the maintenance of soft-pine lumber as contrasted with other materials in lumber at all? Is that question clear?

A. I think so. In answering that I would have to say I think the integrity of grades, species, and manufacture of lumber is important to all lumber, because the misuse of lumber or using of the wrong lumber, or lumber in the wrong place or a wrong class of lumber for a certain thing, where the lumber does not stand up, produces a dissatisfied customer and tends to throw the market off of lumber for building material to the lumber's substitute, and I think it is important for all lumber, not only soft pine but all lumber, that each lumber be marketed under a name that is not misleading, and that the grades manufactured be absolutely true.

Q. Do you think that the use of a type of lumber for exterior residence purposes, which fails to show durability, has a tendency to affect one way or the other the market for lumber for building purposes?

A. Yes, sir.

Q. What effect would that have?

A. Well, it would naturally have the effect of producing sus-

611 picion in the mind of the person who built, the builders, architects, and also in the minds of everybody who heard of it that lumber, as such, was not fit building material and that they should use some substitute, such as brick, cement——

Q. In order to get durability?

A. In order to get durability.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. You have just stated, Mr. Danaher, that the preservation of the integrity of the grades and species is very important to the lumber industry?

A. Yes, sir.

Q. In the early part of your testimony, you referred to the lumber which is produced by the Booth-Kelly Lumber Company in Eugene, Oregon, which I think you said is entirely Douglas fir?

A. Practically all Douglas fir.

Q. Is that marketed as Douglas fir?

A. Yes, sir.

Q. Is it marketed to any extent as Oregon pine?

Mr. BURR. Just a moment, if the examiner please; I think that counsel for the defense is obviously intending to lay a foundation for the contention that inasmuch as certain other lumber has been perhaps misnamed, that therefore the misnaming of this lum-
612 ber is innocent. That throws upon counsel for the Commission a burden to try and prove that the misnaming of this lumber, that tree and the other lumber, does no harm to the public.

If the argument for which he is now laying the basis is to be met in proper shape, in other words, without any lumberman present, who knows at firsthand these other types of lumber intimately, we are now putting the Commission in a position of having to determine whether some other misnomer is deceptive; whether some other trade practice is acceptable as against this. We do not want in this case to force the Government to go on here and prove that the misnaming of the Douglas fir, if it be misnamed, is not detrimental.

It seems to me, whether it is detrimental in that particular branch of the lumber industry, is another case. If there is a misnomer there and if the misnomer has the effect on the public which is detrimental, that makes another case, and that does not palliate this case one way or the other.

On the other hand, if that misnomer is not detrimental, it makes respondent's case neither weaker nor stronger. Each one of those cases should stand on their own merits. The misnomer here, is enough. Other things are immaterial, and I will object to the entire line of questions, and I think I am right.

Mr. MATTHEW. Counsel for the Commission misconceives and unintentionally somewhat mistakes my purpose. I am testing the validity of the testimony of this very witness respecting the
613 necessity of maintaining the integrity of goods and species, and I am testing it with respect to his own testimony as to lumber produced by his own companies.

I submit I am not going far afield. I am not going to attempt to show, if the examiner please, that lumber which is marketed as poplar lumber does not come from a poplar tree at all; I am not going very far afield; I am not going to retry the mahogany case; I am dealing with the testimony of this very witness.

Mr. BURR. May I have the question read?

(The question was thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. You may answer the question.

A. The legal name in California for Douglas fir is Oregon pine. We do not turn down any orders from California, because they state that it should be Oregon pine instead of Douglas fir, because that has been the local name for a long time; they know what they are getting in that restricted territory.

By Mr. MATTHEW:

Q. You feel entirely free to fill an order for Oregon pine which you receive in California, with Douglas fir?

A. I would. I don't know if we ever get them that way, but I know that is the local name in California.

Q. Throughout the west of the United States, I assume, you market that lumber as Douglas fir?

614 A. Douglas fir; yes.

Q. You know the tree from which that lumber is produced is not a fir tree, do you not?

A. I do not know what the——

Mr. BURR. Just one moment, Mr. Witness; it seems to me that is subject to my objection. He is trying to lay a foundation here that there are other misnomers, and I don't think that that has a thing to do with this misnomer, if I have proved that this is a misnomer, after I have proved it is misleading to the public, as I believe we will prove.

Mr. MATTHEW. I do not think that you have proved either.

Mr. BURR. It seems to me that is this attempt to try misnomer stuff in other cases does not belong in this record, and it is wholly immaterial to this issue.

Examiner SHEPPARD. Mr. Burr, I take it that Mr. Matthew knows that sins committed by others are no justification for sins committed by somebody else, and I do not think that he has any particular idea of going too far along this line. If it will be any consolation to you, there will be no finding of fact along that line. Go ahead. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. I have heard that is the case, but I don't know it.

Q. In other words, you are not interested in the botanical name of the tree from which you obtain Douglas fir lumber?

615 A. No, sir; not particularly.

Q. Your real objection, Mr. Danaher—and I think your testimony upon your examination in chief shows that—is to avoid misconception, confusion, misunderstanding in the trade or on the part of consumers?

A. Yes, sir.

Q. And your interest is not in the botanical species particularly?

A. It is not.

Q. Throughout what period, to your knowledge, has lumber from the Pinus ponderosa tree been marketed under the name of California white pine?

A. I have knowledge of it since about 1906.

By Examiner SHEPPARD:

Q. That is twenty-six years?

A. Yes, sir.

By Mr. MATTHEW:

Q. Has sugar pine ever been marketed, to your knowledge, under the name of California white pine?

A. No, sir.

Q. Might I ask whether, if these respondents discontinued the use of the name California white pine, you would expect that your company would make use of the name California white pine as a trade name for sugar pine?

A. We would not. I would fight that move, if it were at-
616 tempted, in every case, because it would again be misleading.

Q. You have no desire to adopt the name "California white pine" for sugar pine?

A. No, sir.

Q. And I assume, so far as you can determine at present in any event, you intend to continue to market your sugar pine as sugar pine?

A. As sugar pine.

Q. How long have you been familiar with the name "sugar pine" for this lumber?

A. Since 1906.

Q. In other words, you became familiar with both of these lumbers at about the same time?

A. Yes, sir.

Q. Are the sugar pine trees and the ponderosa pine trees largely intermingled in the forest?

A. In some parts; in some localities.

Q. That is quite generally true, is it not?

A. No, sir.

Q. That is, you find some pure stands of sugar pine and some pure stands of ponderosa pine, but as far as the sugar pine is concerned those pure stands are rather limited, are they not?

A. No, sir; I have never seen a pure stand of sugar pine, but I have seen a pure stand of ponderosa.

Q. All right; where you find sugar pine you find a good
617 deal of ponderosa pine intermingled with it?

A. Yes.

Q. And in the logging operations, the sugar pine and the ponderosa pine are cut indiscriminately?

A. They are cut at the same time.

Q. And they are moved to the mill at the same time?

A. Yes.

Q. And put through the sawmill at the same time?

A. Yes, sir.

Q. And thereafter graded and stacked and shipped?

A. Yes, sir.

Q. After the lumber leaves the saws and reaches the grader, is it customary to segregate the sugar pine from the ponderosa pine?

A. Yes, sir.

Q. Is it true as to all the lumber grades?

A. No, sir; it has not been true as to the common grades of sugar pine. We have put the common grades of sugar pine and the common grades of ponderosa pine in together, as a general trade practice.

Q. That is your practice and, so far as you know, it is the prevailing practice of the mills which cut both sugar and ponderosa pine?

A. Yes, sir.

Q. When these common grades of lumber are shipped to the market, under what name—under what trade name do we find
618 this intermingled sugar and ponderosa pine marketed?

A. Mostly just the common pine or mixed pines.

Q. Is it ever sold as California white pine of common grades?

A. I imagine it has been; yes, sir.

Q. It is very commonly sold in that fashion, is it not?

A. I am not entirely familiar with that, because up until the past year we have never manufactured grades in boards and shipped them, because our timber and the timber generally in that central California territory is so big and the knot defects so big that we could not make commercial common or yard common type, and it is just this last year that we have been selecting logs that will make that grade.

Q. So prior to last year, you were not marketing any common?

A. No, sir; except as box lumber and manufacturing it into box.

Q. Did your box lumber consist of California sugar pine and pondosa pine indiscriminately?

A. Yes.

Q. They were intermingled?

A. Yes, sir.

Q. When sold as box lumber, does it bear the name of sugar pine?

A. Pine box.

Q. Just pine box. It is not customary to distinguish in any fashion?

A. No, sir.

Q. Since you have adopted the name "pondosa pine" as a
619 trade name for your ponderosa pine lumber, how do you describe the common lumber which you produce and ship—I understand you have been producing it and shipping it within the last year?

A. We ship it as a mixed shipment; we also segregate it on racks; we have shipped this year some sugar pine common; also some pondosa common.

Q. When you have the mixture, you describe it as mixed pine common?

A. Yes.

Q. Is that the practice of the trade?

A. I think that is a fairly well-known practice of the trade in that locality in which sugar pine grows, yes. Where there is no sugar pine, where they have a stand of natural ponderosa forest, they generally describe it as white pine, I believe.

Q. I think perhaps the examiner is interested in knowing for what purposes the common grades of this lumber are used?

Examiner SHEPPARD. Yes; I would like to know that.

A. It is used for shelving, fence boards, barn boards, sheathing—anything that does not take an absolutely sound-knot, tight-knot stock. No. 1 Commons do take that; they use that for shelving and different purposes. I am not entirely familiar with all the purposes for which it is used.

By Mr. MATTHEW:

Q. Can you tell me whether the greater portion of your common lumber is shipped as mixed pine or as either pondosa or sugar
620 pine?

A. The greater part of the commons produced by our mill in California is handled as box lumber. We can only get common in board type in inch boards, from a very few selected logs, that have small knots; in the ordinary log, the defects are too big.

Q. Let us take the mills generally, which cut sugar and white pine and obtain a mixed common; do you happen to know whether, generally speaking, the common lumber is shipped as a mixed common?

A. I think it is.

Q. It is comparatively the unusual thing to segregate the sugar pine from the ponderosa pine and ship the sugar pine alone, as sugar pine common?

A. Yes; that is brought about by the fact that ordinarily you get a very small percentage of sugar pine commons—in the two or three common grades, because of the knot defect. It is big timber and has big knots in it.

Q. About how large a proportion of common do you get out of a sugar pine tree as compared with the proportion that goes in the upper grades?

A. Just what do you mean by upper grades; the B shop and better?

Q. Just quality shop and better; that excludes the box, as I understand it.

A. That would mean the common and box being all based as common lumber?

621 Q. If you please.

A. I would say some place between 35 and 40 percent of the product of your sugar pine logs is of the common type that would be box and common boards, and so forth.

Q. The remainder would go into the upper grades?
A. Into 3 shop and better grades?
Q. What proportion is normally shop?
A. Let us see; I will have to do some mental arithmetic.
Q. 1, 2, and 3 shop; is that it?
A. 1, 2, and 3 shop, and the third clear of the factory plank; I would say some place around 40 percent.

By Mr. BURR:

Q. Would be what?
A. Would be shop factory plank, 3 shop, 2 shop, 1 shop, and third clear.

By Mr. MATTHEW:

Q. That does not mean very much for the highest grades?
A. It leaves about 25 percent—35 of common and 40 of shops.
Q. Could you make the same segregation roughly with respect to the ponderosa pines?
A. Yes, sir; I would say that your ponderosa pine would develop about 10 percent more common, taking an equal amount off of your shop, most of that 10 percent coming off of your better grades.

Now, I am speaking of the large type ponderosa timber that
622 I am comparing with in our own operations.

Q. Does your company receive any orders for California white pine under that name?
A. I suppose we have.
Q. And in such instances I assume it is your present practice to furnish the lumber which you carry under the name of pondosa pine?
A. Yes, sir. On receipt of an order we send a verification in which we set forth the term of their order and put the name of the wood, instead of white pine, pondosa.
Q. Is it sometimes quite difficult to distinguish the pondosa pine lumber from sugar pine lumber?
A. Not in our locality.
Q. Are there not some boards yielded by the ponderosa pine tree which resemble very closely boards yielded by the sugar pine tree?
A. Yes; I think that is so.
Q. You were asked by the counsel for the Federal Trade Commission upon your direct examination as to various uses to which sugar pine is particularly adapted. There was a reference to pattern wood, for example, and I think one or two others; I am not sure whether you gave us a general list of the special uses which you believe sugar pine is best adapted for. Would you do so, please?
A. I think sugar pine is best adapted for pattern stock and for such uses as building exterior woodwork, where you need a
623 lasting wood, a wood that does not decay readily, one that will hold its shape and stay put, that has not a tendency to warp and twist that some other woods have.

Q. You would not recommend that sapwood or sugar pine being used for exterior finish?

A. No, sir.

Q. In fact, you would not recommend that the sapwood of any pine be used in exterior finish, would you?

A. No, sir.

Q. Have you any other more important uses for sugar pine in mind?

A. I have not. I think it is used for interior finish, but to my mind, it is not as good possibly as pondosa for interior finish in some ways.

Q. Is that because of the pitch pockets that you have referred to?

A. Little sugar grains and little flecks of pitch coming through.

Q. It is used for interior finish, to some extent, is it?

A. Yes, sir.

Q. In that respect, it is in some competition with ponderosa pine lumber?

A. Yes, sir.

Q. You do not encounter any particular competition from the ponderosa pine so far as the pattern wood is concerned, do you?

A. From my own knowledge, I would say, no. As I explained, it is only occasionally we know that our stock is to be used for
624 pattern work.

Q. Do you know that the ponderosa pine is marketed very largely as California white pine, and is not largely used for pattern purposes?

A. I think it is not common.

Q. Let us turn for a moment to the use of sugar pine for interior work; is it a fact that the heart wood of the sugar pine tends to cause discoloration of the enamel?

A. I understand that the little pitch flecks or sugar, as we call it, will come through white enamel paint and show, in some cases.

Q. And that is true of heart wood as well as sapwood?

A. It is.

Q. Does the Michigan-California Lumber Company produce a larger relative quantity of sugar pine than the ponderosa pine?

A. Our cut varies from year to year, but the amount of timber we own is about equally divided in pine timber, between sugar and ponderosa.

Q. During the past four or five years, has the sugar pine cut predominated?

A. I could not answer that. I would say for four or five years—or for the last three years, I would say not—the ponderosa cut has predominated.

Q. You have testified that approximately one year ago you changed the trade name of your ponderosa pine from California
625 white to pondosa pine; did other manufacturers of sugar pine and of California white pine make the change in trade names for ponderosa as of about the same time?

A. Yes, sir; I think they did; I think two of them did.

Q. What were those two?

A. The Madera Sugar Pine Company and the Sugar Pine Lumber Company.

Q. What name is now employed by the Sugar Pine Company to designate the ponderosa pine?

A. By "now" do you mean today or last week, or when?

Q. I do not think my question is misleading. About a year ago you say three of these companies changed their name?

A. Yes.

Q. Which they frequently use, namely, California white pine, and your company went to pondosa pine?

A. Yes.

Q. The Sugar Pine Lumber Company went to what name?

A. To pondosa pine, so I understand.

Q. Do you know what they use now?

A. I think they have gone back to white pine—California white pine.

Q. You are not sure that they use the name "Western yellow pine"?

A. No, sir; I don't know.

Q. Or California yellow pine?

A. I don't know.

626 Q. Do you know whether or not the Sugar Pine Company has within the last month or so put out a price list in which pondosa pine is described as yellow pine?

A. No, sir; I do not.

Q. All right. Now, as to the Madera Lumber Company; do you know what name they are using?

A. I think they are using the name "pondosa", but I don't know, because I have not seen their price list.

Examiner SHEPPARD. Are they respondents in this case?

Mr. MATTHEW. No, sir.

Examiner SHEPPARD. Neither one of them?

Mr. MATTHEW. I think counsel will permit me to clear this one point up that I have before me. The price list of the Sugar Pine Lumber Company, of Pinedale, California—I am not sure that it bears the date—yes; effective August 1, 1929, and, therefore, is comparatively recent, which carries as a caption on one of the price tables the words "yellow pine" and below that in parentheses the word "pondosa."

By Mr. MATTHEW:

Q. Mr. Danaher, you have stated that you have been under the impression that you have been losing orders for sugar pine to California white pine; do you remember making a statement to that effect?

A. I made the statement that at the time and during the period of years, I remember that impression and that that was one

627 of the reasons that caused me to advocate the change in name.

Q. Is it your view that you have been losing orders for sugar pine to California white pine?

A. I think that the trade name California white pine—the use of that name has enabled the manufacturers of ponderosa timber to sell more of their stuff under that name than they might have under another, and in that way, I am losing.

Q. You have no specific instances in mind where you lost a particular order?

A. No, sir.

Q. But your testimony just reflected the conviction which you had?

A. Yes, sir.

Q. That the use of this particular trade name tends to result in your losing some orders?

A. Yes, sir.

Q. Of course, you do not think yellow pine is a correct commercial name for this material?

A. Absolutely not.

Q. You would hardly approve of the price list I just directed your attention to, in that respect?

A. No, sir.

Q. Why don't you approve the term "yellow pine"?

A. Because I do not think the wood, as a whole, and as an average of the entire district from which California white
628 pine is shipped resembles to any extent yellow pine, to any considerable extent, and I think the use of the trade name "yellow pine" would be confusing and misleading.

By Examiner SHEPPARD:

Q. Let me get you straight; am I to understand from what you just said that to call ponderosa pine yellow pine would be erroneous and deceiving as a trade name?

A. My impression is it would be misleading, because its qualities for workability, and so forth, are not possessed by the yellow pines as the trade and consumers in general know.

Q. My understanding from the testimony is that ponderosa is soft and yellow pines are hardwoods.

A. Ponderosa pine is much softer.

By Mr. MATTHEW:

Q. As far as that quality of softness is concerned, the ponderosa pine lumber which is now commonly marketed as California white pine more nearly resembles the true white pines than southern yellow pines?

A. Yes, sir.

Q. If the manufacturers and distributors of California ponderosa pine lumber were entirely to abandon the trade name of California

white pine and adopt some other name, I care not what it may be, in your opinion would their relative volume of sales decline?

Mr. BURR. If the examiner please, it seems to me that is too theoretical, "if he does not care what the name is." It
629 might vary very widely according to the name.

Examiner SHEPPARD. I do not know that that question will help me or the Commission.

Mr. MATTHEW. If you will bear with me, I can break that question up. I think it is a perfectly proper question; if not, the question can be stricken out.

Examiner SHEPPARD. All right.

By Mr. MATTHEW:

Q. If the manufacturers and distributors of ponderosa pine lumber, which is now marketed under the trade name of California white pine, were to abandon that present trade name of California white pine and replace it by the trade name California pondosa pine, in your opinion, would their relative volume of sales decline?

Mr. BURR. Just one moment, Mr. Examiner; I would like to object to that as highly speculative.

In the first place, he has suggested no alternative name.

Mr. MATTHEW. I certainly have; that is in the question.

Mr. BURR. Would it not depend on whether they called it yellow pine? He already said yellow pine would not be a fair name.

Mr. MATTHEW. You have not followed my question. I will ask the reporter to read the question.

(The question was thereupon repeated by the reporter as above recorded.)

630 Mr. BURR. I see I did not catch the entire question. I withdraw my objection.

Examiner SHEPPARD. I do not see much materiality in it, Mr. Burr.

Mr. BURR. It is highly speculative, but I do not mind his answer.

A. Temporarily it might, but that would not be a lasting condition, to my mind, because they could advertise and sell it just as much on its own merits as under a misnomer.

By Mr. MATTHEW:

Q. Temporarily you think there might be a little loss of marketing entailed by that change; is that so?

A. Yes.

Q. But within a year or so, perhaps, with vigorous advertising campaigns and the expenditure of some money, do you think they could sell as much of this lumber as they now sell under the term "California white pine"?

A. If you will allow me to tell you what I think——

Q. If you will just answer the question first, and then you may explain.

The WITNESS. Will you read the question?

(The question was repeated by the reporter as above recorded.)

A. As much or more.

Q. You mean by that, that relatively their position would
631 be at least as good as it is now?

A. I think, with advertising, it would be better. They are not now advertising to any extent.

By Examiner SHEPPARD:

Q. You mean the white pine growers?

A. Individually they are, but there is no concerted action in advertising.

By Mr. MATTHEW:

Q. Let us pursue that just a little further, Mr. Danaher. At the present time there is a certain volume of California white pine, under that name, going into the market, and a certain volume of sugar pine going into the market; we will pool, for the purposes of my inquiry, if you please, the sugar pine and the California white pine, that is, we will say that the sugar pine represents a certain proportion of the total, call it 30 percent, if you will, or any other figure, and that the remainder or 70 percent represents the sales of California white pine; it is your testimony, as I understand it, that such a change in name as I have suggested would shortly result in a loss of sales of California white pine under the new name, which would still represent 70 percent or better of the total; in other words, the relative position of the manufacturer of California white pine lumber in the market could not be impaired; if that was so, how would your position be improved?

In other words, if the California white pine manufacturer
632 can sell just as much of this pine under a different name as he can sell under the name of California white pine, it must follow that the sugar pine position cannot be improved.

Mr. BURR. Oh, no; not at all.

Mr. MATTHEW. I am asking the witness.

Mr. BURR. It is very unfair for counsel to make that suggestion, because it is not proper cross-examination.

Mr. MATTHEW. I think the purpose of my cross-examination is now obvious, and I submit the question to the examiner.

Examiner SHEPPARD. Let me hear the question again, please?

(The question was thereupon repeated by the reporter as above recorded.)

Mr. BURR. I object to the question on the ground that it is highly speculative and calls for the conclusion of the witness.

Mr. MATTHEW. I shall press the question for this reason, Mr. Examiner, that the witness has testified, or at least he implied directly upon his examination in chief, that the continued use of this term, "California white pine", resulted in a loss of sales to the sugar pine producers.

In other words, California white pine is being used where sugar pine would be used, except for the use of this trade name. Now, my questions are intended to bring out the circumstance that this lumber under a different name would presumptively still hold
633 its present place or even have a better position, which, of course, tends to negative the contention of the witness upon his direct examination that the sales of sugar pine are being impaired by the use of this trade name, one of the very issues of this case.

Mr. BURR. There is no such thing to negative, unless these two were the only ones in existence. I object on the ground that it is speculative. What he knows about the effect—or what he knows to be the fact under the present misnomer may be evidence, but what might happen under an entirely new set of circumstances is speculative, whereas his answers on direct examination were from his own experience.

Mr. MATTHEW. If Your Honor please, the whole complaint revolves around the question of the effect of the trade name. That is the very central issue in the case.

Now, we are trying to test the effect of the trade name, and I submit to Your Honor it is the very essence of proper cross-examination to undertake to determine the effect of a change in the trade name which, after all, is the object of certain gentlemen who are in the friendliest way opposed to it.

Examiner SHEPPARD. Mr. Matthews, as I said awhile ago, speaking off the record, I do not believe that any inquiry as to what results may follow the Commission's action in this case or in any similar case, is a proper subject matter for us to go into here. The Commission's proceedings are brought in the interest of the
634 public, in this case the ultimate consumer. Whether or not another manufacturer's business will be influenced or affected by the change of the name, which may or may not follow the Commission's action, I doubt whether it will be of any particular use to me or to the Commission in allowing it to go in.

I will tell you what I will do. I do not want to cut off the respondent in this case from anything they wish to argue before the Commission, so that to that extent I am going to allow the testimony as given to remain in the record for the purposes of argument before the Commission if you so see fit to do.

Mr. BURR. I will give you an exception. Now, will you please read the question?

Mr. BURR. Are you going to allow the present question?

Examiner SHEPPARD. I will allow the question for the benefit of the respondent's argument. You need not rebut it, because, so far as I am concerned, I shall make no finding regarding it, and it is for the purpose simply of argument.

Mr. BURR. I might have to rebut it, although you might expect to make no finding, because the Commission may determine to make some finding, even though the examiner does not.

Examiner SHEPPARD. I doubt it very much.

Mr. BURR. They do sometimes make some changes.

Examiner SHEPPARD. Yes; I know they do.

My purpose in doing this, Mr. Matthew, is in following my
635 policy, which is always to allow the respondent in the case to have every opportunity to put in whatever he believes will benefit him, and I will follow that line with you.

Mr. BURR. My objection goes to the whole line of this testimony.

Mr. MATTHEW. It is my very earnest belief that this line of questions goes to the very heart of the case. I assume that Your Honor is not as familiar with either the text of the complaint or the background of the case as we are on our side here.

Examiner SHEPPARD. That is very true; I know very little about at as yet.

Mr. MATTHEW. If Your Honor will read the complaint, you will find that they have alleged, not merely once, but several times——

Mr. BURR. If the Examiner please, if the question is allowed, why, we will fill the record with arguments——

Mr. MATTHEW. Please allow me to finish.

Mr. BURR. I object to the argument. Why spread it on the record, if the question is permitted. It seems to be unimportant to fill up the record.

Examiner SHEPPARD. This is all argument, and it will be in the brief, if you desire.

Mr. MATTHEW. I want my argument to appear on the record here.

Mr. BURR. Then I will have mine in also.

636 Mr. MATTHEW. I believe counsel will concede that I am entitled to at least complete my sentence. I am making this argument for the record, and the purpose for which I am addressing you, Mr. Examiner, is to ask for a specific ruling upon this point, because I think this testimony should either be in the record for all purposes or out of the record for all purposes. I do not believe it should be in the record merely for purposes of argument, as you have used that expression—it should either be in and a finding should be made responsive to it, or it should be out altogether.

I recognize the purpose of the examiner is to show proper latitude to the parties in presenting their contentions in matters of this kind, yet the statement made by Your Honor and announced in the ruling practically forecloses from requesting or expecting a finding of facts. I am not asking you to make a finding of the facts that are not in issue in this case, because I can show them to Your Honor by going over the complaint.

Mr. BURR. May I be heard before the examiner replies?

Examiner SHEPPARD. I cannot see it, Mr. Matthew, where this record has any right to go into any speculative matters, the results of which would be contingent upon the Commission's action. That must be stated in the final order, and with that this inquiry has nothing to do.

Our inquiry is entirely about the use of the trade name,
637 and we are not interested in any way with the result that might follow. It is to be presumed that when the Commission, after consideration of the case, promulgates an order, that the result will be beneficial to the interests of the public, and it is not for us now to inquire what that result will be; we have nothing to do with it.

Mr. MATTHEW. Mr. Examiner, I have not suggested any action on the part of the Commission. My question did not say anything at all as to what the Commission might order.

Examiner SHEPPARD. Your question, as I understand it, is this: You want to know from this gentleman, if these respondents change their name, what would be the result thereof?

Mr. MATTHEW. Yes, sir.

Examiner SHEPPARD. That is exactly what I am telling you. We have no interest in the result of the order.

Mr. BURR. If the Examiner please, I would like to be heard at this juncture, if I may.

Examiner SHEPPARD. Yes.

Mr. BURR. I am inclined to agree with counsel for the respondent in one respect. I really think that material should be in the record only to the extent that it is an appropriate basis for a finding, one way or the other. I do not believe that this record should be encumbered with material which the examiner believes clearly cannot properly lead up to a finding. In that respect I agree with
838 counsel for the respondent. Beyond that, as regards the testimony he is trying to bring out now, how it should be classified, I differ from him.

I do not think it is appropriate for this examiner, or for the Commission later on, to have a finding that if the names were changed to California pondosa pine, that it would or would not result in an increase of sales. I think that would be a very strange sort of finding for you to make or for the Commission to make later on.

That being the case, it seems to me fairly obvious that it is unnecessary, it is wasteful to take up the time of the examiner and the Commission and build up a great big record on speculative matters on which the examiner could not possibly properly make a finding, and therefore I press my objection to that line of questions.

Examiner SHEPPARD. For the reason I said awhile ago, Mr. Matthew, it is not my province to make a finding on something that may follow.

Mr. MATTHEW. If Your Honor please, I am not suggesting any finding of the Commission at all. I carefully avoided that. Counsel has been very insistent in creating an impression that that is what I have in mind.

Examiner SHEPPARD. That is what I have had in mind.

Mr. MATTHEW. It is not in my mind, Mr. Examiner, at all. The complaint alleges that we are engaged in unfair competition with the sugar pine, Idaho white pine manufacturers, the northern
639 white pine manufacturers, and that is the very reason why this complaint is brought.

Examiner SHEPPARD. I will let you put it in.

Mr. BURR. I reserve an objection to this entire line of cross-examination.

Examiner SHEPPARD. I will let you put it in; go ahead, and if I can make a finding on it, I will do so.

Mr. BURR. If the examiner please, I do not think it proper cross-examination. May it be considered that this is a defense witness for the purpose of these questions? It certainly is not cross-examination. I did not go into any such wild speculation.

Mr. MATTHEW. It is cross-examination on the testimony in chief, that sugar pine is losing sales to California white pine.

Mr. BURR. It does not seem to me that that authorizes counsel to turn the whole thing loose for wild speculation as to what might happen under a hypothetical set of circumstances.

Examiner SHEPPARD. We will consider it cross-examination, Mr. Burr, and if you desire to, you may rebut it.

Mr. BURR. I will take an exception to the examiner's ruling to be noted in the record.

Examiner SHEPPARD. Now, go ahead and answer the question. Let us have the question read.

(The question was thereupon again repeated by the reporter as above recorded.)

640 By Mr. MATTHEW:

Q. Give me your best judgment.

A. The position of the sugar-pine manufacturer would be improved, because he would be able to sell sugar pine to those users and purchasers who are buying California white pine under a misapprehension that they are using true white pine, therefore the sugar-pine producer would be able to sell that much additional sugar pine, or make it easier to sell his supply of sugar pine, and the producer of the California white pine, or ponderosa pine, would naturally have to find other markets for his product.

Q. He has got to get an additional market to make good the loss of a certain proportion of sales to sugar pine; that is your point?

A. To sugar pine or white pine.

Q. At one time, Mr. Danaher, did your company become a member of the association or corporation known as the Sugar Pine Sales Agency?

A. We became a member of the corporation, Sugar Pine Sales Company, I think it was.

Q. When was that formed?

A. Either 1926 or 1927; I am not certain; I think it was in 1927.

Q. Did that company represent all the producers of sugar-pine lumber in California?

A. Practically all of them; yes.

Q. Is the company still in existence?

641 A. No, sir.

Q. When did its corporate existence terminate?

A. That I could not say.

Q. You are sure it was a corporation?

A. No; I am not sure just exactly it was. It was a sales organization; just the form under which it was organized; I do not know; I think it was done under advice of your counselor, Mr. Andrews.

Q. Did you personally have any contact with the formation of that association?

A. I sat in at a couple of meetings before the company was formed, and on preliminary talks I was present, at which it was decided to leave the form in which this organization was to be put together up to certain attorneys.

Mr. BURR. If the Court please, I think this is irrelevant, and I would like to know what the purpose of it is.

Mr. MATTHEW. Very often on preliminary examination it is not deemed advisable to indicate the purposes of the cross-examination.

Mr. BURR. All right; I will withdraw that objection.

By Mr. MATTHEW:

Q. What was the purpose of forming this company or organization, Mr. Danaher?

A. The purpose of forming the company was to advertise and promulgate the use of sugar pine.

642 Q. Were any changes in prices of sugar-pine lumber made after the company was formed?

A. Yes; I think immediately after the company was formed we got about two dollars a thousand less for sugar pine than it was before.

Q. Did the market price advance or fall upon the formation of the company?

A. I think it remained stationary.

Q. What circumstances brought about the discontinuance of the organization?

A. I understand and was told that it was because certain members of the organization could not sell the product of all of its members; the market was bad and the sugar pine piled up in the mills, and some arbitrarily withdrew and the association broke up.

Q. That association broke up by 1927; was that the time?

A. I think that was along in—yes; I think we broke up in 1927.

Q. Was it not about that time, then, that the manufacturers or producers of sugar pine, at least those who were very largely interested in sugar pine, decided that it was quite necessary to attempt to bring about a change in the name of the California white pine?

A. It might have been about that time, but I do not think the fact that they broke up had anything to do with it.

Q. Frankly, I intended to suggest that very thing, Mr. Danaher. In this respect, am I wrong in understanding that the attempt

643 to promote and stimulate the sales of sugar pine through this organization, and possibly to get better prices for sugar pine having quite seriously failed—that is, through the formation of your organization—that the organization broke up and there was so much ill feeling and dissatisfaction that those sugar-pine manufacturers decided that they must perhaps make some effort to bring about a discontinuance of the trade name of California white pine?

A. Such is not my understanding.

Q. All right. You referred to a visit that you made to some mill manufacturing ponderosa pine in New Mexico. Do you recall the name of the mill?

A. The American Lumber Company.

Q. Located where?

A. Albuquerque.

Q. The mill is at Albuquerque?

A. The mill is at Albuquerque.

Q. Where did they obtain their lumber?

A. 125 miles south of the Santa Fe, up in the Zuni Mountains.

Q. Is that company now operating?

A. I think it is, but not under that name.

Q. I am not sure whether you answered this question, Mr. Danaher: Does the sugar pine have a greater proportion of sap than the strobus pine?

A. Yes, sir.

644 Q. Does it have a greater proportion of sap than the Idaho white pine?

A. Yes, sir.

Q. Since you adopted the name "California pondosa pine" for your ponderosa lumber, does it go to the trade in substantially the same way as it did before you changed the name?

A. Yes.

Q. Marketing methods are just the same?

A. The marketing methods are just the same.

Q. And the lumber is used for the same purposes, as far as you know?

A. As far as I know; yes.

Q. You are selling or shipping grades of your California pondosa pine through the remanufacturing plants, such as manufacturers of sash, doors, blinds, and moldings?

A. Yes, sir.

Q. There is one further question I desire to ask, Mr. Danaher, unless you feel that you have fully answered it: The examiner asked you a question, following a question of my own, as to your reasons for your feeling that ponderosa pine lumber should not be termed

"yellow pine lumber"; did you give all the reasons which, in your opinion, make it unwise and undesirable and likely to lead to confusion if the word "yellow" were employed?

A. I thought I did.

Q. I shall not ask any further questions if you have no other
645 trade reasons in mind.

Examiner SHEPPARD. I believe you covered that.

The WITNESS. I thought I covered that as fully as I could.

Mr. MATTHEW. I would ask leave, if Mr. Danaher expects to be in attendance throughout the hearing in New York, to recall him for further cross-examination.

Mr. BURR. For further cross-examination, or do you intend to put him on as a defense witness?

Mr. MATTHEW. Both. I shall not ask Mr. Danaher in advance if he happens to be here——

The WITNESS. If I am not here, I will be at Detroit, and probably at San Francisco when you meet out there.

Redirect examination by Mr. BURR:

Q. Mr. Danaher, the Sugar Pine Sales Company was formed for advertising or for promotion of sales, or for what purpose?

A. It was formed for the purpose of selling, advertising, and promulgating the use and sale of sugar pine.

Q. Its membership composed the manufacturers of sugar pine in the various parts of California?

A. Yes; practically all the mills that manufactured sugar pine in California, I think, were members.

Q. Were you present at the meetings when the association broke up?

A. No, sir.

646 Q. You were not present at those meetings?

A. No, sir.

Q. Then, how far does your knowledge go as to the reason for breaking up?

A. It is entirely hearsay.

Q. It is entirely hearsay?

A. I think I testified, I was told, in answer to counsel's question.

Q. I believe you said that since your company changed its name from California white pine to pondosa pine for ponderosa products, that, so far as you know, the lumber has been used for the same purposes as before; did you so testify?

A. Yes, sir.

Q. I believe you stated that, in your judgment, genuine white pines are more adapted than ponderosa pine for exterior finish; is that true?

A. Yes.

Q. Do you regard the use of the words "white pine" as a trade term for ponderosa products as having a tendency toward having the builder use ponderosa products in positions where white pine

would be specified, or does it not have such a tendency? Is that question clear?

Mr. MATTHEW. I think he testified to that on his direct examination.

Mr. BURR. I am addressing myself to your question on
647 cross-examination. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. I think it has a tendency to have the products of ponderosa used under a misapprehension that they are getting white pine.

Q. Do you have sufficient knowledges of the purposes for which the lumber made by your company, after being bought from the wholesalers, is put to, to be able to say whether there has been a change, such that not so much of your product is used on the outside of a building as was the case before; do you have knowledge enough to testify as to that?

A. No, sir.

Q. Are you able to say with any assurance that the products now named as pondosa by your company is still used for the same purposes as they were before?

A. No; I have not knowledge to say they are still used; they are still sold to the same customers.

Q. You mean the same wholesalers?

A. To the same wholesalers and occasionally to the same manufacturer.

Q. Do you know whether the wholesaler has followed your lead and sells the product as pondosa, or do you know whether he changes the name to California white pine when he sells it?

A. I do not know that. I know that he is going pretty soon to follow our rule, because we are going to trade mark it "pondosa."

648 Q. You are going to trade mark it "pondosa"?

A. Yes, sir.

Q. Have you given any advice or instructions to your customers to change to pondosa for purposes of resale by them?

A. No, sir; we have no control over the wholesaler.

Q. You attempt no control whatever?

A. No, sir.

Q. I believe you testified on cross-examination that you had never known a pure stand of lambertiana sugar pine?

A. No.

Q. Would you state whether or not there is a tendency toward a higher cost of producing lumber due to the fact that the stands are not uniform where sugar pine is found; I am referring to sugar pine?

A. Higher cost of producing sugar pine?

Q. Yes.

Mr. MATTHEW. Do I understand the examiner to rule that the cost of production is a proper matter of inquiry here?

The EXAMINER. I don't want to go into a matter of economics here.

Mr. BURR. I do not think that is a matter of economics, if the examiner please. I am just asking for a tendency.

Mr. MATTHEW. You are asking about relative costs——

Mr. BURR. Read the question if you want to know.

(The question was thereupon repeated by the reporter as
649 above recorded.)

A. By "uniform", just what do you mean?

(Discussion off the record.)

By Mr. BURR:

Q. You testified with regard to mixed pine common at the institute of opposing counsel. What uses do the mixed pine common products go into? Did you go into that in your cross-examination as fully as you desired?

A. I went into the uses as far as I know of them for pine commons and mixed pine commons; they would go into the same uses as straight pine common, that is, whether it was considered white pine common, it would be used for certain things, and mixed pine common would be used for the same things that straight white common would be used for.

Q. Are they used where durability is a consideration?

A. Well, they are used for such things as fence boards; it has not much of a use, except by railroads to build drift fences to protect the railroad tracks from snow.

Q. The common, does that come out of the heart or sap, largely?

A. It is heart.

Q. That is, heart, both in the case of ponderosa and sugar pine?

A. Practically, yes.

Q. But that is the knotty portion of the wood, therefore heart; is that true?

A. Yes.

650 Q. I wish you would explain to me whether the 1, 2, and 3 shop is from that part of the tree that is between the common and the select grade, or how does it come?

A. 1, 2, and 3 shop is designated as shop common. This common shop is the clear cuttings taken from in between the knots; the percentage of door or sash cutting between the knots determine its grade, whether 1, 2, or 3 shop.

Q. That is heartwood or sapwood, in the case of sugar pine; do you know?

A. Practically all heartwood in sugar pine.

Q. That is a little further out from the center of the tree than is the mixed pine common material?

A. No, sir; in most trees that are of the shop common type, you get very little in yard common; we have to differentiate between yard common, which is the board common that you are talking of. The 1, 2, and 3 common, and the shop common, that is more in the top of the tree, although you do get some shop out of the yard com-

mon type of tree, because the knot defects are smaller, and they may be at certain stages of the cutting of the log where you will produce lumber that has the door cuttings in the plank, but when you get into shop common type, the knots are so large that you can make very little shop type, when you get into no. 3, and most of that goes into box; the knots are too big to go into yard common.

Q. Is it the yard type of common that goes into the mixed?

651 A. Yes, sir.

Q. Turning to the Pinus ponderosa, does your last answer hold true for that?

A. Yes.

Q. As regards the shop grades 1, 2, and 3 shop common—is that the right phrase?

A. Yes, sir.

Q. Would Pinus ponderosa be heart or sapwood in the main?

A. I would say the biggest percentage of it would be heart, although there would be some sap.

Q. Where, in the tree, do the selects D, C, and B repectively come from; are they as you proceed out, or how?

A. They are right under the bark, until you get into a defect, or a natural defect that lowers the grade.

Q. Taking the B and better of the sugar pine, is that largely heart or sap?

A. To a large extent, that would depend on the thickness in cutting sugar pine, that has a relatively small sap ring, and it is the general practice, I believe—I know it is at our plant—to take inch pieces after you have taken the slab—to cut it all into inch until you get what is called a heart face. That sap is generally clear or nearly clear, so it would probably go into C or better.

Q. That would be sap largely?

A. In inch, yes, sir. Then as we get to that sap or cut
652 thicker lumber and cut some more heart inch—that is the manufacturing process, because it is necessary to prevent checks, and so forth.

Q. I wish you would cover the same ground with regard to the average ponderosa, if you will?

A. Your practice is the same, of course; after your slab is cut, until you get a good-sized face of the log, you go around, take the slab off here—you have to take enough off to get the fair face, eight inches or wider before you take any thicker, unless you want to waste a lot of material.

If you take a two-inch piece off and only add an inch face here and your next piece was two inches, you would have to throw too much lumber away, so you take an inch, then you take another, and you won't lose so much if you take two inches.

Q. And is that true of sugar pine or ponderosa?

A. That is true, yes. In a great many cases, if you get in there, you are still in the sap, after you have opened up this face, you are still in the sap, then you take your thick pieces in the sap——

Q. After you remove the one-inch slab from the sugar pine, have you removed a larger percentage of the sapwoods than you have in the case of the ponderosa?

A. Yes, sir. This is rather technical. The percentage of sap being less in sugar pine than in ponderosa, if you grant that,
653 a good deal of your sawmill waste other than sawdust, such as edgings and so forth come from the sapwood, granted that on the same-sized log, your waste is the same on the sugar pine log as it is on the ponderosa log. You have removed a larger percentage of your sapwood on your sugar pine, because you had a lesser amount of sap to begin with.

Q. With regard to these pitch pockets that you referred to in the sugar-pine lumber, would you say whether the sugar-pine manufacturers have developed a certain variety of so-called "killer" or wash to eliminate those pitch pockets?

A. I do not think the term "pitch pockets" is entirely clear to me, but I think I know what you are speaking of; you are referring to these little pitch spots that ooze through once in a while, whereas a pitch pocket to a lumberman means a pocket deep into the log of the wood, where there is quite a mass of pitch.

Q. How do you describe it as it appears in sugar-pine lumber?

A. We call it sugar, just as the ordinary type.

Q. They are tiny pock marks?

A. They are just tiny specks of pitch. I just wanted to correct that impression of pitch pocket. That is entirely different. I don't know whether they develop anything along that line or not.

Q. I would like to ask you this, In your judgment, does the sale of Pinus ponderosa for exterior purposes aid in the marketing
654 of that type of lumber, the sale of that type of lumber in the long run?

Mr. MATTHEW. Will you amend your question to read "use" instead of "sale"?

Mr. BURR. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

Mr. BURR. I don't think I want to change it. Is the question clear to you?

A. Do you mean does the use of ponderosa products for exterior work aid in the continued sale of that lumber; that is practically what you mean? I don't know that I can answer that. I think it has up to the present time. Again I am thinking. I don't see that I am getting any place on that.

Q. Let me ask you this: You have testified that Pinus ponderosa is not as durable where exposed to the weather; is that true, as the genuine white pine?

A. That is my opinion.

Q. Where Pinus ponderosa is used in places where it is exposed to the weather does it deteriorate and rot out more rapidly than genuine white pines?

A. In my opinion it does.

Q. The use of the variety of lumber where it fails to give satisfaction, in your judgment, does it tend to promote the continued large sale of that type of lumber?

655 A. No, sir.

Q. Then it would be, in your judgment, a detriment to the marketability of Pinus ponderosa to change the name so that it no longer simulated the name of white pine?

A. No, sir.

Mr. BURR. Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

The WITNESS. If I understand the question, do I think white pine could be sold—ponderosa products could be sold as readily under some other name; is that what it means?

By Mr. BURR:

Q. Yes.

A. I think it could.

Q. Would it be a benefit to the marketability of Pinus ponderosa that it no longer be offered under a name if it resembles the name of a product famous for outside construction purposes?

A. I don't think I understand that question at all, sir.

Mr. BURR. I will withdraw the question; I think it is sufficiently clear.

Q. I believe you said if sugar pine was marketed under the name "California white pine", it would be misleading?

A. Yes, sir.

Q. Why would that be the case?

656 A. Because white pine to me means Pinus strobus and all that Pinus strobus or northern white pine originally stood for, while sugar pine has those attributes, it still has its defect, and that is the little sugar showing through, and I think a person buying sugar pine for certain purposes thinking he was getting the old Pinus strobus, would be misled.

Q. Do you regard the sugar pine as more nearly entitled to the term "white pine" than Pinus ponderosa?

A. Very much more.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. Do you regard it as misleading to market Pinus monticola under the name of white pine?

A. If the name "Idaho" was not placed before it, I would.

Q. It is the use of that term "Idaho" which, in your opinion, justifies the name "Idaho white pine"?

A. Yes, sir.

Redirect examination by Mr. BURR:

Q. You think Idaho white pine is more nearly entitled to the use white pine than California white pine or ponderosa?

A. Yes, sir.

Mr. BURR. That is all.

(Whereupon, at 4:30 o'clock p.m. an adjournment was taken to October 11th, 1929, at 10:00 o'clock a.m.)

657 Docket Nos. 1620–1669, inc.

NEW YORK, *October 11th, 1929.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before William W. Sheppard, examiner.

Appearances: Eugene W. Burr and J. G. Birks, attorneys for the Commission.

McCutcheon, Olney, Mannon & Greene, by Allan P. Matthew and Carl I. Wheat, attorneys for the respondents, Clover Valley Lumber Company et al., Davies-Johnson Lumber Co. et al., Diamond Match Company et al., California Fruit Exchange et al., Penman Peak Lumber Co. et al., Feather River Lumber Company et al., Kesterson Lumber Company et al., Hobart Estate Company et al., Fruit Growers Supply Company et al., Quincy Lumber Company et al., Spanish Peak Lumber Company et al., Lassen Lumber and Box Company et al., Red River Lumber Company et al., Owen-Oregon Lumber Company et al., Big Lakes Box Company et al., Ewauana Box Company et al., Klamath Lumber & Box Company et al., Lamm Lumber Company et al., Pelican Bay Lumber Company et al., Algoma Lumber Company et al., Shaw Bertram Lumber Company et al.

658 Examiner SHEPPARD. I believe, gentlemen, that it is by mutual agreement and stipulation that the respondent is putting on some of his case here, out of turn, in order to facilitate the hearing and keep down expenses, and in order to avoid the necessity of a return trip to this city.

Mr. MATTHEW. Yes, sir.

Mr. BURR. You might also say that a suggestion to that end was made by the chief counsel, which was sent out to the respondents in this case—both those represented by counsel and those not represented.

Examiner SHEPPARD. That is all right with the examiner to follow such procedure: anything that will lessen expense and trouble is always desirable.

ARTHUR E. LANE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Lane, what is your business?

A. Wholesale lumber.

Q. Is your place of business in this city?

A. Grand Central Terminal, New York City.

Q. How long have you been in the lumber business?

A. About 37 years.

659 Q. Will you relate your experience in the lumber business generally, if you please?

A. In 1895, I started with the west coast woods, and specialized in western woods since that time, and during that time we have acted as wholesale distributors entirely.

Q. Through what general territory do you distribute lumber, as a wholesaler?

A. New York State, the New England States, Pennsylvania, New Jersey, Delaware, Maryland, District of Columbia.

Q. You have been engaged in the business approximately thirty-five years?

A. Since 1895.

Q. Continuously?

A. Yes, sir.

Q. What particular varieties of lumber do you carry?

A. Would you like to have me name them?

Q. If you please.

A. Douglas fir, western red cedar, Sitka spruce, western hemlock, Idaho white pine, Idaho white fir, Idaho spruce, Engleman spruce, Idaho cedar, Idaho and Montana larch, Port Arthur cedar, California sugar pine, California white pine, redwood, and California white fir.

Q. Do you carry any pondosa pine by that name?

A. Pardon me; I should have mentioned pondosa pine.

Q. The list of lumber which you have given practically
660 covers these Pacific coast woods in which you specialize, Mr. Lane?

A. Yes, sir.

Q. To what trade do you distribute the lumber in which you deal?

A. Retail lumber dealers, what we call trim manufacturing plants, and some industrial business, as well as some cheap building business and a few specialty operations.

Q. Throughout what period has the name "California white pine" been established in this local lumber trade?

A. How long?

Q. Yes.

A. From twenty to twenty-five years.

Q. And you have been familiar with that term during that period?

A. Yes, sir.

By Mr. BURR:

Q. That is California white pine?

By Mr. MATTHEW:

Q. As to California white pine, is the name well and generally understood in the trade?

A. I should say it was very well understood.

Q. So far as you can determine, is there any confusion or misunderstanding in the lumber trade as to the identity of the lumber which is distributed under the name "California white pine?"

A. I do not think there is.

Q. It is known that, botanically speaking, it is not classi-
661 fied as a white pine, is it, Mr. Lane?

A. We sell it entirely as California white pine.

Mr. BURR. May I ask that the witness answer the question? Read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. That is a botanical question.

Examiner SHEPPARD. If you can not answer it, just say so.

Mr. MATTHEW. Let me withdraw the question.

Mr. BURR. Let him say whether it is known or not; he says that is a botanical question.

The WITNESS. I don't know what other people know about it; all I know is what I tell you here.

Examiner SHEPPARD. That is perfectly all right, Mr. Lane; if you don't know, just say so.

By Mr. MATTHEW:

Q. Do you know whether it is classified botanically as white pine or not?

A. Do I know whether *it is or not?*

Q. Yes; or are you interested in the botany of the species?

A. I would say that I was not interested in the botanical side of it.

Q. Do you know the botanical names of the trees which yield the several varieties of lumber which you distribute?

662 A. Very few.

Q. Lumber sells on its quality and utility rather than its botanical species, does it?

A. Yes, sir.

Q. Under what name do you offer this particular lumber to the trade?

A. California white pine.

Q. Is that your invariable practice?

A. Always.

Q. Under what name do you receive orders for this lumber?

A. California white pine.

Q. Do you ever receive any orders for white pine without any qualifying designation?

A. No, sir.

Q. Is the term "Idaho white pine" well known to the trade?

A. Yes, sir.

Q. You stated that you are engaged in selling Idaho white pine as well as these other Pacific slope woods?

A. Yes, sir.

Q. I take it you undertake to sell as much in volume as possible of each one of them?

A. Yes, sir.

Q. You are not pushing any particular variety at the expense of any other variety, I take it?

A. No, sir.

663 Q. If a customer inquires for Idaho white pine, does he inquire for it under that name or does he simply ask for white pine?

A. He asks for Idaho white pine.

Q. If a customer asks for Idaho white pine, is it your invariable practice to furnish Idaho white pine?

A. Yes, sir.

Q. There is no substitution in your business of one lumber for another?

A. No, sir.

Q. And you never furnish California white pine upon orders for northern white or Idaho white pine or any other variety of lumber?

A. No, sir.

Q. Do you have any complaints from your customers upon the ground that the lumber which you furnish them as California white pine has been misrepresented, or there has been deception or substitution in any way?

A. No, sir.

Q. Is the distribution of California white pine in this territory increasing or has it been decreasing during a period of the last few years?

A. I would not be able to give you any definite information on that.

Q. Do you know whether the supply of northern white pine lumber in the New York area has been increasing or decreasing?

664 A. My personal opinion would be that there has not been much change.

Q. Mr. Lane, there has been testimony in this proceeding on the part of salesmen for the Weyerhaeuser interests, I think specifically the Weyerhaeuser Sales Company, to the effect that the Weyerhaeuser interests are losing orders to California white pine in three classes of cases.

First, it is stated by this witness, there are some retail lumber dealers who naturally think that California white pine is superior to pondosa pine.

Second, there are some dealers who think that California white pine is a true white pine, although the witness states that these are in the minority.

And, third, there are some dealers who know that California white pine is not a true white pine, but since it is invoiced to them as white, they feel at liberty to resell it as a true white pine, so called.

Now, I will ask you if you know of any lumber dealers who belong in the third category; that is, dealers who know that California white pine is not a true white pine, but who, nevertheless, feel at liberty to sell it as a true white pine because it is invoiced to them under a name which includes the word "white"?

A. I do not.

Q. Do you know of any lumber dealers in the second category; that is, who think that California white pine is a true white pine?

665

A. No.

Q. Are these several woods sold on their merits, Mr. Lane, in your opinion?

A. They are so far as we are concerned, and I think others are doing the same.

Q. That is, they sell with respect to their quality and their utility?

A. Yes, sir.

Mr. MATTHEW. That is all.

Cross-examination by Mr. BURR:

Q. In outlining the various types of lumber that you handle, I believe you said, in a preliminary way, that you were specializing in western lumber; do you handle anything besides western lumber?

A. No, sir.

Q. You do not handle Northern white pine at all?

A. Pardon me, we do on special occasions.

Q. To meet special orders?

A. Yes, sir.

Q. How often, in the last year, would you say you handled Northern white pine?

A. We have sold two cars this year.

666

Q. Where did they come from?

A. Wisconsin.

Q. Was that virgin white pine, original first growth, or was it second growth?

A. I would not be able to answer that.

Q. Do you remember anything about the width of it?

A. No.

Q. Did that come through your yards or go direct to the customer?

A. We do not have any yards; we do not see the lumber.

Q. You never see the lumber?

A. Only when we go to the yards and look at it.

Q. How much experience have you had personally in the woods? Have you ever been in the forests yourself?

A. Not in the western forests.

Q. Not in the forests which yield the woods that you specialize in?

A. Only on inspection tours.

Q. Driving through in an automobile, or something like that?

A. Walking around, and that is very different.

Q. Yes, walking around is a little bit different and gives you a chance of getting a more intimate acquaintance with the tree; now, do you ever have occasion to come in contact with the actual consumer of lumber?

A. Yes, sir.

667 Q. And by that I mean the man who buys from your customer, the retailer; do you ever come in contact with him?

A. Yes, sir.

Q. In what way does that happen?

A. That is usually brought about by a request from a retail lumber distributor or a trim mill manufacturer to discuss the western woods, and we call on his customers.

Q. And he comes to you for that purpose?

A. Our customer comes to us for that assistance.

Q. I believe you testified that you are not pushing any variety at the expense of any other variety of lumber?

A. Right.

Q. Do you distinguish at all between the characteristics and qualities of lumber for the ultimate purpose of the buyer; do you distinguish that one type of lumber is good for one thing and another type is good for another?

A. We do when the customer makes the request, and sometimes——

Q. And sometimes that happens?

A. Sometimes we think the customer does not know.

Q. And then you volunteer some information for him?

A. That is it.

Q. Which do you regard as the woods that are outstanding in the characteristic and quality of durability, when exposed to conditions likely to induce decay?

A. You are talking now only on the question of durability

668 in the western woods?

Q. No; woods in general. You are familiar with the durability of various types of lumber, I presume?

A. Yes, sir.

Q. You have to meet southern woods in competition, do you not?

A. Yes, sir.

Q. And it is your endeavor to quote western woods and secure sales, and in that way you come in contact with competitors who are selling woods from other parts of the country, do you not?

A. Yes.

Q. So you are familiar, in a general way, with the durability of woods, are you not?

A. Yes, sir.

Q. Will you kindly answer the question as to which types of woods you regard as outstanding for that characteristic and quality of durability?

A. Western red cedar.

Q. What else?

A. May I ask you a question?

Q. Yes; I may not be able to answer it, sir, but I have no objection to your asking.

A. On the question of durability, that is quite an expansive word, and it makes a great difference whether the piece of wood or
669 lumber is exposed in various ways. If you put a piece of wood in the ground, or if you put it in the air, or paint it, or don't paint it—all of those things make a difference, so when you say durability there might be certain woods that would exceed other woods on account of certain conditions.

Q. Suppose, then, we confine the consideration in the first instance to lumber which is used for exterior finish, where it is exposed to rainfall and weather conditions?

A. I would place western red cedar no. 1.

Q. At the top?

A. Yes, sir.

Q. What else?

A. California sugar pine no. 2; I would put Idaho white pine no. 3; I would put Sitka spruce no. 4; in certain places I would put Port Arthur cedar no. 3; in other places I would put it at no. 4.

Q. Depending on what?

A. Depending on the exposure and wear. If it is strictly for outside finish, it would go no. 4, in my opinion.

I left out one important wood, and no California man would want me to leave that out, and that is redwood.

Q. Where would you put that?

A. As no. 2.

Q. And the others shift down one place?

A. The others would shift down one place; yes.

Q. All right, proceed.

670 A. I have mentioned Idaho white pine and Sitka spruce. Well, several of those woods are close to the line, I suppose, and it is your purpose to find a position for California white pine in comparison with the other woods?

Q. Only partly so.

A. California white pine——

Q. Before you proceed on that, let me ask you—my question was broad enough to cover other woods than woods from the Pacific coast, but I think you mentioned nothing but Pacific coast lumber.

A. I understood you to say that you were referring to western woods.

Q. If you include northern white pine within the purview of your answer, where in the category would you put northern white pine?

A. Generally, I suppose you mean?

Q. Yes; for outside exterior use, the same as the other woods that you have referred to.

A. I think I would put that about in the same position as California sugar pine.

Q. I think that was third, after you made the readjustment?

Examiner SHEPPARD. Yes.

By Mr. BURR:

Q. Where would you put the pondosa wood—pondosa pine?

A. I would place the California white pine, and then I
671 think I would put pondosa pine next.

Q. After the others, or where in your category?

A. After the others. Spruce would fit in there just above or just below, according to the way they were treated.

Q. Is there any difference in the durability and the rating that you would give for durability of these varieties of lumber where the piece is exposed to the weather and is partly underneath the surface of the soil; in other words, here is a clapboard or piece of rustic or another—I don't know what they are—you know, that is exposed in part and is in part underneath the surface of the soil. Is there any difference in that line, would you say, or have you not studied that particular feature?

A. I don't think that makes any difference in that class of construction.

Q. There are some woods that are particularly good for fence posts where they have to protrude above the soil, and then be stuck about 3 feet into the soil, that makes, does it, a different category?

A. Yes.

Q. That would make it of a different category, you say?

A. Yes, sir.

Q. Why would it not be a different category where the board on the outside of the house is partly underneath the soil?

A. I could not tell you why.

672 Q. But you would not think it made any difference if a piece of outside finish was partly exposed to the soil and partly to the winds of heaven?

A. If you will allow me to explain, fence posts is of course an entirely different form of construction. If you put a post in the ground it comes in contact with the moist soil; the upper part of the post is supposed to come in contact with the elements, wet, dry, and sun, and they are entirely contrary treatments, almost.

Q. Do you distinguish between pondosa pine and California white pine; are they two different varieties of lumber, or are the same variety, or what is your understanding?

A. In our classification they are different.

Q. They are different?

A. Yes, sir.

Q. Do you understand that they come from a different variety of tree?

A. You mean a different species?

Q. Yes; a different species of tree.

A. The species is called the same, yet there is some difference in the tree.

Q. Do you know where the pondosa pine comes from?

A. Yes, sir.

Q. Where?

A. All the Western States.

673 Q. Including California, Arizona, and the Southwest?

A. Yes, sir; practically every State in the Northwest and on the Pacific slope have some.

Q. Did you finish your answer?

A. Practically.

Q. Where does California white pine come from?

A. California and Oregon.

Q. Do you buy lumber, that is billed to you as pondosa pine, from the entire territory that you referred to, as territory where the pondosa pine grows?

A. We might, but we don't.

Q. Where do you buy it from?

A. Most from Oregon and Idaho and western Washington.

Q. What part of Oregon do you buy the lumber that is billed to you as pondosa pine from?

A. Most of it east of the central and southeastern.

Q. Do you remember the name of the concern through which you buy that in that part of Oregon that you refer to?

A. You mean what the name of the concern is where we buy the pondosa pine?

Q. In Oregon; yes, sir.

A. Is that an important question?

Q. If you do not want to answer, I won't press it.

A. It is a commercial matter.

Examiner SHEPPARD. I don't want you to divulge any of
674 your personal trade matters.

By Mr. BURR:

Q. Do you remember when the pondosa pine first came into the market under that trade name?

A. Well, I would not be very definite; I might say possibly ten years ago; maybe eight.

Q. Were you buying the same type of lumber before that?

A. Yes, sir.

Q. Under what trade name?

A. Western white pine.

Q. In what respects do you distinguish between pondosa pine and California white pine in the general character of the wood, as lumber?

A. I guess you will have to explain that question a little bit.

Q. I think you said that you distinguished between pondosa pine and California white pine as two varieties of lumber from a practical,

commercial standpoint; did you not? If I misunderstood you, set me right.

A. I will tell you, I admit that California white pine and ponderosa pine come from the same species of tree, but differ as to the product of the tree because of the location of the timber where it is cut, and other things relating to that.

Now, when you ask me how I determine the difference, I don't know just what you want.

Q. They shade off into one another, I suppose, in character
675 and quality, do they?

A. The general appearance is quite similar.

Q. Where are you buying your California white pine from, what locality?

A. We buy some in what is called the Klamath Falls district; we buy some of it further south, I should say probably a couple of hundred miles; some of it in the central part and some in the central western part.

Q. When a buyer wants to get from you a wood that is valuable where exposed to the weather, you do not recommend California white pine, do you?

A. Well, as a rule, we would not.

Q. What would you recommend among your products?

A. We would recommend cedar, redwood, sugar pine, depending on the class of work that the wood is going to be used in.

Q. How large a percentage of your buyers get your advice on the subject of what wood to buy?

A. Very little at this time.

Q. Your buyers are retailers, manufacturers, specialty manufacturers, and millworkers, and are all pretty well posted on what they want, and they order by trade name, and you give it to them; is that right?

A. Yes, sir.

Q. You do not endeavor to be the guardian to your trade and tell them what they want, when they ask for something, do you?

676 A. Not necessarily.

Q. How often in the past year, would you say, that you have given advice as to what variety of lumber to use—just give us a rough estimate, how many times has that occurred?

A. I don't think that answer would be worth a nickel.

Q. That is my business, sir, if you will excuse me.

A. Pardon me.

Q. Can you give us your best answer on that, just your best judgment, how often that occurs?

A. Possibly twenty-five times, or possibly seventy-five or a hundred.

Q. Is that so? That is a pretty good number of cases. I am surprised that it is so large. You give them advice when the ques-

tion of durability comes up along the line you have suggested in that category of western lumber; is that so?

A. Yes, sir.

Q. Suppose you were asked for something to be used for pattern stock—does that question ever come up?

A. Yes.

Q. What do you recommend for pattern stock—is that what the retailer asks you for or what the millman asks you for?

A. That question does come up from certain sources.

Q. All right; what advice do you give on pattern stock?

A. Our first choice for pattern stock would be California sugar pine.

677 Q. Why?

A. Because of its texture.

Q. What is the texture?

A. The texture means whether it is hard or easy to work, principally.

Q. Now, what is your second choice on pattern stock; have you any, or do you just recommend sugar pine and let it go at that?

A. No; there are others of these that can be used.

Q. What else? What would be your second choice among the woods that you handle?

A. Well, I would say Washington white pine, if I could get it.

Q. Is that the same as Idaho white pine, do you mean?

A. Practically the same, only it is a little different.

Q. You do not happen to know the botanical name of that tree, do you?

A. No; we just call it Washington white pine.

Q. Where do you buy that?

A. Close to the northern and central part of Washington, mostly on the west side of the Cascades.

Q. Is that the same variety of tree which you know as Idaho white pine?

A. Practically the same, but somewhat different on account of its location and growth.

Q. You mean there are local differences in the same tree; is that the idea you have in mind?

678 A. No; it will go a little further than that.

Q. How far?

A. I am not prepared to give you the scientific side of it.

Q. No; I do not expect that.

A. Only in a general way.

Q. Your office handles Idaho white pine, and you did not mention Washington white pine when you mentioned these varieties of lumber you handled?

A. Possibly not, because there are so many. Your last is not a question and should not have an answer.

Mr. BURR. Will you read that question, please?

(The question was thereupon repeated by the reporter as above recorded.)

The WITNESS. That is not a question.

Q. All right, I will ask you a question. Why did you not mention Washington white pine when you listed for counsel for the defense the different types of lumber that you handle from the western coast?

A. I did not remember it. I also left out some other woods.

Q. You do not know whether the variety of white pine that you secure from Washington in that district, that you just described a moment ago, is the same variety of tree as the lumber that you receive under the trade name "Idaho white pine"; is that true?

A. I think it comes from the same species.

Q. Do you understand whether or not that species, Idaho white pine and Washington white pine that you buy is the same
679 species as California white pine?

A. They are not, in my opinion.

Q. Are they the same species as the pondosa pine, in your opinion?

A. No.

Q. You are sure of that, are you?

A. As sure as I can be of anything.

Q. Is the sugar pine a different species from any of those four that we have just referred to?

A. Yes, sir.

Q. Is northern pine a different species than any of those we have just mentioned?

Mr. MATTHEW. Do you mean northern white pine?

By Mr. BURR:

Q. Yes; northern white pine, thank you.

A. It is considered to be the same species, and yet those different woods have different botanical names. There are some differences in the woods, and I am not able to say from a scientific standpoint whether they are exactly the same thing in every respect or not.

Q. You now know which are white pines and which are not white pines, of those various western pine woods?

A. Am I asked a question?

Q. Yes.

A. I don't know just what you mean by your reference to white pines.

680 Q. I will say the record shows that there are two groups of pine; that all pines are grouped under two categories, the white-pine group and the yellow-pine group; now, do you know whether northern white pine belongs to the white-pine group or not?

A. It is considered so.

Q. Do you know whether the Idaho white pine belongs to that group?

A. It is considered that same species.

Q. These are several species belonging to one group?

A. That is where you define your species; do you mean other characteristics or using the botanical name, or what?

Mr. MATTHEW. The examiner understands that I have not offered this witness as a botanist?

Examiner SHEPPARD. Yes.

Mr. BURR. I am simply exercising my right under the broad powers of cross-examination.

Mr. MATTHEW. Your powers on cross-examination are broader than mine were yesterday.

Mr. BURR. I don't think so.

Examiner SHEPPARD. Go ahead; let us not waste time in arguing.

By Mr. BURR:

681 Q. To which group does the California white pine belong, if any? Is that a member of the true white-pine group, or does that belong to the yellow-pine group?

A. It belongs to the yellow-pine group.

Q. Where does the pondosa pine belong?

A. I think it belongs to the same group.

Q. Where does the Washington white pine that you referred to belong?

A. That belongs to what you call the other group.

Q. The white-pine group?

A. Yes.

Q. I believe you testified on direct examination that you seldom or never, whichever it was, that you never had any call for white pine without designating the species?

A. Very seldom.

Q. You do on occasion, do you?

A. I presume we do.

Q. Do you know what you furnish under those circumstances?

A. We do not furnish anything.

Q. What do you do?

A. We find out what the customer wants.

Q. And then you make him specify what species it is or what trade name it is, and then you furnish it; is that true?

A. If we can.

Mr. BURR. That is all.

682 Redirect examination by Mr. MATTHEW:

Q. Perhaps counsel will allow me to ask one question which I should have asked on direct examination; I would like to ask Mr. Lane, if the question is not embarrassing, if his business is one of the large lumber businesses in this territory; are your operations here regarded as quite large?

A. I think you could get that information possibly from someone else better than you could from me.

Q. If it is an embarrassing question, I shall not press it.

By Examiner SHEPPARD:

Q. Are you familiar with Pinus strobus?

A. Yes, sir.

Q. What does that indicate to you?

A. That indicates to me that the party making the inquiry would want pine that would come from what we call the eastern part of the country.

Q. In other words, northern pine?

A. Yes, commercially speaking; although you can buy Pinus strobus in North Carolina.

Q. Another query which I think you can answer—I want you to tell me from your experience and knowledge of woods how the so-called "white pine of California and the pondosa pine" compare in durability to the Pinus strobus or the northern pine?

A. You want to know how California white pine and
683 pondosa pine compare with Pinus strobus?

Q. As to durability?

A. Pinus strobus would be better.

(Witness excused.)

JULIAN A. RICE, was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. What is your business, Mr. Rice?

A. Wholesale lumber.

Q. Where is your place of business?

A. New York Central Terminal.

Q. Throughout what territory, generally, do you distribute lumber?

A. New Jersey, New York, Massachusetts, Connecticut.

Q. How long have you been engaged in the wholesale distribution of lumber in this territory?

A. About nineteen years.

Q. Continuously?

A. Yes, sir.

Q. What kind of lumber do you distribute?

A. A very general lot—yellow pine, North Carolina pine, red cedar, pondosa pine, California white pine, Idaho white pine, spruce—I guess that is all.

684 Q. What is the general nature of your trade, Mr. Rice?

A. Almost entirely with retail lumber dealers and box manufacturers.

Q. Do you carry California white pine?

A. Yes.

Q. Throughout what period have you been selling California white to your trade?

A. As long as I can remember; I don't remember whether it was the whole period of nineteen years, or fifteen years of it—a long time, anyway—fifteen years or more.

Q. Has the name "California white pine" been used during that period to designate this lumber?

A. Yes, sir.

Q. And you have been familiar with it during that time?

A. Yes, sir.

Q. Will you state whether or not that name of California white pine is well understood in the lumber trade in New York City and vicinity?

A. It is well understood.

Q. When you receive orders for California white pine, are the orders placed under those terms?

A. Yes, sir.

Q. Do you ever receive an order for white pine, without any qualifying term?

A. I do not remember ever having one; I might have, but
685 I don't remember.

Q. I think you stated that you sell Idaho white pine?

A. Yes, sir.

Q. When a customer orders Idaho white pine, does he order it by that full term, "Idaho white pine"?

A. Yes; he does.

Q. Do you offer your California white-pine lumber to the trade as California white pine?

A. Yes.

Q. And not as white pine alone?

A. Not under any other name except California white pine.

Q. Do you invoice that lumber to your customers as California white pine?

A. Yes, sir.

Q. Have you ever furnished California white-pine lumber to any of your customers upon an order or in response to specifications calling for white pine only?

A. No, sir.

Q. Have you had any complaints by your customers upon the ground that the lumber which they had received from you or through you, as California white pine, had been misrepresented as to its character or as to its identity?

A. Never.

Q. There is no claim of deception or misunderstanding in
686 any respect?

A. No.

Q. Do you think your customers know exactly what they are getting?

A. I am sure they do.

Q. Your customers are well informed what is meant by these various trade names?

A. I think they are.

Q. Are these several lumbers or varieties of lumber which you carry sold on their merits; that is, for their quality and uses, irrespective of particular names?

A. Yes; they are all sold for purposes for which they are most suitable according to their characteristics.

Q. Do you find that the use of the term "California white pine" occasions any misunderstanding as to whether this lumber is obtained from some tree that is botanically classified as a white pine?

A. I do not think most people know the botanical names, so I do not think that there would be any question as to what the botanical name is.

Q. The trade hasn't any interest in that?

A. The trade has not any interest in the botanical names; they don't know them, and I don't know most of them.

Q. Mr. Rice, there has been testimony given by a sales representative of the Weyerhaeuser Lumber interests to the effect
687 that the Weyerhaeuser interests are losing orders to California white pine in three classes——

Mr. BURR. If the examiner please, I am going to object to that method of asking that question. Can he not, without bringing into the foreground what was testified by another witness, ask his questions, without showing that the witness is supposed to rebut certain matters?

It seems to me objectionable, suggestive, and leading. Why not ask the question and bring out these three alternates and try to rebut it in that way? As the question is put now, it seems to me exceedingly objectionable.

Mr. MATTHEW. Do not argue about it. I will defer to you immediately. I thought you wanted me to proceed along those lines in the interest of time saving.

Examiner SHEPPARD. All right, proceed.

By Mr. MATTHEW:

Q. Do you know of any retail lumber dealers or any other customers of yours who know that California white pine is not a true white pine botanically, but that they feel free to offer it to the trade as a true white pine, so called, because it is invoiced to them as California white pine?

A. I do not know of any such cases. Of course, I do not generally know how my customers sell their lumber, because I am not there to see them do it.

Mr. MATTHEW. I think that is all.

688 Cross-examination by Mr. BURR:

Q. You say you do not know the botanical names of some of these trees?

A. No; I do not know all of them.

Q. Botanical names are not known in the lumber trade very much, are they?

A. Not generally.

Q. You would hardly be expected to know them, to meet the questions that come to you from the trade?

A. If I used botanical names, my customers would not know what I was talking about.

Q. Which of the varieties of pine that you carry do you understand to be genuine white pine?

A. The Idaho white pine and California sugar pine.

Q. Do you handle any Northern white pine?

A. We have possibly in the last year sold one car because of special request, and we bought that from another wholesaler. We do not regularly buy it from any white pine mills.

Q. Do you know whether that is genuine white pine or not?

A. Northern white pine?

Q. Yes.

A. I could not prove it.

Q. What is your understanding?

A. It is my understanding that it is.

689 Q. Do you know whether or not the California white pine belongs to the classification of genuine white pine?

A. I understand that it does not.

Q. Does pondosa pine belong to the white-pine group?

A. I understand that does not.

Q. And that has been your understanding for a long period?

A. Ever since we have been handling them.

Q. How long have you been handling pondosa under that trade name?

A. I cannot remember when they changed the name from western pine to pondosa, but it was since that time, I suppose, seven or eight years.

Q. Do you understand that the ultimate consumer of various classes of woods is familiar with what is to be delivered under the various trade terms?

A. Who is the ultimate consumer?

Q. The builder, contractor, or owner?

A. I do not know whether you meant him or the man who lives in the house. I presume the contractor and builder is, but the person who occupied the house probably is not, but that is just guesswork; there are so many classes of people, some are very intelligent, and many of them are very stupid, like the rest of us.

Q. Would you regard genuine white pine or northern white pine as having any significance in the lumber trade?

690 A. I do not quite understand what you mean by "significance." I understand it is a wood that has been used in the East here for a good many years; it is very find and very nice wood; it is one of the first woods that the settlers in the colonial days used.

Q. What is the reputation of that wood, we will say, for durability?

A. It is very durable.

Q. What is its reputation for texture?

A. Very nice, soft texture.

Q. Nice, soft pine texture?

A. Yes.

Q. What is its reputation as regards ability to stay in place?

A. It is very good for staying in place.

Q. Do you regard Idaho white pine as having similar characteristics?

A. Yes. Not exactly, but very much the same.

Q. Do you regard California white pine as having similar characteristics?

A. They have some of the characteristics.

Q. Which ones?

A. Well, characteristics which they have would be durable, lightness in color, and lightness in weight, compared with some kinds of pine.

Q. And some is similar in texture?

691 A. Some is similar in texture; that is what I meant.

Q. How about durability?

A. It is not as durable, I understand, as northern white pine.

Q. Do you find that California white pine varies in quality in various parts of the range where you ship it?

A. Most of the stock we ship is California.

Q. Where in California?

A. Klamath Falls and some a little south of Cloud River.

Q. Do you sometimes buy that wood from some other locality?

A. We have had it from other localities, but not to any great extent.

Q. Do you regard Klamath Falls district preferable, and is that why you order it from there, or why is it?

A. It is lighter.

Q. It is lighter in color or weight?

A. Lighter in weight, and probably softer in texture.

Q. Do you think the word "white" as connected with California white pine would or would not have a tendency to cause a buyer who was not well posted on woods to regard the California white pine as belonging to the white pine group?

A. Any buyer who is not well posted on woods might not, of course, know anything about white pine, and he is very apt to say simply that he wanted shelving board or something of that sort.

692 Any of our customers that buy of us would know immediately that if we said California white pine, we meant that kind of wood.

Of course, I do not know whether a person who never heard the words "white pine" would know anything about it, and he would not know whether it was a good or a poor wood.

Q. I think you stated that northern white pine had a high reputation here?

A. Yes.

Q. In this part of the country, particularly?

A. Yes, sir.

Q. Other witnesses have stated that customers ask, on occasion, for white pine; I want to ask you whether the use of the word "white" in connection with the product California white pine would or would not, in your judgment, afford a means of misleading the ultimate buyer, getting California white pine, into thinking that he was getting genuine white pine?

Mr. MATTHEW. Just a moment; I will object to that unless you reframe the question. Ask the witness whether it does; you asked whether it would, and that is purely speculative, and it is asking a question which this witness cannot answer.

Mr. BURR. I think, if the examiner please, that this witness has testified on direct examination to a number of matters of opinion, and it seems to me this question is appropriate. If the examiner does not recall the question, I will ask to have it reread.

Examiner SHEPPARD. Read the question, Mr. Reporter.

693 (The question was thereupon repeated by the reporter as above recorded.)

Examiner SHEPPARD. That is a question, Mr. Burr, that the Commission has to decide from the testimony in this case. As to Mr. Rice's opinion on it, I do not think that would be helpful one way or another, in any shape or form.

We have to rest this case, as you know, on facts. The Commission has to make up its final decision on the facts and not on opinions of witnesses.

However, I will allow the witness to answer it, although I will give it probative value.

Mr. MATTHEW. Mr. Examiner, I was only objecting to the word "would."

Examiner SHEPPARD. All right, Mr. Rice, let me have your opinion.

The WITNESS. I think you asked me whether the word "white", used in connection with California white pine, would influence somebody to think that it was not California white pine, but true white pine?

By Mr. BURR:

Q. Might lead them to think that California white pine itself was genuine white pine?

A. I do not think I can answer that. I do not know what kind of an answer you would expect of me. I think that would be kind of a guess, would it not; it depends entirely on who you

694 asked it of.

Q. Do you regard the term "California white pine", in the respect of containing the word "white" in that name, when it is admitted by you, I believe, that the California white pine is not a

true white pine, do you regard the use of that word "white" as having the capacity or tendency to mislead?

A. I do not regard it as such in the use, in the industry. I think, of course, it might mislead a boy in school, if you asked him about the tree, or something like that, but in the lumber industry, I do not think it is misleading.

Q. You do not think it is misleading to the retailer?

A. I know it is not.

Q. How about the consumer, he is a boy in the lumber business, is he not?

A. It depends on who the consumer is. If the consumer is a contractor or builder, or if the consumer is a man who manufactures things out of wood, I do not think he is. He knows the kind of wood he wants to use for the purpose. I imagine the man who lives in the house, very likely doesn't know anything about it; does not know whether it is white pine, yellow pine, spruce, or hemlock; all he knows is the house is built.

Q. That ultimate consumer knows something of the reputation of white pine in this neighborhood, does he not? White pine has reached the ultimate consumer as a matter of reputation, hasn't it, as a term?

695 A. I really do not know. I should think the man would have heard of the words "white pine", certainly.

Q. When he goes and asks for white pine, is there not a tendency for him to get California white pine, and accept it, when he asks for white pine from this trade term?

A. You are asking me what somebody else would do?

Q. I am asking you for a tendency.

A. I don't know anything about the tendency. I do not want to argue with you, but you are asking me what somebody else is going to do. I don't know. I know we would not, if anybody asked us for white pine, we would not sell California white pine.

Q. I understand that; I am not impeaching your integrity in the slightest. I think that is perfectly clear.

A. Whether somebody else would do it, I don't know.

Q. I asked for your opinion, after long years of handling lumber, whether or not in your judgment the use of the word "white" in connection with California white pine, in the territory where white pine has had a reputation for generations, has or has not a tendency or capacity to mislead the ultimate consumer who knows the white pine reputation?

A. I do not think the word "California" white pine would have anything to do with it. If a substitution would be made, the man would readily substitute pondosa, just as soon as he would Cal-

696 ifornia white pine. It is the appearance that would call for substitution.

A man who goes into a lumber yard to buy lumber, and he says he wants to buy white pine, and, if the man did not have true white pine, he would bring out something that looked like it; spruce, Cali-

fornia white pine or pondosa pine, or any wood that he wanted to make a substitute of, and the party who was buying it, if he thought it satisfactory, would take it. I do not think the word "white" in connection with California white pine would be brought into it. I do not think the lumber dealer would say he had California white pine, if he wanted to substitute.

Q. If the lumber dealer said, "We have Idaho white pine", would he or would he not be selling genuine white pine, if he sold the Idaho?

A. He would be selling genuine white pine.

Q. What if he said, "We have California white pine", would he or would he not be selling genuine white pine?

A. No; he would not be selling genuine white pine.

Q. Do you or do you not believe that the California white pine pile would be easier to sell, because he would be able to say, "This is California white pine", than a stack which is made up of pondosa, where, if the purchaser asked what it was, he would have to answer, "pondosa", which did not include the word "white"?

697 A. You are asking me if a man who wants to cheat is willing to go one step further, and cheat with pondosa white pine or California white pine. My answer is, if he is going to cheat, he will say, "I have white pine."

Q. Is it not easier to sell as and for white pine something that is called "California white pine", than to sell something without the use of the word "white"?

A. Well, it might ease his conscience.

Q. And it might be easier to put it over, would it not, because it has the word "white" in it?

A. The word "white" does not appear on the lumber, and he would not show the invoice, because he would not want the customer to see the prices at which he bought it.

Q. When a customer comes into a lumberyard and says, "What is that?" and he is answered, "California white pine", does that not help to sell it for white pine?

A. Possibly it would be easier than if it were some other name.

Q. That did not have "white" in it?

A. If you called it by some other name that was not known, a man would have to describe it to him——

Q. If it did not have the word "white" in it, it would not be as easy to sell it for white pine than if it did have the word "white" in it; isn't that true?

A. I suppose that is so.

Q. You say you have no complaints with regard to misrepresentation; the complaints of the ultimate consumer go to the

698 retailer rather than to you, or would they come to you?

A. They would not come to us unless we, in turn, misrepresented it. If we sold exactly what the man bought, they could not come back to us.

Q. The buyer could not come back to you, you say?

A. No; if we sold what he intended to buy.

Mr. BURR. That is all.

Redirect examination by Mr. MATTHEW:

Q. I would like to ask you, Mr. Rice, whether in your opinion this term "California white pine" is best adapted to characterize this particular lumber, and if so, why?

A. I think it describes the lumber accurately, because it is light in color and weight and resembles white pine in those characteristics and comes from California. I know that our customers draw distinctions between California white pine and pondosa, but if we called it all the same thing, there would have to be some distinctive name so that we could sell them one wood in preference to the other.

Q. Does the California white pine resemble the typical southern yellow pines in any respect?

A. It does not. Southern yellow pine is heavy and pitchy, very hard. Those are the common characteristics about it, especially the hardness.

Q. Southern yellow pines are used generally for far differ-
699 ent purposes?

A. Yes; for timbers and that sort of thing.

Q. So far as appearance, quality, and utility are concerned, is this California white pine lumber more nearly like the so-called true northern white pine lumber than any other?

A. I don't know about any other.

Q. I mean does it more nearly resemble the northern white pine than the yellow pine?

A. Oh, yes.

Q. Counsel has suggested that the use of this term "white" might have a tendency to deceive a customer or the ultimate consumer as to the lumber which he is getting; do you know of any such case where he has been deceived?

A. No. I know of no case where there has been any deception practiced.

Q. It is just as easy to practice substitution or deception if a dealer is unscrupulous, irrespective of the name under which the lumber is distributed to the general trade?

A. Yes; I think if he is going to start out to deceive and he has an opportunity to do so he may practice the substitution on any boards.

Q. If a radical change were made in the present name of California white pine, would it, in your opinion, be likely to result in some confusion in the trade?

A. I cannot think offhand of any name that would as accu-
700 rately describe the lumber, if that is what you mean. I cannot think of any other name that would describe it more accurately.

Q. You think that term describes the lumber most accurately?

A. It does to my mind.

Q. It would be entirely possible for an unscrupulous lumber dealer to furnish spruce for white pine if he desired to do so?

A. I am sure he could with certain kinds of spruce.

Q. In other words, the name has nothing to do with it when it comes to substitution?

A. Very often the name does not enter into it at all.

Mr. MATTHEW. I think that is all.

Re-cross-examination by Mr. BURR:

Q. If someone furnished spruce when white pine was ordered, and it was so shown, it would be a palpable fraud, wouldn't it?

A. Yes, sir.

Q. Suppose somebody asked for white pine and California white pine is furnished, does not that present a radically different situation?

A. In what way different? I do not understand.

Q. A man asks for white pine and gets California white pine; it is not deception in the same class as furnishing spruce when white pine is ordered, is it?

A. It would be if the seller was attempting to deceive him. I do not see that the degree of deception would make any difference.

701 Q. The retailer might say, "I bought it as white pine—California white pine."

A. The retailer knows very well he has not bought true white pine, but has bought this wood called California white pine, which is the same as pondosa.

Q. You think it is deception to sell California white pine on an order for white pine, do you?

A. Yes, sir.

Q. But do you think that the retailer would feel that he was somewhat fortified if he were able to say, "I bought it as California white pine; I am not familiar with the varieties of trees on that, and I do not know whether it is genuine white pine"?

A. No; not if he knew that he was lying, and I think he would know it.

Q. Nevertheless, with the word "white" included in the name, does that or does that not operate to afford a better opportunity for the retailer to sell California white pine as and for white pine?

A. My answer to that is, if a man is going to deceive, I suppose it gives him a chance to pretend to himself that he has not deceived as much in that event, but it does not alter the fact that he is guilty of deception.

Q. In the instrumentality of deception there is a difference, is there not?

A. It might ease his own conscience, but I do not see how

702 it has anything to do with the matter of deceiving—I do not see how it can even ease his conscience; it is silly to say that.

Q. You say that the trade term "California white pine" describes the lumber well?

A. It does to my mind.

Q. You think it describes the lumber well in point of color?

A. Yes, sir.

Q. You think it describes the lumber well in point of texture?

A. Yes, sir.

Q. Let me ask you, does it describe the lumber well in point of durability, when you have in mind the durable characteristics of the other white pines that you have described?

A. No; I do not think it does describe it in that particular as well, because I know it is not as durable as the other pines.

Q. Do you know any firm that is selling the same variety of tree as California white pine under the term "soft pine"?

A. That has not come to my knowledge.

Q. Would you regard that as a fairly good term, "California soft pine"?

A. I am afraid there might be some confusion between California soft pine and California sugar pine; it sound something alike. It begins with an "S", and if you say it repeatedly over the telephone, you might misunderstand it.

Mr. BURR. That is all.

703 Redirect examination by Mr. MATTHEW:

Q. Would that term "California soft pine" you think be an unsatisfactory substitution for California white pine?

A. I think it would be or might be possible, if you were talking to a man, for instance over the telephone, to misunderstand; he might be saying "sugar" for "soft"; they are somewhat alike; not exactly alike. Of course, if it were printed it would evidently not be the same word.

Re-cross-examination by Mr. BURR:

Q. In other respects, would you regard that a good term?

A. It is better than I thought of myself.

Q. Would you regard it better than California white pine, in view of the testimony?

A. No; I don't think it is as good as California white pine; it seems to me "white" describes the lumber very accurately.

Q. In view of the other white pines that are so diametrically different in point of durability, do you still contend that it is a good term?

A. I do, because never to my knowledge has there been any confusion.

Q. But you testified that the consumer——

A. I did not testify the consumer was confused.

Q. I did not finish—you interrupted me.

704 A. I beg your pardon.

Q. The consumer does not come to you with his complaint, and you do not get his complaints?

A. I do not get them at all.

(Witness excused.)

W. A. GAETZ was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Gaetz, what is your business?

A. I act as manufacturer's representative, selling lumber.

Q. How many years' experience have you had in the lumber business?

A. Well, practically all my life, that is, as a boy I worked in the woods in the winter, but I have been actively engaged in the manufacture and sale of lumber for 29 years.

Q. Will you relate your lumber experience in some detail from the very beginning, right down to date, Mr. Gaetz?

A. That is as a manufacturer, you mean?

Q. I wish you would start with your first experience in the woods.

A. My first experience in the woods would be logging.

Q. Where was that?

A. That was in Nova Scotia.

705 Q. In connection with what variety of timber?

A. White pine and spruce.

Q. Is there a northern white pine in this territory?

A. Well, it would be the so-called "white pine", the same as you would have in Maine and Michigan.

Q. Strobus pine?

A. Yes; with a little Norway mixed in with it.

Q. Now, will you continue, please?

A. From there I came to Maine, and I worked there in the manufacture of window frames, interior finish; from there I went to Spokane, Washington; that was twenty-six years ago, and I have been in that district ever since; that is, selling on the road, and for the past six years here in New York.

Q. How many years were you in the State of Washington?

A. Well, I have to figure it up—about nineteen to twenty years. I made that my home, but since 1917 I have been on the road practically all the time through the Middle West and here.

Q. Did you become personally familiar with the lumber industry on the Pacific Northwest during the period of your stay in Washington?

A. In the Spokane district; yes.

Q. With what varieties of lumber did you become particularly familiar?

A. I became particularly familiar with what you term now
706 "pondosa and Idaho white pine."

Q. You were in the mills?

A. Yes.

Q. You know something, then, about the manufacture of lumber?

A. Some.

Q. And you are familiar with the appearance and quality and utility of lumber?

A. Yes; to a considerable extent.

Q. What varieties of lumber did you sell when you made your home at Spokane and were engaged in distributing lumber?

A. Pondosa and Idaho, with fir and larch mixed in.

Q. Was pondosa pine sold under that name?

A. It was first sold under the name of "western white pine", then later on, about eight or ten years ago, they changed to pondosa—I don't know the exact date.

Q. You are now engaged in the wholesale business in New York?

A. No; I am not a wholesaler; I am selling to wholesalers and jobbers.

Q. You are a manufacturers' agent, I think you said?

A. Yes.

Q. How long have you been engaged in that business here in New York?

A. Since November 1923.

Q. Prior to that time you had experience in selling?

A. Yes; to the retail trade.

707 Q. Throughout what part of the United States?

A. Wyoming, Colorado, Nebraska, Iowa, North and South Dakota, part of Kansas, part of Illinois.

By Examiner SHEPPARD:

Q. The Middle West?

A. The Middle West.

Q. Your direct experience on the east coast has been what?

A. As a wholesaler in connection with sash and door jobbers; I only get to the retail trade when I am asked to go with someone else.

Q. What kinds of lumber do you sell or distribute?

A. Principally pondosa, some Idaho, and a little California white pine.

Q. Do you directly represent any manufacturer of California white pine?

A. No, sir.

Q. Do you represent any manufacturer of California sugar pine?

A. No, sir.

Q. Your principal interest then is in the pondosa pine?

A. What we term the inland empire district.

Q. You carry the Idaho white pine as well?

A. Yes, sir.

Q. Are you familiar with these various lumbers which are marketed here under the name of Idaho white pine, pondosa pine, and California white pine?

708 A. Yes, sir.

Q. How long have you been familiar with that term "California white pine"?

A. I first started to hear about it in 1909 in the Middle West; it was sold by the McLeod River Lumber Company, sold as California white pine; that was my first experience with it.

Q. Has it been sold under that name ever since?

A. To my knowledge; yes, sir.

Q. Is that term now well established in the lumber trade and well known to the lumber trade?

A. Yes; it is.

Q. As far as you know, is there any confusion or misunderstanding in the lumber trade as to the identity of the lumber that is sold under that name?

A. Not to my knowledge.

Q. Mr. Gaetz, you have stated that you carry principally pondosa pine; do you know whether or not the pondosa pine is obtained from the same species of trees which yield the California white pine?

A. As I understand it, botanically it is the same tree. The trees growing in different districts will have different little characteristics when cut into lumber.

Q. Right in connection with that, I would like to ask you, Mr. Gaetz, whether there is any well-recognized commercial distinction between the pondosa pine, which is distributed in this
709 territory, and the California white pine, which is likewise distributed here?

A. There is a distinction.

Q. Will you explain that distinction as carefully as you can?

A. The pondosa pine comes from a smaller tree; the knots are smaller, consequently the common lumber would have a smaller knot, so it would be a smoother board; when we come to the upper grades, the shop grades, that is from a larger tree and produces a softer-textured finish and wider. The shop lumber being wider, you have more cutting volume than you have from a narrower piece of lumber.

Q. You are referring now to California white pine?

A. California. As I understand it, pondosa pine is more desirable for common boards, because it is a smaller knotted timber, but when we come to the upper grades, then the California pine is more desirable, because it is a larger tree and is of softer texture.

Q. Then I gather from your testimony that the pondosa pine has superior utility for certain purposes, and that the California white pine, in turn, has superior utility for other purposes?

A. That is my understanding.

Q. Has that been your experience in the trade?

A. Yes, it has.

Q. Will you likewise explain to what extent the pondosa pine and the California white pine are in competition in this territory
710 with which you are intimately familiar?

A. Our molding business; we are in competition, that is, interior finish, and in common boards, in wider finish; the narrower finish from the pondosa is cheaper, so it sells over the California.

Q. Will you explain the differences in price for the two varieties or of the two trade names of the lumber in the different grades?

A. That is between California white pine and pondosa?

Q. Yes. Contrast, for example, pondosa common with California common and then proceed to other grades.

A. California common and pondosa common by rail rate is practically the same; California coming in by water and rail, they have a three-dollar differential in freight. That can be eliminated in a certain class of trade, but when we come to the finished lumber, the pondosa pine producing a lot of narrow stuff and they make a lot of narrow stuff at a low price, but they produce very little wide lumber, whereas California white pine produces very little narrow and a larger proportion of wide. They are higher priced on the narrow and lower priced on the wide.

By Examiner SHEPPARD:

Q. How about the comparison of the two from the standpoint of sap?

711 A. The pondosa will have a little more sap in the finish, because it is a smaller tree.

Q. I had the opposite idea; I thought the sap was eliminated on the first cut-off?

A. In the ponderosa tree your sap comes in the first cut, and as you get into the heart, you get the common lumber.

Q. So California pine has more sap?

A. It is a larger tree, and you get into the clear lumber after you get through the sap.

By Mr. MATTHEW:

Q. Is Idaho white pine in direct competition with the pondosa pine and the California white pine?

A. People who want Idaho white pine buy it. For instance, the price would tell you. Take, for instance, the six-, eight-, ten-inch common pondosa, the market price is supposed to be $45.25; the same thing in Idaho would be $51.50. Twelve-inch is worth $49.25, and twelve-inch Idaho is $57.50—I believe that is what it is; I am not positive about it.

Q. Is it recognized in the trade that the Idaho white pine has superior utility for certain purposes?

A. Yes, sir.

Q. For what purposes particularly?

A. From the lumber dealer's standpoint, who carries it in his yard, it is regarded as a softer lumber, looks nicer, and it is supposed

712 to last longer, but I think that is a question, because I do not think any of us know whether it will or not. These woods have not been used long enough to tell which will last the longest. The Idaho lasting qualities are based on the old eastern woods, which are graded entirely different.

Q. Is there a marked difference between Idaho white pine and your eastern lumber to which you have referred?

A. There is a difference, which the experienced lumberman can tell, but perhaps the average man could not tell.

Q. Are there differences between the two regarding their utility?

A. I do not know, because the eastern white pine has proven its lasting qualities, whereas Idaho is still going through that process.

By Examiner SHEPPARD:

Q. Both are used for exterior finish?

A. Yes, sir.

By Mr. MATTHEW:

Q. As a distributor of the pondosa pine, under that name, Mr. Gaetz, do you find yourself at a trade disadvantage because of the use of the name "California white pine"——

A. No.

Q. (Continuing). By the manufacturers or dealers in this California white pine?

A. No, sir.

Mr. MATTHEW. In this connection, Mr. Examiner, I think I may be allowed to refer to the paragraph in the complaint to
713 which this particular inquiry is directly responsive.

Mr. BURR. Is that part of the question?

Mr. MATTHEW. I am explaining to the examiner the purpose of the question. Subdivision K of paragraph 9 of the complaint, is my reason for this question.

Q. Why is it you believe you are not at a trade disadvantage because you use the term "pondosa", whereas the distributor of California white pine uses the latter term?

A. The name is well established with the lumber trade that I deal with. One is called "pondosa", and they know what you mean by that. When you say "California", they know what they are buying; that is, the wholesale and jobbing trade that I deal with.

By Examiner SHEPPARD:

Q. They know the difference in the woods?

A. Yes, sir.

By Mr. MATTHEW:

Q. From a business point of view, you have no complaint against the use of the term "California white pine" to describe this particular lumber?

A. No, sir; I have not.

Q. Is there any confusion or misunderstanding in the lumber trade as to what California white pine lumber is?

A. Not to the trade that I deal with; that is, the wholesaler and jobbing trade; they know, and through the Middle West where
714 I travel on the road, there wasn't any confusion in the dealers' minds, but back here, I don't get to go to the dealer very much, so I am not so well posted on what the dealer knows about it.

Q. For the proper protection and conservation of your business in selling pondosa pine, would you prefer that the term "California white pine" be retained by these California and Oregon manufacturers?

Mr. BURR. If the examiner please, I think preference is going still further than any of the questions which either side have asked thus far.

Examiner SHEPPARD. That is a question that the Commission has to decide, and I do not know that the opinion of this witness or any other witness would do any good. I shall bar questions on either side with reference to the very question that the Commission has to decide in this case.

Mr. MATTHEW. My question was addressed to the very definitely alleged statement in subdivision K of paragraph 9 of the complaint, and I think naturally a supplementary question to determine whether or not it is to the advantage of these people who are alleged to be at a disadvantage to have this particular trade name retained, is a proper question.

However, if the examiner still feels the question is unnecessary, I shall not press it, of course.

Examiner SHEPPARD. I did not get, Mr. Matthew, that that was your question. I thought you asked this witness the
715 question whether or not the trade should or should not retain those names.

Mr. BURR. He asked for his preference. Let us have the last question read.

(The question was thereupon repeated by the reporter as above recorded.)

Mr. MATTHEW. I am not asking him to advise the Commission, but I am asking what is to his best interest as to the retention or loss of this term.

Examiner SHEPPARD. I will let you answer.

A. My preference would be to have it retain California white pine.

By Mr. MATTHEW:

Q. Are these several varieties of lumber selling on their merits in this market, Mr. Gaetz?

A. Yes, sir.

Q. Because they have utility for certain purposes and uses?

A. The very reason that a man will pay from $5 to $7 more for Idaho white pine he must believe in its merits or he would buy the cheaper stuff, would he not?

Q. Is Idaho white pine graded somewhat higher—that is, somewhat more strictly than pondosa or California white pine?

A. It is graded under the same rules, but, being a smaller tree, the stock is somewhat smoother lumber, and when graded, for instance, a pondosa knot will check because it is solid, because it
716 shrinks, whereas an Idaho white-pine knot is smaller and you do not get that checking.

Q. Is Idaho no. 3 common about as good as no. 2 pondosa common?

A. In some cases it will replace pondosa no. 2, but not always, because Idaho no. 3 may have some dry rot strak' in it which the pondosa will not have, but a knot defect would be a similar proposition.

Q. Does the Idaho white pine lumber characteristic in different thickness vary from the pondosa pine lumber?

A. I have always thought that, especially in the thicker common, 5/4, 6/4, and 8/4 Idaho will stay in place in a man's yard better than pondosa of the same thickness and not warp so much.

Q. Certain portions of your trade take Idaho white pine in preference to pondosa pine?

A. Yes, sir.

Q. In some parts of this territory, where Idaho white pine seems to be preferred?

A. Very much so.

Q. Can you explain that in some more detail?

A. I do not know how to explain it. We sell some window frames mixed with clear, with no particular demand for Idaho in common lumber, but where we haven't been able to furnish that Idaho we to lose the business. On one or two occasions we had a man try pondosa to see how he liked it; when he got it there he sold it as
717 pondosa, but his trade did not like it, so he would not buy any more. That happened a year ago, and we made a change.

Q. Then, on the other hand, you find certain portions of the trade that prefer pondosa?

A. The pondosa is handled more in the larger cities where they have cheaper buildings. It is a case of more of that speculative proposition.

Q. Do you sell a considerable amount of lumber or sell some lumber in northern New Jersey to retail yards?

A. No; I do not sell any to the retail yards myself.

Q. Can a practical lumberman readily distinguish between Idaho white pine and pondosa or California white pine on the other?

A. Very readily; yes.

Q. So far as your knowledge goes, has there been any complaint to the effect that California white pine has been furnished upon orders for so-called genuine white pine?

A. Not to my knowledge.

Q. I want to ask a question about durability of the lumber, Mr. Gaetz. Is heart wood more or less durable than sapwood?

A. Yes.

Q. Heart wood is more durable?

A. More durable than sap.

Q. Is that true of all this species of lumber?

A. In all the species of pine lumber this sapwood will rot quicker than the heart. For instance, I have got here in the old inspec-
718 tion rules that sap was considered a defect, but in our new inspection rules it is not considered a defect; it was changed

so you can adapt it to the lumber. If you made sap a defect, we would not have any upper grades.

Mr. MATTHEW. That is all.

Cross-examination by Mr. BURR:

Q. You would not have any upper grades in what variety of lumber?

A. In pondosa, Idaho, or even California, if you took out the white sap, you would not have what they term "first and second clears."

Q. Is there any distinction, in your experience, in the proportion of heart wood and sapwood in pondosa as contrasted with the heart and sapwood proportion in Idaho white pine?

A. I think the pondosa will have a little more sap; that is, in what we call the upper grades.

Q. In the Idaho would it not be possible to get heart-wood grades eliminating sap as a defect?

A. It might be, but the inspection rules do not eliminate white sap.

Q. When was the change in inspection rules made?

A. I will have to go back a long way. The first grade rules, what we termed the Tonawando inspection, took in first and second grades, first and second clears, A and B selects and common; the first three grades were free of all sap.

719 Q. They had to be free of all sap under those rules?

A. Yes; then the others would admit a certain amount of sap on the reverse side. They took those grades and what they termed the "Mississippi Valley grades", which were adapted to that lumber, which changed it, and then when we took them up later about twenty-five years ago, I think, we eliminated the white sap entirely as a defect.

Q. Are there some orders that come in for lumber under the Tonawanda rules still?

A. I do not handle Tonawanda wood, but Tonawanda still have their inspections; they have still a little lumber that goes under the Tonawanda inspection, but I am not positive about that.

Q. That feature is something that you would naturally not come in contact with?

A. No; because I do not handle northern pine.

Q. When you say there is no confusion in the trade, you are referring to confusion in the mind of which class of persons?

A. Of the wholesaler, sash-and-door man, and retail lumberman.

Q. You believe that none of those three classes are confused in their minds as to the difference between California white pine and other so-called "white pines"; is that true?

A. I have never met anyone who was confused; none, to my knowledge.

Q. Let me ask you, do you testify also as to whether or not
720 the ultimate consumer knows the difference between California white pine and Idaho white pine?

A. No; the ultimate consumer, as I understand, is the man who buys the house and lives in it.

Q. It might be the builder and contractor, perhaps; do you know?

A. The contractor would know the difference between Idaho white pine and California and pondosa; he may not know the difference between pondosa and California.

Q. Between those two?

A. Between those two, but he would know Idaho and northern pine. There is some pine yet in Maine, and they will know the difference between those. As I say, they may be confused, however, between pondosa and California.

Q. You say he will know the difference between those two; let me ask you this: You regard the northern white pine as more durable than California white pine, do you?

A. All I can say is this: The northern white pine and eastern white pine have proved themselves by years and years of experience, but we have had these western woods for only about 25 years, and it is too soon to tell which will be the best.

Q. Which will be the best of the western woods, you mean?

A. Or how they will compare with the eastern woods. It is a matter of supposition that one will compare with the other, because we have not had a real test yet.

721 Q. But there is a difference in reputation between the northern white pine and the California white pine; is that so?

A. Oh, yes; there is a difference in reputation.

Q. Would you say that was on account of the years during which those buildings made from northern white pine have withstood the weather; is that so?

A. Well, the greatest difference is the working it; there is nothing that we have found yet that works as easily as this eastern or so-called "northern" pine.

Q. I am referring to durability.

A. I am not prepared to say.

Q. I am talking about reputation for durability.

A. Of course, northern white pine has its reputation for durability, because it has proven that; the others haven't that reputation, because that is still to be proven.

Q. Have you yourself any preference from the standpoint of durability between the western woods; if you were buying for your own home and were going to use a western pine for that purpose, upon which one would you place your dependence for durability?

A. If I was in the district where they carried Idaho white pine, I would use that.

Q. Why?

A. Because it would be there——

Q. Yes.

722 A. But if I would get to another district probably where the retail yard did not carry Idaho, I would then have to take

pondosa or California, whatever they had, but if the man had two kinds of woods, I would buy Idaho.

Q. For exterior finish, you mean?

A. Yes; for exterior finish.

Q. How about interior finish?

A. I would take pondosa or California, because I would get clearer stock.

Q. How about price; it would be a little cheaper, would it?

A. The interior finish in pondosa and California would be cheaper than Idaho of the same grade of lumber.

By Examiner SHEPPARD:

Q. It is cheaper in the upper grades, too, is it not?

A. Yes, sir. The interior finish would be upper grades.

By Mr. BURR:

Q. You testified that there was no confusion in the trade resulting from the term "California white pine"; do you regard the use of the words "white pine" in the term "California white pine" as having a capacity to deceive the ultimate consumer?

A. You are speaking about the man who owns the house now?

Q. Yes.

A. Well, the man who owns the house, that is, if he is buying a house, he does not know the difference, whether it is pine or hemlock. He knows it as a house. If a man is building a
723 home for himself, then his architect would write up the specifications and he would ask the architect's say-so on it. So if there were any confusion, it might be on the part of the architect.

Q. In the New England States particularly, do you know whether some of those old white pine structures are widely known and reputed for great age?

A. Yes.

Q. You have been in New England, have you?

A. Yes, sir.

Q. Have you seen any of those old white-pine buildings that have stood—nobody knows how long?

A. Yes, sir.

Q. Would you say that the people who built residences—homes in New England—would leave it up to the architect, or do they personally know the reputation of white pine?

A. I might say this: The man who would buy pine lumber from the West today, any kind of wood, on the reputation of those old homes, would be misled.

Q. I beg your pardon?

A. He would be misled. Even our Idaho, coming to him with sap and everything, would not compare with that wood much more favorably than any of these other woods.

Q. I believe you testified that you don't know whether Idaho would stand up with northern or not?

724 A. I don't know, but these old buildings that you speak of were probably of heart lumber, treated in a different way; we do not treat our western lumber that way, and it would be unfair to even ask Idaho people to guarantee their stuff to last with this stuff. Lumber has to be treated well to last.

Q. You mean it has to be painted and all that sort of thing?

A. Yes, and keep the sap out. White sap will rot any lumber, I don't care what it is.

Q. When a man in New England asks for white pine and calls upon his architect to specify white pine, do you or do you not think that in case he was asked to substitute, he would be more apt to substitute western wood that used the word "white pine" in its trade term than if it did not have the term "white" in its trade term?

A. I do not think the word "white" would have anything to do with it. That is my personal opinion, you understand.

Q. And do you think that the man who wanted white pine for exterior finish for his residence would be equally likely, if called upon to substitute, to secure Idaho white pine or pondosa white pine interchangeably?

A. There is one thing you understand, that the retailer who carries pondosa pine would not have Idaho; if he carries Idaho white pine, he possibly would not carry pondosa, as a usual thing.

725 In a great many cases of the ordinary small house, which I am talking about, the fellow comes for finish, and the retail dealer puts in any grade or kind of lumber.

Q. This man we will say calls for and wants white pine; he finds that it is high in price, perhaps, and he says, "Can I get some western wood that will do the work"; would he not be more apt to accept Idaho white pine than pondosa?

A. Yes; if he could get Idaho, he would accept Idaho first.

Q. Does not the word "white" in the term "Idaho white pine" assist in meeting that particular type of lumber for the builder who desires white pine and is willing to substitute a western wood?

A. I don't think the "white" has anything to do with it; it is the wood.

Q. Do you or do you not think that the man who is asked for white pine would or would not be willing to substitute a genuine white pine rather than a pine that was not a genuine white pine, if he had to substitute?

A. If he were taking a genuine white pine, he would not be substituting, would he?

Q. If he would be taking Idaho white pine, would he be substituting?

A. If he was basing his contention on eastern white pine, and took Idaho, he would be substituting that for eastern white.

Q. Would he be more apt to substitute a wood from the genuine white pine group than he would to substitute something not

726 from the white pine group at all?

A. He would be more apt to substitute the Idaho because it looks like the same kind of lumber, in a way.

Q. And he could be correctly informed that it was genuine white pine, in the case of Idaho?

A. And he should be also informed that it was not the same kind of white pine that he had in mind.

Q. But would he or would he not be more apt to substitute something that could be truthfully stated to be a true white pine?

A. Yes.

Q. A man who wants northern white pine, and finds it high in price, would he or would he not be apt to accept a substitution of a wood which was designated California white pine rather than take a type of lumber which did not have the word "white" in its trade name?

A. I do not think so.

Q. You don't think so?

A. No, sir; I don't think the word "white" in the California would have anything to do with it, because the lumber is too apparent in appearance.

Q. It is too what?

A. It is too apparent.

Q. Take some of that white pine lumber, for example, that is very white and soft in texture, would you say that the everyday house builder could tell the difference between California white
727 pine and Idaho white pine?

A. The contractor could, not the ultimate consumer—he could not, but the contractor could.

Q. But sometimes the contractor's interests are a little different from the ultimate consumer's?

A. The lumberman cannot control those things.

Q. To return to the original question—here is a grade of white, beautiful California white pine, nice and soft in texture and looks a great deal like that of genuine white pine, does it not?

A. No.

Q. It looks a good deal like Idaho white pine, doesn't it, superficially?

A. When you get up to it, there is a vast difference.

Q. Do you think I would be able to go over and tell the difference between Idaho white pine and California white pine by eye?

A. I might put it this way: There are lots of metals which are mistaken for gold, but gold is never mistaken for any other metal; the qualities are there; you may not know what it is, but you know it is different.

Q. You would not think that California white pine in its softer, whiter types, could be mistaken for another of the genuine white pines; I am not talking about the contractor or builder, I am talking about the ultimate consumer?

A. He may not know that it is Idaho, but he will know that
728 it is different.

Q. Mr. Witness, there are a number of exhibits or proposed exhibits in the room of various types of lumber. Do you mean to say that the average consumer can say that this (pointing to one of them) and this over here (pointing to another) belong to the same species of tree, and pick them out and identify them as to species?

A. The layman would not know what tree they belong to, but he would know that there was a difference in the pine.

Q. Do you mean to say that he could pick and sort those samples and say, "These belong together" and "These are separate"?

A. Not the ordinary fellow who buys a piece of lumber, but he would know the difference in the texture of the pine as soon as he sees it, and tell the difference between Idaho and California.

Q. You think that the average consumer can go to those samples there and say, "These two belong to the same species" and "These two belong to the same species"?

A. He would not know the species, but he would know the difference in the general look of the lumber.

Q. I am not talking about species; do you think he can separate them and say, "These belong together and those belong to another species"?

A. Yes, I think he could. I may be mistaken, but I think he could.

729 Q. You think the consumer, then, is protected by his eye from getting a substitute, do you?

A. Usually when the consumer gets that substitute in his house it is painted, so that the eye would not know anything about it.

Q. But he may go over there and look at lumber delivered on the job?

A. You do not get what I mean. I mean that as between those two pieces of lumber that this fellow would know one from the other, yet he would not know which was the best.

Q. I understand that.

A. So his eye would not do much good in protecting him.

Q. You say, as I understand you, that it would be impossible to substitute California white pine for the genuine white pine because the consumer himself would know the difference.

Mr. MATTHEW. No; he did not say that.

The WITNESS. I did not say that, and I did not intend to say it.

By Mr. BURR:

Q. Did you say, when it came to substitution, and the consumer is bound to take a substitute, that California white pine could not be substituted for Idaho because he could tell the substitution?

A. What I was trying to say is the difference between them is pronounced enough so that any person can tell that it is dif-
730 ferent, that is, that Idaho white pine is different from California white pine, by looking at it; he may not know what

species it belongs to, but it is different looking; and he may not know it is any better than the other, but he knows that it is different.

Q. That, you think, to be true in the case of the whiter and softer types of California white pines?

A. Yes, I do; that is, to the average person, I am talking about; people of average intelligence that would give it any thought. I am not saying he could tell which is the best, you understand.

Q. I understand. Do you think that there is a capacity in the term "California white pine" to facilitate, make it easy, where the dealer is going to substitute for northern white pine, some western white, do you think there is a capacity and tendency, by the use of the word "white" in connection with California white pine, to enable that to be sold as readily or nearly as readily as Idaho white pine?

A. You are speaking now of the retail-lumber dealers?

Q. No; I am speaking of the consumer.

A. The retail-lumber dealer selling it to the consumer?

Q. Yes.

A. You see, there is another side to that. Usually the retail dealer either has Idaho, pondosa, or California. The man comes in and asks for pine and gets whatever he has, because he buys a pine
731 that his trade will use. Therefore you take the person who carries Idaho white pine, that is all you would have to give him; if he had pondosa or California, and he asks for Idaho, the dealer goes around to some yards where they have nothing but Idaho—it is usually a case of what the dealer has is what the fellow gets.

Q. So, in your opinion, it is just a case of happen-so; when a man goes to a dealer who has California pine or Idaho pine, he gets whatever the dealer happens to have?

A. Usually all the dealers in that particular town would carry the same kind of lumber; that is, the great majority of cases, the great majority of the lumber dealers carry a particular kind of lumber, either Idaho or pondosa, and if you go through a district where they carry Idaho, it is almost impossible to sell pondosa, because their trade is educated for that kind of stock; to them it is pine, that is all it is.

Q. So that when it comes to substitution of something for northern white pine, when the customer wants white pine, it would depend upon whether the dealer had California white pine or Idaho white pine, would it?

A. Yes; to some extent. The idea is this: Usually the man carries the lumber that his trade demands. In the large cities you will find yards that have all kinds of lumber, so that he can get what he wants, but in the country towns, here it is usually Idaho, but in the country towns in the West or Middle West, rather, it is usually pondosa.

732 Q. Have you seen California white pine cut from the central California district?

A. I am not so well acquainted with the districts that California white pine comes from. I have seen it at this end, but I never had much experience at that end—just one trip around the mills—so I don't know enough about it to say.

Q. I think you testified something with regard to the knots found in pondosa?

A. Yes.

Q. Is that the same situation as to the knots—does that apply to California white pine also?

A. Yes, sir.

Q. I think you testified in your direct examination that there was some line there where pondosa failed to give satisfaction as regards its use for window frames?

A. No; I said I sold pondosa pine window frames, but they wanted Idaho common lumber, and we did not have the Idaho common lumber, so therefore we lost the business.

Q. They wanted it for the frames?

A. No; they wanted it for outside, surfaced four sides; they wanted window frames shipped; we had the window frames that were made from pondosa, which we thought was satisfactory, but they would not use pondosa lumber; therefore we could not get the trade.

Q. I think you said that sometimes the trade prefer pon-
733 dosa to Idaho white; is that usually a question of price?

A. It is entirely a question of price. If the price was equal and there was plenty of Idaho, they would not buy pondosa.

Q. I think you testified that you did not know of any complaints in furnishing California white pine, due to the name or something of that kind?

A. I never knew of any confusion.

Q. Do you come in contact with customers' complaints?

A. No; only in an indirect way.

Q. Just hearsay, is it?

A. No; for instance, if we sold a man a car of lumber which was not dried and he would get it to his customer and it would shrink, we would get a kick that way, but we would not get the direct complaint.

Q. Were you referring to direct complaints when you said you never knew of customers' complaints?

A. I never heard of direct complaints or indirect complaints.

Q. That is what you meant on your direct examination?

A. Yes, sir. Also I am not very closely in touch with the ultimate consumer.

Q. The percentage of heart is higher in the Idaho white pine than it is in pondosa?

A. In the selects, possibly; yes.

Q. The same is true as regards Idaho white pine and the California white pine, is it?

734 A. I think so, although I am not so well posted on California.

Q. Are you familiar with the slabbing in the woods?

A. Of the log when they cut it?

Q. Yes.

A. Yes; the pondosa particularly.

Q. Does the slabbing of the California white pine leave more of the heartwood than the slab of the pondosa, due to the size of the piece?

A. In our pondosa the log is a little larger; for instance, you slab off the facing first, then the shop, then you get the common lumber from the heart; now, then, the Idaho being smaller, does not have very much clear lumber, so you get into the common lumber quicker. So while you find the pondosa pine board will be all heart, the Idaho may have a little sap on each edge of it.

Q. What I am getting at is the taking off of the slab lumber; that is virtually waste, is it not, that slab part?

A. Just about four feet of it.

Q. After the slabbing operation is done, is there a greater percentage of sapwood removed from the Idaho white than there is from the pondosa, due to the size of the tree? We have had statements here that the excess of sapwood is in the pondosa over that of Idaho; do you agree with that?

A. I would say, if that is so, it is because it is a larger tree.

735 Q. Would it not result then, after you take off the slab, that the percentage is still more pronounced as regards the sapwood remaining?

A. That being true, you have a wider margin of heart in pondosa than you have in Idaho.

Q. After you take off the slabwood that rather intensifies that difference?

A. What we call slabbing, is cutting it down, and then you get your finishes; the first finish in ponderosa is all sap, but with the smaller Idaho, in the same operation, you get heart with that finish—I may be mistaken, but it is my idea that you get less sap in Idaho finish than you do in pondosa.

Redirect examination by Mr. MATTHEW:

Q. Mr. Gates, you said in the inclusion of the word "white" in California white pine it does not have any tendency to facilitate deception or substitution?

A. That is my opinion.

Q. If deception is to be attempted at all, and there is to be substitution undertaken, would this particular trade name have anything to do with facilitating that effort?

A. I do not see it; I never did.

Q. In your lumber experience just what was meant by the term "white pine"?

A. In my early lumber experience we did not call it white pine; we had pine and Norway, so that when we said "pine" it
736 meant nothing else but the State of Maine pine. A little later we got what we called Michigan pine, and we termed that "Michigan." We did not use the word "white." I do not know where the word "white" started, and I haven't been able to find out.

Q. That is of comparatively recent origin?

A. I do not know how recent; it might have been for a long time. I understand when the Mississippi Valley inspection rules were made they termed it "white pine", because yellow pine came from the South, and when they decided on that they termed one "white", I suppose, because the other was known as yellow pine. That is the reason that term of white pine was used. For twenty-five or twenty-six years we had native white pine; then Michigan pine, and that we termed "Michigan pine", without any other name.

Q. "White" was not used?

A. No; we just called it either "Maine", because yellow was not coming in then.

Q. It is your contention, then, is it, that the term "white" came in in order to distinguish it from yellow?

A. That is my opinion; yes, sir.

Re-cross-examination by Mr. BURR:

Q. As I understand, when you handled your Michigan you did not even call it Michigan pine?

A. We called it Michigan pine; yes.

737 Q. You realize all the time that you had any experience with Michigan pine, that it was the same thing as northern pine, did you?

A. Oh, yes, we knew what kind of pine it was; the name did not mean so much, it is the kind, when you get it. In those days we got the upper grades only; there was very little of the common used.

Q. That was just as fine a grade as you had seen, from Maine?

A. When I got to Maine, the finer stocks were gone, and we had to go to Michigan to get it. Occasionally we could get a few logs, but the Maine pine that they were using then, you could not do anything with it.

Q. It was also called cork pine, was it?

A. Yes.

Q. When you were in the woods there in Michigan, they referred to it as white pine, did they not?

A. I have never been in the woods in Michigan, so I don't know what they called it there, but they might have, because they had Norway, and when I say "Michigan pine" I mean the same kind of pine that corresponds to the Maine pine.

Q. You contend it is just as easy to substitute for white pine, a wood that does not have the word "white" named in it, as it is a wood that is called "white"?

A. Yes; I think so. I may be mistaken, but that is my idea.

Q. You think it is?

738 A. If a fellow is going to substitute, he is going to substitute.

Q. Do you think it is just as easy to substitute spruce, when a man wants white pine, as something else?

A. No; spruce looks different, especially in this neck of the woods where, if they want to get spruce lumber, they still can get it. I don't think you would substitute spruce for white pine.

Q. You think it is just as easy to substitute a wood for pine, whether it has the name "white" in it as a wood that does not have that name?

A. Well, it would be a hard job to go and watch them, to see what they would substitute it for.

Q. You think the trade term hasn't anything to do with it?

A. No, sir.

(Witness excused.)

MILTON L. DAKE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. In what business are you engaged?

A. I am in the wholesale lumber business.

Q. Where is your principal place of business?

A. In Newark, New Jersey.

739 Q. How long have you been engaged in the lumber business?

A. All my life.

Q. Will you briefly relate your experience in the lumber business?

A. I was born in Manistee, Michigan; I worked for Hanna, Lay & Company. They were white-pine manufacturers in Traverse City. I started to work for the inspectors when I was sixteen years old. I operated two sawmills in Wexford County, and cruised some timberland for the Flanner-Steger Land and Lumber Company in Blackwell, Wisconsin; went back to Traverse City to inspect lumber with Lund & Gillette; went from there to the Indian Territory, when it was the Indian Territory, and cruised 110,000 acres of timber, and went from there to Tonawanda, New York, where I inspected lumber.

Q. How long were you at Tonawanda?

A. In 1911 and 1912 I visited all of the mills in northern Canada, through to Vancouver, of the white-pine lumber, and graded other kinds of lumber in northern Canada; every mill there produces its own lumber; they have their own grading terms; you have no Mississippi grades or California grades, and you have no Tonawanda grades. There is where the competition comes in with Idaho white pine in the East, is on account of the shipments of lumber out of Canada.

Q. Will you continue with the rest of your lumber experience?

740 A. Then I started in the wholesale lumber business in New York, and moved from here to Newark.

Q. That was about in 1912?

A. 1915, about then.

Q. How long have you been continuously in the wholesale lumber business; from 1915 to date?

A. Yes, sir.

Q. Throughout what territory do you distribute lumber?

A. Through the northern part of Pennsylvania—very little in Pennsylvania—through New Jersey, the southern part of New York State, Long Island, Connecticut, and a little in Massachusetts.

Q. What varieties of lumber do you distribute?

A. I distribute southern white pine, Canada pine, Tonawanda pine, and Michigan cork pine, Minnesota white pine, Vancouver white pine, Idaho white pine, pondosa white pine, California sugar pine, California white pine, the white pine of New Mexico, which has all the characteristics of the sugar pine, but it is so hard that you can not cut it even with a saw.

Q. Throughout what period have you been familiar with California white pine under that name?

A. California white pine, ever since I have been—well, ever since I have been in the wholesale business.

Q. How long have you been distributing California white pine?

A. About twelve or fourteen years.

741 Q. Will you explain briefly the nature of your trade; do you sell to retailers?

A. We sell to retailers altogether and to large box manufacturers and some shipbuilding companies.

Q. Is the term "California white pine" well known to the lumber trade?

A. Absolutely.

Q. Is there any confusion as to what that term means?

A. No confusion at all.

Q. And there isn't any misunderstanding as to the identity of the name?

A. No, sir. I had a case yesterday; I shipped a large dealer in Newark some northern Minnesota white pine—I shipped him sugar; I shipped him some sugar and California white pine; he had some 12/4 stock in California white pine; he was out of 12/4 sugar, and he asked me—called me up to find out where I could select 2,000 feet of sugar pine in order to fill that order, even though he had the California white pine.

Q. Then the term "sugar pine" is likewise well known to the trade?

A. Yes.

Q. There is no confusion between sugar pine and California white pine?

A. No, sir.

Q. Is there any confusion between California white pine and
742 Idaho white pine?

A. No confusion at all.

Q. Under what name do you receive orders for lumber which you fill with California white pine?

A. I receive orders for California white pine; they usually specify also Klamath Falls section, because we find in certain sections of California, in the lower lands, where a large amount of California pine is produced, that the California white pine is of a harder nature than it is in the higher latitudes.

By Mr. BURR:

Q. Of sugar pine?

A. California white pine.

By Mr. MATTHEW:

Q. Then your California white pine is largely drawn from Klamath Falls area, the northern part of California?

A. Yes, sir.

Q. I take it then that many of your customers at least are acquainted with the qualities of the lumber, with respect to the districts in which it is produced?

A. Yes; for instance, Tuttle Brothers, at Westfield, the Plainfield Lumber & Supply Company, of Plainfield, experimented with sugar pine and found that the outside doors went to pieces in five years, and you can not sell them sugar pine today on a bet; but you can sell California white pine.

Q. Are they satisfied with California white pine?

743 A. Yes.

Q. And they know what it is?

A. They know absolutely what it is.

Q. Are these several lumbers which you carry, particularly the pine lumbers, selling on their merits with respect to their quality and utility?

A. Every lumberman I sell knows what he wants; for instance, in your mill run lumber in northern Canada, managed by Booth & McLaughlin, they make a mill run lumber which, in general, you will find 5 percent of no. 3 barn, no. 2 barn, and 1 barn, all combined in one car, so that in competing with Idaho no. 2 common these concerns can cart that lumber up to Weyerhaeuser's and no one else can compete in selling a concern like that, that uses Canadian white pine, because they have had a large demand of that, to be dressed $\frac{13}{16}$, and it will dress $\frac{15}{16}$—every customer we sell knows what his wants actually are.

Q. Do you offer California white pine lumber to the trade under that name?

A. Yes.

Q. You do not offer it under the trade name of white pine alone?
A. No, sir.
Q. Do you invoice it to the trade as California white pine?
A. Yes.
Q. Do you have any orders for white pine, as such, without any qualifying term?
744 A. No; he never had one I know of.
Q. How do your orders come; how does the customer ask for pine lumber?
A. He asks either for Tonawanda white pine or Canadian white pine or sugar pine or else Minnesota white pine or California white pine.
Q. He does not ask for white pine alone?
A. No, sir.
Q. Does he ask for Idaho white pine, too?
A. Yes.
Q. Never without the qualifying term?
A. No, sir.
Q. Have you found that the use of the term "white" in the trade name of California white pine, particularly, leads to any confusion or misunderstanding?
A. No, sir.
Q. Does it facilitate substitution and deception?
A. It does not facilitate substitution and deception, for this reason: We check the retail lumberyards along the shore that use pondosa pine, in the interior, no. 1 and no. 3 common Idaho white pine. Where a yard uses Idaho no. 2 common in the northern part of the State, in large yards, they also handle Canadian white pine and the no. 3 barn grade, and for anybody that want something cheaper they always get it in the white pine, and if a fellow wanted pondosa
745 pine, he could not buy it in those yards, because they do not have it.
Q. I take it, Mr. Dake, that your greatest interest is in selling as much lumber as you can in the specified grades, and you are not undertaking to push a particular one at the expense of another?
A. We aim to sell the consumer the kind of lumber that we feel is good for his use.
Q. Your purpose is to satisfy your customer?
A. Yes, sir; if he wants wood for work in a pattern shop, we even question about sugar pine.
Q. Do you know of any retail dealers who know that California white pine is not a true white pine, but that they purchase it and undertake to furnish it as a white pine only because it is invoiced to them as a white pine?
A. I do not know of any.
Q. Is it generally known throughout the trade that pondosa and California white pine are obtained from the same species of tree?
A. Yes; it is.

Q. Do you receive any complaints from your customers to whom you furnish California white pine that the lumber has been misrepresented to them?

A. No, sir.

Q. Or that there has been deception or substitution practiced?

A. No, sir.

746 Q. There has been some discussion, Mr. Dake, as to possible alternative terms for California white pine; in your opinion, would the term "California soft pine" properly and adequately describe this lumber and tend to keep it distinct in the minds of the trade?

A. I think that would be very confusing.

Q. Will you please tell us why you think it would be confusing?

A. Because I think it would hit sugar pine. Sugar pine is a softer wood than California white pine, and the sugar pine manufacturers have advertised it as a true white pine. White pine, in all my years' experience, has been known as a softwood and a wood that could be easily worked because it was soft. If you were to take a California or a pondosa pine and say it is soft pine and you will confuse everybody and you will have kicks on a lot of lumber.

Q. Suppose we term it California pondosa pine, would it cause confusion in the trade, in your opinion?

A. I think it would cause confusion in the trade for this reason: Your pondosa and your Idaho white pine is composed of only ten, eleven, or twelve grades, and you only get in your pondosa 1, 2, and 3 shop; you cannot order no. 1 shop and no. 2 shop; usually they combine 1, 2, and 3 shops in the one grade, because your log is not large enough; when it comes to California white pine, that is sold here in either 3rd clear, which is a very high type shop lumber,

747 or C select, because your freight rate bars your planing mill from using the lower California grades. For instance, a grade of shop comes on a $22 freight rate, and you can only throw the excess lumber away, because the freight rate would be prohibitive, so everybody that California lumber is a wide lumber——

By Examiner SHEPPARD:

Q. It is made from a big tree?

A. It is made from a large tree, whereas your pondosa is made out of small trees, and that brings up the fact that your common boards in California white pine is not very salable in this market on account of the size of the knots.

By Mr. MATTHEW:

Q. Let us take the term "California yellow pine"; would that be a proper term by which to describe this lumber?

A. It would not, because you have your shortleaf yellow pine from the South, and you would simply be deceived there.

Q. You would confuse it with the southern yellow pines?

A. Yes.

Q. Can you think of any other term that is more likely to properly describe this lumber than the existing term "California white pine"?

A. I can not.

Mr. BURR. Mr. Examiner, I have been rather patient on this
748 examination, but I do not think that this constructive wood, as to what the lumber should be called, is of any concern to the Commission. I doubt very much if a finding can be properly based upon it, and, as I say, while I have been rather patient, thinking the examination would be short, at the same time, if we go into this subject with the respondent's witnesses, it will be properly objectionable. I do not think it ought to be brought out at all.

The Commission is not going to select a term for them to use; they are merely going to find out if this term that they are using is confusing. Let the trade get together and select their own term if this is prohibited. I do not think that this is proper, and I object to it.

Examiner SHEPPARD. What I was trying to impress upon you yesterday was that we have no interest at all in what other new names may be secured or used; we are interested, as you probably know, Mr. Matthew, in the state or conditions that exist under the present name.

Mr. MATTHEW. Mr. Examiner, I recognize that. Counsel has rather inadequately characterized the nature of my examination. I think that the Federal Trade Commission, as a practical and sensible adjusting body, will want to know whether our present term is a term that is best adapted to carry this lumber into the trade.

It is perfectly obvious from allegations of the complaint, which is here, that we may be forced to ponderosa pine or
749 some other term, and I want to make it clear to the Commission, if I can, and I believe I may be able to do so, that this term, "California white pine," is the term which preeminently carries the proper meaning to the trade of what this lumber is, and there is no other term that can take its place, properly and honestly.

You recall counsel himself, in his cross-examination of Mr. Dake, suggested this term "California soft", showing what was in counsel's mind, something that he wanted to get over to the trade.

Mr. BURR. My question, I admit, was subject to some criticism—indeed, the same criticism that I have just now made of counsel—but it was elicited by his direct examination, and therefore I am not precluded from objecting to the question he is asking the witness. There were five complaints brought on this same matter, and the manufacturers of the ponderosa pine got together and agreed upon the term "pondosa pine" without any suggestion from the Commission, and they have advertised that term, and now everybody says it is a good term.

It seems to me it is none of the business of the Commission to predict what kind of a term would be free from a misleading char-

acter. If California white pine is proved to be misleading in character—and I believe it is—it will be proper for the Commission to rely upon the ingenuity and judgment of the manufacturers
750 of this line of lumber themselves to produce the term, which they can draw out of the clear sky, perhaps, introduce and advertise it, and establish it in the trade, just as the pondosa people have done, and I do not think it is proper for the examiner to permit witnesses to speculate on what terms would be satisfactory.

Therefore, I lodge my objection to this class of testimony.

Mr. MATTHEW. The examiner certainly wants to know whether the present term is the best term to describe this lumber and avoid substitution and deception.

Examiner SHEPPARD. I am perfectly willing to allow you, and you have questioned some of the witnesses already on the present name, but as to any speculation regarding some other name, I do not think we need to go into that at all. So just remember that in your examinations on both sides. Finish up with this gentleman now.

By Mr. MATTHEW:

Q. Do you believe that the term "California white pine" is properly adapted to this particular lumber?

A. I do.

Q. Will you tell us why?

A. Because sugar pine is a true white pine; it is called "sugar pine" because every manufacturer and every retail lumberman that I have come in contact with knows what California white pine is, knows its characteristics and is not deceived by them, but he
751 is going to be deceived if we change its name. That is one of the reasons why I think it ought to be maintained.

Mr. MATTHEW: That is all of my direct.

Cross-examination by Mr. BURR:

Q. You say that sugar pine is a genuine white pine?

A. Yes.

Q. Is Idaho a genuine white pine?

A. Yes.

Q. If there were any question as to the appropriateness of the use of the word "white", Idaho would be rather more entitled to it, as a genuine white pine, than California white pine would be entitled to it, would it not?

A. If you used the term "white pine" and if you shipped Mexican white pine, for instance——

Q. Wait a minute; answer my question and you may then offer your explanations. Would or would not Idaho white pine be more deserving the term "white pine", being a genuine white pine, than California white pine is deserving of that term?

A. I do not think so.

Q. Do you know that there is a group of pines known as white pines?

A. Yes, sir.

Q. Do you or do you not believe that there are persons who would regard the words "white pine" in a trade term as giving an
752 indication that the various varieties of so-called "white pine" belong to this white pine group?

A. If you used the words "cork pines" you would be getting somewhere——

Q. Answer this question, please.

A. What is the question?

Mr. BURR. Read the question, and I want my questions answered.

Mr. MATTHEW. I object to counsel pounding the table.

Mr. BURR. Do not be alarmed, it is a perfectly good table——

Mr. MATTHEW. I object on the record to counsel pounding the table and shouting at the witness.

Mr. BURR. I think this witness has shown a desire to avoid answering questions as they are put to him, and I am entitled to get responsive answers to my questions. If he thinks any explanations are necessary, he may have that opportunity after he has answered the questions. Now, read the question.

(The question was thereupon repeated by the reporter as above recorded.)

A. No, sir.

(The question was again repeated by the reporter.)

The WITNESS. You have two questions there. If you are talking about Pinus strobus, yes; if you are talking about white pines, it all depends upon the section of the country that the pine comes from and the uses it is going to be put to.

753 Q. Do you think the term "Idaho white pine" indicates to anybody that it belongs to the white pine group?

A. If you go to the trade and sell Idaho pine——

Mr. BURR. Read the question, please; and answer it yes or no; if it is susceptible of it, and give your explanation afterwards. That is the proper way to answer a question.

Examiner SHEPPARD. Yes; answer briefly; you can always qualify your answer later.

A. Yes.

By Mr. BURR:

Q. The Idaho white pine does belong to the white pine group, and using the term "white" in connection with the Idaho white pine as a trade term indicates to some that the Idaho white pine is genuine white pine; is that true?

A. That only indicates to them that the pine comes from Idaho.

Q. Does not the word "white" mean that it is white pine?

A. It means that the trade name of Idaho white pine is a true white pine.

Q. Do you think the word "white" in connection with the term "Idaho white pine" is an indication to the trade that it belongs to the white pine group?

A. No, sir.

Q. If you called it Idaho yellow pine, do you not think that would negative the idea that it belonged to the white pine group?

A. Yes.

754 Q. Then does not the use of the word "white" negative the idea that the Idaho white pine belongs to the yellow pine group?

A. No; it does not.

Q. You think it might just as well belong to the yellow pine group with the word "white" in it?

A. No; I would say if you put the word "white" and called it Michigan white pine, that you would then negative the idea, whereas in earlier days Michigan was always called Michigan pine, and then as Michigan cork pine, and was never known under any other name.

Q. You never heard the name "Michigan white pine"?

A. No, sir.

Q. Have you not used it yourself this morning?

A. I used it this morning only in so far as it was necessary with the association that arose in the question using the words "white pine." We sell lumber not just as white pine, but the section of the country it comes from.

For instance, I could not take an order for white pine—true white pine to customers of mine and ship it out of Idaho, because they would not be familiar with it.

Q. Michigan white pine is sometimes sold as Michigan white pine, is it not?

A. Yes, sir.

Q. And the word "white" in connection with the term "Michigan white pine" indicates it is white pine, does it not?

755 A. It indicates it is white pine from Michigan.

Q. And the same is true of Canadian white pine, is it not?

A. We term that Canadian pine; very seldom use Canadian white pine.

Q. I think you testified that if California white pine were termed "California yellow pine", it would be misleading, did you not?

A. Yes.

Q. That would be because it would indicate that California white pine had the properties of other yellow pines, wouldn't it?

A. Yes.

Q. The term "California white pine" does or does not have a tendency to associate California white pine with the genuine white pine?

A. No, sir.

Q. It does not?

A. No, sir.

Q. You think the word "white" in connection with the words "California white pine" has no significance, do you?

A. No significance; if you changed California sugar pine to California white pine, it would be very misleading.

Q. But California sugar pine is a genuine white pine?

A. I don't care. They advertise it as California sugar pine, and they advertise it as genuine and true white pine; they took that out of the air, because there was sugar in the wood, and the other
756 lumber had no other name except California white pine, and every manufacturer knows that sugar pine is a true white pine, and every manufacturer knows that California white pine is not a true white pine wood.

Q. If the two types of lumber were coming on the market at the same time, sugar pine rather than California white pine would be entitled to the term "white pine" because of its connection with the white-pine group, don't you think so?

A. I imagine so.

Q. Then, coming on at the same time, you think that the term "white" in connection with California white pine has no tendency in the minds of the retailer to associate California white pine with the group of white pines—no tendency at all?

A. No, sir; absolutely not.

Q. Your testimony does not relate to the consumer, but rather to the retailer; is that true?

A. Yes, sir; absolutely to the retailer; most of the architects that build private homes all through the East and do schoolhouse jobs specify specifically the Latin names of the woods to be used.

Q. We have had several architects on the stand, and the contrary has been shown to be the case, as far as the use of those technical names is concerned.

A. In some instances, they do.

Q. In some instances they use strobus and in some they don't.

A. They are getting to do that more and more every day.

Q. Why is that?

757 A. On account of the speculative builders, and more especially on the substitution of Washington spruce for sugar pine.

Q. For sugar pine?

A. Yes. When you come to think of it——

Q. Wait a minute.

Mr. BURR. I do not care to have the witness deliver a speech. There is no question pending. I think that is all.

Mr. MATTHEW. That is all. Thank you, Mr. Dake.

(Witness excused.)

(Whereupon, at 1:00 o'clock p.m., a recess was taken to 2:00 o'clock p.m. of the same day.)

758 AFTER RECESS

2:00 P.M.

ARTHUR BERES was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Beres, please state your name and place of residence?

A. My name is Arthur Beres, and the residence is Greenlawn, Long Island.

Q. What is your business, Mr. Beres?

A. Lumber.

Q. With what company or concern are you connected?

A. The Brooklyn Lumber Company.

Q. That company is a corporation?

A. No; it is an ownership.

Q. A partnership?

A. An ownership.

Q. What is your relation to the Brooklyn Lumber Company?

A. I am just the manager there.

Q. Where is its place of business?

A. 454 Hamilton Avenue, Brooklyn.

Q. How long have you been connected with the Brooklyn Lumber Company?

A. Over thirty years.

Q. What is the nature of your particular connection with the company?

759 A. I am just the manager there.

Q. Is your company engaged in the wholesale lumber business or retail lumber business?

A. Retail.

Q. Have you a mill?

A. No; no mill.

Q. You just sell to the general trade as a retail lumber dealer?

A. Yes, sir.

Q. What varieties of lumber do you carry in your yards, Mr. Beres?

A. We handle all kinds—white pines, spruce, yellow pine, hardwoods.

Q. Do you carry California white pine?

A. Yes, sir.

Q. Pondosa pine?

A. Yes.

Q. Idaho white pine?

A. Yes.

Q. Northern white pine?

A. We do not handle much northern white pine; we have been handling mostly western pines in the last fifteen years.

Q. Mr. Beres, I want to direct your attention to some testimony given by a witness in this proceeding, Mr. J. M. Brady, of the Weyerhaeuser Sales Company.

760 Mr. Brady was being interrogated with respect to certain loss of sales by his company, and then we have the interrogation proceeding as follows:

"Q. Do you have occasion to find out what the reason is for losing sales, Mr. Brady?

"A. Yes; in some instances.

"Q. What do you find those reasons to be?

"A. They differ. Some of it is due to price; others in regard particularly to this California white pine; some claim they prefer California white pine; some from a price standpoint; others say it is better and softer and this name white pine, their specifications call for white pine and they buy California white pine and sell it as white pine on these specifications.

"Q. Do you recall any particular instance that you could give and that you would be willing to state, specifying any particular case where you lost sales of that kind?

"A. Yes; I have got one case in mind; a few years ago this man asked me for prices on Idaho white pine; I understood him to say that the contract he was bidding for called for genuine white pine. He got the contract and when I went back to him to try to get the order out of him, he told me that he had bought California white pine.

"Q. Do you mind stating who that was?

"A. The Brooklyn Lumber Company."

761 The part I have read, is part of Mr. Brady's testimony on his direct examination, and upon cross-examination, there were questions and answers, as follows:

First I may say I was asking Mr. Brady as to the date when this particular incident occurred, and he answered, "I don't know the date definitely; no."

"Q. Can you give us the name of the representative of the Brooklyn Lumber Company who told you that he had purchased California white pine in preference to your pine?

"A. Mr. Beres."

Now, Mr. Beres, I will ask you do you recall the incident to which Mr. Brady refers in the testimony which I have read, namely, to a conversation between Mr.Brady and yourself, respecting the attempt to obtain an order from you?

A. Yes; I remember the call.

Q. I would ask you if Mr. Brady is correct in the understanding which he gave here that the contract upon which you were bidding at that time, called for genuine white pine?

A. No, sir.

Q. What lumber was called for by the contractor?

A. California white pine.

Q. Did you supply California white pine upon that contract?

A. Yes, sir.

Q. Have you before you the specifications for the particular order upon which you were bidding at that time?

762 A. I have got two orders here. I have the order for the year 1928 and the year 1929. I did not want to bring them all, but here is a sample for both years, and you can see what that calls for.

Q. The first paper which you hand me is entitled, "Duplicate Order, Board of Education, City of New York, 1928; File No. is 3876", and it refers to various quantities and descriptions of lumber,

and we find upon the list, California white pine in two instances, and I will show it to counsel.

(Document handed to counsel.)

Mr. BURR. Thank you.

Q. The other paper which the witness has handed me is entitled "Duplicate Order, Board of Education, City of New York, 1929," and the file no. is 32245, and it calls for an order of California white pine (document handed to counsel).

What do the letters "P.S." upon these orders mean, Mr. Beres, please?

A. Public schools.

Q. I take it these were orders for lumber received by you from the board of education for use in the public schools?

A. Yes; lumber was delivered from us to them. We delivered the lumber to the board of education.

Q. And was California white pine lumber ordered from you as California white pine lumber?

A. Yes.

763 Q. Are these forms which you show me and these orders representative of and typical orders which you receive from the Board of Education?

A. Oh, yes; I have six or seven hundred of those orders, but I did not want to carry them all over here.

Q. Have you furnished any California white pine upon an order calling for genuine white pine?

A. No, sir.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. You say you have not furnished California white pine on any orders calling for genuine white pine?

A. No, sir.

Q. Do you ever have orders calling for white pine, without saying "Genuine white pine"?

A. Oh, yes.

Q. Do you carry Idaho white pine?

A. Oh, yes.

Q. Would you regard it as compliance with the specification, if you furnished Idaho white pine under the specification for——

A. It would not make any difference to me: If I did not have it in California pine, I would probably furnish it in Idaho white pine.

764 The man don't specify what he wants, and if he gives an order for white pine, I would send anything in the way of white pine——

Q. You would send California, Idaho, or pondosa?

A. Or pondosa, if it suits his purpose.

Q. As you happened to be stocked, you mean?

A. Yes, sir.

Q. On a specification for white pine, I mean?

A. Yes, sir.

Q. You have testified with regard to these two orders or invoices, which are they?

A. They are orders.

Q. You have testified with regard to these orders, and I think you said they are samples, didn't you, or something; just what was it?

A. The orders here?

Q. Those are ordinary cases, are they?

A. These are regular samples of orders of this particular contract we had. We got these all during the year; the contract runs for the whole year.

Q. You did not testify, did you, that these were the particular jobs that Brady was talking about, when he testified yesterday?

A. That is one of the jobs; yes, sir.

Q. This is one of the jobs?

A. Yes, sir.

Q. You would not testify this was the same job; you have not identified it as the same job, have you?

765 A. They are the same people we have been furnishing for the last six or seven years.

Q. I see there is some popular on here?

A. Yes, sir.

Q. Does the school board buy nothing but poplar and California white pine; that is not true, is it?

A. They do buy everything; they buy oak and other woods. Probably we did not get those items on that contract and somebody else got them.

Q. In other words, you bid on certain items?

A. We bid on the whole list, and whatever we want we got; what we didn't get, somebody else gets.

Q. Does the board of education ever ask for bids on white pine, without the use of the word "California"?

A. They ask for the California white pine.

Q. Is that the only pine they use?

A. Yes.

Q. The only kind of white pine they specify?

A. Yes.

Q. They always use the words "California white"; is that what you mean?

A. Yes; it is right there on the order.

Q. I see it is on this particular order; do you testify positively that it is on other orders?

A. All other orders, they call for white pine; they call for

766 California white pine.

Q. I wanted to know whether they ever varied from that specification?

A. They never do.

Q. Is this for interior or exterior work?

A. They use that in jobs in schools for the children.

Q. For interior work; you never sell them that wood, for the school board, I mean, for exterior work; they do not build the buildings out of it; do they build any frame buildings?

A. No; they don't; but they use some for little buildings like garages and things like that.

Mr. MATTHEW. You are going outside of the direct examination; I have not made any inquiry along that line.

Mr. BURR. I do not care to go any further.

Mr. MATTHEW. I just wanted to correct an erroneous impression which I thought was through a misunderstanding on Mr. Brady's part.

(Witness excused.)

FRANK O. MORRISSETTE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Where do you reside, please?

A. Elizabeth, New Jersey.

767 Q. What is your business?

A. Atlantic coast representative for the California Sugar & White Pine Company.

Q. Where do you make your offices?

A. 233 Broadway.

Q. What is the California Sugar & White Pine Company?

A. They are representatives of manufacturers of sugar pine and California white pine.

Q. Does that company represent any particular mills in the sale of sugar and white pine?

A. Yes, sir.

Q. Would you name them, please?

A. The Shaw-Bertram Lumber Company of Klamath Falls, Oregon.

By Examiner SHEPPARD:

Q. Those are sugar-pine mills?

A. Sugar pine and white pine.

Swayne Lumber Company of Orejo, California, the Spanish Peak Lumber Company of Quincy, California.

Examiner SHEPPARD. If those are respondents, call my attention to them.

Mr. MATTHEW. They all are so far.

A. (Continued). California Fir Exchange, Blairsden; Hobart Mills at Hobart, California.

Mr. MATTHEW. I might explain, Mr. Examiner, that the Hobart Mills are operated by the Hobart Estate Company, which is

768 likewise one of the respondents in these proceedings. I think each of these five are respondents.

Mr. BURR. They are.

Mr. MATTHEW. Although we do not personally represent the Swayne Lumber Company.

By Mr. MATTHEW:

Q. Mr. Morrissette, throughout what territory do you sell lumber in behalf of the companies which you named?

A. The Atlantic coast territory, which includes New York State, New England, the Southern States, and the eastern part of Pennsylvania.

Q. Do you sell sugar and California white pine indiscriminately?

A. Yes, sir.

Q. Endeavoring, I assume, to sell as much lumber as possible of both types?

A. We try to sell what the man wants. If he wants California white pine, we sell it to him; if he uses sugar, we sell him sugar.

Q. How long have you been engaged in this business yourself, Mr. Morrissette?

A. In the lumber business?

Q. As Atlantic coast representative of the Sugar and White Pine Company?

A. Since 1921.

Q. How long have you been in the lumber business?

769 A. Oh, since 1913.

Q. Will you give us something about your experience in the lumber business prior to your coming to the California Sugar & White Pine Company?

A. I started in western North Carolina, the Laurel River Logging Company. When I first went there I was a sort of handy-andy man.

When I left in 1917 to join the Army I was yard superintendent, having been so for perhaps a years and a half.

Q. What kind of lumber was that company engaged in producing?

A. Mostly hardwoods and some white pine.

Q. Is that strobus pine?

A. Strobus.

Q. As produced in the western part of North Carolina?

A. Yes; as produced in the Blue Ridge Mountains.

Q. Will you give us some idea of the character of the trade to which you sell sugar and white pine lumber?

A. Retail yards, planing mills, industrials, steel companies, shipbuilding companies, piano keys and organ manufacturers.

Q. You do not sell at retail at all?

A. No; wholesale only.

Q. Under what name do you offer California white pine lumber to the trade?

A. California white pine.

Q. And under what name do you recive orders for this lumber?

770 A. California white pine.

Q. Do you ever receive orders under any other terms, that is, for example, under the term "white pine" without any qualifying term?

A. No, sir; we do not get any like that, as I recall.

Q. Under what term do you invoice this lumber to the trade?

A. California white pine, the same as we sell it.

Q. That is your invariable practice?

A. Yes, sir; invariably.

Q. And has been during the entire period of your connection with the business?

A. Yes, sir; positively.

Q. Is the term "California white pine" well known to the lumber trade in this Atlantic territory that you cover?

A. I find it is very well known. 100 percent of the people we come in contact with.

Q. You have stated, as I recall, Mr. Morrissette, that you are interested alike in the sale both of sugar pine and California white pine?

A. Yes, sir.

Q. Do you find that the sugar pine is desired by your customers for certain purposes, and that California white pine is largely desired for other uses?

A. Well, they are used for different purposes, of course.

Q. Can you indicate the principal purposes for which cus-
771 tomers desire sugar pine, for example?

A. Pipe organs, patterns, and piano keys.

Q. For what purposes is the California white pine used by your trade, as far as you know?

A. Interior trim, moldings, sash, doors, and blinds.

Q. Can you tell approximately what proportion of your total sales of lumber in this territory is represented by sugar pine and what proportion is represented by California white pine?

A. At the present time?

Q. At the present time?

A. I should judge about fifty-fifty.

Q. Has there been any change in the proportions since the time when you first entered upon this business in 1921?

A. I think in 1921 we were selling about 75 percent sugar to 25 percent California white.

Q. Has the change in the proportions been gradual since 1921 to date?

A. Well, yes; I think they have.

Q. To what reasons do you ascribe the growth in the sales of California white pine and the correlative decline in the sales of sugar pine, as far as your company is concerned?

A. I believe the planing mills, for instance, found out that the California white pine is suitable for interior trim, doors, and so
forth, as much so as sugar pine; in addition to that, it is a
772 little cheaper. They get the same cutting values out of the shop grades, particularly in the California white pine, as they do in the sugar.

Q. Are you impartial in pressing the sales of the California white pine and the California sugar pine?

A. No, sir; we do not discriminate in the sale of California white pine and sugar pine.

Q. Then you are impartial?

A. Yes, sir; we are impartial.

By Examiner SHEPPARD:

Q. Is sugar pine also used for outside work?

A. In some cases.

Q. The other is not?

A. Well, I cannot say.

Q. Is California white pine bought to be used for outside work?

A. No; I do not believe it is generally bought for outside purposes. The people we sell to are mostly to the planing mills and retail trades. The planing mills cut it up for trim, molding, sash, and doors.

Q. The sugar pine is bought in great quantities for outside use?

A. I do not know that it is used more extensively for outside uses than California white pine.

Examiner SHEPPARD. I gained the impression that it is used more—all right, go ahead.

773 By Mr. MATTHEW:

Q. You have stated, Mr. Morrissette, that you found that the California white pine was as suitable for interior trim as sugar pine in some respects, or perhaps you said even better; or how did you put it?

A. We find in some cases people would rather have the California white pine than sugar pine for interior trim.

Q. What reason is ascribed for that preference?

A. Their reason seems to be that the pitch in sugar pine would come through the paint, and they do not experience that trouble in the California white.

As a matter of fact, a lot of our trade seems to think that California white takes better paint and finish than sugar pine, exclusive of the feature of the pitch coming through.

Q. Do any of the purchasers of California white pine lumber from your company claim to have been deceived or dissatisfied with the lumber that is furnished as California white pine?

A. No, sir.

Q. Do you feel that these lumbers are selling on their merits in this territory?

A. Yes, sir; for the purposes for which they are intended to be used.

Q. They are sold for their quality and utility?

A. Yes, sir.

774 Q. Do you feel that there has been competition of the northern or eastern white pine, as it has been variously termed in these proceedings——

A. In what respect?

Q. Do you find that the northern white pine comes in competition in this market with California sugar pine or California white pine?

A. No, sir; for the reason that there is no such dependable source of supply.

Q. That is, the northern white pine is not a large factor in the market?

A. Not in the market today.

Q. Do you have competition from Idaho white pine?

A. Yes, sir.

Q. In what respect or in what grades?

A. Mostly in the common grades.

Q. Why do you find that competition is confined mostly to common grades?

A. Well, our California common grades have never been considered very satisfactory in competition with Idaho on account of the fact that the trees from which our lumber comes, in California white pine, are large, therefore the knots are larger, not as sound in some cases, and the texture has a lot to do with it, whereas I understand the Idaho is a smaller tree and has a sounder knot type of lumber.

Q. Is there competition between Idaho white pine and Cali-
775 fornia white pine in the shop grades?

A. Well, some people prefer California white pine on account of the fact that they get better cuts out of factory cuttings than they do out of Idaho.

Q. What is that due to?

A. The knots are larger and further apart and there is more meat between them; that is about the best way I can describe it.

Q. By "more meat" you mean more clear lumber?

A. More clear cuttings, more wider cuttings between the knots.

Q. Is it your impression that Idaho white pine is directly a competitor with California white pine, grade for grade?

A. No, sir; it is not.

Q. Can you clarify that a little further?

A. To start with, the common boards—we cannot compete with Idaho for the reasons I have just given previously.

Q. That is, the Idaho white pine, then, has the call of the market, as far as the common grades are concerned?

A. Idaho white pine has the call of the market for common grade, where the man is willing to pay the price; but in the yard stock, for instance, in specified widths it has a preference over California white, for the reason that we have not been able to get our mills to separate the specified widths, and the principal reason, I presume, is that the Idaho is a little softer textured than California white.

776 By Examiner SHEPPARD:

Q. Is not Idaho white used for exterior work?

A. I do not know a great deal, sir, about Idaho pine. I presume it is used as much for exterior purposes as the other pines are.

By Mr. MATTHEW:

Q. What grades of lumber in the California white pine are sold, for the most part, in this market; can you state that?

A. Mostly the higher grades, such as no. 3 Clear, D Selects, C Selects, 1 and 2 Clear. Those are the principal grades; they are the bulk of our orders that are called for.

Q. Yes; I am just asking about your experience. There has been some testimony respecting the relative softness of sugar pine on the one hand and California white pine on the other, and further testimony respecting the variability of California white pine in different portions of its range. Have you had any experience with variability in sugar pine?

A. I hardly believe I understand that question.

Q. Is sugar pine lumber uniformly quite soft and of smooth texture—that is, similar texture, no matter from what section it is obtained?

A. It is my experience that sugar pine runs more uniform than texture than California white pine.

Q. Is there any lack of uniformity noticeable in it?

A. Not in our mills.

Q. You obtain no sugar pine from Oregon?

777 A. No.

Q. And you don't know anything about the texture of the sugar pine from there?

A. We get some little from there, but the quantity is so small that we ship it with our California pine.

Q. California white pine?

A. Yes; we do not bother enough to pick it out and separate it.

Q. When you do mix the sugar pine with the California white, under what name is it invoiced to the trade?

A. The same as we sell it always, whether sold separately or in combination cars.

Q. Do you sell it as California pine?

A. As California white pine? We ship California white pine and sugar pine from the same mills; it is invoiced separately, sold separately, and separated in the car.

Q. You say it is separated in the car?

A. Yes; kept separate in the car.

Q. When you have a shipment from the Shaw-Bertram Company, which operates in the Klamath Falls section, do you attempt to separate the sugar pine from the California white pine if there happens to be lumber of both kinds in the car?

A. No, sir.

Q. Is that quite customary in the trade, to let a small amount of sugar pine that happens to come with the California white pine to remain together?

778 A. You see, in Klamath Falls our percentage of sugar pine is so small in comparison with the California white pine that we just let it remain together, and wherever we have had occasion

to ship the sugar pine with the California white, we invoice it as such; we had one case of that kind, however, where it was rejected by the customer.

Q. When you say invoiced as such, you mean invoiced as California white pine and California sugar pine?

A. Yes, sir; doing the customary thing; and he rejected it.

Q. Was that a trade shipment of sugar pine?

A. No; there was sugar pine shipped with the white pine.

Q. Just what did you furnish?

A. We furnished California white pine, with the exception of a few thousand feet of sugar; we included that with the other material, thinking that we were doing them a favor, but found that we had a complaint on our hands.

Q. He wanted California white pine only?

A. Yes, sir.

Q. Ordinarily, as I understand it, you ship the sugar pine and California white pine separately?

A. Separately, always.

Q. Have you found that there is any confusion in the lumber trade in this territory because of the use of the name "California white pine" in the lumber that you market under that name?

A. No, sir.

779 Q. Is that name thoroughly understood in the trade?

A. Everybody that we have come in contact with, whether we do business with them or not, thoroughly understands, in my opinion, what California white pine is.

Q. You think it identifies the lumber?

A. I think it is very accurately identified.

Mr. MATTHEW. Cross-examine.

Cross-examination by Mr. BURR:

Q. Do you come in contact with the actual builder, contractor, and home owner?

A. No, sir.

Q. So that any kick he might have would be registered with the retailer, would it?

A. That would not come back to us.

Q. It would not come back to you?

A. No; it would not come back to us.

Q. I think you said that northern white pine was not in competition with California white pine. Is not that largely a question of price?

A. I think it is largely, in my opinion, on account of the source of supply.

Q. You think that they prefer California as a source of supply rather than Michigan or Canada?

A. I think a lot of people would use northern white pine if
780 they could get it right along, regardless of price.

Q. Northern white pine, then, is not quite so well advertised; is that true?

A. I could not answer that. I have not noticed a great deal of advertisements regarding the northern white pine.

Q. You know there is virgin white pine coming from Minnesota, or don't you know that?

A. I do not know much about the Minnesota country with reference to quantity that is being marketed.

Q. Do you know whether there is virgin northern white pine coming from Canada?

A. I understand there is being some Canadian pine shipped into this territory.

Q. But you have not looked into that matter?

A. I spent a year and a half in Canada from August 1919 until about the middle of the summer of 1920.

Q. In what part of Canada?

A. North of Montreal, in the Laurentian Valley, inspecting hardwoods, and I found about one percent of white pine.

Q. There is very little white pine in that forest?

A. Just an occasional tree.

Q. Not enough to be commercial?

A. No; I don't believe we have a carload within five miles of it.

Q. Did you cut it down with the rest?

781 A. I was not interested in the logging; I was merely shipping it out on orders.

Q. Did I understand you to say that Idaho white pine competes strongly with California white pine on common lumber?

A. No, sir; we cannot compete with them on common lumber.

Q. You mean by "we" California white pine?

A. California white pine will not compete with Idaho in the common grades.

Q. Is that true of sugar pine also, that it will not compete in common grades?

A. Yes, sir; that is my opinion.

Q. In other words, the sugar—the Idaho white pine takes the market?

A. Practically Idaho and pondosa principally control the market in the shelving grades.

Q. Do you regard California white pine as equally durable when exposed to the weather with Idaho white pine?

A. If it is free from sap, I do, sir.

Q. You do?

A. Yes.

Q. Is not California white pine in its white and smooth texture largely a sapwood proposition? Don't you think that is so?

A. No, sir; I do not. You take our logs in California; you get a good deal more heart lumber than you do in the Idaho or the pondosa.

782 Q. Than they do in Idaho white pine?

A. Than they do in Idaho or pondosa white pine on account of the larger tree.

Q. But you do not get as large a proportion on account of the tree being larger, do you?

A. We get a larger proportion of clear lumber from the heart, on the inside of the lumber, free from sap.

Q. In other words, there is less sap in the California white pine, of that particular part that you are telling about, less proportion now, not less amount—but less proportion than there is in the Idaho white-pine lumber?

A. I don't know a great deal about Idaho white pine, but I think I can say there is a very large percentage of clear heart lumber produced in California white pine in proportion to that in pondosa.

Q. You would not be positive about the same situation prevailing as regards the Idaho?

A. I can be, sir.

Q. Have you been in the forest where they were cutting Idaho white pine?

A. No, sir.

Q. Have you ever sold that lumber?

A. No, sir.

Q. The California white pine, you say, is sold here chiefly in the higher grades; did I understand you correctly?

783 A. Yes, sir.

Q. Your market is rather restrictive in nature, is it? I noted that you talked a good deal about organ manufacturers and piano keys; that is very high-grade stuff, is it?

A. That is sugar pine.

Q. Sugar pine goes into the manufacture of piano keys and organs?

A. The best part of the logs, the cream of the logs.

Q. Is ponderosa or California white pine as suited for that type of manufacture as the sugar pine?

A. I could not say whether it could be used for that purpose or not, but none of them use it, and we have piano key manufacturers and organ people that have been on our books for twenty-five years or more.

Q. And have been using sugar pine all the time?

A. Have been using sugar pine all the time; yes, sir.

Q. How about the pattern stock?

A. Sugar pine.

Q. Have you ever had any experience in trying California white pine for pattern stock?

A. No, sir; because we do not recommend it and I do not recall that we ever made a sale for that purpose.

Q. You don't think it would be as good for that purpose?

A. No, sir; I don't.

Q. Does the word "white" in the term "California white pine" have any significance to your mind?

784 A. No, sir.

Q. Might it just as well be referred to, and the stuff be called California pine?

A. I think the name "California white pine" just about describes it.

Q. Do you regard California white pine as belonging to the so-called genuine white pine group?

A. No, sir.

Q. Then would it not be a little clearer if the word "white" had been left out of that term?

A. Well, I think if anybody was going to sell California white pine for genuine white pine, they would sell it for that purpose, regardless of the name.

Q. Would not the name help them, because they would be able to say, "We have white pine—we have California white pine", doesn't that help a sale of California white pine if the fellow is crooked enough to want to sell it for genuine white pine?

A. In that case, he is beyond redemption.

Q. Answer the question. I don't care whether he is beyond redemption or in purgatory or not; read the question back to him, please?

(The question was thereupon repeated by the reporter as above recorded.)

By Mr. BURR:

Q. Is the question clear?

785 A. It seems to me there are two answers there.

Mr. BURR. Let us read it again.

(Question again repeated by the reporter as above recorded.)

A. I do not see how he could sell it for genuine white pine.

Q. I am talking about the customer, the retailer, somebody who is not wise on the subject; suppose he asked for white pine and does not know California white pine or Idaho white pine as genuine white pine, would not the word "white" in that connection help an unscrupulous dealer to dispose of it as genuine white pine?

A. I do not think it would, sir.

Q. Let us look at it this way: You regard Idaho white pine as genuine white pine?

A. Well, it is known among the trade as genuine white pine.

Q. You think the word "white" helps to identify it as genuine white pine; I mean the word "white" in the trade name?

A. No, sir.

Q. You think it would sell just as well as genuine white pine if it were called Idaho yellow pine?

A. No, sir.

Q. You think it would sell just as well if the word "white" were left out—that is, it would sell equally well irrespective of whether the word "white" was in there or not?

A. Yes, sir.

Q. Do you think the word "yellow" would hurt it, if it
786 were used in the name, as a white pine?

A. It is not a yellow pine.

Q. Answer the question. Do you think it would be injurious to the Idaho white pine industry to call his Idaho white pine yellow pine?

A. Yes.

Q. Why?

A. Because it is not yellow pine.

Q. Absolutely. Now, then, do you think it would hurt him to drop out the word "white", when he wants to sell it as genuine white pine?

A. He should not drop the name "white" out of it.

Q. Is not the word "white", then, in connection with the words "Idaho white pine" helpful in identifying the wood as genuine white pine?

A. I presume that is was quite helpful before the wood was so well established in the trade.

Q. Is it not helpful still?

A. Yes, sir.

Q. There are new people coming in the lumber business every year, are there not?

A. Yes.

Q. There are new people that have to get acquainted with the woods every year—different types of lumber?

A. Yes.

787 Q. Is not the term "Idaho white pine" an asset if you are going to sell it as genuine white pine?

A. Yes, sir.

Q. By the same argument, do you not reach the conclusion that the term "California white pine" has a tendency to identify the product as and for a genuine white pine?

A. I don't believe it has, sir, in my opinion.

Q. Would it be detrimental to the California white pine manufacturers if they were to begin to call their wood or were required to call their wood California yellow pine?

A. I should say it would be detrimental to them, because it is known among the trade as California white pine.

Q. Would it not be detrimental for another and further reason, because it would make it appear that California white pine was a wood similar to the hard yellow pine of the South, if they were to call it California yellow pine?

A. Yes, sir.

Q. By the same token, does not the term "white" mean something to the trade in identifying California white pine as near or close to the genuine white pine?

A. Yes, sir.

Q. Then to a man who is not familiar with this type of wood, does the word "white" in the term "California white pine" have a tendency to make the purchaser believe that he is getting a genuine white pine, if he is not posted?

788 A. I presume it would; yes, sir.

Mr. BURR. That is all.

Redirect examination by Mr. MATTHEW:

Q. Mr. Morrissette, do you know of any case where a man has been led to believe or to purchase California white pine, that he is getting what counsel has termed a genuine white pine?

A. I did not catch that question.

Mr. MATTHEW. Will you read the question, please?

(The question was thereupon repeated by the reporter as above recorded.)

A. No, sir.

Re-cross-examination by Mr. BURR:

Q. You do not come in contact, I think you testified, with the actual consumer, or builder, or contractor?

A. No, sir; we do not.

(Witness excused.)

HAROLD J. PLUNKETT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. What is your business, Mr. Plunkett?

789 A. Wholesale lumber.

Q. What is the name of your company?

A. Plunkett and Webster Lumber Company.

Q. Is that a corporation?

A. Yes, sir.

Q. Where is your place of business?

A. Our place of business is at 260 North Avenue, New Rochelle, New York.

Q. Where is New Rochelle with reference to New York City?

A. It is northeast, on the New Haven road; it is a few miles out of New York, three or four miles from the corporate limits.

Q. How long have you been engaged in the lumber business?

A. Off and on for twenty years.

Q. You have been identified with the Plunkett Company during that period?

A. Since it was the Plunkett & Webster Lumber Company. That has been organized for fourteen years.

Q. And you have been with the company since that time?

A. Except when I was in the Army; yes, sir.

Q. Have you stated your relationship to the company?

A. No, I didn't. I am secretary.

Q. What was your experience in the lumber business prior to the time you became connected with the Plunkett & Webster Lumber Company?

A. I sold hardwoods and inspected hardwoods previous to
790 that time.

Q. What is the nature of your trade, Mr. Plunkett?

A. We are jobbers of hard and soft woods, mostly domestic woods.

Q. You do not sell as retailers?

A. Wholesale only.

Q. And you are not a millman?

A. No; except that we have an interest in one or two mills in the North, hardwood mills.

Q. But not in mills turning out pine products?

A. No.

Q. What varieties of pine lumber do you distribute?

A. Most all domestic pines.

Q. Including the northern white pine as well?

A. Yes.

Q. And the Idaho white pine?

A. Yes.

Q. And the pines of the Pacific slope, which have been referred to here?

A. Yes; principally California pine—very little of the other.

Q. You carry California white pine?

A. And sugar.

By Mr. BURR:

Q. Pondosa?

A. Some; yes.

791 By Mr. MATTHEW:

Q. Throughout what territory do you distribute your lumber, Mr. Plunkett?

A. Roughly, from Grand Rapids to Boston, north of the Mason and Dixon Line.

Q. Throughout what period have you been acquainted with the name "California white pine"?

A. Probably ten years.

Q. Has this lumber been sold under that trade name during that entire period?

A. As far as I know, it has, all that time.

Q. Do you offer California white pine under that name?

A. Yes, sir.

Q. Do you invoice it to the trade under that name?

A. Yes, sir.

Q. Do you receive orders for California white pine under that name, as well?

A. Yes, sir.

Q. Did you ever receive orders for white pine without the qualifying term, such as "California" or "Idaho"?

A. No.

Q. Is the term "California white pine" quite well known to the trade with which you deal, Mr. Plunkett?

A. Yes; very well.

Q. Is there any confusion or misunderstanding as to the
792 identity of lumber whatever denoted by that term?

A. I believe there is not; I cannot recall any case.

Q. Have you had complaints from your trade respecting lumber which was furnished as California white pine, upon the ground that it was misdescribed or that there was substitution or deception?

A. No, sir.

Q. I am not sure whether I asked you as to the exact character of your trade; you said you sell to retailers; do you also sell to remanufacturers and millmen?

A. Yes; piano manufacturers, yard trade, sash and door, organ manufacturers, but principally yard trade.

Q. What lumber do you sell especially to organ and piano manufacturers?

A. Principally sugar pine.

Q. Do you sell to contractors?

A. No; we do not.

Mr. MATTHEWS. Thank you; that is all.

Cross-examination by Mr. BURR:

Q. As I understand it, you sell only to manufacturers and retailers?

A. That is all.

Q. Do you ever come in contact with the architects?

A. No.

793 Q. Do you ever come in contact with the consumers?

A. No.

Q. Or the contractors?

A. No.

Q. Or builders?

A. No.

Q. Do you ever come in contact with the speculative building-trade business?

A. No.

Q. You have testified that the retailers to whom you sell have no confusion in their own minds as to the differences between Idaho white pine and pondosa pine and California white pine; is that true?

A. That is true.

Q. Do you regard, yourself, that pondosa pine and California white pine are different trees; as being a different species of lumber?

A. Yes; we do.

Q. A different kind of lumber?

A. Yes.

Q. Do you regard sugar pine as being the same kind of lumber as pondosa pine?

A. No.

Q. Do you regard Idaho white pine as being the same kind of lumber as California white pine?

794 A. No.

Q. Which differs more from the Idaho white pine, the pondosa or the California white pine?

A. I do not think I am competent to say.

Q. Which differs most from the pondosa pine, California white pine or Idaho white pine?

A. The Idaho, I believe.

Q. Differs from——

A. Differs more than the California white pine; yes, sir.

Q. You think California white pine and pondosa pine are closely together do you?

A. Yes; they are much alike.

Q. You do not know anything about the botanical differentiation for distinctions of the wood, do you?

A. Except in a general way, only.

Q. Do you know whether from any botanical point of view, the California white pine is a genuine white pine?

A. Yes; I know that it is not a genuine white pine.

Q. Do you regard the term "white" in connection with California white pine as in a sense identifying it with the white pine group?

A. No; I don't.

Q. The word "white" would indicate, would it not, to the average man, that the wood belonged to the white-pine group, would it not, rather than to the yellow?

795 A. It depends upon what you mean by the average man. In the average lumberman I do not think it would, because he is so familiar with it.

Q. He has readjusted himself to the difference in the terms; is that true?

A. I think that is so.

Q. But would you think that the average consumer was as well posted as that?

A. Just what is the average consumer; suppose you define that.

Q. I am talking about first the builder who hires the contractor and architect; are they familiar with the various woods of the West, so that they are able to know that the wood that is named "California white pine" is not really a white pine; would you say they are able to do that?

A. I don't know.

Q. Do you sell to the larger retailers, or do you have a lot of these little fellows with yards in the country?

A. Principally larger yards our business is with.

Q. Would you be willing to testify positively and tell the examiner here that the retailers who are running the small yards, and are presumably less experienced, that they thoroughly understand that California white pine is really not a white pine; would you be positive of that?

A. I can only tell from my own experience of those that I have come in contact with; beyond that I cannot possibly testify.

796 Q. You do not come in contact with these small yard owners?

A. Some of them, and I think that my experience would represent a pretty good average.

Q. Do you go out and actually travel over the country and see the retailer?

A. I do not now.

Q. When did you last do so?

A. Within up to about three years ago.

Q. Up to three years ago you were an actual salesman?

A. Part time; yes.

Q. Where were you traveling; not all through this entire territory that you described?

A. Yes; principally with other salesmen at that time, with our other man.

Q. That is, you go along together, do you?

A. Yes.

Q. And call on the trade with someone else?

A. Yes; usually we went to our other salesmen; yes.

Q. What distinction do you make between Idaho white pine and California white pine as to its practical utility?

A. I think that is a pretty general question. I believe that each have their uses for certain purposes and not entirely competitive uses in a great many instances.

Q. Will you distinguish what Idaho white pine is best adapted to?

797 A. I think for common boards Idaho white pine is superior to California white pine.

Q. For what reason?

A. The knot is sounder; the tree produces smaller, sounder knots.

Q. Do you recommend it for greater durability where exposed to weather influences?

A. I don't know.

Q. You don't know as to that?

A. No.

Q. Do you regard Idaho white pine as softer than California white pine or not as soft in texture?

A. It is softer, in general.

Q. How about its ability to stay in place after being completed; do you distinguish between the two at all?

A. Yes; if I were to recommend it, I would recommend Idaho white to stay in place rather than California.

Q. You do not mean for interior trim, or do you?

A. I mean in places where exposed to heat and cold, as any wood would be exposed; no matter what it is used for.

Q. You think the retailers understand those practical distinctions between the two classes of wood pretty thoroughly, do you?

A. I do.

Q. They know the attributes of Idaho white pine and California white pine, as you have stated?

A. I think so, and maybe better than I do.

798 Q. Because they come in contact with the fellow who can make the kick, if they want to?

A. That is right.

Redirect examination by Mr. MATTHEW:

Q. Mr. Plunkett, if we are to make an effort to adopt a trade name for this particular lumber which will most satisfactorily identify its quality and uses to which it may best be put, rather than to consider the botanical classification, do you think that the term "California white pine" is best suited to that purpose?

A. I believe it is very well fitted by name.

Q. Will you state why?

A. Because, in general, the wood is used by people who formerly or even at the present time use a true white pine, and in a great many instances it is adaptable for purposes where formerly the true white pine was necessary, where it does not even compete, so far as its use is concerned, with the true yellow pine.

Mr. MATTHEW. That is all.

Re-cross-examination by Mr. BURR:

Q. Which do you regard as the true white pines?

A. I cannot name them all.

Q. Commercial white pines?

799 A. Sugar pine, Idaho white pine, and what we call northern pine in Minnesota, and Canadian.

Q. You do not know any of those botanical names, or do you remember those?

A. No; I do not; except Pinus strobus and Pinus ponderosa; I know those two.

Q. Pinus ponderosa means which?

A. As I understand, yellow pine.

Q. Which lumber belongs to the Pinus ponderosa tree?

A. I suppose, possibly not all the yellow pine, but western pondosa, California white pine, and some of the other species of yellow pine.

Q. The pondosa pine and California pine are the only ponderosas?

A. They are both ponderosas.

Q. You understand that?

A. Yes.

Q. Do you understand that white pine has any prestige or reputation in the northeastern part of the country, particularly?

A. Yes, sir.

Q. It means northern white pine primarily?

A. Yes; when they speak of white pine without other names.

Q. It is most apt to mean what?

A. Eastern white pine.

Q. And also known as northern white pine, is it?

800 A. Yes; also northern white pine.

Q. Would you regard it as a proper fulfilling of specifications if Idaho white pine was supplied on an order for white pine?

A. To some trade I would, and sometimes I would not.

Q. Take this trade, suppose an architect specifies, as some of them have testified, that they have specified white pine, without saying "strobus" or "northern" or "eastern" or "Idaho"; just simply say "white pine"; would you regard Idaho white pine as fulfilling that specification?

A. Do you mean technically, now?

Q. From the practical standpoint; would it be good faith with the purchaser?

A. It would, depending on the purchaser. We have trade that if we shipped Idaho white pine to, on an order specifying white pine, we would not be shipping what he expects to get.

Q. I am talking about the retailer; would that be good faith with his customer, if he gave Idaho white pine, if he asked for white pine?

A. Yes.

Q. Would it be good faith with the customer if California white pine were given?

A. Yes.

Q. You think it would be?

A. I do, but you hardly would make a sale without knowing some of the circumstances.

801 Q. You rely on who asked about it?

A. You should, if you don't.

Q. Otherwise you are not serving the highest interests, are you?

A. No.

Q. Do you mean that he could hardly be blamed much if he gave either, in request for white pine, could he?

A. The only cases we would think of shipping——

Q. No; I do not mean you; I mean the retailer now.

A. Oh, yes; he could, in general. Yes; he could be blamed very much if, in general, he shipped California white pine on an order that specified white pine. In general, he would be very much in the wrong.

Q. A customer does not always ask for Idaho white pine if he wants Idaho white pine?

A. I think sometimes he would ask for Idaho white pine when he wants that.

Q. You throw the responsibility on the retailer, not the customer, because you say the retailer ought to know what the customer intends?

A. I guess I do; I think the retailer ought to know.

Q. Don't you think that there are more retailers who might not have the highest degree of conscientiousness, who would deliver California white pine on an order for white pine, than would be the case

if the word "white" were not in the term—California white pine?

802 A. No; I don't.

Q. Don't you think that there are retailers who would be willing to dispose of California white pine under the excuse that they bought it as California white pine and therefore it must belong to the white pines, and therefore they would have an opportunity to dispose of it as such?

A. It could be possible; yes.

Redirect examination by Mr. MATTHEW:

Q. As far as you know, is that done, Mr. Plunkett?

A. I never knew of its being done.

(Witness excused.)

P. A. ALBERTSON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Albertson, where do you reside?

A. Klamath Falls, Oregon.

Q. What is your business?

A. Sales manager for the Pelican Bay Lumber Company.

Q. What is the Pelican Bay Lumber Company?

A. Producers of California white pine.

Examiner SHEPPARD. They are respondents in this case?

Mr. MATTHEW. The Pelican Bay Lumber Company is a

803 respondent in the case, Mr. Examiner.

By Mr. MATTHEW:

Q. How long have you been connected with the Pelican Bay Lumber company, Mr. Albertson?

A. I first became connected with them in 1912, and left in December 1914 and went back in August 1920, and I have been there continuously ever since.

Q. During the epriod of your service with the Pelican Bay Lumber Company have you been in the sales department continuously?

A. Yes, sir.

Q. And how long have you been sales manager?

A. Since 1920.

Q. The plant of the Pelican Bay is located at Klamath Falls, Oregon?

A. Yes.

Q. From what territory does it draw the logs which are manufactured into lumber?

A. Klamath County, Oregon.

Q. That is, generally speaking, in southern Oregon?

A. In southern Oregon.

Q. Throughout what portion of the United States is the lumber of the Pelican Bay Lumber Company distributed?

A. In California, Arizona, New Mexico, Texas, Oklahoma, the Carolinas, Georgia—practically all States except in the States of Washington, Idaho, and Montana and two or three Northern
804 States or Northwestern States.

Q. In your sales work, have your duties carried you into the eastern part of the United States?

A. Yes, sir.

Q. Throughout what portions of the United States, just roughly?

A. Southern California, Arizona, Texas, Oklahoma, Missouri, Colorado, Nebraska, Minnesota, Illinois, Indiana, Pennsylvania, New York, Connecticut, and Massachusetts.

Q. Does your company sell to the retail trade directly?

A. In some localities.

Q. Is that its general practice?

A. No, sir.

Q. What is the nature of its trade, generally?

A. Through the wholesalers in the East and the producers of sash and doors in the Middle West, and the box factories in the Pacific coast and to some retail yards located in the States of Illinois, Wisconsin, Oregon, Ohio, Oklahoma, and Texas; otherwise we sell through wholesalers.

Q. What experience have you had in the lumber industry apart from the experience which you have just described with the Pelican Bay Lumber Company?

A. I worked for three years in a sawmill, scaler, dogger, setter, edgerman, grader, tallyman.

Q. Where was that?

A. Loyalton, California.

805 Q. What varieties of lumber were purchased at that plant?

A. California white pine.

Q. What other experience have you had in the lumber industry?

A. Assistant to the sales manager at McLeod, California, for a period of approximately two or three years; in New York City as wholesaler with the Charles Este Company of Philadelphia, who have gone out of business, in the Long Leaf Pine Company in east Florida; in the New York office as sales manager for the Wisconsin-Alabama Lumber Company at Sylacauga, Alabama; buyer for W. L. Shepard Company at Montgomery.

Q. How many years, in the aggregate, have you been identified with the lumber industry?

A. Since 1906.

Q. Mr. Albertson, have you generally become familiar with the various types and varieties of pine lumber that you have distributed to the trade throughout the United States?

A. I think so.

Q. You are familiar with the lumber that is known as California white pine?

A. Yes, sir.

Q. Pondosa pine?
A. Yes, sir.
Q. Sugar pine?
A. Idaho white pine?
A. Yes, sir.
806 Q. Northern white pine?
A. No, sir. I have only handled a very limited quantity of northern white pine, and that was years ago.
Q. But you have seen northern white pine?
A. I have seen it and come in more or less contact with it occasionally.
Q. Are you able to recognize it, as such?
A. It would be questionable.
Q. Are some specimens of these various lumbers which I have named so similar in appearance as to make it difficult in some instances to identify them?
A. Yes, sir.
Mr. MATTHEW. At this time, Mr. Examiner, I will ask the witness to identify some of these specimens of lumber, all of which are marked, and may I say that there will be no claim on our part that every specimen which we have here is necessarily an average, but there has been an effort made—at least we made a request for representative pieces, and if our friends in the opposition feel that any pieces are not representative, it should be clearly understood that we are entirely ready to accept their suggestions, and perhaps other pieces might be offered in addition.
It seems to me, Mr. Examiner, we should have identified the specimens of lumber we have here and, if possible, at a later
807 time we might have smaller sections cut from these larger pieces and have them introduced of record. It is not my purpose to introduce them now, but I would like to have them identified in some fashion for some possible future use.
Q. I show you first, Mr. Albertson, a specimen of lumber which purports to have come from the plant of the Pelican Bay Lumber Company, located near Klamath Falls, Klamath County, Oregon, and ask you to state briefly what it is [handing specimen to the witness]?
A. California white pine.
Q. Is it manufactured from the tree known botanically as Pinus ponderosa?
A. I would say so.
Q. Is it sap- or heartwood?
A. All sap.
Mr. MATTHEW. I desire to have that marked for identification, "Respondents' Exhibit 1."
(The specimen was thereupon marked "Respondents' Exhibit 1" for identification.)

By Mr. BURR:

Q. Is that a typical speciment of Pinus ponderosa?

A. All sap, of our district; yes, sir.

Q. Would you say that the average piece of sapwood of Pinus ponderosa was so pretty and white and uniform in texture as that?

A. This predominates.

Q. That is the very highest type, isn't it?

808 A. Yes, sir.

Q. You would not say that is the average?

A. The average of what?

Q. In appearance?

A. Of sapwood?

Q. Yes.

A. Yes, sir.

Q. I thought you said it was the highest type?

A. The highest grade; there is no blemish in it.

Q. In that grade, in appearance, is that an average, or is that more white?

A. It is the average for what is known as no. 1 and 2 clear.

Q. There is other lumber that is even whiter and prettier and more even than that?

A. It is all like that in 1 and 2 clear.

Q. What?

A. It is all that way in the highest grade in sap 1—sap 1 and 2 clear is just like that.

Q. All of it?

A. Yes.

Q. In other words, it is typical?

A. I would say so.

Q. I see toward the bottom, reading from the top, there are some signs of darker color and streaks, and about eight inches from the bottom—calling the top of the board where the paster is,

809 rather yellow streaks, darker; does that occur frequently in sap lumber of Pinus ponderosa?

A. Yes.

Q. Is there not a difference in the lumber as regards the presence or absence of appearances of that kind?

A. I do not understand the question.

Q. Are there not high and low points; in other words, yellowish and darker marks appearing in greater or less frequency in various specimens?

A. Do I understand you to mean some pieces of sap showing more yellow than this?

Q. Yes?

A. Yes; that is true.

Q. In other words, is that not about as fine a board as could be found in Pinus ponderosa?

A. Yes; to illustrate the sap.

By Mr. MATTHEW:

Q. I show you another specimen of lumber, Mr. Albertson, purporting to have come from the plant of the Pelican Bay Lumber Co., located near Klamath Falls, Ore., identified as "B and better grade heart and sap type", and will ask you if this specimen is fairly representative of the lumber produced by your mill of that particular grade?

A. In that grade; yes, sir; 1 and 2 clear.

Q. In other words, this is clear lumber?

810 A. Clear lumber.

By Examiner SHEPPARD:

Q. No sap in it?

A. Oh, yes; right here [indicating].

Q. On the right hand side of this board, Mr. Albertson, there is an area ranging from two inches at the top, perhaps three inches at the bottom, that is lighter than the rest; is that sapwood?

A. Yes.

Q. The remainder of the wood is heart?

A. Yes.

Q. Slightly darker in color than the other?

A. Yes.

Mr. MATTHEW. I will ask that that be marked "Respondents' Exhibit No. 2" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 2" for identification.)

Q. Mr. Albertson, have you some comment to make as to whether this board is rather typical or not?

A. It is not typical in that the heart stock would lead you to believe it was sugar pine, and the soft lead you to believe it was white pine. You get occasional pieces like that.

By Mr. BURR:

Q. What do you mean, Idaho white pine?

A. California white pine.

Q. In other words, the sap is more like California white

811 pine than the sap of sugar pine?

A. Yes, sir.

By Mr. MATTHEW:

Q. What is the particular feature of the heart wood of this specimen which leads you to say it resembles sugar pine?

A. The small flecks of pitch; we call them sugar pockets.

Mr. BURR. This is not sugar pine, but Pinus ponderosa, according to the tag.

Mr. MATTHEW. So the witness testified.

By Mr. BURR:

Q. If you had nothing before you but that portion of the board which you say resembled sugar pine, would you or would you not believe that the entire board was sugar pine?

A. I'd believe it was sugar pine.

Mr. BURR. I object to the confusion of the Commission in the situation that is difficult enough anyway to get light upon, if nine tenths of this board could be identified as sugar pine, and I object to its going in to show the Commission what California white pine looked like. I think on its face it is more likely to have a tendency to confuse than it has to clarify the situation.

Mr. MATTHEW. I have not offered anything in evidence yet; I have merely identified it; I understand I can have almost anything identified.

Examiner SHEPPARD. Nothing is in; it is only marked for
812 identification. What is the next one?

By Mr. MATTHEW:

Q. I show you another specimen of lumber, Mr. Albertson, identified by the tag upon it has having been manufactured at the plant of the Pelican Bay Lumber Company near Klamath Falls, Oregon, from Pinus ponderosa, and further identified as small-knot common type; would you say that is a fairly typical specimen of the small-knot common type?

A. I would.

Q. In this instance the difference between the sap wood and heart wood shows up quite clearly?

A. Yes, sir.

Q. The sap wood is on either side and in the center runs the heart wood; somewhat darker?

A. It does.

Q. Is this California white pine also?

A. Yes.

By Mr. BURR:

Q. Would you say that is an average of the typical specimen?

A. That is a typical specimen of small, sound, tight-knot California white pine; I would call it no. 1 common.

Mr. MATTHEW. I ask that it be marked "Respondents' Exhibit No. 3" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 3" for identification.)

813 Q. I show you another specimen of lumber identified by the inscription upon it as having been manufactured at the plant of the Pelican Bay Lumber Company, near Klamath Falls, Klamath County, Oregon, and further identified as "large-knot common type"; will you state whether or not that is fairly typical of the large-knot common type of California white pine lumber manufactured from the Pinus ponderosa tree in the Klamath Falls area?

A. Large-knot common type? No.

Q. In what respect does it differ from a typical specimen of large-knot common type?

A. The words "large knot" is confusing in there.

Q. Why?

A. I would say this would be an average. We sometimes get larger knots than that.

Q. This would be average-sized quality of common type, in your opinion?

A. You get some knots larger than this in common types. That would be 3 common.

Q. This specimen again shows the narrow area of heartwood in the center and the sapwood on either side?

A. Yes, sir.

Mr. MATTHEW. I ask to have it marked for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 4" for identification.)

814 By Mr. BURR:

Q. If you look at the edge, Mr. Albertson, is it possible to tell how large the heart lumber was by carrying out the circle, as it appears on the edge?

A. You could not do that conclusively, because you don't know what shape the tree was in. It is conceded, as general practice——

Q. Generally speaking, the size of the heart of the tree at this particular elevation would be found, generally speaking—roughly speaking—by following out the curvature that appears on the knot; is that true?

A. Not altogether, because this curvature is a little less sharp than this curvature [indicating], and the heart is not a perfect circle.

Q. But generally speaking?

A. Generally speaking, I would say that would be the case.

By Mr. MATTHEW:

Q. I show you another specimen of lumber purporting to have come from the plant of the Pelican Bay Lumber Company, near Klamath Falls, Oregon, manufactured from the Pinus ponderosa tree, and identified further as "small-knot finished type, all heart", and will ask you to state whether that is fairly representative of small-knot finished type California white pine produced in the Klamath Falls area?

A. Yes, sir.

815 By Mr. BURR:

Q. That is all heart, is it?

A. Yes, sir.

Q. You see the narrow margin of sapwood apparently on the left-hand side of the board; is that right, Mr. Witness?

A. Yes.

Mr. MATTHEW. I ask that that be marked "Respondents' Exhibit 5" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 5" for identification.)

By Mr. MATTHEW:

Q. I show you another specimen of lumber, Mr. Albertson, purporting, by the inscription upon it, to have come from the plant of the Diamond Match Company at Chico, California, and identified as "sugar pine lumber." Will you state whether or not that is, in your opinion, fairly typical of sugar pine lumber?

A. I would say so.

By Mr. BURR:

Q. You would say it is?

A. Yes.

Q. Heart or sap?

A. Both; sap on the left side, and the balance is heart.

Q. The left side is the upper end where the inscription is placed?

A. It is more pronounced on the back.

816 Q. It is more pronounced on the reverse side?

A. Yes, sir.

Mr. MATTHEW. I ask that it be marked "Respondents' Exhibit 6" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 6" for identification.)

By Mr. MATTHEW:

Q. This is another specimen, Mr. Albertson, and I will ask you whether this piece of lumber purporting to have come from the Diamond Match Company at Chico, California, and labeled "sugar pine", is likewise a fair specimen of sugar pine lumber?

A. It is.

Q. In this instance the heart-wood lumber predominates as before, there being the narrow area of sap lumber on the left side?

A. Yes, sir.

Mr. MATTHEW. I ask that this be marked "Respondents' Exhibit 7" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 7" for identification.)

Q. I show you another specimen purporting to come from the Diamond Match Company, Chico, California, identified as "sugar pine", and ask you whether, in your opinion, that is a fair specimen of sugar pine?

A. It is.

817 Q. There is a small area of sap on the right-hand side of the board, Mr. Albertson?

A. There is.

Q. And the rest of it is heart wood?

A. Yes, sir.

Mr. MATTHEW. I ask to have that marked as "Respondents' Exhibit No. 8" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 8" for identification.)

Q. I show you another specimen of lumber from the plant of the Diamond Match Company at Chico, California, identified as "sugar pine lumber", and ask you if that is likewise a typical piece of sugar pine lumber?

A. It is.

Q. This specimen consists entirely of heart wood?

A. It does.

Q. And there are a few knots in it which are likewise typical of that grade of lumber?

A. Yes, sir.

Mr. MATTHEW. I ask that that be marked "Respondents' Exhibit No. 9" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 9" for identification.)

Q. I show you another specimen of lumber identified by the inscription as having been cut from Pinus ponderosa at the
818 Pickering Lumber Company's sawmills, located at Standard, Tuolumne County, California, and will ask you if you can identify that as a clear piece of lumber manufactured from Pinus ponderosa, as California white pine?

A. Yes, sir.

Mr. MATTHEW. I ask that that be marked "Respondent's Exhibit No. 10" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 10" for identification.)

Q. Is this entirely sap?

A. All sap.

Q. I show you another specimen of lumber, purporting to have been cut from Pinus ponderosa at the Pickering Lumber Company at Standard, Tuolumne County, California, and ask you if that is likewise a typical specimen?

A. Yes; it is.

Q. Is this particular sample of heart or sapwood?

A. All heart.

Mr. MATTHEW. I ask that this be marked "Respondents' Exhibit No. 11" for identification.

(The specimen was thereupon marked "Respondents' Exhibit No. 11" for identification.)

Q. I show you another specimen of lumber, which purports to have been cut from a Pinus ponderosa tree at the Pickering Lumber Company sawmills, Standard, Tuolumne County, Cali-
819 fornia and ask you if you can identify that as a fairly typical piece of Pinus ponderosa lumber?

A. Yes, sir.

Q. Is that entirely sap, or is there any heart wood in it?

A. That is entirely sap.

Mr. MATTHEW. I ask that that be marked "Respondents' Exhibit No. 12" for identification.

(The specimen was thereupon marked "Respondent's Exhibit No. 12" for identification.)

Q. I show you an additional specimen of lumber, Mr. Albertson, purporting to have been cut from a Pinus ponderosa tree at the Pickering Lumber Company sawmill at Standard, California, and ask you if that is likewise a typical specimen?

A. It is not.

Q. In what respect is it not typical?

A. It is a hard-textured piece, and I do not think that that sort of wood predominates; I know it does not predominate in any California white pine that I have had contact with; it is like some of it, but very little.

Q. You regard that as an exceptional piece?

A. I would.

Q. Is it sap or heart wood?

A. Heart.

Mr. MATTHEW. I ask to have that marked "Respondent's Exhibit 13" for identification.

820 (The specimen was thereupon marked "Respondent's Exhibit No. 13" for identification.)

Q. The next in order that I desire to call your attention to are specimens of pondosa pine lumber which have come from the Spokane District. The witness cannot personally identify these pieces of lumber as having come from any particular mill, but they obtain locally, and if there is any objection—well, at least I shall have them identified.

I am going to offer two specimens of lumber received by us or furnished to us upon our request by the Portchester Lumber Company, of Portchester, New York, with certificates upon them, in the name of the Portchester Lumber Company, stating that:

"The attached wood sample is commonly known as pondosa pine and was shipped to us by Duffy-Hammacher Lumber Company at Spokane, Washington; shipment originating at Perman, Saunders County, Montana," and I ask that they be marked, respectively, "Respondents' Exhibits 14 and 15" for identification.

(Two specimens were thereupon marked "Respondents' Exhibits Nos. 14 and 15" for identification.)

By Mr. BURR:

Q. Referring to respondents' exhibit 13 for identification, I would like to ask the witness a question or so.

Do you know whether that is typical of pondosa?

A. Pondosa more than California; yes, sir.

821 Q. Let me ask you this, Mr. Albertson: The bright yellow marks on that piece of lumber, both above and below the numeral 13, will you state whether those marks are incident to the failure of the sawing of that lumber in vertical shape, or whether they are normally fitted to the saw for Pinus ponderosa; in other words, is that defective sawing that makes that show so badly?

A. No; that is all winter wood.

Mr. MATTHEW. I will ask to have identified a further sample of pondosa pine, identified by the inscription upon it as having come from the northwestern part of the United States, shipped from the mill of Morrill & Sturgeon Lumber Company at North Powder, Oregon.

This certificate is over the name of the Lord & Bushnell Lumber Company of Chicago, dated September 27th, 1929.

(The specimen was thereupon marked "Respondent's Exhibit No. 16" for identification.)

Mr. MATTHEW. I want to have marked for identification a piece of lumber which purports to be longleaf yellow pine—Pinus palustris, bearing the certificate of the Wausau-Southern Lumber Company.

(The specimen was thereupon marked "Respondent's Exhibit No. 17" for identification.)

By Mr. MATTHEW:

Q. Is this sample which has just been identified as Respondent's Exhibit No. 17 for identification fairly representative of the
822 southern longleaf yellow pine?

A. It is.

Mr. MATTHEW. May I ask to have two further samples of southern yellow pine longleaf lumber identified as exhibits 18 and 19 for identification, respectively.

(Two specimens were thereupon marked "Respondents' Exhibits Nos. 18 and 19" for identification.)

Mr. MATTHEW. I expect at some stage of these proceedings that the parties should be able to agree as to what specimens may be fairly offered as typical, in which event, and I again repeat, we will cut off certain specimens and have them cleaned up properly and offered for the record, but I object to any intimation that we are intending to make unfair and partisan comparisons. I made that clear a moment ago, and I do not think that there should be any doubt about it now.

Mr. BURR. Is it true, is it not, Mr. Matthew, that you are inspecting and now identifying preliminary to offering southern pine that you have here in the hearing room, for the purpose of showing the marked contract that exists between the pitch pines of the South, so called, and the so-called "California" white pine; it is done for the purpose of putting the two boards side by side?

Mr. MATTHEW. Certainly.

Mr. BURR. I do not think you ought to bristle up about what Mr. Williams has said.

823 Mr. MATTHEW. I objected to the statement that was made before the examiner off the record, after I had agreed with you that I would offer samples which would be fairly representative.

Mr. WILLIAMSON. I am sorry I said what I did.

By Mr. BURR:

Q. Are these three pitch-pine specimens all heartwood, would you say, or are you not sufficiently positive to be able to testify about it?

A. There is some sap in this specimen marked "No. 18" for identification in the upper lefthand corner.

Q. There is some sap there?

A. There is some slight sap, about three quarters of an inch in width, half the length of the piece, tapering out in the middle of the piece to nothing. The other two pieces are all heart.

Q. Referring now to samples marked for identification "Nos. 17, 18, and 19", can you say, Mr. Albertson, whether or not these samples you would regard as a fair exhibition of the average normal run of the mill for longleaf yellow pine of the South?

A. Sample no. 18 contains a little more mass pitch at one end than the other two samples, but the three exhibits taken together would give you the average, because sample 19 and sample 17 are very good.

Q. Whereas sample no. 18——

A. Has a little mass pitch at one end, tapering out at the other end.

824 Q. In other words, that is below the average and the other two are above; is that true?

A. To strike your average you would have to concede that.

Q. In other words, 17 and 19, in your judgment, are more favorable than the average run of the mill?

A. They are very good samples; yes.

Q. What do you mean by good samples, for this type of lumber?

A. Because you might get pieces quite a little poorer than this.

Q. Poorer in strength to stand up?

A. No; you get pieces that would contain more of this mass pitch. This is really good longleaf yellow pine [indicating].

Q. Referring to respondents' exhibit 19 for identification?

A. Referring to exhibit 19. Referring to no. 18, you have your mass pitch; the average would be less pitch than in 18.

Q. What is the disadvantage in your longleaf yellow pine to have pitch in it; is there any disadvantage about pitch in longleaf yellow pine?

A. In some cases and for some use mass pitch is not desirable.

Q. This type of lumber is used mainly for its strength, isn't it?

A. For structural purposes mass pitch is very desirable.

Q. Then, so far as that is concerned, sample no. 18 is favorable?

A. It is very desirable for construction pieces.

Q. On account of density, strength, and hardness; is that right?

A. Yes.

825 Q. Does this type of lumber compete with Pinus ponderosa on the market for the same utility and purposes?

A. Some in the shape of boards, when you get down to your common boards.

Q. Might compete?

A. It might compete in a sense for boxing, where the texture does not bother them.

Mr. BURR. If the examiner please, I should like to have Mr. Williamson resume the stand for a moment.

(Witness excused.)

M. W. WILLIAMSON recalled, further testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Williamson, inviting your attention to respondent's exhibit for identification no. 13, I would ask you to tell me the occasional reason for the spotted appearance in the center of the board on that face, which carries the typewritten identification.

A. Well, this happens to be the result, in my opinion, more from the way that lumber was manufactured than it is in the texture of the piece.

Q. How was it manufactured to bring out that spotted and dark appearance?

826 A. Because the saw passes more parallel with the grain of the wood than it does against it. In other words, it is what we call flat-sawn lumber, flash-grain or bastard-sawn, as it is sometimes called. In other words, my contention is—and I am rather defending this piece than condemning it, because it happens to fall within a beautiful line of samples of California white pine, and the contrast seemed to throw it below a typical piece.

I think the very fact that it was shipped as all-heart pondosa pine by the manufacturer is somewhat of evidence that they did not regard it as anything unusual.

Q. Do you regard that flash-sawn piece of lumber as fairly representative of pondosa pine?

A. Absolutely.

Q. You do?

A. Absolutely. In many cases it is called for by the trade. They want that-slash, that flash in the grain—in many cases that I have had transactions in pondosa pine they have demanded this very type, called the Norway grain, or yellow-pine grain.

Q. For inside finish?

A. Absolutely.

Q. In order to bring out the stain?

A. As a grain. I see beauty in that piece, whether it is for or against the case.

Q. How about no. 14?

827 A. Precisely, therefore, I contend that this is just as much a typical piece.

Q. You contend that it is typical of pondosa pine?

A. Yes.

Q. Is it called typical of California white pine?

A. Yes; it says it is a specimen of California white pine, unless I am mistaken.

Q. Manufactured in California, they might call it pondosa pine?
A. Yes, sir.

Mr. BURR. Whether the defense is willing to admit it or not, they have this yellow-pine grain appearing in their California white pine just the same as they have in the softer.

Cross-examination by Mr. MATTHEW:

Q. Mr. Williamson, what did you understand to be the purport of Mr. Albertson's comment on that piece, identified as no. 13?
A. I just think he thought it might indicate too much of a yellow-pine grain and too hard to be complimentary of the lumber.
Q. That was your inference?
A. That was my inference; yes.
Q. You did not understand him to say that it was not a beautiful piece of lumber?
A. No.
Q. Lacking in beauty in any respect?
A. No.

828 Q. Or that it was not desirable for certain particular purposes?
A. No.
Q. All you understood him to say was that it was not typical of California white-pine lumber?
A. I suppose this was all based on texture. If you are talking about typical manufacture or typical in texture, I contend that he is wrong in both cases.
Q. Your contention is that that is typical of lumber which is marketed as California white pine?
A. Yes; as much so as any of the other samples, Mr. Matthew.

Mr. MATTHEW. The respondents will have no further evidence to introduce at this New York hearing, with the reservation that the respondents may return here in case they would like to have a hearing later on.

Mr. BURR. That is understand.

(Whereupon, at 5:15 o'clock p.m., the hearing was adjourned to Detroit, Michigan, at the United States Postoffice Building, October 14th, 1929, at 10:00 o'clock a.m., in room 424.)

829 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inc.

DETROIT, MICHIGAN, *October 14, 1929.*

Met pursuant to notice, 10:00 o'clock a.m.
Before William W. Sheppard, examiner.
Appearances:

Eugene W. Burr (Washington, D.C.) for the Federal Trade Commission.

George F. Lindsay, 1413 Merchants Bank Building, St. Paul, Minn., for the complainants.

A. P. Matthew, 712 Railway Exchange Building, Chicago, Illinois, for the respondents.

Carl I. Wheat, 712 Railway Exchange Building, Chicago, Illinois, for the respondents.

830 PROCEEDINGS

Exam. SHEPPARD. Gentlemen, if we are ready, we will get started.

THOMAS J. ANKETELL was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Exam. SHEPPARD. This is Mr. Thomas J. Anketell?

Mr. BURR. What is your business, Mr. Anketell?

A. Lumberman.

Q. What concern are you with?

A. I am with various ones, the Anketell Lumber and Coal Company and the Gratiot Lumber Company.

Q. How long have you been in the lumber business, Mr. Anketell?

A. Over forty years.

Q. How long have you been with the Gratiot Lumber Company?

A. Well, I organized it.

Q. And it has been going how long?

A. About twenty years, I guess; fifteen or twenty.

Q. And you are located here in Detroit, are you?

A. Yes, sir.

Q. Has all of your experience the forty years been here in Detroit?

831 A. No.

Q. And where was you prior to that?

A. Well, when I was a boy or a young man I worked in the lumberyards in Chicago. After the wholesaling and distributing from Chicago, I went up into Wisconsin and then in the sawmill business.

Q. How long have you been in Detroit?

A. Oh, about twenty-four years.

Q. And your experience in the retail lumber business has been entirely during the last twenty-four years here, or were you in that business elsewhere some time?

A. I don't remember how long, I had a line of yards at various places.

Q. You have had a line of yards?

A. I did have.

Q. Was that before you came to Detroit?

A. Yes.

Q. Where were your headquarters then?

A. Well, I had headquarters in Merrill, Wisconsin; Chicago, Illinois; and Detroit, Michigan.

Q. How long has your experience been in the actual——

A. I beg your pardon.

Q. How long has your experience been in the actual forests?

A. I don't remember a number of years.

Q. And that was in Wisconsin, was it, too?

A. In Wisconsin; yes.

832 Q. Now you don't do any mill work, do you?

A. Practically none, practically none; just simply sanding and cutting.

Q. And what species of lumber do you carry, what kind of wood?

A. We carry white pine, yellow pine, fir, red cedar, oak, pondosa pine, a little, well, practically no pondosa pine, that is, with a very little poplar.

Q. What do you mean, I would say, what do you mean by white pine?

A. It is a little difficult to give an exact definition of what white pine is. But white pine—is such a common, so well known I never thought of giving a definition of it.

Q. Well, do you know anything about the names botanically?

A. No.

Q. Did you ever get orders for white pine with the word strobus connected with it?

A. No—well, since you speak of it I recognize it now.

Q. You have heard of it now?

A. Yes.

Q. I see. Do you recall what is known as to the trade as northern white pine, or genuine white pine?

A. Yes, sir.

Q. Now, have you got white pine in California also?

A. No.

Q. What do you get from California?

A. What they call sugar pine.

833 Q. You do buy sugar pine, do you?

A. I have bought it, but not recently.

Q. Do you regard sugar pine as white pine?

A. In my opinion, no.

Q. In your opinion, no? Do you buy anything under the trade name of California white pine?

A. I have bought it, but so little, I have bought so little of the California white pine and the sugar pine that is difficult to answer that question, because I have always considered the two about the same.

Q. About the same?

A. That is what I have considered, I am not qualified to give a technical opinion, because I have not been through the California pine whatsoever.

Q. Have you got any California pine in your yard at the present time?

A. Not that I know of.

Q. You have bought it at times, you say?

A. I have; I have a little. I don't remember seeing—several years ago I may have bought some, but I don't remember.

Q. Do you recall, or do you regard that as white pine, the California white pine?

A. I never have.

Q. You never have?

A. No.

Q. And do you regard Idaho white pine as white pine?

834 A. Yes.

Q. You do?

A. You say white pine, white pine, you have no pondosa pine?

Q. Yes; white pine; not pondosa pine?

A. Yes; I do mean Idaho white pine.

Q. But you regard pondosa pine as a white pine?

A. No.

Q. Do you distinguish between the pondosa pine and the California white pine?

A. I have never considered very much the difference between the two, except as I say, so far as California white pine is concerned, I mean California, because I do not have so very much of it.

Q. Well——

Mr. MATTHEW. I think the witness ought not to be interrogated about California white pine, if he does not deal in it.

Mr. BURR. Well, I think he may answer that.

Mr. MATTHEW. He said he spoke of California, but he might have bought a little a number of years ago. That is the most he has said.

By Mr. BURR:

Q. To make sure, Mr. Anketell, you don't know very much about California white pine?

A. Very little.

Q. Do you have competition with a number of dealers that sell California white pine?

A. I don't recognize—I haven't recognized or noticed any

835 competition on what is called California white pine. Never have come in competition with it as California white pine. That is all I know.

Q. Now, do you have orders come in for white pine, or do they ask for northern white pine, or how do these orders come?

A. Usually ask for white pine.

Q. What do you furnish under those orders, in compliance with those orders?

A. As we carry practically nothing but white pine in the species of what is called white pine, they usually get white pine. We have

carried a little pondosa pine and in the stress of business sometimes we have sent out a little pondosa pine as white pine. During the boom when everything was booming and everybody wanted lumber without much idea of what they got, why I presume they did get a little pondosa pine.

Q. From you?

A. From anybody—from us, sent out as white pine.

Q. Do you regard that as a correct compliance with the specifications of orders for white pine?

A. No.

Q. You don't regard that as good?

A. No.

Q. Would you fill an order for white pine interchangeably with Idaho white pine or northern white pine?

A. Yes, sir.

836 Q. Are you still getting the northern white pine in good quality?

A. Yes.

Exam. SHEPPARD. Ask him the same question, Mr. Burr, about sugar pine that you just asked him about filling orders for pine.

By Mr. BURR:

Q. Would you fill an order for white pine with sugar pine, if you had sugar pine in stock of the right dimensions, and so forth?

A. I am not quite sure what would be done under those conditions.

Q. Have you sugar pine in your yards at the present time?

A. Not that I know of.

Q. When did you get it last?

A. Several years ago.

Q. Have you used some sugar pine or some California white pine?

A. Very little of either.

Q. Very little of either, not much choice?

A. No.

Q. Have you bought any Arizona or New Mexico white pine, so called?

A. So called.

Q. Yes; I mean under that trade term.

A. Yes; so called. They call it white pine.

Q. Do you have Arizona white pine?

A. I think I have.

837 Q. In your yards now?

A. Yes.

Q. Would you fill an order, feel free to fill an order, or do you use Arizona white pine in filling orders for white pine?

A. About the only thing we carry that in is ship-lap.

Q. Ship-laps. That——

A. Yes; that is about the only thing we carry of the Arizona.

Q. Of Arizona white pine?

A. Or New Mexico.

Q. Now, if you get orders for white pine ship-lap do you feel free to furnish Arizona white pine?

A. The contractor usually understands what he is getting.

Q. Would you feel free to, please answer?

A. Yes; I certainly would.

Q. You would feel free to give Arizona pine as white pine?

A. Yes.

Q. Do you distinguish between Arizona white pine and California white pine in that respect?

A. I say I am not qualified to testify as to California white pine or sugar pine.

Q. Is the Arizona white pine a large source of your supply?

A. Not particularly.

Q. From whom do you buy it?

A. I think we buy some from the Cady Lumber Company.

Exam. SHEPPARD. If they are respondents, let me know.

Mr. BURR. Yes; they are respondents.

838 The WITNESS. The O. McNary Lumber Company.

Q. I don't know as to them.

A. The Cady Lumber Company, we buy quite a little from.

Q. Have you ever dealt with the Arizona Lumber and Timber Company?

A. Not that I remember.

Q. Not that you recall. Have you ever purchased from the Saginaw and Manistee Lumber Company any Arizona white pine?

A. Have I ever purchased any from the Saginaw and the Manistee?

Q. Yes.

A. No—wait a minute——

Q. The Signaw and the Manistee Lumber Company?

A. Manistee or Manistique?

Q. Manistee?

A. I don't remember buying any from either of them.

Q. Have you ever bought any New Mexico white pine?

A. I don't remember, I probably did.

Q. Ship-lap is an exterior finish, is it not?

A. Not in Detroit.

Q. Not in Detroit? Where is it used?

A. Used for sheathing up buildings; for instance, a veneered building they use ship-lap, and put the brick outside. And they would also use it frequently for barns.

Q. Use it for barns on the outside?

A. Occasionally, they don't build many barns any more here in Detroit.

839 Q. I didn't know but what you had a rural business too. Do you use Arizona white pine and pondosa pine interchangeably in your ship-lap?

A. Yes.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. You said, Mr. Anketell, you usually furnished Arizona white pine upon orders which you received ship-lap?

A. Yes.

Q. That is your usual practice?

A. Usual practice. It is usually called that, white pine ship-lap. That is what it is usually called.

Q. Have you sometimes furnished pondosa pine upon similar orders?

A. Yes; in ship-lap; a contractor seems to understand by white pine what he gets.

Q. Is it ordinary, you would feel free to furnish Arizona white pine or pondosa pine upon orders for ship-lap, those orders white pine ship-lap, what form does the order come in?

A. Usually comes in white pine ship-lap.

Q. And you understand from that that he expects to receive Arizona white pine ship-lap or pondosa pine ship-lap?

A. He would expect that, or even white pine, or real white pine.

840 Q. Is satisfied with either?

A. He would be satisfied for that purpose with any one of them. I think he would, we never do know.

Q. That is your understanding of the trade?

A. Yes.

Q. You are not attempting to deceive your customers at all?

A. No.

Q. With the understanding of the trade that the Arizona white pine or the pondosa will satisfy an order of that character?

A. It will satisfy an order; yes.

Q. And you purchased pondosa pine under that name?

A. I purchased pondosa pine under pondosa pine.

Q. Under that name?

A. Any purchase I specified pondosa pine in purchasing.

Q. And where did you purchase the greater amount of your pondosa pine?

A. That is difficult to answer, because it comes from various places.

Q. Does it come from the inland empire section?

A. That is the so-called "inland empire."

Q. That is from the Northwest?

A. Eastern Oregon, Idaho, or Montana.

Q. Eastern Washington?

A. I don't remember any coming from eastern Washington.

Q. So far as your recollection goes, it is eastern Oregon,

841 Idaho, and Montana?

A. Yes.

Q. And you buy it as pondosa?

A. As pondosa pine.

Q. And you furnish it upon these cases, upon orders which call for white pine, because you understand it is understood by your trade and satisfies the trade?

A. Yes.

Q. Now, you say you would not regard sugar pine as white pine. Although I understand that you would not expect to furnish sugar pine upon orders calling for white pine?

A. Excepting in ship-lap. If I buy sugar pine for the same purpose as this is used, pondosa and New Mexico as ship-lap is used.

Q. That is understood for interior use where it is not exposed to weather conditions?

A. Ship-lap we use in Detroit, goes anywhere, and is very rarely exposed to the weather.

Q. And what quality of lumber is employed for that purpose, just any lumber, or some particular type?

A. Yes; any lumber.

Q. I take it, Mr. Anketell, you are not interested in the botanical identification of trees, but you are interested as a practical lumberman in the quality and use of the word?

A. That is all.

842 Q. Now, the botanical name of sugar pine, I assume, you don't know?

A. No.

Q. Or of the Idaho white pine?

A. I would probably recognize it if I heard it.

Q. Do you obtain your pondosa pine from wholesalers or from manufacturers of lumber?

A. Usually from manufacturers.

Q. Have the manufacturers of this pondosa pine from whom you obtained your supplies made any suggestion with respect to its being furnished as white pine here upon orders for white pine, or have they just left it with you?

A. That is all.

Q. That is the extent of your dealings with them?

A. Yes.

Examiner SHEPPARD. You do retail business, do you not, Mr. Anketell?

A. Yes; retail and construction loan business.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Do you make a distinction between the furnishing of genuine white pine as contracted with other varieties of pine for exterior use?

843 A. We carry, with the exception of this ship-lap, we carry very, very little pondosa pine, and when I say pondosa I am classifying—when I say pondosa pine, I consider, I always have considered, California pine and Arizona pine and New Mexico pine in the same category. We carry very, very little outside of the real white pine.

Q. Do you recall where—do you regard real white pine as better for exterior purposes?

A. Most assuredly.

Q. Why?

A. It does not rot as soon in this climate.

Q. Does not rot as soon in this climate?

A. In this climate.

Examiner SHEPPARD. What has led you to that belief?

A. Experience.

By Mr. BURR:

Q. Have you had any experience with pondosa pine?

A. In some places where we have made construction loans they used pondosa or pondosa pine for steps. It has rotted in two or three years and we had to replace it.

Q. Where was that, do you recall?

A. Here in the vicinity of Detroit.

Q. Do you recall any specific instances; any particular cases?

A. Yes; in a construction loan we made to a man named Paul Hecker.

Q. Was that for steps?

A. Steps.

844 Q. A porch, or something like that?

A. Porch steps.

Q. What happened?

A. Rotted.

Q. In how long a time?

A. Now, when I say this——

Q. Now, how long was it first, please?

A. I should say about three years. When I say this, this is what was reported to me by my employees, so you have to——

Q. It came in the regular course of your business from an employee, did it?

A. Yes.

Mr. MATTHEW. We object to that.

Mr. BURR. If the examiner please, when a man knows through reports from the office employees in the regular course of his business, I say, possibly is not hearsay.

Mr. MATTHEW. I submit it is the purest hearsay.

Examiner SHEPPARD. I think I ruled on that at the beginning of the trial, gentlemen. I am going to consider as knowledge what a man gets in the course of his business. That is the only way in the world we learn anything, what we read or hear, and so forth, and so on in the course of our ordinary business, our association with people who are in business with us. I don't think the hearsay rule applies to that. I am going to let the examination go on.

845 Mr. MATTHEW. He has testified to specific instance, and an instance which was reported to him, and he is merely reporting the language of others, as to his general information, that

is the only thing. It is not a matter of expert opinion upon which he is being interrogated now.

Mr. BURR. The expert rule, I think, has got nothing to do with this matter.

Mr. MATTHEW. Well, there is absolutely no basis upon which hearsay can properly come in.

Exam. SHEPPARD. Of course, I do think, Mr. Burr, that the best evidence on that would be the man himself.

Mr. BURR. If you are referring to white pine, I think so. If you are referring to the rule as admissibility, I don't think the rule as to admissibility, I don't think the best evidence rule applies.

Mr. MATTHEW. It wholly is inadmissible.

Mr. BURR. No. What a man knows in the course of his business is something that he can tell us—as to what lumber he would buy and his whole policy, and in several cases the courts have definitely held that the Federal Trade Commission may receive evidence upon which business men would be guided and guide their course of policy.

Comm. SHEPPARD. Mr. Burr—Mr. Anketell, I am letting you answer that question, because I take it that the information you received on this particular instance and probably other mat-
846 ters that are not concerned in this inquiry was from an association with your customers in the regular line of business.

The WITNESS. Yes; I might suggest that it would be very easy for me, and it might save time, to let me answer, to let my answer go through, because all you would have to do would be to call the man who reported it to me, and bring him down here and he would simply testify to the facts.

Exam. SHEPPARD. I am going to let the examination proceed.

Mr. MATTHEW. Exception.

Mr. BURR. Read the question.

(Question read.)

Q. Now, how long ago was it that those steps rotted out?

A. I don't remember the exact date. Within the last year or so.

Q. Did you replace that porch?

A. I think we did.

Q. Do you remember what you furnished?

A. I cannot remember. I don't know what we furnished.

Q. Now, was that pondosa pine or California white pine that you furnished? Do you recall what it was?

A. Reported to me as being pondosa. Of course, naturally I would not know, I would not know the details of it as to that, except what was reported to me.

Q. Now, do you remember any other specific instance of trouble with that type of lumber?

A. No.

Q. Have you built for yourself a residence, Mr. Anketell?
847 A. Yes.

Q. What lumber did you use for that?

A. How do you mean?

Q. What lumber did you use?

A. Well, there is not so awful much lumber in it. Well, let's see—solid brick house with steel frame.

Q. Any lumber trim on it?

A. Yes.

Q. Exterior lumber trim?

A. Yes.

Q. What did you use for that?

A. I don't remember. I don't remember exactly, but I think part of it was white pine, as I built the house for my own use, I used yellow pine, southern yellow pine, five eights ceiling for cornice.

Q. Yellow pine for cornices?

A. Five eighths yellow pine ceiling for cornices, because where there is practically no water; it is a very wide cornice, where it is kept painted constantly.

Q. You had that in preference to either pondosa or white pine, did you?

A. Not in preference, but it was going to be painted up, properly painted, and I was going to live in the house, so I thought I would try it out. See?

Q. Put it in there as an experiment, did you?

848 A. Partly.

Mr. BURR. All right. That is all.

Cross-examination by Mr. MATTHEWS:

Q. Mr. Anketell, in this case where some steps rotted away, where you stated that the wood was pondosa pine, do you know whether it was sap wood or h'art wood?

A. No.

Q. What wood do you prefer for frames of sash?

A. White pine.

By Mr. BURR:

Q. What did you put in your own residence?

A. White pine. I think it was white pine.

Q. You are not sure?

A. No.

Mr. BURR. That is all.

(Witness excused.)

C. W. KOTCHER, called as witness and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Exam. SHEPPARD. Mr. C. W. Kotcher.

Q. What is your business, Mr. Kotcher?

A. Lumber, interior finish.

849 Q. Do you do any millwork?

A. Millwork?

Q. Yes.

A. Yes, sir.

Q. What line of millwork do you make?
A. Everything for the interior.
Q. Everything for the interior?
A. In the line of lumber.
Q. Do you make an exterior work?
A. Yes.
Q. What line of exterior work do you make?
A. All lines of lumber.
Q. All lines of exterior finish?
A. Out of lumber.
Q. Now, do you make stock or special order?
A. Both.
Q. Both. And how long have you been in the real estate lumber business?
A. About 43 years.
Q. All of the time in Detroit?
A. Yes, sir.
Q. How long have you been in interior- and exterior-finish millwork?
A. 43 years.
Q. Did you ever have any experience in the actual forest?
850. A. Yes, sir.
Q. Where was that?
A. State of Michigan.
Q. That was with northern white pine, was it?
A. Yes, sir.
Q. From northern pine up there?
A. That is hardwood, hemlock.
Q. How long were you in the woods?
A. Oh, probably ten years.
Q. Well, while the logging operations were on hand, I presume?
A. Yes, sir.
Q. Now, what varieties of lumber did you buy and sell for your retail trade; that is, buy lumber not restricting it to pine?
A. Well, we bought a number of different species of pine. For outside and exterior cornice work we used northern.
Q. You are talking about——
A. White pine.
Q. Now, I was talking first about the retail rather than the millwork. You referred to the millwork, were you not?
A. Yes.
Q. Now, confining yourself for the moment to the retail trade, what variety of pine did you handle for the trade that you sold to?
A. Excluding millwork?
Q. Excluding millwork for the time being?
851 A. Well, we used fir.
Q. What kind of pine?
A. Well, it is a type, we used yellow pine, mostly yellow pine for bill stuff.

Q. For what?

A. What we called bill stuff, piece stuff, construction material, like joice and scantlings, and those things; we used principally yellow pine.

Q. Now, then, did you buy, and still buy, for retail lumber purposes white pine?

A. Yes, sir.

Q. What variety of white pine do you handle?

A. You mean what quality?

Q. No; I don't mean the grade or quality. Do you use northern white pine, for example?

A. We buy Idaho pine. We buy California sugar pine. We buy northern white pine.

Q. Now, what do you mean by Idaho pine? There are two varieties of pine cut in Idaho, I believe. Which one do you refer to, or to both?

A. I refer to the Pinus monticola; that is the genuine white pine.

Q. That is the genuine white pine, is it? Where do you get your northern white pine?

A. We get it mostly from Canada.

852 Q. Do you get a good quality of genuine white pine, northern white pine?

A. We use it a great deal. We get the grade that we buy.

Q. Is that virgin timber?

A. Yes.

Q. First growth or second growth?

A. It is virgin timber, strictly, as I understand it.

Q. Do you have to pay more for it than you do for the Idaho white?

A. It is a shade higher.

Q. Now, do you buy pondosa pine?

A. Why, we use it for a very limited quantity for sheathing—sheathing houses; we get it for that purpose.

Q. That is what, sheathing—not exposed to the weather?

A. Yes.

Q. And do you regard that as efficient as the genuine northern pine for exterior use?

A. Yes.

Q. Have you had experience with it that leads you to that view?

A. Yes; I have.

Q. Will you tell us about it?

A. Well, a few years ago we were not as well posted as we are now, and we thought that we used that in our buildings for the sash, and bought it for that purpose, and in about seven or eight years we had to take that our and replace that with northern pine.

853 Q. Was that Idaho pine, Idaho pondosa?

A. It was pondosa.

Q. Pondosa?
A. That's what we bought it for as western pine.
Q. Bought it as western pine?
A. I think we did. I don't remember without looking at the invoice.
Q. That was a variety of pondosa pine?
A. Yes.
Q. You are sure of that?
A. Yes.
Q. Do you remember where it was used?
A. Used in our building on Gratiot Avenue for the front sash.
Q. Have you had to replace this front sash?
A. Yes, sir; I did.
Q. And what did you put in there then?
A. Northern pine, white pine.
Q. You answered a while ago that you regarded Idaho white pine as inferior to northern white pine for exterior use?
A. No; I didn't.
Q. Well, I thought the record would so show.
Examiner SHEPPARD. He didn't say that.
Mr. BURR. That is my mistake.
Q. Now, did you have calls from customers asking for white pine without any designation, whether northern, or Idaho, or California, what it was intended to be?
854 A. Every day.
Q. And what do you supply when you get orders for white pine?
A. We supply white pine.
Q. Now, do you use California or Arizona white pine as real white pine?
A. No.
Mr. MATTHEW. I don't think he said he sold any California or Arizona pine.
Mr. BURR. He didn't say Arizona, but I think he said he did buy California.
A. Only for sugar, for the sugar pine.
Q. Did you buy any California white pine?
A. No.
Q. Did you buy any Arizona white pine?
A. Not that I know of. We buy some pondosa as I said—I don't know where it comes from—for sheathing. That is the only thing we get it for and sell a very limited quantity.
Q. Do you sell it for anything besides interior use now?
A. That is all.
Q. Interior only?
A. That is all.

Q. Have you had any experience with pondosa as regards its durability and lack of durability for outside use, besides what you referred to on Gratiot Avenue?

A. Yes; I have.

855 Q. Will you explain?

A. Yes. We furnished quite a good-sized residence for the president of the Peerless Motor Car Company up in Alginas not long ago, and the outside door was specified white pine. We buy all the doors that we can; we bought this one, set up there, and the wet and dry twisted the door so we had to go and take it out and we found it was pondosa pine. We replaced it with northern white pine, a northern white-pine door, and it was about a year or so ago, and that door has been there since.

Q. Do you know of any other specific instances?

A. Well, there is nothing that I can relate from my own personal experience as I know of. All I know is what I have heard around town.

Q. Well, is this from your employees or just talk around town?

A. From my employees; we had had some correspondence and we have had some requests. We had a request—wait a minute, now. Off the record.

(Colloquy off the record.)

A. We had a request, I think, about a year ago from the Board of Education to go out and look at some frames in the schoolhouse.

Mr. MATTHEW. That is objected to.

The WITNESS. And to report what we found. And we reported they were not pine, and they ordered them out.

Examiner SHEPPARD. I am going to limit this to intercourse by the witness with his own employees. I don't intend to let

856 down the bars to the public. I don't think that is right.

Mr. BURR. No; I don't think so.

Examiner SHEPPARD. I will order the last stricken, Mr. Reporter.

Mr. MATTHEW. I was trying to interpose an objection.

Mr. BURR. How much are you striking?

Mr. MATTHEW. I think he should strike the answer and start again.

Mr. BURR. I think the witness where the witness testifies he went out and found it and that should be left.

Mr. MATTHEW. He didn't so testify.

Mr. BURR. Well, he did, I am quite sure.

Examiner SHEPPARD. You saw it yourself?

A. I sent out inspector out there.

Q. (By Mr. BURR.) The inspector is not in your employ?

A. Yes.

Q. (Mr. BURR.) I think that is all.

Mr. MATTHEW. Think that is nearly hearsay, and one of the fundamental reasons for hearsay is I am entitled to cross-examine the

man who knows at first-hand. It does not make any difference whether he gets it from employees or anybody else. It is a third person.

Examiner SHEPPARD. That certainly is the best evidence.

Mr. BURR. Let me see if I can qualify him.

Mr. MATTHEW. I don't care how accurate his report may be
857 that was made to this gentleman, even though he may give it here in good faith.

Mr. BURR. Did you—do you have inspectors for this kind of work?

A. Yes, sir.

Q. Is the inspector in your employ?

A. Yes, sir.

Q. To whom does he report in your organization?

A. Both Mr. Stewart and myself.

Q. How is Mr. Stewart?

A. He is the general manager of our business.

Q. And these people report also to you, do they?

A. Yes, sir.

Q. Did this man in this particular case report to you on the subject?

A. Yes, sir.

Q. And is that a part of the inspector's regular business, to report to you as well as to Mr. Stewart?

A. Yes, sir; he reports to both of us.

Q. And as a part of your regular business it is your duty to keep posted through your inspectors and their regular reports to you; is that true?

A. I don't go and check up.

Q. That is the means of information you have, through these reports?

858 A. We have to depend upon our men. That is not from my personal observation at this particular time.

Q. You didn't go out there, you mean?

A. I didn't go out there, but this other I know more about.

Q. Which other do you mean?

A. I mean the sash that I took out from our own buildings.

Q. Well, I see; I think that is admissible.

Mr. MATTHEW. I submit it is absolutely inadmissible under all of the rules. You cannot find a case which will admit hearsay under those conditions.

Exam. SHEPPARD. I think that is probably drawing it out a little too far, Mr. Burr; I think we will limit Mr. Kotcher's testimony to the instance he has narrated to his own personal experience.

Mr. BURR. If the examiner please, I wish to have an exception noted and ask in view of the exception that the matter be not finally stricken.

Exam. SHEPPARD. All right. Let the testimony remain in, Mr. Reporter, and give an exception to Mr. Burr.

Mr. BURR. There are one or two cases I would like to look up when I have an opportunity to do so.

Q. Do you recall any other specific instance, Mr. Kotcher?

A. No; I don't. They are not very fresh in my mind. I didn't know that you were going to ask me such questions or I might have refreshed my mind.

859 Q. Now, referring to your millwork, you use white pine, do you, for exterior millwork solely?

A. Yes, sir; white pine and cypress.

Q. Yes; white pine and cypress. Is that white pine, Idaho white pine or northern white pine, or both?

A. Both, and sugar pine; California sugar pine.

Q. You use some California sugar pine for exterior finish, do you?

A. Quite a little; we use it mostly for sash and outdoor doors, outside doors, and things of that kind.

Q. Now, do you regard Idaho white pine as durable for uses where exposed to the weather?

A. Yes.

Q. Have you had any unfortunate experience with Idaho white pine for that purpose?

A. No.

Q. Could you use that for interior purposes?

A. Oh, I imagine.

Q. How long have you been using it for interior purposes?

A. Oh, about fifteen years.

Q. And that would be about the earliest, would it?

A. I might say that we could get this northern pine previous to fifteen years ago a lot easier than now.

Q. It was fully as cheap up to that time as white pine?

A. Not a great deal difference in price, comparing the
860 same grades.

Q. A little less freight on the northern white pine than on the Idaho?

A. Well, they always sell it delivered, so it didn't make much difference about that.

Q. Now, how long have you been using California sugar for exterior trim purposes?

A. Oh, probably twenty years.

Q. Do you recall any unfortunate experiences with that type of wood as to its durability where used when exposed to the weather?

A. No; I haven't. We don't use so much of that for exterior, except sash.

Q. And you regard it as durable for that purpose?

A. California sugar pine?

Q. Yes.

A. Yes.

Q. Where exposed to the weather?

A. Yes; I do.

Q. Now, is the so-called "California white pine" on the market handled by your competitors?

A. I don't know who sells it.

Q. I beg your pardon.

A. I don't know anything about our competitors, whether they sell California white pine or not.

861 Q. Well, has there been at any time that you know of confusion in the trade as regards the selling of California white pine under the trade name "white pine"?

A. There has been confusion.

Q. Did you ever say about four years ago, or do anything to try to clear up that confusion?

A. Yes; I did.

Mr. MATTHEW. I am going to object to the leading questions, Mr. Examiner.

Exam. SHEPPARD. A little leading, Mr. Burr.

Mr. BURR. Well, if you have made any effort to clear up the confusion which you say existed in the trade as regards the meaning of California white pine, will you state what you did?

Mr. MATTHEW. Now, I object to that. What he did does not go to the merits of this case, if the Commissioner please.

Mr. BURR. If the examiner please, there is no better circumstantial evidence.

Exam. SHEPPARD. I think I will let him answer your question.

Mr. BURR. Read the question.

(Question read.)

A. Based upon my experience personally and investigating the differential in the price of California so-called white pine or pondosa and genuine white pine, I sent out a lot of samples showing two woods. I believe the market price today, in a good

862 quality of lumber, between the pondosa or the so-called California white pine and the Pinus strobus, or genuine white pine, is somewhere around $20 a thousand in the cut cars of lumber.

Exam. SHEPPARD. You mean the difference in the price?

A. Yes; I believe it is about that. We have to use a pretty good grade of lumber in doors and sash; but, of course, there is nowheres near that much difference in the common grades that are used for cornices. Just what the differences in the common grades are, I don't know. I sent out samples and put a lot of propaganda out that I thought was necessary.

Q. Why?

A. Well, from the confusion in what was sold and named, misnamed, I got statistics from the Government showing different kinds of woods, especially in the different kinds of pine, and their statement as to the rot-resisting qualities of the different kinds of pines, thus—just based upon that, I put out a little propaganda regarding it, not very much.

Q. To whom did you sent that?

Mr. MATTHEW. Let it be understood that my objection goes to all the witnesses testifying to on that.

Exam. SHEPPARD. Yes; the objection is noted to all of that testimony.

By Mr. BURR:

Q. To whom did you send that?

A. Oh, I sent it to contractors and architects.

Q. Did you ever take it up with the retailers, this matter
863 of confusion at any of their meetings?

A. No.

Q. I beg your pardon?

A. I did not.

Q. Did it ever come up at any of these meetings or luncheons?

A. Not as I know of.

Q. Now, has there been any controversy in this city among architects and builders, and so forth, say about four years ago, on this subject of substitution of California white pine for genuine white pine?

A. I don't know.

Mr. MATTHEW. Just a minute. As far as the witness has stated now, I will offer no objection, but the question is objectionable as it stands.

Q. And have you written any articles of which appeared in the Detroit papers, or any of them, with regard to the confusion that existed at that time as to the California pine, California white pine and genuine white pine?

Mr. MATTHEW. I object to the question, if the Court please. It is absolutely immaterial to this proceeding whether the witness wrote articles for the newspapers or not. This is an inquiry into the facts, and upon those facts presumably the Commission will arrive at some conclusions.

Exam. SHEPPARD. That is true, Mr. Matthew.

Mr. BURR. If the Commission please, I am trying to show——

Exam. SHEPPARD. No, Mr. Matthews, I know what you
864 said was true, but at the same time the testimony along this line goes to substantiate the complaint and to show a public interest in this question, whether or not it is taken up by the contractors or by the wholesalers or the retailer or the jobbing dealers; it all goes to that paramount issue. I think that testimony is under the rule of evidence; it goes to this issue. I will let it go in and give you an exception.

Mr. MATTHEW. I think it is not only irrelevant, anything attempting to be stated in the articles, but it is purely self-serving.

Exam. SHEPPARD. I don't know anything about the newspaper article. Of course, if it is offered in evidence, that is a different proposition. I will pass on it at that time, but whether or not Mr. Burr is just inquiring of this witness now whether he did certain things——

Mr. MATTHEW. My objection may be recorded?
Exam. SHEPPARD. Yes.
Mr. BURR. Will you read the question?
(Question read.)
The WITNESS. I didn't write any articles.
Q. I beg your pardon?
A. I didn't write any articles.
Q. Did you make any addresses which were published in one of the Detroit papers on that subject?
Mr. MATTHEW. My objection still runs to this.
865 Examiner SHEPPARD. Yes; answer it.
A. I had a conversation with one of the reporters one time in reference to it.
Q. In reference to it?
A. Yes.

By Mr. BURR:

Q. Did that occasion any meeting on the subject on the part of the retail dealers?
A. I don't think it did.
Q. Did it occasion any meeting on the part of the architects of the city of Detroit on that subject?
A. I don't think it did.
Q. Was there a meeting of the architects in which they discussed that subject?
A. I don't know.
Q. You don't know? Do you know whether or not you have lost orders to competitors who were selling California white pine, so-called?
Mr. MATTHEW. The witness has said definitely he does not know anything about whether his competitors sell California white pine or not.
Mr. BURR. I didn't recall him so testifying.
Examiner SHEPPARD. Yes; he did.
Mr. BURR. Did he?
Examiner SHEPPARD. Yes. That is all.

866 Cross-examination by Mr. MATTHEW:

Q. Mr. Kotcher, from whom do you purchase your Idaho white pine?
A. Well, I don't know.
Q. You can't name any of the companies or producers from whom you obtain that lumber?
A. I don't buy it.
Q. How do you obtain your supplies of Idaho white pine?
A. Well, our purchasing agent buys it.
Q. From the wholesalers?
A. General producers.
Q. And you don't know from what companies he produces or purchases Idaho white pine?
A. No.

Q. Do you know from what company or companies he purchases northern white pine?

A. The customary rule of purchases made at the present time, I don't know. I don't do the buying.

Q. And you don't keep informed as to who the producers of your lumber may be.

A. Well, there are so many of them that it is pretty difficult unless you are in very close touch with them.

Q. Well, do you know whether you purchased the northern white pine or any Idaho pine of the warehouses interests?

A. I know we have. We bought considerable from them at
867 different times.

Q. Do you know where you obtain the pondosa pine?

A. No, sir.

Q. Do you know from what area you secure it? That is, whether it comes from the inland empire or some other section?

A. You refer now to pondosa?

Q. Yes.

A. I think it comes from the inland, from the northwestern section of the country. We usually say pondosam, and it is hardly worth while remembering about it.

Q. As I recall it, you stated that you had only small quantities and that was sheathing?

A. Sheathing.

Q. And you don't know from what concerns you obtain it?

A. I don't know from what concerns we obtain it.

Q. You don't know, except it comes down from the Pacific Northwest?

A. I don't know just where we get it.

Q. Do you buy it under the name of pondosa pine?

A. We may buy it under the name of western white pine. I don't know just what they call it.

Q. You don't know that the name "western white pine" passed out of use a few years ago?

A. Pardon me.

Q. You don't know that the name, the term "western white pine" passed out of use a few years ago, and the term "California white——

868 A. In California?

Q. The western white pine passed out of use some three or four years ago?

A. I think that they did discontinue calling it weste n white pine.

Q. Do you know that the lumber came from that particular area, the lumber coming from that particular area is now sold as pondosa pine?

A. Yes, sir; and advertised as such.

Q. Now, you spoke of this incident where some window sash constructed of western white pine had failed, and it was necessary to replace the sash. You said that that lumber had been purchased as western white pine?

A. Well, that is a long time ago, and I cannot say; I know it was——

Mr. BURR. You know it was what?

A. It was western pine.

By Mr. MATTHEW:

Q. Don't know where it was obtained?

A. I don't.

Q. Or under what name it was sold to you?

A. I don't.

Q. Now, you spoke of this outside door built for a residence for the officer of the Peerless Motor Car Company?

A. Peerless Motors.

Q. And you said it was found to be constructed of pondosa pine?

869 A. Yes.

Q. Do you know where that pondosa pine was obtained?

A. We bought the door already made.

Q. Where?

A. I don't know.

Q. You don't know whether the lumber which was used in building and constructing that door had been furnished as pondosa pine?

A. I don't know; bought it from some big producer of doors.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. That sash that counsel has just referred to, that was a pondosa sash I believe you testified, did you not?

A. Yes, sir.

Q. And you are not sure whether it was bought during the time pondosa was called western white pine or whether it is since they began to call it pondosa?

A. It was bought before they decided to call it pondosa pine, probably in the neighborhood of about twenty years ago.

Q. Do you know what the botanical name of pondosa is?

A. I know what the botanical name is; yes.

Q. What is it?

A. It is Pinus pondorosa.

Mr. BURR. That is all.

(Witness excused.)

870 FRED M. SIBLEY was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Examiner SHEPPARD. Mr. Fred M. Sibley.

Q. Mr. Sibley, you have had experience in the retail lumber trade here, have you, sir?

A. Yes, sir.

Q. And you have a factory also, have you?

A. Yes, sir.

Q. How long have you been in the retail lumber business?
A. 26 or 27 years.
Q. All of that time in Detroit?
A. Yes, sir.
Q. And have you been all during that entire period engaged in similar operations?
A. Yes, sir.
Q. In lumber?
A. Yes, sir.
Q. And have you studied wood technology at all?
A. Sir?
Q. Did you have anything to do with the lumber matters in—during the war?
A. Yes, sir.
Q. If so, what was your experience in that capacity, briefly?
871 A. I had charge of the airplane-propeller division, first in the Signal Corps and also in the Bureau of Aircraft Production, and I was largely interested in hardwoods—mahogany, walnut, and oak.
Q. And you looked after securing supplies, did you?
A. Only for propellers.
Q. Yes; that is what I mean, in that sphere?
A. Yes, sir.
Q. Now, referring to your retail business as distinguished from your milling operations, please state the various pines you employ?
A. You mean at the present time?
Q. Oh, yes; and over a period of the last few years, if there has been any difference, I would like to know how you have changed your supplies?
A. Well, for the past five years we have been selling only California sugar, Pinus pondosa, Pinus strobus.
Q. You have been using Pinus strobus, the sugar pine, and Pinus pondorosa?
A. Pinus pondosa and Pinus pondorosa are identical.
Q. Well, Pinus pondorosa is the botanical name?
A. There should not be any mistake as to either——
Mr. MATTHEW. I think the witness should confine himself.
Mr. BURR. Yes; strike out that last.
The WITNESS. In any event, I meant Pinus pondorosa.
872 Q. You meant Pinus pondorosa?
A. Yes.
Q. Under what trade name did you buy that when you bought Pinus pondorosa?
A. We still called it western pine.
Q. You still call it western pine?
A. Yes.
Q. How about Idaho white pine, do you deal in that?
A. Yes; I let that include the Idaho pine, the other pine that I included——

Q. That is western pine, too?

A. That goes—that is western, too.

Q. You still call the Pinus pondorosa lumber that you buy—you still call it western pine or western white pine?

A. Call it both ways, western white pine and western pine.

Q. Now, in buying lumber from any pondorosa dealer, do you buy any from California?

A. I am not prepared to answer.

Q. Do you buy any from the so-called "inland empire", do you know what that means?

A. Yes, sir.

Q. You do buy it there?

A. Yes, sir.

Q. And is that under the trade name of western white pine, or what is the trade name at the present time?

873 A. The trade name is Pinus pondosa.

Q. That is pondosa at the present time?

A. Yes.

Q. They don't use Pinus in the trade, do they?

A. No, sir.

Q. Now, do you recall from whom you bought such Pinus lumber as you carry, from whom you buy it now?

A. No, sir; I do not.

Q. Who looks after your buying for you?

A. Mr. Krug.

Q. Does it—he buy any of this class of wood from the Klamath Falls, Oregon?

Q. We have bought it from Klamath Falls. I don't know whether they buy it now or not.

Q. Is that pondosa that you buy from Klamath Falls, or what is the type of lumber?

A. Up to six years ago, I did the buying myself. Since that time Mr. Kurg has done the buying and I don't know what term he buys it under.

Q. Do you know whether it is pondorosa wood or not?

A. No, sir; I do not.

Q. Now, for the retail trade as distinguished again from your millwork, do you distinguish between the white pine and the pondorosa?

A. To a negligible extent, we handle only Idaho white pine.

874 Q. Only Idaho white?

A. Only Idaho white.

Q. Do you buy any northern white pine?

A. We haven't got any in quantities for four or five years.

Q. For how long a time have you had experience as to the character of Idaho white pine for uses where the lumber is to be exposed to the weather?

A. I should say eight or ten years.

Q. Have you had any experience indicating that it is of a short-lived quality?

A. You mean Idaho white?

Q. Yes.

A. My experience has shown me that the sapwood lasts about the same.

Q. As what?

A. As Pinus pondosa or even northern pine.

Mr. MATTHEW. I didn't get that.

Mr. BURR. Sapwood, he is talking about.

Mr. MATTHEW. Sapwood or what?

The WITNESS. Sapwood and Idaho white pine.

Mr. MATTHEW. Lasts as long as what?

A. Pondosa sapwood and northern white pine.

By Mr. BURR:

Q. I don't think there is much difference between the sapwood of the three species?

A. No, sir.

Q. Now, as regards hardwood, have you had any opportunity to compare these three types of lumber?

875 A. Yes, sir.

Q. What is the result of your experience?

A. The so-called "northern white pine or Pinus strobus" is much more long lived than either the Idaho white pine or the pondosa. The Idaho white pine is not as long lived as northern pine and is longer lived than the western—than the pondosa. You have to excuse me for use—for using the word pondosa—because when I bought it I bought it for western pine, or western white pine.

Q. When you mean pondosa you mean pondorosa, no matter how named?

A. That is right.

Mr. MATTHEW. He has not said that?

Mr. BURR. Yes.

The WITNESS. Well, I will so testify.

Mr. BURR. Have you had any experience with California white pine as to its durability? I am talking about pondorosa now, bought as California white pine, as distinguished from pondorosa bought as pondosa pine or was western white pine.

A. I haven't distinguished between the California white pine and the pondosa, not in my own mind.

Q. Well, now, have you had any experience with any lumber bought as California white pine?

A. No, sir.

Q. Have you had any experience with any lumber bought

876 as Arizona white pine or as New Mexico white pine?

A. No experience as to lasting qualities.

Q. As to durability?

A. No, sir.

Q. Have you ever bought Arizona or New Mexico white pine, so-called?

A. I cannot answer.

Q. You don't know, is that right?

A. No.

Q. Now, the confusion in the trade by referring—I am now referring to the retail-lumber trade—as to the difference between California white pine and pondosa, or the difference between California white pine and genuine white pine——

A. What do you mean by the trade?

Q. Well, you have competitors here in the retail trade?

A. Yes.

Q. Do they say California white—sell California white pine as white pine, do you know?

A. What testimony I can give would be hearsay.

Q. Well, do you have knowledge of what the trade conditions are as regards your competitors?

A. Yes, sir; very accurate.

Q. You know what their yards are carrying, do you?

A. No, sir.

Q. You don't know what their yards are carrying?

A. No, sir; we are still referring to any lumber, are we not?

877 Q. I beg your pardon?

A. We are still referring to any lumber.

Q. No; I am referring to your millwork. I am referring to your retail trade.

A. That is what I am speaking of.

Q. You might deal in better select, or something of that kind. I am referring to the entire retail situation.

A. When you made a question you suggestion something about lumber to be used for outside purposes?

Q. You are talking about that?

A. Yes.

Q. Now, do you have competition in the select grades which are used for outside work at all?

A. Of California white pine?

Q. Yes.

A. Yes, sir; outside you mean?

Q. Yes.

A. I don't know.

Q. Are the select grades of Idaho white pine and northern white pine used for outside work?

A. Well, there is very little lumber in the better grades used for outside work.

Q. Within the fire limits of Detroit, you mean, do you?

A. Well, I am speaking of our trade, to whom we sell.

Q. Do you have rural trade through the district outside of

878 Detroit?

A. Some. Well, in the suburbs?

Q. Yes.

A. But outside of the Detroit city limits.

Q. In the suburbs where they use frame for exterior purposes?

A. I was classifying frames, in the millwork heading.

Q. Well, now, do you sell select grades of genuine white pine for exterior work in the suburbs?

A. Practically none except for porches. The detail work around the tops of porches, columns.

Q. You sell any white pine for interior work?

A. You mean by any—what do you mean?

Q. Any lumber termed "white pine"?

A. White pine?

Q. For interior work?

A. We sell practically none.

Q. There would not be anything then but the millwork for exterior purposes; is that true?

Mr. MATTHEW. Just read that question.

(Question read.)

The WITNESS. I don't know what you mean by that.

Mr. BURR. Well, strike that question.

Q. What varieties of woodwork do you regard as genuine white pine; what varieties of wood?

A. Pinus strobus and Pinus monticola.

Q. Pinus monticola?

879 A. Yes.

Q. Do you regard California sugar pine as genuine white pine or not?

A. No, sir.

Q. Do you regard the pondorosa as genuine white pine?

A. No, sir.

Q. Now, then, do you distinguish between genuine white pine and pondoroso for outside purposes, and, if so, which do you recommend?

A. White pine.

Q. Do you recommend Idaho or northern white pines interchangeably for outside work?

A. I don't consider Idaho pine as good as northern white pine. The Idaho white pine.

Q. Do you ever offer Idaho white pine when orders come in for white pine?

A. Yes, sir.

Q. Do you have orders for northern white pine occasionally, mentioning the word "northern"?

A. No, sir.

Q. Do you have orders occasionally for white pine, with the word strobus, the botanical name, used?

A. No.

Q. Did you ever have orders using the botanical name for any of these?

A. Not to my knowledge, no.

880 Q. Now, how about the cornice lumber, which do you prefer for that purpose?

A. Northern white pine.

Q. As first choice?

A. Yes, sir.

Q. Do you make cornices out of Idaho white pine?

A. No, sir—oh, out of Idaho pine, yes.

Q. Do you make them out of pondorosa?

A. Practically none.

Q. Now, you have patrons in the millwork business that use California white pine for exterior trim?

A. I can't say, it would be hearsay.

Q. I beg your pardon.

A. It would only be hearsay.

Q. You don't know from your own knowledge what the trade does?

A. I know what the trade is doing, but I haven't actually gone to any particular job, and looked at the wood and identified it as California white pine.

Q. Do you know through reports made in the course of your business, in the ordinary course of business from your subordinates as to whether they favor the use of California white pine for exterior finish?

Mr. MATTHEW. I object. That is hearsay.

Examiner SHEPPARD. Yes. I don't think he should testify.

Mr. BURR. He can testify upon what he knows in the reg-

881 ular course of his business through his subordinates.

Mr. MATTHEW. How does he know?

Examiner SHEPPARD. You have to distinguish between what a man knows and what a man hears. The witness himself seems to have a pretty good knowledge of the hearsay rule.

Mr. MATTHEW. I understand the objection is sustained and I think the answer should be stricken.

Examiner SHEPPARD. I don't think he answered at all.

Mr. BURR. He has not answered. I am going to take exception to the examiner's ruling.

Examiner SHEPPARD. Off the record.

(Discussion off the record.)

By Mr. BURR:

Q. Now, when you sell wood made from pondorosa—strike that question.

Do you ever have calls for California white pine, using the word "California"?

A. No, sir.

Q. Do you ever sell any of the pondorosa lumber as white pine, to fill any orders for white pine?

A. Yes, sir.

Q. You have done that?
A. Yes, sir.
Q. How recently?
A. Every day.
Q. Every day. Is that the general practice in this community?
882 A. I think so.
Mr. MATTHEW. Well, now, if he knows.
Examiner SHEPPARD. I understand that is something of your own knowledge, Mr. Witness?
A. Yes, sir.
Mr. MATTHEW. The practice of the trade?
The WITNESS. Yes, sir.
Mr. BURR. Are you one of the large dealers of lumber in this city?
A. Yes, sir.
Q. Can you mention any other dealers that has a larger trade than yourself?
A. I don't know.
Q. Now, have you ever had any experience with the durability of frames and sash on common lumber, that was sold by your firm, as to durability?
A. Only in a very general way.
Q. Have you ever found it necessary to replace sash or window frames or the setting for doors that were put in from pondosa?
A. Yes, sir.
Q. Weill you tell the examiner about such instances?
A. Well, my knowledge is general. I know we have on different occasions had sash come in that had rotted at the joints, used on houses perhaps that we had delivered a number of years previous, and we had to replace them.
883 Q. Can you recall any other specific instances?
A. No, sir.

By Mr. MATTHEW:

Q. Do you know that the lumber was pondosa?
A. Yes, sir.
Q. And you replaced it with genuine pine?
A. I beg your pardon?
Q. You replaced it with what sort of wood?
A. Same wood.
Q. The same wood?
A. Yes, sir; same wood, or California sugar.

By Mr. BURR:

Q. I beg your pardon?
A. The same wood, of California sugar; yes.
Q. What is a pergola; is that outside finish?
A. That is a part of the appurtenances of a house.
Q. Outside, exterior?
A. Yes, sir.

Q. Did you ever furnish that in pondosa pine and have it fail to stand up?

A. I have only in my own home.

Q. Well, what is the condition of that?

A. It is decaying.

Q. When was it put in?

A. About six years ago.

Q. Do you remember where you bought that lumber?

A. From my own company.

884 Q. Do you remember where your company bought it?

A. No, sir.

Q. Do you know whether it was pondorosa pine or not?

A. It was pondorosa pine.

Q. Did you furnish any of the outside trim for Dr. Herman Hoodler?

A. Yes.

Q. All of it?

A. Yes, sir.

Q. How is it standing up?

A. I am not certain, but I think it is cypress, most of it.

Q. Most of it cypress. You saw the frames and sash?

A. I cannot answer.

Q. Did you ever have to replace the frames and sash in that building?

A. Not to my knowledge.

Q. Not to your knowledge. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. You stated that you sometimes furnished pondosa pine upon orders for white pine?

A. Yes, sir.

Q. Is that quite common practice with you?

A. For sash and shop work.

885 Q. Well, may I ask for what reason you furnished pondosa pine upon orders that call for white pine, if as you stated there is a recognized difference between white pine and pondosa pine?

A. Because from my business experience that is what our competitors do, and we have only to meet the price, we have to buy cheap, cheap lumber, in order to meet the price.

Q. That is the only reason for your furnishing pondosa in response to orders for white pine?

A. Yes, sir.

Q. Do your customers understand what they are getting? I am assuming you are not constantly deceiving them at all?

A. I believe 75 to 85 percent do.

Exam. SHEPPARD. Well, Mr. Sibley, I want to understand you. You mean to say that when the pondorosa or pondosa as you call it, is sold for a specification calling for white pine, that 75 to 85 percent of the customers know that they are not getting white pine?

A. That is true; the builders.

By Mr. MATTHEW:

Q. Now, in a certain instance you were compelled to replace some frames and sash which were manufactured of pondosa pine, and which were rotted at the joints, and you say you replaced them with either the same wood or California sugar pine?

A. Yes, sir.

886 Q. Can you tell us which it was, was the pondorosa white pine what you used for California sugar?

A. My answer to that would be that we carry a very, very small amount of genuine white pine, stock lumber, and I don't—I would not have the stock to use.

Q. Do you carry much California sugar pine in stock?

A. Not so much now. We did formerly carry a great deal.

Q. Why have you discontinued the sugar pine? Why has your stock diminished?

A. The price.

Q. That is purely a trade condition?

A. Yes, sir.

Q. The price is too high to make it worth while to carry it?

A. Yes, sir.

Q. Do you know whether these frames and sash which you say became rotted at the joints were made of sapwood or hartwood?

A. I cannot say at this time.

Q. Of course, you would not recommend sapwood for exterior finish, I take it?

A. No, sir.

Q. Of any variety of pine?

A. No.

Q. Did it appear that these joints had been properly protected by paint or otherwise?

A. Yes, sir.

887 Q. When you replaced them, why did you not use northern white or Idaho white?

A. I think I answered that question. I said because we carried such a small stock of white pine that we made that replacement out of our regular stock.

Q. Then I misunderstood you. Did *d*you likewise testify that you were carrying less of northern white pine and more of Idaho white than formerly?

A. We are carrying practically no northern white pine. All of our common lumber is Idaho pine.

Q. And you are discontinuing the northern white because of the price?

A. Difficulty in getting it and price.

Q. It is quite difficult to get it?

A. Very difficult to get it in sufficient quantities for our trade.

Q. You are practically compelled to rely upon Idaho white, upon pondosa pine for your purposes?

A. Yes, sir.

Q. You were asked about a pergola that had been constructed at your residence some years ago?

A. Yes, sir.

Q. Do you know where you obtained the lumber used in the pergola, in connection with the pergola?

A. No, sir.

Q. I assume that the rotting took place at the point where
888 the woods went in the ground or in contact with the ground?

A. Not necessarily; the whole pergola seems to be rotting, even the posts, the upright and top of the posts.

Q. Are those of sapwood or h'artwood?

A. Started with sapwood and has reached into the h'artwood now.

Q. Is the pergola painted?

A. It has been painted twice, three coats in six years.

Q. Painted originally as soon as it was put in?

A. Yes.

Q. Those timbers were in part of h'artwood and sapwood?

A. No timbers in it; it is made of posts and boards.

Q. Were the b'ards of h'art or sapwood, partly h'art and partly sapwood?

A. Yes.

Q. And when you got northern white pine, when you get that, is it largely sapwood?

A. Sap.

Q. And it has not changed in that condition then within the past few years in the period of time that we are making inquiry about?

A. Formerly twelve or fifteen years ago we purchased practically our entire requirements in white pine in what is known as northern white pine. I am speaking now of exterior lumber. We
889 found that northern, gotten up in central Canada, we had to buy stocks coming from smaller trees, which gave us a larger percentage of sapwood, and it was not as satisfactory from a longevity standard as the old original big timber white pine.

Q. The old original big timber white pine, as you characterize it, is largely heartwood?

A. Heartwood and some sap.

Q. The relative amount of sap was less than in the white pine you were getting in recent years?

A. Yes, considerably.

Q. That change has been throughout the market in the last fourteen or fifteen years?

A. Yes, sir; I say for the past five years we have handled practically no northern white pine.

Q. Is that condition rather general in the lumber trade in this area, or are you familiar with it?

A. I think it is general with the exception of one or two lumber dealers who particularly try to deal in the northern white pine.

Q. With those one or two exceptions has white pine noticeably declined in this market as far as volume is concerned?

A. Very much.

Q. And is being replaced to a great extent with Idaho white pine and with pondosa pine?

A. Yes, sir.

Q. In fact, it would be impossible to fill the requirements
890 of the trade if you had to rely on the northern white pine alone?

A. Yes, sir.

Q. Are you sufficiently informed as to the condition of the industry here generally to state whether or not the supply of sugar pine has declined or decreased in this market?

A. No, sir; I am not.

Q. Well, apart from shop grades do you carry much sugar pine?

A. I don't think we carry any of the common grades.

Q. Did you at any time?

A. I don't believe so. If my memory serves me there was a serious differentiation in the price and we bought the other lumber because it was as good in our opinion and cheaper.

Q. What other lumber do you mean?

A. Pondosa.

Q. You have been buying pondosa pine in preference to sugar pine because in *because in* your opinion it was as good and cheaper?

A. Yes, sir.

Exam. SHEPPARD. That was for interior work?

A. No, I am speaking of exterior.

Mr. BURR. Read that question.

(Question read.)

The WITNESS. For exterior work.

Mr. MATTHEW. The witness says for exterior work.

Q. At one time, you were buying this pondosa pine under
891 the name of western white pine?

A. Yes, sir.

Q. Or western pine?

A. Yes, sir.

Q. And you said you still frequently refer to it as western pine and western white pine?

A. Yes.

Q. Has there been any change in your practice or in the use made of this lumber since that name was changed from western white pine to pondosa pine? Perhaps my question is not clear.

A. No—your question is clear. The lumbermen use the term pondosa pine, but the buying trade still considers it as pine.

Q. That was always the practice of the buying trade, was it not?

A. I do not think the change in the name has affected the sale of the material.

Q. That is, this lumber then finds its way into the trade and into use in about the same fashion that it did before it was changed?

A. Yes, sir.

Q. Do you purchase any of your lumber from the warehouses interest?

A. Yes; a great deal of it; most of it.

Q. You buy Idaho white pine largely purchased of them?

A. I believe we buy 75 percent of our white pine—Idaho white pine—from warehouses.

892 Q. Do you buy Idaho pondosa pine from or through Weyerhauser?

A. Very little.

Q. Where do you obtain it?

A. I don't know; from a great many different sources.

Q. I want to ask one further question about the pines. You said in answer to a question of counsel for the Commission that you regard the northern pine, Pinus strobus, and the Idaho white pine, Pinus monticola, as white pines?

A. Yes.

Q. And I think you also said that you felt free to furnish either of those varieties of lumber upon orders for white pine?

A. Yes.

Q. I think you likewise stated that you would not regard sugar pine as a true white pine?

A. Yes, sir.

Q. By that we understand—are we to understand that it is not your practice and you would not ordinarily feel free to furnish sugar pine upon orders which call for true white pine, as you understand it?

A. In the shop we would furnish sugar pine; in the shop work we would furnish sugar pine for white pine.

Q. Just use the pondosa pine in the shop?

A. Yes.

Q. That is the only one?

A. But exterior work, for outside work, we would not be
893 confronted with the decision, because the grade of the lumber and type of it is such that it would not be satisfactory.

Q. Why is that?

A. Well, we like a small, sound, knotted type of lumber.

Q. And the cheaper kinds—do not answer the requirements in that respect?

A. No.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Do you frequently take up with your customers the character of the material that you are furnishing and tell them that it is not a genuine white pine?

A. I have done it.

Q. You have done it?

A. In the past and found it didn't avail me much, so discontinued it.

Q. What do you mean by that?

A. I mean that the contractor or builder who buys lumber is not particularly interested in the longevity of the wood. He is more interested in a smooth, good-appearing lumber at a low price than he is in its lasting quality.

Q. Well—did I interrupt you?

A. More interested in the good-appearing lumber for a low
894 price than he is in its lasting quality.

Q. Do you have much building for speculative immediate sales purposes in this community?

A. Well, it is the practice for immediate sale.

Q. In other words, do you call it ordinarily speculative?

A. We have speculative contract buildings, the classification——

Q. Contract building is a building on architect specifications?

A. Yes.

Q. Do you ever in your trade see the architect's specifications for this class of work?

A. Yes.

Q. For your millwork or your general retail work?

(No response.)

Mr. MATTHEW. Mr. Burr, I don't want to seem to be technical; that is not proper redirect.

Mr. BURR. If the examiner please, I think the examiner will permit this witness to be recalled after a week's continuance to go on the stand again. And I think that is a technical position——

Mr. MATTHEW. I will not press my objection. But let us go on.

Mr. BURR. Read the question.

(Question read.)

A. Yes.

Q. Now, where you get it on architect's specification do you
895 find that there is less substitution or more substitution for other wood for white pine?

Mr. MATTHEW. I don't know whether I understand that question.

The WITNESS. I don't know as I quite understand. Do you mean by that that the woods may be optional?

Q. Yes.

A. Several woods may be optional.

By Mr. BURR:

Q. So that all the woods, the alternative which is really furnished upon specifications of the architect, you are more apt to have a substitution or less apt?

A. It would be white pine or cypress.

Q. When the architect specifies?

A. Yes; speaking now for outside work.

Q. Yes; and then when you get it on architect's specifications and there is an alternative given, or possibility to substitute some variety of pine that is not a genuine white pine——

Mr. MATTHEW. Well, I don't understand. I don't know as I understand. Is it a purely speculative question?

Exam. SHEPPARD. I think so.

Mr. BURR. Well, I will withdraw it. I don't want to be captious at all.

Q. Do you ever find that you are unable to supply the wood called for by the specification, and then ask for permission to substitute?

896 A. Yes, sir.

Q. Does that ever occur when you are called upon for white pine?

A. Are you still talking about the architects' specifications or general trade?

Q. Well, let's make it general.

A. I would like to answer that separately.

Q. All right; first as to the architects' specifications?

A. Yes.

Q. You take it up and substitute at times, do you?

A. In less than fifty percent of the cases.

Q. Would it happen to some of the 75 percent of the cases which you testified on direct examination that the dealer knows that he is getting a variety of lumber, not genuine white pine on occasions when he asks for white pine?

A. Yes.

Q. That was on cross-examination, was it?

A. Yes.

Q. Have you seen any of the white pine, northern white pine, coming into the market in the last five years?

A. No, sir.

Q. You don't know whether the virgin forests are furnishing large white pine lumber still from Canada—or from Minnesota or not, do you?

A. I know a very small amount is being furnished.

897 Q. Of the large size northern white pine?

A. Yes.

Q. How much Canadian do you come in contact with; enough so that you would know Canadian white pine?

A. Yes; a small amount is being furnished.

Q. That is virgin white pine, is it?

A. Yes; a very small amount.

Q. Now, will you state whether or not the difficulty that you experience is a difficulty in getting northern white pine or is the difficulty that of getting it at a satisfactory price, or is it absolutely difficult?

A. We handle a very large quantity of white pine and we have to buy it according to certain specifications, as to width, thicknesses,

and we find it extremely difficult to get the proper amounts of the sizes that we wish. That coupled with the higher price has made us switch over to the western pine.

Q. Have you tried within the last five years, or did you say you have?

A. Yes, sir.

Q. You have tried but you haven't bought any for five years?

A. I said we bought a little.

Q. I thought you said you had not bought any?

A. I said a little.

Q. Now, Idaho white pine you buy for mill work; you testi-
898 fied on cross-examination, that was composed of part sap wood?

A. I don't think I testified that we bought any Idaho white pine for mill work.

Q. Is all your mill work made from pondosa?

A. All from the pondorosa or sugar.

Q. What are the proportions?

A. I estimate 85 percent pondorosa.

Q. And for what purposes in your mill work do you get the sugar pine?

A. We will find a job occasionally for an architect that does not specify the harder coarser texture of the pondosa, and we, while he perhaps wants the old white pine, not carrying that, we will sell him on the California sugar as being a good substitute from the standpoint of softness and good to take paint nicely.

Q. Do you regard that as more durable or less durable than the pondosa for outside uses?

A. Well, I haven't had any exact experience.

Q. You would not be able to state on that?

A. No, sir.

Q. Is sugar pine a little higher in price than the pondosa pine?

A. The last I knew it was. I haven't familiarized myself very lately on it.

Q. How wide is your trade in millwork? Do you ship that
899 to a great distance or is it local?

A. Within a radius of forty miles of Detroit.

Q. How much of it is made up on order and how much is stock?

A. I haven't the exact figures. But my estimate would be 80 percent stock and 20 percent from orders.

Q. Do you have competitors upon the Mississippi Valley and elsewhere for the exterior trim that you make in your mill?

A. Yes, sir.

Q. They compete with the Anderson firm from Minnesota?

A. I don't believe they sell there.

Q. I beg your pardon.

A. I don't believe they sell there.

Q. Do you know whether or not you compete with those firms in order to sell these different dealers?

Do you know whether Anderson firm comes into this market?

A. They did come in a short time ago. But I don't know this exact moment.

Mr. BURR. That is all.

Re-cross-examination by Mr. MATTHEWS:

Q. What—why do you use no Idaho white pine for millwork?

A. Price.

Q. Is the price of Idaho white pine in excess of the price for
900 sugar pine?

A. I should be able to answer that, but I will say I am not familiar with the prices lately, I don't think so.

Q. Does Idaho white pine come in substantially in what are cheap grades?

A. Well, in the north such of it as is sold is pondosa.

Q. Then pondosa largely takes the market, as far as used for millwork is concerned?

A. Yes, sir.

Q. How long has that been the situation?

A. I think always since the wood has been in use.

Q. Every since the market declined so noticeably in supply of northern white pine?

A. Well, my own feeling is that as we switched to the western woods about the same percentage has been maintained in the cheap grades, so far as Detroit is concerned for Idaho pondosa as it now exists.

Q. That is, it has been about the same percentage with relation to the Idaho white pine and the pondosa for the past fifteen years or so, is that right?

A. Yes; twelve or fifteen years.

Q. Twelve or fifteen years, you noticed no change in the relative percentage of pondosa pine and Idaho white pine when the pondosa replaced the western white, is that the situation?

A. No; I say about the same.

901 Q. About the same. This change in the use of woods during the past twelve or fifteen years is virtually responsible, primarily responsible, for the economic conditions which have obtained in the industry?

A. Absolutely.

Q. I am not quite clear on this question of substitution.

A. If the examiner will permit, I can perhaps tell it in my own words.

Q. First, let me ask this question. If it is not entirely clear, then I will be very glad to have you supplement in your own way.

As I understand it, you say in less than fifty percent of the cases is any substitution upon architect's specification, and in those instances you take the matter up with the architect or the responsible party and see just whether the substitution may be permitted?

A. Fifty percent of the cases where the use of white pine or cypress is not optional. If the specification requires white pine or cypress, we usually substitute cypress.

Q. Why is that? Is cypress so much cheaper than white pine?

A. No; I think rather it is notice to us that the architect knows what he is doing, and we feel that we will perhaps meet with difficulty if we substitute the Idaho white pine or the pondosa under those circumstances, and we think it is safer, since we put so much labor into the products, to use cypress.

902 Q. Then when you refer to such substitution you mean a substitution in the event that you take advantage of the alternative between the two woods specified?

A. I mean of the fifty percent where it is not optional, a certain percentage of those cases even, we would substitute western white pine or Idaho. It is a matter of personal element largely, depending on the architect himself. I might illustrate the point by saying that we at one time had an order for a large building for an architect here in Detroit and we got out some two or three hundred frames and we got them out of Idaho white pine and we—he called for genuine pine.

Q. Called for white pine?

A. He called for white pine.

Mr. BURR. Called for genuine white pine?

A. No; using the word "white pine." I might say I am using it to differentiate here. When we carried Idaho white pine in the common grades we were forced to carry one grade lower than the grade that was being sold in western pine because of the price. In other words, a number three Idaho pine costs a trifle more in number three grade, because—it costs a trifle more than a number two western pine, and we carried the Idaho because we thought it better for exterior purposes. In this particular case we made plain frames out of number three Idaho white pine and they were rejected. We
903 have a thousand dollars or more in them, and they were worthless for any other use, so our man tried to sell the architect on the proposition that it was better, longer-lived lumber, and I finally personally went to him and told him about it, but he said he didn't care about that, what he wanted was better-looking lumber, it didn't make any difference to him particularly as long as it was smooth appearing, and we had to destroy the frames and replace them with pondosa.

Exam. SHEPPARD. At a cheaper figure?

A. No; at the same figure.

Q. The same figure?

Mr. MATTHEW. Now, his specification called for a certain grade.

A. We used a grade better.

Q. The specifications called for white pine, and you furnished Idaho white pine and he rejected it, and you were compelled to replace the frames with frame made out of pondosa pine?

A. He objected on the basis of grade.

Q. But he was willing to accept the frames made from pondosa pine?

A. That is right. Now, when we got that architect's specifications again we figured, we disregarded his term of white pine, because we know he does not mean it. That is what I meant.

Q. That is a matter of personal equasion?

A. A matter of personal equasion.

Q. And your problem is to satisfy your particular customer?

904 A. It is.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Now, when you refer to genuine pine as you did a moment ago, what do you mean by genuine pine?

A. Well, my father was raised in the white-pine country, and I presume it is just a matter of training that I think of the old Michigan white pine, call it genuine white pine—Canadian pine.

Q. Genuine pine, you say, is the white pine?

A. It is the old Pinus strobus such as we had twenty-five years ago.

Mr. BURR. That is all.

(Witness excused.)

RICHARD H. MARR was thereupon called as a witness and, having been duly sworn, testified as follows:

Exam. SHEPPARD. Mr. Richard H. Marr.

Direct examination by Mr. BURR:

Q. Are you an architect, Mr. Marr?

A. Yes, sir.

Q. How long have you been an architect?

905 A. About twenty-five years.

Q. Have been located in Detroit?

A. Yes.

Q. Been here all of that length of time?

A. Except two or three years; three years, I believe.

Q. Do you have occasion to specify pine for your clients for construction purposes?

A. Yes; I specify some pine.

Q. Do you do residence work for people who use wood for exterior purposes?

A. Yes, in some degree; a small degree, I would say.

Q. What kind of wood do you specify for exterior use, what kind of pine, I would say?

A. Well, I limit the pine usually to frames. It happens that most of my practice is the type that requires wood which can be set such as oak or cypress and we usually use the pine for colonial work where it is painted and for sash and other mill painted work, practically all of it is interior.

Q. How much of it is exterior?

A. Practically all of it is interior.

Q. And how do you specify white pine, what language do you use, what do you say?

A. We usually, always say merely white pine, and then I do recall just once it occurred, but there was a great deal of activity, I think two or three years ago on the substitutes for white pine coming in, and we have been called on by representatives of a good many different bureaus—pondosa or white pine, and so on—each claiming the merits for the various woods, and at one time I believe they said the genuine white pine was gone. Then we asked for it because there seemed to be a difference of opinion of what the genuine white pine really was. It didn't help us any, and we now merely substitute white pine, if it is a building of any importance, I mean, and the wood has to be long lived, and the very best we try to find, say it is a northern white pine; because the term "old white pine," as I understand, is rather scarce and expensive. In fact, we happen to have people like that where money was not any particular object and where longevity was the principal consideration; we do find the old type of pine.

906

Q. You do, you say?

A. I think we did, but where they got it or how they got it I don't know, but my experience is we substituted that for the old type of pine. But the balance, I am frank to admit, I don't know just what kind of pine goes in in all cases.

Q. Do you differentiate between California white pine and genuine white pine?

A. We haven't; no.

Q. You haven't. Do you know whether you have accepted California white pine for exterior use?

A. I cannot say. I don't think we would know whether it went in or not. There is such a confusion on it, the white pine is claimed to be of certain quality, but one branch of the lumber industry denies it and another branch recommends it. We are simply at sea on the whole white-pine situation.

907

Q. Do you regard the Idaho white pine as genuine white pine or don't you?

A. I don't know.

Q. Is the same true of California sugar pine?

A. Yes. I might say that the only wood which is really, has really been called to our particular attention as not a worthy substitute, has been called pondosa; isn't that the name pondoso?

Q. Well, I will say for the benefit of the witness that the species known as Pinus pondorosa, the lumber made from it, as you know the trade name is pondosa, comes from the inland empire for the past five years, last past, and before that time it was western white pine. It is also sold as Arizona, California, and New Mexico white pine.

A. Well, we know it as pondosa pine. We have been led to believe that it is not the equal of the other pines. In cases occasionally I

recall in one specific case it has been inserted that no pondosa pine is permitted; in the average specification we don't make any additional classification; we simply use the white pine.

Q. When you say you have been led to understand the pondosa pine is not as good as the other pine, you refer to what particular pine?

908 A. Well, like the former witness, we always thought of pine as northern pine.

Q. Not the equal of northern pine?

A. No.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Do you know of any case, Mr. Marr, any case within your experience, where California white pine has been furnished on specifications calling for white pine?

A. Yes; it is.

Q. California white pine?

A. Pondosa pine.

Q. I am asking about California white pine?

A. I don't know of that.

Q. You don't know. That is all.

(Witness excused.)

Mr. BURR. I move we adjourn until two o'clock.

Exam. SHEPPARD. We will adjourn until two o'clock.

(Whereupon an adjournment was taken until two o'clock, October 14, 1929.)

909 Docket Nos. 1620–1669, inc.

DETROIT, *October 14, 1929—2:00 o'clock p.m.*

Exam. SHEPPARD. All right, we will proceed.

C. E. DAY was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are an architect, are you?

A. Yes, sir.

Q. How long have you been an architect?

A. About 16 years.

Q. What—all the time in Detroit?

A. Yes, sir.

Q. You are an architect on residences, residential work, chiefly, are you?

A. Almost entirely.

Q. Have you ever, for residential purposes, have you ever had occasion to specify the furnishing of pine lumber?

A. Some.

Q. Some for exterior purposes?

A. Certain classes of work; yes.

Q. What classes of work would you say?

910 A. Colonial work and Georgian work.

Q. Some exterior trim on most any building?

A. Yes; a certain amount of pine used in any building.

Q. Cornice and things of that kind?

A. Yes.

Q. Now, in your specifications do you on occasion call for white pine?

A. Yes.

Q. Do you regard Idaho white pine as a compliance with that specification?

A. Well, we have considered it as such. Of course, it is not from the standpoint of botany, I suppose, a true white pine; but we have used it, and it has been in the market and used as white pine.

Q. Do you accept it as a compliance with that specification of California white pine?

A. Well, to tell the truth, I don't always know, and we don't always know what we get. We specify white pine because on the job, the white pine, your carpenter superintendent or foreman will tell you it is this, or it is not that, and we use it in the building as long as it is a good lumber.

Q. Well, if you were told that certain lumber which you had asked for as white pine was California white pine, would you accept it?

A. I think I would; yes.

911 Q. Now, have you ever come in contact with the so-called "Arizona" and "New Mexico" white pine?

A. Have I heard of Government contact——

Q. Now, have you come in contact with it?

A. More or less; I would not say that I could definitely say yes.

Q. You would think that lumber that appeared satisfactory to the eye if it was Arizona or New Mexico white pine, in compliance with your specifications, you would consider that?

A. Well, I think that our white pine of Mexico and Minnesota, as it is accepted around here, is sufficient for those purposes; I think there is no doubt about it.

Q. You would accept this?

A. Yes; because I say it is hard to get and hard to get in this market, and as I understand that is what the lumbermen tell me. I would accept it.

Q. You would take it irrespective of whether the Idaho white pine or the California white pine or Arizona or New Mexico white pine——

A. Yes, sir.

Q. Without any distinction between those?

A. Yes; without any distinction at all.

Q. Now, do you occasionally have pondosa pine delivered?

A. Yes.

Q. You would take that as a compliance with the specification for white pine?

912 A. Well, we have right along.

Q. You have?

A. Yes, sir. I don't know that it is upheld to us as such. Probably just called white pine or on our billings; I don't know that we are informed that we are getting a substitute when it is delivered, but it comes on the job. Now, it is good lumber, as long as it is not shaky; it is a good strong lumber and we don't raise much question with regard to it.

Q. Now, do you regard white pine as the—being of great durability where it is exposed to weather—greater than other kinds, or don't you make any distinction?

A. If I had known before coming down here, I would have found out a little bit about it, if I had known what I was going to testify to. I would have refreshed my recollection a little bit.

Q. I am glad you didn't. What we are trying to get at is the situation and understanding among the architects and what the condition is rather than what they might believe it to be if they made a study of it. So your testimony is more valuable than if you had known about this beforehand and could have posted yourself.

A. This western coast pine, as I understand it, it is a good material, pretty free from defects; in fact, much more so than the pine we get in the localities down here, which now comes pretty knotted on account of this scarcity.

913 But so far as tensile strength of the two lumbers, I would not be prepared to say; I imagine there was not an awful lot of difference.

Q. For strength you would rather have the yellow pine?

A. Yes.

Q. I am not talking about tensile strength; I am more as to the acceptance of the two woods?

A. You are talking about building and the life of the wood?

Q. I am talking about the building, where it is used on the outside.

A. I don't suppose anything could beat the ordinary old white pine.

Q. You mean northern white pine?

A. Yes.

Q. Now, as regards those western woods which were mentioned, Idaho white pine, California white pine, Arizona and New Mexico white pine, do you distinguish at all between those as to durability?

A. No.

Q. One equals the other, is that what you mean?

A. Yes.

Q. Now, do you think that is true of your fellow architects?

A. Well, I cannot say as to that. It all depends. I am talking from the standpoint from which I use it. I might also say that the white pine that goes in certain types of residences

914 you can also almost carry around in your hip pocket. For instance, the English, Spanish, and Italian would not use it at all.

Q. Would not use it on the outside?
A. On the outside because it does not take stain.
Mr. BURR. That is all.
Exam. SHEPPARD. Any cross?
Mr. MATTHEW. No.
(Witness excused.)

CHARLES F. MEAGHER was thereupon called as a witness and, having been duly sworn, testified as follows:

Exam. SHEPPARD. Mr. Charles F. Meagher.

Direct examination by Mr. BURR:

Q. Mr. Meagher, you are in what business or profession?
A. Retail lumber business.
Q. You are here in Detroit?
A. Yes.
Q. For how long a period have you been in the retail lumber business?
A. 33 years.
Q. All of that time here?
A. Yes.
Q. What varieties of pine do you deal in?
915 Q. Besides the southern yellow pine, do you deal in that in any amount, the southern yellow pine?
A. White pine, yellow pine, what we call pondosa pine, California pine, Idaho pine—those are the principal ones.
Q. Now, for white pine, what varieties do you include?
A. There are a number that they call by the name of white pine, although different varieties. When we specify white pine, we are careful to specify the kind of white pine we require.
Q. When you say "we" do you mean yourself?
A. Yes, sir.
Q. Do you ever call white pine anything else? Arizona white pine or New Mexico white pine?
A. Yes.
Q. Both of them?
A. Both of them.
Q. With what concerns have you dealt in Arizona that sell the Arizona white pine?
A. The Albuquerque Lumber Company, of Albuquerque, New Mexico.
Q. Do you deal with the Arizona Lumber and Timber Company?
A. No.
Q. Do you deal with Cady Lumber Company? Of Albuquerque?
A. Not in recent years. We have some little time ago.
Q. Now, when you have calls for white pine but without specifications, specifying any particular State or locality, do you regard
916 that as being a compliance when you furnish California white pine, or how do you handle it?

A. Yes. If a man specifies white pine simply, without stating the district from which it should come, we consider that for the fine buildings, why, we give him Michigan white pine, Canadian white, or Idaho white pine; for the cheaper kinds of buildings we might have given him Oregon white pine or Montana white pine.

Q. I see. Well, now, do you yourself distinguish between such varieties so-called "white pine" that are genuine white pine and others that are not genuine white pine? Do you draw any distinction in your own office on that subject?

A. Yes; we consider the kind of pine we used to get from Michigan to be the genuine Michigan cork white pine. We consider the Canadian white pine to be equal to the old Michigan white pine and the Wisconsin pine somewhat similar to it, although we have never considered the Wisconsin to be as good as the old Michigan white pine. I also consider the Idaho white pine to be as good as Michigan white pine, and the other so-called "white pine" I don't consider to be of the same value as the Idaho and Michigan pine.

Q. Now, if somebody ordered white pine you would think that you were complying with his order if you furnished pondosa pine?

A. It depends upon the type of building. If it were a high type of building I would ask him whether pondosa pine would be
917 satisfactory. If it were a building of ordinary construction, I mean a building that costs five or six thousand dollars, I would feel that pondosa pine would be furnished without any question. In my own mind I don't consider pondosa pine quite the equal of Idaho white pine or the Michigan pine or the Canadian.

Q. Do you regard the California as the equal of the Oregon white pine?

A. I consider it equal to the Arizona and New Mexico pine. I consider the California white pine from one section to be superior to the pondosa.

Q. Which section?

A. Northern.

Q. How about Klamath Falls, Oregon? And the California white pine?

A. It is a very good district. I would consider it quite satisfactory pine from that district. The California pine that I don't like so well is that that comes from the southern part, where the knots in the pine are apt to be larger. They are not so suitable for the purpose that we use it for ourselves.

Q. Have you noticed any difference between the California white pine and the pines that you regard as the genuine white pines, and as regards to the ability of the knots to stay in place?

A. The California white pine that comes from the north-
918 ern part the State ordinarily has smaller, tighter, sounder knots than those which come from the southern part of the State, and the knots, as I have said, are smaller and for that reason more solid.

Q. How about their durability and their working loose? Do you find any difference between the various types in how much the knots work loose and leak?

A. If they are unsound, of course, they will work loose. If they are sound, they are all right.

Q. Do you ever furnish pondosa pine as a compliance with an order for white pine, without notifying your customer that you are substituting?

A. Yes; we frequently do for buildings of the less costly type.

Q. Of the type you described a moment ago?

A. Yes; what I mentioned a moment ago.

Examiner SHEPPARD. Is that a sort of trade custom? Do you know anything about that condition at all? Is that something that a great many lumber dealers do, the lumber retailers?

A. I believe it is frequently done.

Q. You know that of your own knowledge?

A. Yes.

Q. To give white, California white pine on specifications calling for white pine?

A. Yes.

Examiner SHEPPARD. All right.

919 By Mr. BURR:

Q. Have you had any experience as to the durability or lack of durability in cases of California white pine where exposed to the weather?

A. I believe that any of the white pines that have been mentioned are good so far as durability is concerned, if they are properly protected by paint.

Q. Now, have you had any experience with durability of California white pine where not protected by paint?

A. No.

Exam. SHEPPARD. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. When you were first engaged in the lumber business, what was meant by the term "white pine"?

A. It was meant a pine that came from Michigan, largely the Lower Peninsula of Michigan. That was the only kind we were familiar with at that time.

Q. Then more recently that term has been broadened to include the Idaho white pine, for example?

A. Yes; the next pine that came within our knowledge was the Wisconsin pine and the Minnesota pine, and then more recently the Canadian pine and then the Idaho pine and the other western pines. As the source of supply here in Michigan, in our im-
920 mediate neighborhood diminished; then we made use of this that came from greater distances.

Q. This term "white pine" has acquired a broader meaning in the lumber trade than it had 33 years back?

A. Yes, sir.

Q. I think you said in answer to a question by the examiner or counsel for the Commission that upon occasion you feel entirely free to furnish pondosa pine upon orders calling for white pine?

A. Yes; for the less costly type of building.

Q. Yes; and you make no distinction between pondosa pine and California white pine in that respect. That is to say, it does not make any difference what name it has, you are trying to furnish what you understand is suitable and will be suitable?

A. Well, I don't know that I would not make any distinction personally; I like the California white pine from the northern part of the State a little better than I do the pondosa pine. My reason for that is that frequently pondosa pine has a crack across the base of the knot, and that does not cover up very well with the paint; it does not look very well.

Q. Then it is that belief in the superiority of this particular California white-pine lumber that leads you to offer that a little more freely than you offer the pondosa pine?

A. Yes.

Q. It is not a case of the name; it is a case of the quality of the lumber.

921 A. It is the quality of the lumber that I am talking about consistently when I offer it to a customer.

Q. At the present time is there any depreciable use in the northern white pine in the Detroit territory?

A. You mean by that white pine from Michigan, the interior, and so forth?

Q. Yes; what we call the original northern white pine anywhere from Michigan, Wisconsin, Minnesota, Canada, if you please?

A. There is some of it used, but not anywhere near the quantity that there is of the western pines.

Q. Could you approximate the percentage of the total?

A. That is a little difficult to say with any degree of accuracy.

Q. Is there more Idaho white pine in the market in the Detroit territory than northern white pine?

A. I would think so.

Q. What lumber takes the bulk of the white-pine trade here?

A. I would say the Idaho pine and the pondosa pine.

Q. Is it in about equal parts?

A. No; from my own experience I would say that there is more pondosa pine used than Idaho. One of the chief reasons for that is that the Idaho is used, usually more costly than the pondosa.

Q. By the pondosa are you including the white pine?

A. No.

Q. Pondosa alone?

922 A. Pondosa alone.

Q. Referring to the pondosa pine, you mean the pine that is actually introduced to the trade under that name?

A. Yes.

Q. Then you will say that the pondosa pine represents the largest consumption of white pine in this territory?

A. So far as my knowledge goes; yes.

Q. What lumber would come next?

A. You mean by that the pine?

Q. Yes.

A. I would say first, pondosa, second Idaho, then possibly the so-called "northern pines," coming from the interior of Michigan, Wisconsin, and Minnesota. I would say in about that order. I am speaking now of the retail lumber trade.

Q. Where would you put the California white pine?

A. California white pine, I would say, would come next.

Q. Next to what?

A. Next to the northern pines.

Q. Then there is a far greater trade in pondosa pine here than the California white pine?

A. I would say so; yes.

Q. Has the use of the pondosa pine been steadily increasing during the period of your experience in the lumber trade?

A. Yes.

Q. You are familiar with the fact that at one time the
923 lumber which is now marketed as pondosa pine had a different name, a different trade name?

A. It used to be called simply western white pine. We simply called all pines of the West "western white pine." After a little time they produced the so-called pondosa pine in order to distinguish others from the California pine, and in fact gave it that trade name.

Q. When the change in the name took place, did any change take place in the practice of the trade as to using this lumber as concerning selling it to customers?

A. I don't think so. I think that is very largely a matter of the knowledge of the producer. It was known to all of us who had made a study of it that there were different kinds of pine in the West, and we would order according to the location of the mill, and the location of the growth of the timber.

Q. I take it from the testimony that these several pines sold upon their merit, of course, keeping in mind such elements as price and differentials?

A. Yes.

Q. I assume that the manufacturers of pondosa pine have not made any representation to you as to whether or not it could be supplied or should be supplied upon orders for white pine?

A. I beg your pardon.

Q. I am assuming that the manufacturers of pondosa pine have not made any representations to you as to whether or not it
924 should be supplied upon orders for white pine?

A. Oh, no, no; they have not.

Q. It is entirely left with you?
A. Yes.
Q. Do you handle any California sugar pine?
A. No; I do not.
Q. Never have?
A. No.
Q. You have got some California white pine?
A. Yes.
Q. And you understand that botanically it is identical with the pondosa pine—that is, the lumber that comes from some species of trees, or are you interested?
A. I am interested in the botanical phase of it, but I am not familiar with that phase of it.
Q. I take it that you are interested in the quality and the utility of the lumber in each instance?
A. Yes.
Q. Your study is confined to that?
A. Yes.
Q. It does not make any difference what the particular name is, your interest is in the use that can be made of the lumber?
A. Yes.
Q. Are you in a position to state whether the trade in the pondosa pine in the Detroit territory has increased any great
925 measure, in any greater measure than the trade in California white pine?
A. From my own experience, I would say yes.
Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Exam. SHEPPARD. Now, you say these various varieties of lumber sell on their merits?
A. Yes.
Q. And you say that the durability, would you, is a merit of lumber?
A. Yes; indeed it is.
Mr. MATTHEW. Pardon me, if the Court please, but he also stated in connection with that same question that he took into consideration the question of price and differential. I think that was in my question.
Mr. BURR. Yes.
Q. Now, the average purchaser of lumber is able to give durability a proper value in connection with the purchase of lumber?
A. To a very large extent they rely on our judgment of it.
Q. As to which wood is durable?
A. Yes; and I seel them according to my judgment of their needs.
Q. Do you find that there is, then, in the Detroit field a considerable number of buyers who are buying for erecting purposes
926 for early sale, as early sale as possible, merely speculative buyers?
A. Oh, yes.

Q. Now, I wish you would say whether you regard buyers of that description as giving proper emphasis to the durability of the material used?

A. They don't always do it.

Q. Then when you say that the buyers are selecting their various types of lumber upon merits you would make a qualification as regards the durability of the speculative buyer?

A. I have said that so far as the selection of the woods, according to their merits, is concerned, that many of our customers accept our judgment in that matter.

Q. Now, I think you also testified that these various types of lumber were sold upon their merits in this market?

A. Yes.

Q. Now, I want to ask further whether the merit of durability is given proper emphasis by this class of buyers for speculative building purposes?

A. I am afraid the merit of the low price is frequently given preference.

Q. Preference to durability?

A. Yes.

Q. Is durability given its proper weight in the purchase of these goods on their supposed merits?

A. I don't know that. I can answer you in a general way,
927 because there is a difference in builders.

Q. I am talking about the speculative buyer.

A. Even with the speculative buyer there is a difference between in the requirements. Some care nothing for anything except price. Others are conscientious about it and want to get the best pine that they can for the purposes they have in mind. If a man wants the cheapest white pine that he can get, then I sell pondosa pine because I am able to do that, to buy it for less money than the sugar or Idaho pine. If he wants white pine and wants a smaller, tighter, solid stock, solid knot, then I am glad to get him the Idaho pine or the Canadian pine and I have to charge a higher price for it.

Q. Now, once more in saying that your customer buys lumber on its merits, isn't there a qualification as regards the weight given to the durability of the various types of lumber?

A. There is, because there is a certain class of speculative buyers, as I said a moment ago, who care more for price than he does for anything else, and such a man as that would buy the cheapest kind of white pine.

Q. Instead of buying on their merits?

A. Yes; he considers the cheapness a merit.

Mr. BURR. I think that is all.

Re-cross-examination by Mr. MATTHEW:

Q. Mr. Meagher, let's deal with this question a moment
928 longer. If the name of California white pine, which is now in use, were replaced by some other name, would that have any

effect upon the operation of a speculative buyer and builder, so far as the purchase and use of this California white pine lumber is concerned.

Mr. BURR. I am going to object to that question.

Mr. MATTHEW. Well, let me reframe my question. We will go back a bit.

Q. If the name California white pine was changed to "California pondosa pine" would that, in your opinion, have any effect upon the purchase of this lumber by the speculative buyer for buildings?

A. I don't think so.

Q. Would he give any more weight to this element of durability in purchasing lumber than he did to it today?

Mr. BURR. You mean if it is named that substitute that you speak of?

Mr. MATTHEW. Yes.

The WITNESS. I don't think so.

Q. In other words, the name is not material there?

A. As between the California white pine and pondosa pine, I don't think so. I think most of them recognize that usually Michigan white pine carries a certain prestige with it, and I believe most of them feel if they had Michigan white pine or its equal
929 they would be getting the best pine obtainable. I think that the majority of them have agreed to class the western white pines in the same class. They don't so much distinguish between the various kinds of western white pines. I am speaking now in the ordinary customer, who has no thought of the name attached to the different kinds of white pine.

Mr. MATTHEW. That is all.

Examiner SHEPPARD. Mr. Meagher, if you had an order for white pine from a customer you would deliver to him California white pine and consider that you had delivered under the specifications?

A. Unless he particularly specified some different kind of white pine I would consider California white pine would fill the bill. That would be the kind of California white pine that I said I am willing to sell. That is a hard California white pine from the northern part of the State that has the small sound type knots.

Examiner SHEPPARD. That is all.

Q. (By Mr. BURR.) You consider, would you, that furnishing the pondosa would be a compliance with that order for white pine?

A. Only for the less costly types of buildings.

Mr. BURR. That is all.

(Witness excused.)

930 RAYMOND CAREY was thereupon called as a witness and, having been duly sworn, testified as follows:

Examiner SHEPPARD. Mr. Raymond Carey.

Direct examination by Mr. BURR:

Q. Your are an architect are you, Mr. Cary?

A. Yes.

Q. How long a period have you been such?
A. About 24 years.
Q. Located in Detroit?
A. Yes.
Q. Of—for how long a time?
A. About 7 years.
Q. And where were you prior to that?
A. Canada.
Q. Canada?
A. Yes.
Q. And your work is largely residential, is it?
A. Well, mostly at the present time.
Q. In your specifications, with regard to them, do you have occasion to call for pine of some description?
A. Yes.
Q. What do you generally specify for exterior purposes, cornices, and the like?
A. White pine.
931 Q. What kind of white pine, if any, other than the northern white pine, do you regard as a compliance with such specifications?
A. Well, I don't know. It is pretty hard to say. It is very difficult to tell one pine from another, only from hearsay. My experience of other places, experience with pines, certain pines that discolor and sap pine, all of that sort of thing—I really like to get the Michigan pine or the northern pine.
Q. Well, suppose you find out that what you have been actually furnishing was pine, under the trade term, California white pine, would you regard that as a compliance with the specifications if in other respects it was up to specification?
A. No, I don't think I would.
Q. You don't think you would?
A. No, because my experience is, from what I have heard about it, I have never had it so far as I know.
Q. You have never used it?
A. So far as I know, but the stuff I have used has always held up. Now, it may have been southern pine, I don't know.
Q. It may have been what?
A. It may have been southern pine.
Q. It may have been?
A. Yes.
Q. Are you in shape to distinguish in any strict technical sense between the different varieties of pine so as to be able to say
932 this is white pine and this other is some other variety of pine?
A. No. I think I should make a guess of it. I think I can tell from certain characteristics.
Q. Now, if you specified white pine and find that the supply men have given you Idaho white pine, would you regard that as a compliance with your specifications if in other respects it measured up?

A. Yes, Idaho.

Q. Idaho, and would you if the California pine, you would not consider that true?

A. The only way that I can find out is that the California pine discolors.

Q. I didn't get that.

A. If in that sense; if it discolors or anything like that, it becomes discolored.

Q. Which variety is that that discolors?

A. Southern.

Q. Southern?

A. I mean the California.

Q. When you said southern pine a moment ago, you meant California?

A. California.

Q. The southern pine from California?

A. Yes.

933 Q. Now, the yellow pine from the South——

A. No.

Q. All right. Now here do you specify white pine for exterior uses?

A. I think I just follow everybody else. I have always been told that white pine is being quite steadily used.

Q. Has white pine a high reputation for durability in this market?

A. I think so, yes.

Q. Would you accept Idaho and northern white pine interchangeably?

A. Well, I have done so.

Q. Is there any other variety—did I interrupt you?

A. No, no.

Q. Is there any other variety, so-called "white pine", that you would accept interchangeably with Idaho and northern white pines?

A. Well, I have known of a case when finally I used spruce, but I didn't know it.

Q. You didn't know it?

A. I was being candid with you, that is all I know.

Q. Would you accept sugar pine as genuine white pine on specifications white pine?

A. No, I don't think I would.

Q. Yes; I see.

934 A. I don't really know. I simply go to a good place and except to get what I specify. If anything goes wrong with it——

Q. You are relying on the contractor?

A. Yes.

Q. For all you know, he may have substituted various other pines for white pines at various times?

A. If it goes wrong, then I find it out and make him replace it.

Q. And that has happened in cases, has it?

A. Well, one case where I had cypress in the pine panel that I put in and didn't know it.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. You spoke of the possible discoloration of lumber, Mr. Carey; does that come under your observation?

A. No.

Q. You don't know what particular type of lumber it is that may discolor under certain conditions?

A. No, but I have always heard——

Q. I don't care about the hearsay, if you please. I mean so for as your yersonal knowledge or experience goes.

A. I don't know.

Q. You don't know whether it is sugar pine or California pine or what it may be?

935 A. Well, you see I don't know—no, not from my own observation.

Mr. MATTHEW. That is all.

By Mr. BURR:

Q. As regards that specification for white pine, you intend to secure genuine white pine, do you?

A. Yes.

Q. Because you would not know you have been furnished with anything else but genuine white pine, except this one occasion when you told that experience?

A. Yes, but, if I remember, they were told about it.

Q. And that is the only case where there has been any substitution in your personal experience?

A. Yes.

Q. And that was your own experience?

A. Yes.

Mr BURR: Q. You are not sure how many other cases might have been specified and you did not detect?

Mr. MATTHEW. I object, purely speculative.

Exam. SHEPPARD. Purely speculative. It don't make any difference.

Mr. BURR. All right.

(Witness excused.)

936 CHARLES J. MOLITOR was thereupon called as a witness, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Exam. SHEPPARD. Mr. Charles J. Molitor.

Q. Your line of business is what, Mr. Molitor?

A. Screens and doors, window screens and doors.

Q. You have a mill and manufacture those?

A. Yes.

Q. You sell them, in a general way?
A. Yes.
Q. You sell common lumber?
A. No, just screens.
Q. Just screens only; is that true?
A. Yes, sir.
Q. Who are your principal competitors in that line of work?
A. You mean in the city here?
Q. Yes, in the city and elsewhere. Right here in Detroit?
A. The Fly Tight Screen Company for one, the Hollywood for another, Johnson for another.
Q. Where is Johnson?
A. Johnson is on Puritan.
Q. Here in Detroit?
A. Yes, I am giving the local manufacturers.
937 Q. These are all local?
A. Yes. Of course, the big concerns are Burrows & Higgins, and Watson. They are out-of-town competitors. There are five very large screen concerns in the United States and they are all located here in competition with us.
Q. Is Brennan one of your competitors?
A. Yes. That is the "Fly Tight."
Q. How long have you been in business here in Detroit?
A. That is the—about fifteen years.
Q. What were you doing prior to that?
A. I was in the grocery business.
Q. What variety of lumber do you buy for screens?
A. White pine only.
Q. White pine only?
A. Yes.
Q. From what section?
A. Idaho.
Q. Have you used any northern white pine during that 15 year period?
A. Yes, I have; I used to use Michigan white pine.
Q. You still can supply yourself from the northern territory, can you?
A. Yes, I can.
Q. It that higher priced a little?
A. I don't believe so. We had to stop using Michigan pine
938 on account of its being shaky and knotty.
Q. Too knotty?
A. Yes. I understand the Michigan trees are now standing alone and they are slightly shaky.
Q. Do you understand there is still virgin forest being cut out of the northern white pine in Canada?
A. Yes, I don't remember ever using any Canadian pine, although we have used some northern.

Q. How about Minnesota?

A. I couldn't tell you about that. I suppose there is some, but I don't know nothing about it, today; don't know enough about it to say.

Q. For how long a period have you been using the Idaho white pine practically exclusively?

A. Four or five years.

Q. Have you any California white pine?

A. Very little.

Q. Do you ever use California white pine?

A. Not to my knowledge; I don't know of it.

Q. How much sugar pine—how about the sugar pine; was that satisfactory?

A. Very fine.

Q. Have you ever used pondosa pine?

A. Very little.

Q. Very little?

939 A. Yes.

Q. And why do you omit to use that type of lumber?

A. I consider it inferior lumber.

Q. In what respect?

A. It does not stay good, does not mill as well, and does not hold paint so well, does not work up so clear.

Q. What is your experience with California white pine?

A. I never had occasion to give any authoritative statements.

Q. Did you ever use Arizona or New Mexico white pine?

A. Not to my knowledge. I might have bought some small shipment from local dealers.

Q. Do you regard Idaho white pine as having superior or inferior utility as regards durability, where exposed to weather, to California white pine?

A. I don't known anything about California white pine to tell the difference, if there was a difference.

Q. I see.

A. I only know about Michigan pine and Idaho pine, or pondosa pine as you call it. I don't know nothing about the other because I have constantly avoided buying it.

Q. Avoided buying California white pine?

A. There never has been occasion for me to buy California white pine, and I have avoided buying pondosa.

Q. Now, do your competitors use Idaho white pine or northern white pine?

940 A. I cannot say whether they do or not.

Q. You don't known what your competitors use?

A. I am not well enough up to say whether they do or not. I hope they are using white pine.

Q. You haven't examined their mills?

A. No; never have occasion, but I know that in some cases we have pondosa and some cases we have to go out and buy it ourselves.

That may be for just one job, or something like that. I don't know what my competitors are using.

Q. Is Idaho white pine higher in price, a higher-priced commodity in this market, than ponderosa?

A. Yes, sir.

Exam. SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Do you buy white pine from the Weyerhauser interests?

A. Yes.

Q. All of it or most of it?

A. All except what we have to buy for special work. I would say 85 percent from Weyerhauser to 95 percent.

Mr. MATTHEW. That is all.

(Witness excused.)

941 D. H. BARTLETT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Bartlett, your business is what?

A. Service manager for the Weyerhauser forest products.

Q. Mr. Bartlett, your headquarters are where?

A. St. Paul.

Q. For how long a time have you held that position?

A. Ten years.

Q. Have you had any experience in the forests? If so, please state briefly what it has been.

A. Started in 1907, and in Bloomington, N. Car.; left there in 1909 and went Cloquet, Minn. My experience in the South was in the mills. In Cloquet I worked in the mills, started in the Red Seal Lumber and up to 1910, stayed with the Cloquet Lumber Company until 1916, and went with the company when it was organized. Went with them for a year and a half—the Weyerhauser Sales Company I am speaking of—and then was sent to Coeur d' Alene, Idaho, as sales manager for the Rutledge Lumber Company. Was there for two years and then came back in Minnesota in charge of the Cedar Falls sales, for the Weyerhauser sales company, for one year and was then transferred to the Weyerhauser forest products in charge of the service research.

942 Q. You did work in North Carolina; that was for the Weyerhauser Company?

A. No.

Q. The point you have mentioned other than in the North and throughout the South were for Weyerhauser interest, were they, one or the other of them?

A. Entirely.

Q. Now, are you familiar with the northern white pine, Pinus strobus, in the woods in Minnesota?

A. Enough to distinguish it. My experience has been mostly in the manufacturing end.

Q. Can you state whether that is large virgin forest timbers?

A. Yes, there is a lot of virgin timber in Minnesota.

Q. Is it virgin timber which the Weyerhauser interest have, Pinus strobus, if you know?

A. It is mostly.

Exam. SHEPPARD. Minnesota.

A. Yes, sir.

By Mr. BURR:

Q. Now, turning to your—coming to your research work, I wish you would state what is the nature of the work you do?

A. It is largely trade inspection, trade-promotion work. The investigation of old markets that may be slipping, and that is of new markets that may hold some potential possibilities for the sale
943 of our woods; in addition to that, it involves working with the sales division on any problem in which the right use of lumber is concerned or in which the use of the most practical or valuable species for any specific use may be concerned.

Q. What is the reason for your studying the adaptability of the various species of lumber to various purposes?

A. It is based upon our belief that the lumber industry must take the lead in establishing the uses for which woods are best suited; that, generally speaking, among the trades using lumber there is a little information of the right kind and the character available to enable them to properly designate or specify the woods that they must get in order to get the greatest service from the lumber that they use. Therefore our research work has carried us into the study of the characteristics of the various woods, their adaptability for certain specific purposes, and, further than that, the recognizing of the use of the wood that in our opinion, based upon our studies, that would best serve the purposes and recommending woods to give the greatest service to the user.

Q. Now, do you carry that to the extent of recommending woods that you don't yourself manufacture?

A. We do.

Q. In what way?

A. For example, we will have to recommend the use of cypress for purposes such as greenhouse construction.

Q. Greenhouses?

944 A. Greenhouses, where it is subjected to extreme of wet and dry conditions. Cypress has proven to be one of the most satisfactory wood for that purpose. As another example with the manufacture of sugar pine, we have specifically recommended the use of California pine for piano keys as a use for which it is best suited. We have gone further than that. We have a grading service which is available to manufacturers to help them get the best grades for any specific purposes. It frequently involves the recommendation of the woods that will be most suitable for that purpose.

We have often gone so far as to recommend fiber board for purposes for which fiber board is much better suited than lumber.

Q. Do you manufacture fiber board?

A. We do not.

Q. Do you manufacture cypress?

A. We do not.

Q. Have you any cypress holdings at all?

A. Not that I know of.

Q. All right. Any other instance that you think of?

A. Not that I can state right now.

Q. In connection with your work do you consider the advertising value of the use of trade terms?

A. We do.

Q. Of what interest is it to your position to do so? Why should it be a part of your business to make that study?

945 A. Well, specifically white pine is a trade name and that because of the centuries of experience with the old white pine of New England has come to be accepted by architects and builders as they would combining fine working qualities with great durability, and as a result we believe that the name "white pine" carries with it assurance of durability and workability.

Q. Does it still carry that reputation generally throughout the country?

A. It does with the architects and builders.

Q. How about the entrance into the trade of California white pine in various localities? Has that interferred with the reputation of white pine as a commodity?

A. It has caused confusion, and by reason of the failure of ponderosa pine it has to some extent, in my opinion, caused confusion in the name of white pine.

Q. Has your company engaged or is it about to engage in Klamath Falls section in Oregon?

A. They are.

Q. Are you planning to "mill the timber you locate from that district," do you know?

A. I don't know.

Q. Don't know as to that?

A. No, sir.

Q. Do you know what prospects are for the next five years?

946 Say the next five years as to the protection of northern white pine by your company?

A. They will remain about the same.

Q. About the same as at present?

A. Yes.

Q. Can you tell me how much that is in million feet?

A. Around 135 million feet.

Q. About 135 million is the present production of your company?

A. Yes, sir.

Exam. SHEPPARD. Per annum?

A. Per annum.

Q. (By Mr. BURR.) Can you state how much of that is virgin timber?

A. It is practically all virgin timber.

Exam. SHEPPARD. That is in Minnesota? I believe so.

A. Yes.

Q. (By Mr. BURR.) Have you any Canadian holdings as far as you know?

A. Not that I know of.

Exam. SHEPPARD. Q. Mr. Bartlett, so far as your production goes of this 135 million feet per year, is that a big amount or a medium amount or is it a small amount?

A. It is a large production for one mill; it is practically one seventh of the white-pine production.

Q. (By Mr. BURR.) Now, when you say one seventh of the white-pine production, you are including the Idaho white pine and
947 northern both?

A. I am.

Q. Are you including the sugar pine with that?

A. May I answer that this way?

Q. Let's get the facts, whichever way you can answer it best.

A. The figures on white-pine production, the last that I have had access to, and which I think cover the year 1926 or 1927, give the production at approximately 800 million feet.

Q. Of what, both?

A. Of white pine, Pinus strobus and monticola.

Q. That is two varieties?

A. The two varieties. I am entirely familiar—not entirely familiar with what production of sugar pine, not familiar with the production of sugar pine, but I believe it is in the neighborhood of 250 or 300 million feet per year.

Q. Additional, you mean?

A. Additional.

Q. Now, do you anticipate or does the company plan for an increased production of Idaho white pine in the next few years?

A. Not beyond the present production.

Q. Is that true of the production of white pine generally?

Q. Is that true of the production of white pine generally? Do you anticipate it will be about in—uniform or other producers are increasing?

A. If you include California sugar pine as a genuine white pine, the production of genuine white pine in the next five years
948 should be greater than for the past five years.

Q. That increase, however, as to sugar pine rather than of the Idaho white pine or the Northern, is that true now?

A. That is correct.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Bartlett, when you gave us the figures of the annual cut of 135 million feet of white pine in northern Minnesota, were you speaking of the production of a single mill or of all the mills of the particular company?

A. The Northwest Paper Company, Coquet, Minnesota.

Q. You made some reference to the Northern Lumber Company. What is that company?

A. The Northern Lumber Company are consolidated, were consolidated recently into the Northwest Paper Company.

Q. Were there other lumber companies which were likewise consolidated in the Northwest Paper?

A. Cloquet Lumber Company and the Johnson-Wentworth Company.

Q. Three lumber companies were amalgated to make——

A. Combined with the Northwest Paper Company, which was already a going concern.

Q. All of them Weyerhauser Company before the consolidation?

A. So-called, yes, sir.

949 Q. Does the cut of the present Northwest Paper Company represent the principal cut of strobus pine in Minnesota?

A. No, sir.

Q. There are other companies operating?

A. There are.

Q. Could you name the principal companies?

A. The Virginia—Raney Lake, Virginia——

Q. Do you know what the annual cut is?

A. Around 200 million. The International Falls Lumber Company.

Q. The annual cut of that company?

A. About 150 million. That is a guess; I am not at all sure.

Q. I will take your best judgment. It does not have to be accurate?

A. Those are the large remaining competitors in Minnesota.

Q. You stated, I believe, that you expect that cut to remain approximately constant for five years to come?

A. The Northwest Paper cut, yes.

Q. Yes.

A. I know nothing about the others.

Q. You don't know whether their cut has declined or whether there is a prospect of the company increasing in the near future?

A. Not of my own knowledge.

Q. Hasn't your investigation carried you far enough so that you can give us any opinion on that?

A. No, it has not.

950 Q. What I want to get at is simply this, whether we are to anticipate a decline in the cut of strobus pine within the next five or ten years. You can't help us on that particular point?

A. Not of my own knowledge, no, sir.

Q. Well, such knowledge as you have gained through general investigation, if you feel that you are in a position——

A. I don't think I am competent to answer.

Q. You have no impression one way or the other on that?

A. I have not.

By Mr. BURR:

Q. I don't think we ought to ask for impression exactly?

A. Ordinarily the information about the cut out of a mill is not widespread.

By Mr. MATTHEW:

Q. If you haven't got it in tangible form I don't want you to do any speculating about it?

A. I haven't.

Q. After the five years to come, do you expect the cut of the Northwest Paper Company to decline?

A. The Northwest Paper Company is now operating upon what they expect to be a perpetual basis.

Q. That is, 135 million feet cut is expected to be a permanent cut?

A. Yes.

Q. You say that is of virgin timber?

951 A. That is virgin timber.

Q. Does it consist of trees of large growth?

A. Well, in any growth, any virgin growth in Minnesota that is both, one tract may be very large and the adjoining tract may be rather small.

Q. How would you characterize it generally?

A. I would say it was slightly below the average of the old stand of Minnesota timber, which has been cut up in the past year.

Q. Is this the second growth?

A. No, this is virgin growth as distinguished from second.

Exam. SHEPPARD. I thought it was all second.

A. My definition of second growth is land that is cut over and then in allowing the timber to grow a second time, and that is when it has been cut over.

Q. That is the original timber?

A. Yes.

Mr. MATTHEW:

Q. But now in the far north, going into the far north you have no small trees in the tracts of second?

A. I am not prepared to answer that. I presume it is in some tracts.

Q. Is the cut of Michigan pine declining?

A. I am not prepared to answer.

Q. You are not informed on that?

A. No, I am not as to Michigan.

952 Q. Pardon me.

A. I cannot answer as to Michigan.

Q. Or Wisconsin?

A. Wisconsin has held practically stationary for the last five years.

Q. You anticipate no particular change in there?

A. No.

Mr. MATTHEW. I think that is all, Mr. Bartlett; thank you.

Exam. SHEPPARD. Now, this Virginia Rainy Lakes Company that is not a Weyerhouser company, is it?

A. I understand the Weyerhauser's have an interest in it.

Q. Is that included within the 155 million board feet of cut that you mentioned awhile ago?

A. No, sir.

Q. Then that is not like the rest of the Weyerhausers?

A. They are interested in Weyerhauser Sales Company, not the Weyerhauser products.

Q. Now, you didn't include that in your figure?

A. No.

Q. How about the International Falls Company?

A. No, sir, that is a Backus.

Exam. SHEPPARD. That is all.

Mr. BURR. All right.

(Witness excused.)

953 HUGH T. KEYES, was thereupon called as a witness, and having been duly sworn, testified as follows:

Mr. BURR: I would like to recall Mr. Bartlett, just a moment.

(Witness withdrawn.)

D. H. BARTLETT, having been previously duly sworn, was recalled and testified as follows:

By Mr. BURR:

Q. Have you had occasion to note in your experience as to pattern stock in connection with your work?

A. I have.

Q. Will you be kind enough to state what type of lumber you like for patterns?

A. Genuine white pine.

Q. None of the other varieties of genuine white pine?

A. Yes.

Q. Now, have you had any experience with the filler and as regards pattern stock made from some other description of lumber?

A. I have.

Q. Will you be kind enough to state what experience you have had on that point?

A. At the General Electric Company in Pittsville, Mass., in 1916, part of my work has been to investigate the uses of lumber for pattern purposes, and it was in pursuance of that work I called on the General Electric Company at Pittsville, Mass., called on

954 their pattern foreman and talked about white pines, and the genuine white pines, and he took me out into the yard

and showed me two piles of lumber which had on these piles a sign, "Do not use." He asked me what I thought they were and I identified them as pondorosa pine. He then told me that they had been shipped as white pine.

Mr. MATTHEW. I object to the hearsay part of this. I am not in position to criticize the witness as to whether they were shipped as white pine or not. I think that part should go out. I have no objection to his telling anything within his knowledge or observation.

Exam. SHEPPARD. Yes, I don't want to hear what he told him.

Q. (By Mr. BURR.) All right. Strike that part of the answer then.

A. May I say that I could identify that as pondorosa pine?

Exam. SHEPPARD. You saw it yourself?

A. I saw the stock; yes, sir.

Mr. BURR. Yes, sir.

Mr. MATTHEW. That is all.

(Witness excused.)

HUGH T. KEYES, having been previously duly sworn, and was recalled, testifying as follows:

Direct examination by Mr. BURR:

Q. You are an architect, are you, Mr. Keyes?

955 A. Yes.

Q. Located in Detroit?

A. Yes.

Q. For how long a time have you been located here?

A. I have been in business 8 years.

Q. All of that time here?

A. Yes.

Q. Now, your work is largely with regard to residences of what type of construction?

A. Mostly residences.

Q. In connection with that work, do you have occasion to require in your specifications the use of pine?

A. Yes.

Q. What pine do you specify for exterior purposes?

A. Well, I have specified white pine up until about a year ago, I learned it was—I learned that there was several kinds of white pine and on inquiry from a mill they told me if I specified Pinus strobus that I would get what I had thought I was getting as white pine, that was the true name of Michigan white pine; and we had always been told, and my experience understood it as being a wood of long life and long endurance. I started that practice then, and put in "Pinus strobus" and I soon found out that it didn't make any difference, that I was still getting what I discovered was Idaho pine, more commonly known as Western pine.

Q. Commonly known as Western pine?

956 A. Commonly known as Western pine. Men who were not experts in the mill and men who were foreman, men who came in contact with us told us that it was Western pine and then it seems to me that most of this is comparative recent. It is common—that is common information I received anyway, and we talked that it was Idaho pine that most of the pine we are getting is Idaho pine.

Q. Was that Idaho pine, or was that Idaho pondosa pine?

A. Idaho white pine.

Q. Idaho white pine?

A. That was our understanding.

Q. That is what you have been getting instead of the Northern white pine?

A. Instead of the old time cork pine, and in occasions where it would be a custom job, knowing that the wood that went into this custom job had to be of a very good quality, because even the best wood would be not any too good for that location, I have specified and tried very hard to the best of my ability, tried to get Michigan cork pine, which, of course, I supposed to be almost nonexistant now. They tell us that it is prohibitive in price and almost nonexistant, that is the Michigan cork pine.

Q. Now, have you had any experience in getting California white pine under specifications for white pine?

957 A. I don't believe I have had any of it on my jobs, although I just know this in a general way.

Mr. MATTHEW: Well, if this is your personal experience, I have no objection. I understood you to say that you had not received any California white pine on your jobs?

A. Well, I don't know. I would not say that. I would not say that I haven't but I don't believe I have. But I have been warned against it in that it is a very soft material.

Q. I am merely objecting to the hearsay Mr. Keyes, that is all.

Q. (By Mr. BURR.) Well, is the reputation California white pine that of a wood with less durability than genuine white pine?

A. Very much so. I would like to make this statement about it. I think there is a great deal of confusion.

Mr. MATTHEW: I don't think the witness should volunteer.

Exam. SHEPPARD: No.

Mr. BURR: Do you regard the terminology of the pines as a confusion condition here in this market?

A. Very much so.

Q. In what respect?

A. Well, we were to specify white pine, due to the similarity of the appearance of the woods we have difficulty in knowing whether we are getting California pine or just soft pine; I think they are both pondosa or sugar pine, and we really don't know whether we are getting that or whether we are getting a more durable pine

958 like the Idaho pine. I understand that is a very durable pine.

Q. Do you as architects have any means of inquiring or acquiring the technical knowledge for the purpose of checking up as to what species of pine is being furnished?

A. Well, we could have probably. I am afraid that this market condition of pine is one that we are just beginning to appreciate some of its difficulties and along with that I might say that we are—some of that pine is really like a great many other materials we deal with. We deal with a very high class of people and we get the best the market affords. Now, as to take three or four pieces of wood and my passing upon which was one and which was another I would only have an opinion, I would not feel as to that that I had the ability to tell the difference, except that I know the difference between a material that has a lot of soft grain in it against a material that is free from that. I think I would know the difference between sugar pine and Idaho pine.

Q. You would be able to tell whether the shipment of lumber delivered at one of your shops was California white pine or whether it was Idaho white pine?

A. I have always felt that I would.

Q. You think you would be able to tell the difference between the two, would you?

A. Well, I have felt that way. Well, I don't know, I do feel that I would know the difference, but I am not any too sure about it.

959 Mr. BURR. All right. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Now, Mr. Keyes, when you specify Pinus strobus, I understand that it was your desire to get true northern white pine, and such specifications were not satisfying in your opinion?

A. Yes, sir.

Q. And you received Idaho white pine?

A. Yes, we did; we received Idaho white pine.

Q. But that did not satisfy your desire?

A. No.

Q. And similarly you would not be satisfied if you were to furnish that sugar pine upon specifications in response to such specifications?

A. No, sir.

Q. But your white pine may still mean and should mean the original white pine that you now specify as Pinus strobus?

A. I have come to feel that there is a white pine that comes from some Western States like Idaho which is a very durable wood, known as white pine, and I have come to acknowledge that that is a white pine, but that is about——well, it is not over a year?

Q. I undestand your testimony on that particular, but when you were specifying for these several years prior to a year ago, you had in mind——

A. The original white pine.

960 Q. Original white pine. That is all. Thank you.

By Exam. SHEPPARD:

Q. Mr. Keyes, I would like to know if you find any difference between the pine that you characterize as the old time white pine, the old time white northern pine or the other known as the Idaho pine that you get from the West?

A. Well, no; I have not any experience with this Idaho pine, it being an inferior wood to white pine, but that might come in Michigan.

Q. Would you accept Idaho white pine under specifications calling for Pinus strobus?

A. No, sir.

Q. You would not?

A. No, sir.

Exam. SHEPPARD. All right. You may be excused.

(Witness excused.)

JOHN LESINSKI was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr Lesinski, you are engaged in what business?

A. Retail lumber.

Q. How long have you been in that business?

A. Sixteen years.

961 Q. Where are you located?

A. 2410 Dentron Avenue, main office.

Q. That is Detroit.

A. Hamtramck.

Q. How far is that from here?

A. About 4½ miles. That is inside of Detroit.

Q. Inside of the city limits?

A. Same as Highland Park is.

Q. Now, you have occasion, do you to sell on specifications for white pine?

A. Yes, sir.

Q. Do you handle California and Idaho white pine both?

A. Mostly western.

Q. Western?

A. Western and some northern Canadian.

Q. Well, northern Canadian?

A. Well, western white pine.

Q. Is that the same as pondosa?

A. Pondosa.

Q. They bill it to you as pondosa rather than western white?

A. Pondosa rather than western white, yes.

Q. And you carry some California white pine, too?

A. A certain amount of it, yes. Mostly sugar.

Q. Mostly sugar pine? But you by some California white

962 pine under that trade name is that true?

A. No, we buy in California the sugar pine for shop work.

Q. How long has that been true, that you have bought California white pine——

A. Very little, mostly western and Idaho.

Q. Up until what time? You say you have bought very little California white pine?

A. Very little.

Q. Have you bought Arizona white pine?

A. Once, a car.

Q. How about New Mexico pine?

A. I don't recall buying any of that.

Q. Now, when you specify on orders when you get orders for white pine, what type of lumber do you regard as a compliance with that order?

A. When a man buys white pine, we either give him western, Idaho, or northern white pine. And they don't pick the western. That is the pondosa, because it has not such defects to it, not as much defect to it as the northern pine has.

Q. As the northern pine?

A. Yes.

Q. And it has a lesser price, too, has it?

A. Yes, sir.

Q. Now, what do you refer to when you say a defect?

A. Coarse knotty defects.

963 Q. Do you differentiate the soft wood as a defect?

A. No, we don't because we buy what we call sap stain and western, or simply sap stain, some fit selects.

Q. Now, the percentage of sapwood is greater in pondosa or northern white pine?

A. In the pitch selects it is all sap.

Q. In which?

A. In the western.

Q. What do you mean?

A. That is what *what* we call the pitch selects, a clear piece of wood with only a little pitch to it.

Q. Do you buy B selects and better in pondosa?

A. No, all we buy in pondosa is number two.

Q. Number two common?

A. The common largely. That is cornice lumber, what we call it.

Q. Do you manufacture cornices?

A. No, no, builders buy it and cut it up and put it up for cornice work.

Q. And what variety do you regard as genuine white pine?

A. Personally I know that the northern white pine is generally named white pine. We know that the western is often substituted for the Idaho.

Q. You think it is coarser than the Idaho?

A. Yes, we know that.

Q. What is your experience if any, on the durability of
964 western white pine in comparison with the others?

A. I have been in the building game and prior to that in the lumber business and so I know a little of the working qualities of the pondosa, and I put some western pine in my own house, and it rotted out in five years.

Q. That you bought for western white pine?

A. Yes.

Q. Do you regard that term western white pine as confusing, in view of the fact that you don't regard it as genuine white pine at all?

A. No, it has been a trade name and we have used it that way; it has been a trade name for western white pine.

Q. The buyer doesn't know it is not genuine white pine?

A. No, the buyer doesn't know.

Q. Have you competition with other retail dealers who handled California white pine?

A. Never had any trouble.

Q. Never had any trouble?

A. No.

Q. Do you have any competition with them?

A. We are in competition with all of them. I guess there are about one hundred or more in the city.

Q. Do you know whether California white pine is on the retail market here?

A. Very little, very little California white pine in here that I know of.

965 Q. Very little. And how about Arizona and New Mexico white pine?

A. Never came in contact with it. The only competition we really know is Idaho and western.

Exam. SHEPPARD. By western, do you mean pondosa?

A. That means pondosa.

Q. (By Mr. Burr.) Now, you do sell pondosa pine as white pine on orders for white pine, do you?

A. Yes, sir.

Q. Do you distinguish between the exterior and interior use?

A. We have no interior use except sheathing lumber, and that would not be considered interior use.

Q. Most of it is exterior use, is it?

A. Yes, sir.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Do you purchase lumber from any of the Weyerhauser companies?

A. Yes, I buy from the Weyerhauser, but most of our goods comes Brooks-Scanlan.

Q. Western pine?

A. Yes.

Q. And that is pine you said you received under the trade name of pondosa pine?

966 A. Yes.

Q. And why do you feel free to furnish this pondosa pine at times upon orders for white pine?

A. We have been used to handle northern Canadian pine because northern Michigan was pretty well cut out; the trouble with northern Canadian was it is higher in price and coarser in knots and not as good as pondosa, and the trade wants that kind of stuff that is better looking, so I just simply give it to the trade.

Q. As long as pondosa was introduced to you as pondosa, why you find it is agreeable to the trade to have you supply that pondosa pine to them for certain purposes on white pine orders?

A. Yes, sir.

Mr. MATTHEW. That is all.

Redirect-examination by Mr. BURR:

Q. Have you bought any northern white pine or Minnesota?

A. I don't recall that. I never liked the Minnesota grade, neither the Wisconsin grades, and that is the reason I haven't bought it.

Q. You don't like the grades.

A. Not, the gradings, no. I was up against an order just here a little while ago, for the city of Detroit. They had specified northern white pine, and bought it in Wisconsin and it

967 was all turned down on me. The grade was way off, the grade that was specified, the defect was way off, and the shipper claimed it was within the grade, and the Detroit inspector claimed it was not. And I took a nice loss up there because the city would not accept it. So I have always been set against the Minnesota and Wisconsin pine.

Q. On that experience?

A. I mean on that grading.

Q. On that grading?

A. Not usable in Detroit.

Mr. BURR: That is all.

(Witness excused.)

Mr. BURR: Now, two of my witnesses if the examiner please, have failed to show up, and one other is not due for fifteen minutes.

(Short recess.)

A. T. BRENNAN, was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Now, Mr. Brennan you are engaged in what business?

A. Manufacturing screen doors.

Q. You do a retail lumber business?

968 A. No.

Q. Are your sales local or over a large territory?

A. Well, local.

Q. You are located here in Detroit, are you?
A. Yes, sir.
Q. How long have you been engaged in that business?
A. Since 1916.
Q. Were you in the lumber business prior to 1916 yourself?
A. Yes, sir.
Q. And who are your principal competitors in your screen doors?
A. Heubner. You mean, local ones?
Q. Yes.
A. Well, the Heubner Screen Door and Molliker. That is two local competitors, and several of them in a small way, but I would say those are the two.
Q. Now, the doors that you make are they screen doors?
A. Screen doors.
Q. And you don't make the regular type of doors, I mean you don't make regular doors?
A. No, just screen doors. I sell a combination door, but we don't make that.
Q. Now, what variety of lumber do you purchase for these screen doors that you manufacture? What variety——
A. What variety of lumber?
Q. Yes.
A. Cheap common.
969 Q. Cheap common?
A. Yes.
Q. Is that California white pine or Idaho white pine, or what?
A. No; it is pondosa, and California, but not sugar pine.
Q. No sugar pine?
A. No; we have no sugar pine.
Q. Is the California pine the so called California pine?
A. So called, yes.
Q. Now, do you buy any Idaho white pine?
A. I have bought some.
Q. What are you buying now?
A. Well, any Idaho——
Q. Idaho white pine?
A. No; I don't think I have bought any Idaho in the last year. In fact, I haven't bought much lumber in the last year, it has all been left over.
Q. What would you say is the largest source of supply, the California white pine, the Idaho white pine, over a period of five years?
A. Well, I would say about the majority of it pondosa.
Q. Pondosa pine?
A. Yes.
Q. Rather than either of the other two?
A. Pardon me?
Q. Rather than the California pine or the Idaho white pine?
A. No; it would run more to the pondosa.

Q. More than to either the California or the Idaho white pine?

970 A. Yes.

Q. Now, do you have requests for lumber, calling for white pine? And I mean for screen doors calling for white pine?

A. Well, no.

Q. What do they ask for? They ask for screen doors?

A. Screen doors.

Q. Do they ever specify white pine?

A. Oh, if it comes out of an architects office, yes; it has to be white pine, yes.

Q. And you deliver the pondosa or the California white pine as the case may be, is that true?

A. Well, not in all cases. In other words, if there is an architect job going out I try to give him the larger and better stuff, we give him, see, but I would not say that of the trade, I would not say that all the trade calls for white pine.

Q. No, no; I understand they would not all call for white pine.

Q. Now, you do deliver pondosa for white pine upon orders calling for white pine?

A. I would say so.

Q. How long has that been the case with your concern, over a period of some five years, is that true?

A. Well, it must be.

Q. How large a percentage of your material is Idaho white pine?

A. What percentage of it?

Q. Yes.

971 A. Now, to tell the truth that is pretty hard to say.

Q. Oh, roughly, approximately as well as you can, in your best judgment.

A. I would say about a car I believe to three of the others.

Q. Three of each—of which others?

A. Of the pondosa.

Q. How would California pine compare with pondosa?

A. How would California?

Q. Yes, or do you regard that as pondosa?

A. I believe they do; yes. We don't pay much attention to it. If we get a good price on California we take it just the same as pondosa.

Q. Well, about how large a percentage of the combination is pondosa, how much of it is California white?

A. Well, I don't believe I can tell you. We do a business this last year which has been on the down hill. We see mostly metal doors.

Q. And you are not sure which would be the heavier pondosa or California pine? Between purchases over five years?

A. I would say pondosa.

Q. Pondosa little the heavier.

A. Yes, I would.

Q. Where do you buy your pondosa from?

A. Inland Lumber Company, Hollywood.

Q. And where do you buy your California white pine?

972 A. Some of that from the Inland Lumber Company, Chicago.

Q. Do you know where that Inland stock grows?

A. No.

Q. You buy it under the California white pine trade name, it that true?

A. If it is California white pine they have it in the invoice, I believe. I haven't paid much attention to that, to see or to tell you the truth.

Q. Now, with regard to the California white pine, pondosa, and Idaho white pine, do you regard them about the same in durability with—where exposed to the whether as your screen doors are?

A. I don't know the difference, to tell you the difference.

Q. Between the three, as to durability?

A. I don't know.

Q. Which do you regard as the smoothest lumber to handle, of the three?

A. Of the three?

Q. Yes.

A. Well, you have a car of it—I don't know. I tried to find out from some lumber dealers about California and that was awful brittle. There was a car of Idaho came in there, and that was about a year ago, I should judge and it was harder to work than the pondosa, so I would say the pondosa, being easiest to work.

973 Mr. MATTHEW:

Q. Pondosa is what?

A. Easiest to work.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. When you receive an order for screen doors in what form is that order customarily framed, what does the customer request?

A. No request there. They come after a door, they just come after a door.

Q. Just say screen door——

A. That is it.

Q. Ordinarily they don't say they want a pine screen door?

A. No, they don't say they want a pine screen door, very seldom mention any sort such as oak, it is merely a screen door.

Q. When an architect specifies white pine for some special job, I understand you undertake to furnish that?

A. Yes.

Redirect-examination by Mr. BURR:

Q. Do you buy stained selects?

A. I do, I buy some stain, that is, I have. I have had no stain in there in over a year.

Q. Do you know whether that is largely sapwood or not?

A. Do I know what?

974 Q. Is that stain select so called, is that largely sapwood?

A. Well, no. If I am buying the way I think I am, I get—I am getting—If I understand it right, it is stained in the pile.

Q. Weather stained?

A. If I understand it right it is stained in the pile. I believe I have been told there is another stain more in the heart of the lumber, a heavy cake. I don't know whether you call that genuine stain or not.

Q. Now, this type of lumber where there is a stain in it, is that a sapwood?

A. A sapwood.

Q. Well, is it from the sap or the heart wood?

A. You got me, I don't know.

Q. Do you consider pondosa and the California white pine as durable as the northern white pine?

A. Well, I never handled much of the northern white pine, so I don't know.

Mr. BURR. That is all.

Mr. MATTHEW. That is all.

(Witness excused.)

Exam. SHEPPARD. We will take a recess until ten o'clock tomorrow.

Mr. BURR. If the examiner please, if the other two witnesses that I called for today haven't showed up, and I tried to reach

975 them over the phone.

(Whereupon a recess was taken until ten o'clock a.m. of Tuesday, October 15, 1929.)

976 Docket Nos. 1620 to 1669, inc.

DETROIT, MICH, *October 15, 1929.*

Met pursuant to adjournment, 10:00 o'clock a. m.

Before William W. Sheppard, Examiner.

Appearances:

Eugene Burr, for the Commission.

Geo. F. Lindsay and A. P. Matthew, for the respondents.

Carl I. Wheat, for the respondents.

J. I. DISE, was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Now, Mr. Dise, you are an architect, are you?

A. I am practicing as such.

Q. Located in Detroit?

A. Yes, sir.

Q. How long have you been practicing as an architect?

A. About eight years.

Q. All of that time in Detroit?

A. Yes, sir.

Q. Now, do you have occasion to specify white pine in out-
977 side construction work?

A. We do occasionally.

Q. You are an architect on residential construction work are you at times?

A. Largely, yes.

Q. Now, in specifying for exterior construction work, do you call for white pine on occasions?

A. We do.

Q. In what terms do you specify when you want white pine?

A. Well, we sometimes specify clear white pine, sometimes designate it by the location that the white pine comes from, I think Michigan white pine is one of our designations for a particular pine.

Q. And do you ever specify northern white pine?

A. I don't think so.

Q. Ever specify California white pine?

A. No.

Q. Idaho white pine?

A. No.

Q. Now, what means do you have of checking up, if any, what you receive as to whether it is what you specify in the way of pine, or whether it is not?

Do you have any means of ascertaining, or do you leave that with the contractors, or what is the situation?

A. No. Well, we leave that to our outside superintendent, largely.

978 Q. As a wood technician, I suppose he can tell the difference between these various varieties of pine?

A. I don't think so, not to the finest degree. But I suppose from external appearances—I would not say he could tell absolutely whether we are getting what we specify, even in that way.

Q. Now, do you regard Idaho white pine as a compliance with the specification for white pine?

A. I don't know whether I am absolutely familiar with Idaho white.

Q. Do you regard California white pine as a compliance with a specification for white pine?

A. I don't think I am familiar enough with that.

Q. If it were reported to you that the pine specified or delivered on a job was Idaho white pine, you would regard that as complying with the specifications?

A. Well, after inspecting the pine and seeing what condition it was in, whether it was a good clear white pine, I think I could tell myself by inspection of the pine whether it was a good white pine; whether it is Idaho pine or Michigan pine or whatever the name of

it is, I cannot tell whether California pine or Idaho pine, just by the appearance of it.

Q. If it is reported to you that it was California white pine would your answer be the same as you have just testified when I asked you about the Idaho white pine?

979 A. Yes.

Q. And do you ever buy ponderosa pine—you have heard of that?

A. I have heard of it.

Q. Would you regard that as complying with the specification calling for white pine?

A. I say, I am hardly familiar with it.

Q. You are not familiar with it?

A. No. If you have some pieces of white pine I can tell you more about it.

Q. You could tell me whether you would accept it as white pine?

A. That is our usual basis of judgment.

Q. The appearance of the wood, with regard to whether it comes up to the specification with regard to knots and——

A. Knots, sap, thick, humidity, and everything else?

Q. All right. You may cross-examine.

Q. (By Mr. MATTHEW.) You judge the pine that you put in a building that you are constructing by its appearance and quality and utility as far as you can judge it from looking at it, wouldn't you?

A. Yes.

Exam. SHEPPARD. I think that is all.

The WITNESS. And then I examine it at times also as to the contents of the dampness, the dampness absorbed by the various woods, so that we can try the stuff and dry it.

Q. That is to ascertain whether it is properly dry?

980 A. Yes.

Q. Whether it is in the green state still or not?

A. Yes, sir.

Cross-examination by Mr. WHEAT:

Q. Mr. DISE, the architects are not as a rule wood technicians are they. They can't tell much about it?

A. No, not as a rule.

Q. Are you familiar with the various botanical terms as applied to the pine woods?

A. No.

Q. If I were to mention to you "Pinus strobus" would that mean anything to you?

A. No, sir. Architects don't specify a certain material, they specify a white pine or yellow, or spruce, specify it by as clear, or hasn't knots in it, or as number one grade or number two grade, and so forth.

Q. The question with it is if they can tell if they get what they specify, or do you think they can?

A. Well, I think the average architect can tell whether he is getting a good grade of white pine, whether it is Idaho pine or California pine.

Q. But can you tell whether or not—while he may as you say tell whether he is getting a good grade, can he tell whether he is getting what he ordered?

981 A. I don't think he can absolutely.

Mr. MATTHEW: All right.

(Witness excused.)

HENRY W. MEIER, was thereupon called as a witness, and having first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr Meier, what line of business have you, please?

A. I am associated with Donaldson & Meier, architects, as business manager.

Q. How long have you been in such capacity?

A. About 12 years.

Q. How long has your firm been in existence?

A. About 50 years.

Q. All the time in Detroit?

A. In Detroit.

Q. Now, Mr. Meier, do you engage largely in residential construction?

A. General practice, very little residential construction.

Q. For exterior purposes, does your firm on occasion specify white pine?

A. It does almost invariably, as long as I have known it.

Q. Under what term?

A. Under white pine, up until about three years ago.

982 Q. Up to three years ago, you say?

A. Yes.

Q. You made a change at that time?

A. We call it white pine, Pinus strobus.

Q. You call it Pinus strobus?

A. Yes, sir.

Q. Did you up to three years ago accept Idaho white pine in compliance with specifications for white pine?

A. I suppose; I would say, we had hardly questioned the pines up to that time. That was a just question of whether we could tell what we were being furnished. We assumed we were getting white pine, and in some case why we probably did not from what developed later on.

Q. What led you to change and begin to specify white pine as Pinus strobus?

A. The difficulty we had with the Detroit Community Fund Building for which we were the architects. That was in 1926 and

1927, the building located on West Warren, just west of Woodward Avenue.

Q. Right downtown?

A. Up about a mile, around the Grand Circus Park.

Q. Will you tell what happened, Mr. Meier?

A. Well, it was early in January, I am—I can't say the exact date, but possibly January 7th, a day or two either way. I had a report, a verbal report from our superintendent looking
983 after that job that he was suspicious of the sash delivered on the job. He was of the opinion that it was not white pine as specified. I called a friend of mine connected with a mill in Detroit and asked him to go up there and look at it, and he was of the opinion it was not white pine, although he couldn't tell me definitely what it was. Then I had a sample sent up to the Detroit Testing Laboratory and I got a report from them and that report was somewhat indefinite.

Q. What is that?

A. The Detroit Testing Laboratory.

Q. Was that an oral or written report?

A. A written report. I have. But—it they went in and they made a report and they said it might be one of three different kinds of pines. Well, about that time I was ready to give up, but I thought that the thing to do then was to call some United States Forestry service, some body, so I had the general contractor to go over and see Mr. Arthur Koehler.

Mr. MATTHEW. How do you spell that?

A. K-o-e-h-l-e-r.

He didn't know what we wanted him down here for and I didn't ask him directly. I had the general contractor—I had the general contractor take him to the job, and he came to our office and reported that the sash there were not white pine, and that they were yellow pine, mostly pondosa and yellow, he said. I immediately
984 called a meeting. I asked Mr. Koehler to put that in writing.

Mr. WHEAT. That was the forestry man?

A. That was the forestry man.

Mr. BURR. He is one of the staff up there?

Exam. SHEPPARD. May I just ask this question? You said he was from the University of Wisconsin?

Mr. BURR. No.

Exam. SHEPPARD. What did he say?

A. I may be mistaken on that although I think it was in connection with the University of Wisconsin at Madison. Here it is, the Forest Products Laboratory, United States Forest, Madison, Wisconsin.

Q. (By Mr. BURR.) For your information, I will say he is still connected there.

Mr. WHEAT. You got that information all right.

Mr. SHEPPARD. That is the situation, thank you.

A. Mr. Koehler gave me a verbal report and I wanted him to put it down in writing, and he said he didn't quite see—didn't feel like doing it, because "I am supposed to be neutral." I don't want to favor one branch of the industry against the other.

I said, "All right, we are going to have a meeting." And I called a meeting of all the parties immediately concerned, consisting of general contractors and mill men and there happened to be

985 Sergerke Kohlhouse of La Crosse, Wisconsin, and Murray Vansile was the local contractor who purchased the stock from this concern in La Crosse. I called a meeting of all of the contractors. And they had already rejected the sash and went on telling them that they did not come up to the specifications calling for white pine. That meeting, I got a couple of telegrams from some parties that wanted to come and they wanted to hold it over a couple of days. And really when I stepped into the room, there was about 17 or 18 gentlemen present, and they kept coming in from almost all parts of the country, and I had fellows who were working to find out why they were there. And it developed a lot of men evidently were sent in by the western pine interests, and there was a general discussion of this thing. They seemed to be familiar with it, and I just simply turned to Mr. Koehler and I said, "Mr. Koehler what kind of sash has been furnished; is it white pine?" And he said, "No, it is yellow pine. I have had it under microscopical examination, and he says that is the only way to tell."

Mr. WHEAT. May I interrupt a moment, if the examiner please. I feel that this man is going into a lot of details; unless he identifies this matter with the pine in question in this case, which is California white pine, it seems to me that these many details about Mr. Koehler stating it was yellow pine and how many men were present at his meeting are purely extraneous matters.

Exam. SHEPPARD. Well, a little bit too much detail. We

986 want to know, of course, and we feel we are entitled to know if this is California white pine and that is the question before us at this time. Go ahead.

The WITNESS. You want to know whether the sash was California white pine?

Mr. BURR. Go ahead with not quite so much detail.

A. All right. The sash were rejected on Mr. Koehler's statement that the pine—the pondosa pine—was furnished for that job and I rejected it definitely.

Q. And they already installed the sash?

A. Some were and some were laying on the different floors.

Q. Was there any compromise offer made to you?

A. Finally compromise was made by the millwork concern, who offered to donate the sash to the Detroit Community Fund if we would leave them in.

Mr. WHEAT. I object and submit that has nothing to do with the issues in this case, whether any offer to compromise on a matter was made.

Exam. SHEPPARD. Yes. I don't care anything about that, one way or the other.

(By Mr. BURR:)

Q. It is a question, those that were not installed were left out, and those that were in were pulled out?

A. Yes.

Q. Have you had any experience as to the wear of the sash that were taken out again?

A. Yes.

987 Mr. BURR. You may cross-examine.

Cross-examination by Mr. WHEAT:

Mr. WHEAT. May I suggest, Mr. Examiner, that I did not object to the statement of what the report of Mr. Koehler was, although I believe it to be hearsay, because I believe that this witness no doubt has that report and he can take it and can produce it at this time.

Mr. BURR. It was oral?

A. It was oral.

Mr. WHEAT. Then I misunderstood the gentleman I thought he said that he had the report with him.

Mr. BURR. He says that he requested a written report and didn't get it.

Mr. WHEAT. I believe then that this objection is timely in view of the misunderstanding as to the existance of this report in the witness's hands and I would like to object to anything that Mr. Koehler stated to the witness. I believe it is hearsay of the rankest sort.

Mr. Koehler is still in the Government service, according to counsel for the Government in this matter, and can be called.

Exam. SHEPPARD. That is true, Mr. Attorney. Yet, anything that Mr. Koehler said to this gentleman is hearsay, but in order to get it, first we have to get a narrative of the matter
988 and clarify it, I think I will let the statement stay in the record.

Mr. WHEAT. I will ask just one or two questions.

Mr. BURR. I will say for the benefit of counsel, we expect to call Mr. Koehler if he is in town when we get to Madison.

Mr. WHEAT. Well, I will withdraw this objection. I don't want you to feel that I am trying to be technical, but I do think, or rather did at that time that it was writing.

Exam. SHEPPARD. You are right about that. But in order to have a concise clear statement in narrative form, let the whole statement go in, although it is not absolutely and technically correct.

Cross examination by Mr. WHEAT:

Q. Now, Mr. Meier, did Mr. Koehler state to you that the wood which was used in these particular sash was wood sold under the name of California white pine?

A. He said it was pondosa pine.

Q. You stated, I believe, in your direct examination, that the first statement with reference to Mr. Koehler's report was that he stated that it was "not white pine, but yellow pine, mostly pondosa pine and yellow," is that correct?

A. That is correct.

Q. Now, Mr. Meier, when you specify white pine for such construction as you had in mind at the outset of your direct
989 examination, do you accept a wood known as Idaho white pine in compliance with that specification?

A. I might say that we have never followed closely the matter of the pine furnished for sash, and assumed that we were getting white pine.

Q. By white pine, you mean white?

A. I mean white pine, the botanical white pine.

Q. Well, which white pine do you mean?

A. I don't think under our specification we had a right to bar any white pine that was white pine, botanically; that is the way I feel.

Q. Now, do you know whether or not this so-called Idaho white pine is white pine botanically?

A. No; not from my own knowledge.

Q. You are not sure. Have you ever had furnished to you on any jobs where you have specified white pine a wood commonly as California sugar pine?

A. I could not say.

Q. And you don't know then, do you whether or not California sugar pine is or is not what you have termed botanically true white pine?

A. I don't know.

Q. And now did you check up regarding the acceptance, that is, the point of origin of pine that is furnished——May I just
990 make this question clear. Do you find out whether the white pine which you specified came from Maine or Canada or Michigan or Wisconsin?

A. We have never in the past.

Q. Do you now?

A. We make an attempt to do it now.

Q. You do that through your outside superintendent, I take it?

A. Exactly.

Q. Do you know of your own knowledge whether there has been any falling off in the past few years in the supply of white pine which came from Michigan?

A. I have been told that by people who were supposed to know the industry.

Q. That is your understanding?

A. That is my understanding.

Q. Do you know whether there is a dependable supply of that wood, botanical that same wood from any particular source?

A. I don't know the source, but I understand we can get it when we specify it.

Q. Do you know whether or not there is a price differential between that wood and other woods which you have stated are true white pine?

A. I don't know.

Q. By the way, for the purpose of the record, will you state if so, what other woods are in your opinion true white pines?

A. I am not in a position to specify, to discuss the technical
991 white pines because my position in the firm is not a specification man or nothing to do with that except to follow up the work on the outside, look over the reports of the superintendent. In other words, I have nothing to do with the specification work.

Q. You are not in any sense a wood technician?

A. I am not.

Q. Have not made a particular study of that particular field?

A. I have made no pretense about that.

Q. Rely on your employees who are there for that purpose?

A. Rely on the employees and we rely on the concerns to a great extent that we do business with.

Mr. WHEAT: That is all.

Redirect examination by Mr. BURR:

Q. Mr. Meer, do you know whether Mr. Koehler said pondosa or whether he said pondorosa as the type of wood, one is the trade term and the other is the botanical term?

A. I would say that my recollection is pondosa.

Q. Pondosa?

A. Yes, sir.

Mr. BURR. All right.

Mr. WHEAT. That will be all.

(Witness excused.)

992 Mr. BURR. If the examiner please, I move we adjourn until tomorrow at Indianapolis.

Exam. SHEPPARD. All right. Mr. Burr and gentlemen, we will take an adjournment to the city of Indianapolis, Indiana, to convene in the morning, being the 16th day of October at ten o'clock in the morning at Room 233 Federal Building. Up to that time our hearing will be adjourned.

(Whereupon the further hearing of said cause was continued until Wednesday, October 16, 1929, to be reconvened in Indianapolis, Indiana, at 10 o'clock a.m.)

993 Docket Nos. 1620–1669, inc.

INDIANAPOLIS, INDIANA, *October 16, 1929.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before: William W. Sheppard, Examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene, (by Messrs. Allan P. Matthew and Carl I. Wheat), for the respondents.

ROY METZGER was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Metzger, you are with the Metzger Lumber Company, are you?

A. Yes, sir.

Q. Located at Lebanon?

A. Principal office, yes, sir.

Q. And you have branch offices elsewhere?

A. Six others.

Q. Six others?

A. Yes, sir.

Q. You are here in this city?

A. No.

994 Q. What position do you hold with that company?

A. Well, it is not a corporation; I am the principal owner.

Q. How long have you been in the lumber business in this vicinity, Mr. Metzger?

A. Seventeen years.

Q. What is your line, both retail work and making of factory finished work?

A. Yes.

Q. How long have you been engaged in both of those lines, since the beginning of the seventeen years?

A. Yes, sir.

Q. Now you operate a retail yard, several retail yards, do you?

A. Seven.

Q. And how many factories?

A. Well, I wouldn't call any of them factories; we have two fair planing mills and two are not so good.

Q. Do you have occasion to buy white pine supplies for the retail trade, referring to them as distinguished from the mill work?

A. Well, we carry white pine proper and pondosa pine, which comes from Oregon, and California white pine, and the white pine proper comes from Idaho that we get, and also some from Arizona.

Q. Do you get white pine proper from——

A. (Interrupting.) Most of it comes from Idaho that we get.

Q. Do you get some known as Arizona white pine?

995 A. That is what they call it now, whether it is in the pondosa class or not I am not so certain on this.

Q. You think it is in the pondosa class?

A. Yes.

Q. When you say white pine proper from Arizona you refer to that which comes from——

A. (Interrupting.) Comes from Idaho, that is marked genuine white pine; the other is not so marked and I understand that the Arizona pine is more or less like pondosa, but not from California and Oregon.

Q. Now you say your white pine from Idaho is marked genuine white pine?

A. Yes, sir.

Q. That is the way you order it?

A. That is the way it comes and we like to have it that way.

Q. Do you know whether or not they apply to that product the term "Idaho white pine"?

A. Well, I think that is more or less the different mills, they have their sales arguments in different ways of course, we understand that the best white pine we can get now comes from either Minnesota or Idaho. It so happened we have been buying from Weyerhaeuser at Cloquet, Minnesota, and also Boise, Idaho, and that comes to us marked with a stamp "genuine white pine." It seems to be softer than and of more uniform texture and has less grain than that which comes from Oregon, California, and Arizona
996 called pondosa pine.

Q. Do you get any from Oregon and California?

A. Yes.

Q. Do you get some lumber from California called California white pine?

A. Yes.

Q. Do you get any from California—are you sure it is marked pondosa pine from the State of California?

A. It is marked either pondosa or California pine, that we have been getting, which comes from Pickering and Weed, California.

Q. Do you understand that the pondosa and the California white pine are the same tree or different trees in variety?

A. I really am not informed on that. I know that there is a difference in the type of lumber.

Q. Will you describe that please?

A. The lumber that comes from near Weed, California, is a little harder in texture than that that comes from farther north.

Q. Now what do you mean by farther north?

A. I was just trying to think—we got some last year—you perhaps know where the Red River Lumber Company manufactures their product.

Q. You got some from the Red River?

A. Yes. That is softer texture, so our mill men say, which comes from Pickering.

997 Mr. WHEAT. I don't think the Pickering plant is at Weed.

The WITNESS. No. It is near Weed.

Mr. WHEAT. The Pickering plant, I am quite sure, is at Standard.

Q. (By Mr. BURR.) Which did you get from?

A. We got from Pickering, the last car, which was not satisfactory because of its hardness and splits easier and the planing-mill men kicked, so we bought some from the Red River company, and perhaps you know where that is.

Mr. BURR. Can we stipulate where that is?

Mr. WHEAT. Yes. I think it might be stipulated that the Red River Lumber Company's plant is at Westwood, Lassen County, California.

Mr. BURR. That is given to me, subject to check.

Mr. WHEAT. The Pickering Lumber Company's present plant is at Standard and Tuolumne. In other words, those particular plants are in the southerly portion of this lumber belt on the Sierra Nevada Range.

By Mr. BURR:

Q. Now, are you certain whether or not there is genuine white pine that comes from the Boise plant or is that some pondosa plant out there?

A. I think there are two different qualities of pine near Boise. I think one is on one side of the mountain and one on the other; in fact they may be logged at the same place; I know we can buy both from the same mill.

998 Q. Both Idaho white pine and pondosa?

A. Yes.

Q. Now, did you finish your statement with regard to the differences that you find in California white pine and pondosa pine in quality for your purposes?

A. I think so.

Q. Now, then, referring to this Arizona white pine, do you find that that is similar to the California white pine, the pondosa, or Idaho white pine in its characteristics, if you can give me your best judgment on that?

A. I don't like to say anything unless I am sure. That is so little a part of our business that it would not come to our notice, and I have never had it distinctly called to my attention any difference between pondosa and Arizona.

Q. Your experience does not justify you in characterizing it?

A. Nothing other than to say our planing mill either prefers Arizona or Idaho pine. Now, I never stopped to argue with them much about it nor discuss it, but their ideas are derived from how it works under knives and planes and machinery.

Q. Now, do you distinguish in quality between the Arizona product that you have been buying and the Idaho product?

A. We prefer the Idaho.

Q. You prefer that some?

A. Yes.

999 Q. And your next choice?

Exam. SHEPPARD. Which—Idaho?

The WITNESS. Boise genuine white pine; it does not have to come from Boise; there are a lot of good white pine mills out there and there are some good mills in the northern part of Minnesota.

By Mr. BURR:

Q. Your next choice for far western product would be from Arizona?

A. Yes; or else from that Red River company. Now, a lot of those mills have mills in different places and when we go to buy a product that seems to fit our needs we don't stop to think much more about it; if it suits possibly we repeat the order and as a result my geography of the far West is not perfect.

Q. Are you able to state which of these various types of western wood belong to the genuine white-pine group? If so, I would like to have you say.

A. I could not state that.

Q. Do you know whether or not California white pine possibly is a genuine white pine?

A. As I understand it the words "genuine white pine" is simply sort of descriptive words describing certain textures of wood and the altitude and climate affects the texture of the wood, and I don't really know why you would or would not call the Oregon or Washington pine genuine white pine; I cannot answer.

Q. Now, let me ask this: Do you regard the northern white
1000 pine—what you get from Minnesota?

A. Yes.

Q. Do you regard that as preferable in character to the Idaho white pine?

A. It is about the same quality and same class; we cannot see any difference, because it is right close together. You see we have not used white pine in this territory for so very long other than Wisconsin white pine and this other.

Q. Do you mean by that Idaho—how long have you used Idaho?

A. We have used that in a limited way for fifteen years, but Arizona pine we have only had access to that the last five or six years.

Q. Now, then, you have been talking about your retail work or have you been talking about millwork?

A. Sort of both.

Q. What you have said applies to both lines which you buy for resales and for making up and selling in the finished products?

A. That is correct.

Q. Now, then, for your millwork do you prefer the northern or Idaho white pine to the other varieties you have mentioned, or don't you distinguish any?

A. Yes; we prefer the Minnesota and Idaho white pine for millwork because of its soft texture; we don't prefer to buy it altogether because of its price; it is higher in price.

Q. What products do you make in your mills?

1001 A. We make doors and windows and cabinet work, that is built-in kitchen cabinets, casing, and stairways.

Q. What exterior products do you make for exterior trim?

A. Some outside benches and seats and outside window and door trim and porch columns.

Q. When someone comes to you to ask for your line of goods do you get specifications calling for white pine or for pine or how do they read? As a rule now, I am asking on your exterior work.

A. They vary. A lot of specifications by architects in this section of the country specify cypress, and others specify white pine. They usually manage to get it specified the kind that you haven't got.

Q. Now, when these specifications come in calling for white pine, referring now to your exterior trim specifically, will you state what varieties of the various types of lumber that you buy which you regard as in compliance with those specifications for white pine?

A. Well, I don't know that one out of a dozen can tell the difference between pondosa pine, genuine white pine, or Arizona white pine. There isn't any of them, half of them can't tell the difference between yellow pine and white pine.

Q. Do you mean southern yellow pine?

A. Yes.

Q. Can't they tell the difference between California white

1002 pine and genuine?

A. No; very few can.

Q. When they ask for white pine, what do you do?

A. We give them what we have.

Q. It might be Arizona or Idaho or northern white pine?

A. Yes.

Q. It might be California white pine if you have it in stock?

A. Yes. If they specify white pine we give them either one of those white pines. We say they are all white pine. There is a different texture.

Q. Do you call pondosa white pine for that purpose?

A. That is the way it is sold, but it is called pondosa just the same, just as if a man orders oak and you give him red oak or jack oak or whatever oak you have, but they are different textures and if he would come in and specify burr oak we would give him burr oak or else tell him that we didn't have it, but if he comes in and asks for white pine and does not specify, we give him what we have, but if he specifies it, then we give him what he asks for and a large percentage of those products come from these California and southern Oregon mills.

Q. How large a percentage of your products come from these California and southern Oregon mills that you refer to?

A. Very little; not over two percent.

Q. How large a percentage comes from Arizona?

A. We have quit buying from Arizona.

1003 Q. You have quit?

A. Yes.

Q. Did you previously use California white pine more extensively than you do now?

A. We formerly used mostly for the outside trim and outside woodwork cypress.

Q. Formerly you mean?

A. Yes.

Q. Up until what time?

A. Up until the last five or six years. Before six or seven years ago all we used this white pine for was in the manufacture of doors and windows. We used cypress for veranda work and outside garden work and trellis work and all that sort of stuff. Now, cypress is a little more difficult to obtain and this western wood is working in. If we had a better freight rate we would use more of it, but our freight rate is a handicap.

Q. Which of these types of wood do you regard as most durable for outside weather, if you have reached any experience on it?

A. This Idaho and Minnesota white pine, which they call genuine cork pine.

Q. Have you had any trouble with your pondosa pine or the California pine?

A. It rots out much quicker, so they say.

Q. Have you had any experience yourself?

1004 A. We have this experience: The sash that is made of pondosa pine frequently comes back to us in six or seven years for new bottom rail, which indicates that they are rotting out. For instance, we made new bottom rails for the Lebanon County courthouse and those sash have been in about five years.

Q. Did you furnish the lumber for that?

A. No, sir.

Q. Do you know what type of lumber those sills were?

A. I don't know what it was, but we put cypress sills back in there.

Q. You don't know whether it was pondosa or California?

A. I am inclined to believe they were pondosa, because they would not have rotted out so quick.

Mr. WHEAT. The witness doesn't know.

Mr. BURR. No; the witness does not know.

Mr. WHEAT. I think the answer ought to go out.

Mr. BURR. I will strike that if you want it stricken.

Mr. WHEAT. I would like to move that the answer be stricken out.

Examiner SHEPPARD. Strike what the witness said about what he said he believed about it.

The WITNESS. Perhaps I am talking too much of my own opinion. I don't aim to do that.

Examiner SHEPPARD. We will stop you if you do.

The WITNESS. I am talking to you as anyone coming into the office, understand.

1005 By Mr. BURR:

Q. Have you any facts to go upon as regards whether or not the wood that rotted out in the Lebanon County courthouse there—have you facts as to what variety of lumber it was?

A. No; not the slightest.

Q. Can you tell varieties of wood by inspection?

A. I can tell some of them; some of them I cannot. On the woods we handle I am a fair judge, but there are so many deceptive things; for instance, the difference between hemlock and spruce is very hard for me to distinguish the difference, and the reason I say that is because I had one associate who has been in the lumber business for twenty years and I shipped him a car of mixed hemlock and spruce and he couldn't tell the difference.

Q. Now, the buyer, does he ask for California white pine on occasion, or pondosa pine on occasion?

A. On certain occasions they do.

Q. And then you give them what they ask for?

A. We tell them just what we can offer them.

Q. Do you regard pondosa and California white pine as being interchangeable on specifications one for the other?

A. Yes; we do on those, but not interchangeable with cork pine.

Q. And which do you refer to?

A. Idaho; what we have got from Idaho.

Q. Do you refer to northern white pine as cork pine, too?

1006 A. That is such a little percentage of our business that we have never had occasion to go into that.

Q. Referring to the pines, how large a percentage of your pine purchases are Idaho white pine?

A. Not over one percent of our pine purchases.

Q. From Idaho?

A. No.

Q. Where do you get the bulk?

A. Most of our pine comes from the South, yellow pine.

Q. Now, referring to your soft pines, how large a percent is Idaho pine do you think?

A. About 25 percent.

Q. How large a percentage of your soft pines is California pine?

A. We buy some spruce; you can hardly tell it from white pine and most of the people would just as soon have it; we sell it as spruce.

Q. Eliminating that spruce and referring to soft pines, how large a percentage do you buy of the California white pine from southern Oregon and California?

A. We only buy about four cars a year of that pondosa pine.

Q. The pondosa?

A. Yes.

Q. And by pondosa you mean——?

A. We mean Oregon or California.

Q. You call that pondosa for your purpose, do you?

1007 A. Yes.

Q. How large a percentage of your soft pine purchases would that constitute would you say, giving your best judgment?

A. I would say it would be about three fourths of the white pine we use.

Q. About three fourths.

A. Yes.

Q. And the other 25 percent would be Idaho?

A. I should say two cars a year of the Idaho pine and four, five, or six of the pondosa.

Q. Of the pondosa?

A. Yes, sir.

Q. That includes your Oregon and California white pine, does it?

A. Yes, sir.

Q. Does that include anything that you buy from Idaho of the pondosa variety instead of the genuine white pine?

A. No; we don't just happen to get pondosa from Idaho.

Cross-examination questions by Mr. WHEAT:

Q. How much northern white pine do you purchase in cars a year?

A. From two to three carloads.

Q. I understood you to say—perhaps it is inference on my part—that you were drawing more from Idaho than from the northern white pine area?

A. I did not aim to say that. I am afraid I am a poor wit-

1008 ness for the things you want because of the fact that we use so little white pine and the fact that we have not been handling it for a very long time and the fact that the district is far away and I have only been out there once and it makes me a little hazy and perhaps ignorant.

Q. I am not complaining on the status of your information. I was asking as to the northern white pine and you say there would be only two or three cars a year as compared to all the rest?

A. Idaho or Minnesota; we buy from both Minnesota and Idaho.

Q. I think you said you were getting two cars per year of the Idaho white pine?

A. Yes, sir.

Q. Let us put that aside and will you tell me about the quantity of northern white pine which you purchase?

A. I should say all told about seven or eight cars a year.

Q. Is that Minnesota white pine, the seven or eight cars?

A. No; we only got one car from Minnesota last year, two from Idaho, and the rest came from Oregon and California.

Q. Let us start again if we may. Last year's record would be fairly typical of the last four or five. Now the northern white pine, we will say Minnesota pine, you have got about one car?

A. That is all.

Q. And from Idaho about two cars?

A. Yes, sir.

Q. And about how many cars of pondosa pine?

A. About five cars last year.

1009 Q. Now when you refer to pondosa pine do you include pine that you purchase under the name of California white pine.

A. As I recall we did not purchase it under that name as California white pine; they just sold it to us as California pine, or really they called that white pine from California and we know what it is; that is, we know what it will look like when it gets here.

Q. Did you purchase any under the name of pondosa pine?

A. Not through that name.

Q. When you get this particular variety of lumber from Idaho or from Washington or central Oregon, do you not purchase it under the name of pondosa pine?

A. I don't recall the name because we usually buy it from the manufacturers and I never buy anything unless I have seen it before; I see it in other yards, and I don't know that I buy it under the name pondosa pine, I just buy it because I know where it is coming from and I know what it looks like.

Q. When you say you buy from the manufacturer you buy it from the sawmill operator?

A. Yes, sir.

Q. Do you know whether it is billed to you as California white pine or as pondosa pine?

A. I just can't tell you.

Exam. SHEPPARD. What do you ask the manufacturer for in ordering white pine of that kind?

1010 The WITNESS. The way I do it, I just get the price on California pine and Idaho pine and I judge what I am going to do with it and I order it. If I can sell California pine, as you can in barn siding, then I buy that, because it is four or five dollars a thousand cheaper.

Exam. SHEPPARD. I understand you make a distinction between California pine and Idaho pine. What I want to get from you is how do you order lumber from a California pine manufacturer—what words do you use—do you say, "Send me a carload of white pine"?

The WITNESS. Yes, sir; and I specify the mill.

Exam. SHEPPARD. You just say send me a carload of California white pine and specify the mill?

The WITNESS. I buy it of the mill.

By Mr. WHEAT:

Q. I take it, Mr. Metzger, as a practical lumber man, your interest is in the quality of the product which you purchase and not in the botanical names of the species of the trees?

A. Yes, sir.

Q. You are buying this lumber for what use you can probably make use of it?

A. Exactly.

Q. And that is one of the reasons, I take it, why you are not distinguishing between pondosa pine as a name and California white pine as a name?

A. Yes, sir.

Q. Now the bulk of the pine lumber which you carry then
1011 must be southern white pine?

A. Yes.

Q. It is easy to distinguish the southern yellow pine from the northern white pine, isn't it?

A. Yes, but not so easy sometimes to distinguish between pondosa pine and southern pine, especially in the short-leaf pine.

Examiner SHEPPARD. The answer was not responsive. The witness made no answer to what the question was. I will allow that to be stricken.

By Mr. WHEAT:

Q. Now can you answer the original question?

Mr. BURR. He answered yes. Just strike the rest.

The WITNESS. It is easy for me but not for some other people.

Q. Now you spoke of some pine that you had received from the Red River Lumber Company and said you found that to be rather soft and satisfactory at times?

A. Yes.

Q. Do you know under what name that was billed you, was it as California white pine?

A. If I recollect they just said Red River pine.

Q. But you are not absolutely certain?

A. No, sir.

Q. Have you ever purchased any sugar pine?

A. No, not under that name.

Q. Are you familiar with lumber which is known as Cali-
1012 fornia sugar pine?

A. Fairly. I don't know whether I can say this is a piece of sugar pine and this is genuine white pine; I don't know the difference there.

Q. Could you distinguish California sugar or Red River from Idaho white pine?

A. I have never tried.

Q. Could you readily distinguish this pine of the quality you received from the Red River Lumber Company, say over southern yellow pines?

A. Yes, sir.

Q. Now, you said you sometimes received orders for white pine and I would understand from that statement that there is no qualifying term used, that is, your customer just asks for white pine?

A. Yes, sir.

Q. Does he ever ask just for pine?

A. Yes.

Q. And what do you undertake to furnish him when he asks for pine?

A. We know he wants it on some particular job, so we give him yellow pine.

Q. Now, when he asks for white pine, how do you determine just what you will supply?

A. We usually find out what he is going to do with it.

Q. And after you find out what he is going to do with it
1013 how do you determine what you will furnish?

A. We give him the one we think he ought to have.

Q. In other words, you try conscientiously to satisfy your customer's needs as you understand them?

A. Yes, sir.

Q. And you will sometimes furnish northern white pine?

A. Sometimes the pondosa.

Q. And sometimes the Idaho white pine?

A. Yes.

Q. And sometimes the pondosa?

A. Yes.

Q. And sometimes the California white pine?

A. Yes.

Q. Then you feel free to furnish lumber which you have purchased as pondosa pine upon orders for white pine if you are satisfied that thereby you are meeting your customer's needs?

A. Yes, sir.

Q. In other words, it does not make any difference as to the trade name under which you purchase the wood if you are satisfied that the wood is of such quality that it will meet the particular needs of the customer. Is that right?

A. Yes, sir.

Q. Do you purchase your Idaho white pine lumber from the Weyerhauser interests?

A. Yes, sir.

1014 Q. And your northern white pine lumber likewise?

A. Yes, sir.

Q. How about the pondosa pine?

A. Well, that comes from different places.

Q. That is scattered?

A. Yes.

Redirect-examination questions by Mr. BURR:

Q. Referring to your last testimony about the pondosa pine that you would furnish pondosa pine on order for white pine. Are you referring to the pondosa pine which you purchase from California and southern Oregon, as you testified in the opening testimony?

A. Yes, sir.

Q. Now, when you order genuine white pine do you ask that it be stamped as genuine white pine?

A. We do on barn siding where it goes up in its original board. On small work it is not necessary, because we work it all up any way.

Q. Do you have competition with California white pine dealers here?

A. No.

Q. You don't know of any?

A. No.

Q. Do you come in contact with the actual buyer yourself?

A. No; not much.

(Witness excused.)

1015 FRED WALLICK was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Wallick, you are an architect, are you?

A. I am.

Q. Located where?

A. 308 Hume Mansur Building, Indianapolis.

Q. How long have you been an architect in Indianapolis?

A. Sixteen years.

Q. Was it here that you started in the architect profession?

A. New York City.

Q. Now, Mr. Wallick, what is your line of architecture work?

A. I am a specialist in residential work.

Q. Do you specify any particular type of lumber for exterior finish?

A. Always.

Q. What is it?

A. Depending upon where it is to be used; for frames and sills and sash we specify different materials. I have used very little lumber for exterior siding because in these days we build very few frame houses; ordinarily it is brick veneer, either on wood or on some fireproof material, the wood being restricted to the frame, sash, sills, exterior pergola, cornice, moulding, etc.

Q. What wood do you specify for exterior trim when you do use the wood?

1016 A. For frames, with the exception of sill, we specify close-grained short-leaf cypress; for sills, no. 1 red oak; and during the last two years we have specified for sash California no. 1 white pine.

Q. California no. 1 white pine—why do you specify in that manner for that type of work?

A. Because two years ago we have a very large mill in which we used California white pine for the sash at the particular recommendation of one of the best mills and we were so pleased with it that we continued its use ever since.

Q. How long was that?

A. About two years.

Q. What mill was that?

A. It was the Balke & Krause mill.

Q. Here in town?

A. Yes.

Q. Do you know where that California white pine was received from by the Balke & Krause mills?

A. I don't know.

Q. Is California white pine the only variety of pine that you have specified for exterior work?

A. No, sir; we don't always specify where the California white pine shall come from unless it refers only to sash.

Q. I don't think you quite understood me. Is that the only variety of pine that you have been specifying, white pine?

1017 A. We use a blanket specification under the phraseology no. 1 white pine according to certain grading rules of either the Southern Pine Association or White Pine Association and as approved by the Bureau of Standards. We have found so much dispute among the mills and men talking about the quality of lumeber that we feel that to throw the specification back to the Bureau of Standards and the rulings of these pine associations would give better results than a specification on our part.

Q. In your last answer you said or used the words "white pine" and in an earlier answer you used the words "California white pine". Now do you sometimes specify white pine and sometimes California white pine?

A. I had thought I had made clear that I referred to California white pine for sash only.

Q. You do specify white pine for exterior purposes other than sash. Is that true?

A. Some four or five years ago we used white pine siding in an extra width. Beyond that as a rule we use white pine for exterior sash and doors.

Q. During the last four years that has been the case?

A. Yes. Everything else on the outside of houses is not white pine because we don't feel that we can afford to use it; it is one of the recognized very expensive woods.

Q. High priced?

A. Yes.

1018 Q. Do you find California white pine too expensive or do you regard that as suitable?

A. We know very little about the comparative costs of the soft type of white pine that you are discussing here. We merely specify what we have found and believe to be the most satisfactory for our needs. As to where the *the* various mills buy it, we have no particular interest.

Q. Do you regard northern white pine as genuine white pine?

A. I have always so considered it.

Q. Do you regard California and Idaho white pine as genuine white pine?

A. I should consider that as coming under that classification.

Q. When you got white pine for exterior siding four or five years ago how did you specify it?

A. Merely no. 1 white pine siding.

Q. What did you get, do you know?
A. As to the quality of the lumber you mean?
Q. Yes, California or northern white pine?
A. I don't know.
Q. You would have accepted it if it had been California or Idaho white pine, would you, as well as northern?
A. If it complied with the grading rules that we recognize as being authority.
Q. You regard that as complying with your white pine specification, would you?
A. Yes, quite so.

1019 Cross-examination by Mr. WHEAT:

Q. I would ask you if you are particularly informed as to the botanical classification of the several trees which provide pine lumber?
A. No, sir.
Q. As an architect your interest is primarily in the quality and utility of lumber which you obtain?
A. Entirely so.
(Witness excused.)

ROY E. BRANKENSICK was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Brankensick, you are in what business?
A. I have been in construction work, I have handled construction work about all my life, nearly all of it.
Q. You are in business for yourself or you work for what concern?
A. Well, the last few years I have been working some for myself. Before that I was employed by the Monolithic Concrete Construction Company for several years, and the Hub City Construction Company here in town.
Q. Did you work on the Cadle Tabernacle here?
A. Yes.

1020 Q. What did you do in connection with that work?
A. I handled the labor on the job, running the foundation and handling the labor; that is, part of it.
Q. Do you know what type of doors they have in that building?
A. I could not say for sure.
Mr. WHEAT. I object to that answer.
Q. Do you know?
A. I don't know.
Q. Do you know how those doors stood up?
A. They have had some trouble with the doors.
Q. Well, what do you mean by some trouble?
A. The lower part of the doors has decayed.
Mr. WHEAT. I take it, the witness is talking of his personal knowledge.

Q. Do you know that personally?
A. I know that.
Q. You have inspected them?
A. I put in two new doors and we have repaired some of the others off and on.
Q. Do you know what kind of wood is in those doors, or are you able to say?
A. I am not able to say that.
Mr. BURR. I will agree that this testimony be stricken unless I tie it up.
Examiner SHEPPARD. It may be stricken.
(Witness excused.)

1021 LOUIS MCCORMICK was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are with the West Side Lumber Company, are you?
A. Yes, sir.
Q. In what capacity?
A. Secretary-treasurer.
Q. How long have you held that position with your company?
A. Approximately two years.
Q. What were you doing prior to that time?
A. I was with the Indianapolis Lumber Company.
Q. Indianapolis Lumber Company?
A. And also the Montgomery Lumber Company in Culver City, California, for a year.
Q. How long were you with this other Indianapolis concern?
A. About 15 years.
Q. So you have been here about 17 years in the retail lumber business?
A. Retail and wholesale sash and door about 20 years.
Q. Do you do any wholesaling at the present time?
A. None at all.
Q. Has that been true for the past 17 years?
A. Yes; that is right.

Q. Now, referring to your soft-pine supplies, where do you
1022 secure your material?

A. Are you referring to yellow pine or——
Q. I am referring to all soft pines.
A. Well, of course, we secure our yellow pine in the South.
Examiner SHEPPARD. Do you call yellow pine soft?
The WITNESS. I am referring to Arkansas soft pine.
Q. You regard that as soft pine? Soft yellow pine?
A. We would, but not as white pine.
Q. Now, eliminating your Arkansas soft pine and your Arkansas yellow pine of the South, will you state where you secure your soft pine supplies?

A. We have a shipment now, a part of a car coming from the Red River Lumber Company, California white pine. We have bought some, I think, of Weyerhauser.

Q. Where did that come from?

A. I am inclined to think—I am not right sure where it came from.

Q. Was that Idaho white pine or pondosa pine, or what was it?

A. I don't know.

Q. Where else do you secure your soft pine supplies, eliminating the Arkansas soft?

A. Well, now we buy most anywhere; we don't discriminate between pondosa, northern white pine, or California sugar pine for our purposes.

Q. Those three?

1023 A. Those three; in other words, any western or northern so-called white pine we don't discriminate for our purposes.

Q. You don't discriminate then between Arizona, California, and Idaho white pine. Is that true?

A. No.

Q. Do you buy any Arizona white pine?

A. I don't know that we have had any.

Q. Have you had any New Mexico white pine?

A. I think not.

Q. How large a percentage of this group of pines do you buy of California white pine?

A. I would say 75 percent.

Q. How much of the Idaho white pine do you buy, or don't you distinguish?

A. We don't distinguish.

Q. You do buy some Idaho?

A. We do. We don't usually buy large quantities of white pine.

Q. When you say that, what are you referring to?

A. I am referring to California sugar pine, pondosa, Idaho, or northern white pine.

Q. Are you referring to California white pine?

A. Yes.

Q. But you do use fairly large quantities of that?

A. California white pine, sugar pine—may I explain that in this market in a retail way we consider any of those woods

1024 white pine.

Q. Mentioning which, now?

A. Any of them. In other words, if a man comes into our place and wants white pine, a white-pine board, we don't distinguish. In other words, it is all white pine in this retail market.

Q. Including all of those varieties that you have named?

A. Excepting with the pattern trade. A trade of that kind requires certain texture of wood.

Q. In other words, you call it all white pine, referring to California white pine, pondosa, Idaho pine, or northern white pine. Is that true?

A. That is true.

Q. For the pattern trade, what is the situation?

A. I think they demand pretty largely northern white pine, although we don't sell that trade.

Q. Now, you say you sell these without distinction?

A. Yes.

Q. The four named last? You answered yes. That is true in the retail trade largely here, is it?

A. I think it is.

Q. Now, how about the price. There is some distinction in price between northern white pine and Idaho white pine and California white pine, is there not?

A. Well, that all comes back to a matter of market. Now, understand this is sold in small quantities as far as we are con-
1025 cerned. We don't sell a thousand feet of white pine. I don't think it was ever known for us to sell a thousand feet. It is a board here and a board there.

Q. Did you sell it for exterior trim?

A. Yes.

Q. Do you have people come in with the request for white pine for exterior trim?

A. Very seldom. This market is mostly a redwood and cypress market in that respect.

Q. You don't do any millwork, do you?

A. Yes.

Q. You do millwork?

A. Yes.

Q. How long have you been running a mill? For exterior trim.

A. I have been connected with the mill in all my experience.

Q. All your experience here in town?

A. Yes.

Q. Do you have calls for white pine on your exterior trim?

A. The architects, as I remember it, are not specific. In other words, they will say no. 1 white pine, which is really no specification unless they refer to some certain grading rule, and when they use no. 1 in this market they mean a clear grade that is free from knots.

Q. What would you be most apt to give them on that specification?

1026 A. Whatever I had in the four woods I have mentioned.

Q. How long has that situation as regards the interchangeability of those four woods, how long has that been the situation here?

A. Well, it has been the situation throughout my experience.

Q. Have the far western woods been in this market during that period?

A. I think so.

Q. Which of those four woods do you regard as most durable under weather conditions, or have you any choice?

A. I would be afraid to say.

Q. You would not say?

A. I would not say.

Q. Which of those four woods has the best reputation here generally, if you know?

A. I think the northern white pine.

Q. That has a rather better reputation?

A. I think so.

Q. But you have no experience to back that up?

A. I could not back that up.

Cross-examination by Mr. WHEAT:

Q. Do you purchase some of your far western pine lumber under the name of pondosa pine?

A. Yes.

1027 Q. You have stated also that you have purchased some California white pine, notably from the Red River Lumber Company?

A. Yes.

Q. You stated likewise in response to the Government's counsel if you received an order for white pine you would feel free to supply that with either northern white pine or Idaho pine or pondosa pine or California white pine?

A. Unless a man was specific in his terms. Of course, if he specified a product we certainly would give him what he specified or not sell it at all.

Q. In other words you are trying to satisfy your customer's want as you understand it?

A. That is it.

Q. And of course you are not deceiving him in any way to the best of your ability?

A. In other words, this market has not been educated to the different kinds and qualities of white pine.

Q. You feel free to furnish that pondosa pine, that is the pine which you have purchased under that name, if you feel that it satisfies your customer's wants as you understand them?

A. Yes.

Q. I would gather from that that your interest is not so much in the trade name of the lumber, but you are interested in the quality and utility of the lumber as to your customer's needs?

A. That is it.

1028 The WITNESS. May I just give you one pointer? You were asking about some doors here. You may not want this information, but my experience with doors has been that in all cases where they go bad they have not been properly protected.

Redirect-examination by Mr. BURR:

Q. Now while you are not interested in trade names I would like to ask you this—would you say that the use of the word "pine" in connection with the trade name "California white pine" had a tendency to confuse the local trade here as to any distinction there might be between that white pine and other white pine?

Mr. WHEAT. I object to the form of that question because it calls for a conclusion. I think the witness ought to be asked as to matters of fact.

Exam. SHEPPARD. That is the very thing we have to decide. I don't think the witness' judgment is sufficient.

(Witness excused.)

THOMAS STEWART was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct-examination by Mr. BURR:

Q. You are with the Pinnell-Coombs Lumber Company, are you?

A. Yes, sir.

Q. And they are at Lebanon, Indiana?

A. Yes, sir.

1029 Q. Have you a retail lumber yard there?

A. Yes, sir.

A. How long have you conducted that yard?

A. The Pinnell-Coombs Lumber Company have been in business about forty years.

Q. How long have you been there? You are manager?

A. I have been there since the first of January this year.

Q. What were you doing before that?

A. I have been in the Pinnell organization retail lumber business for the past twenty years.

Q. You were selling before you became manager?

A. Yes; the same as I am now manager of a retail lumber yard.

Q. I thought you said you had been manager for one year.

A. With the Pinnell-Coombs Company; I have been with the Pinnell organization for twenty years same capacity, only different yards—Shelbyville for the past 15 years.

Q. Now you also conduct a mill, a shop, do you?

A. Well, we have a mill; we don't operate it very much.

Q. How long have you been omitting to operate it?

A. Well, the mill of the Pinnell-Coombs Lumber Company at Lebanon for the past year has operated very little on millwork.

Q. In the purchase of your lumber do you have occasion to buy soft white pines, referring now to other pines than the Arkansas soft?

A. For millwork we have not in the past year.

1030 Q. With regard to your retail lumber business?

A. We have; yes.

Q. And what pines have you been purchasing?

A. We have bought pondosa pine altogether, five cars in the past ten months.

Q. Where have you been getting it from?

A. From the Brooks-Scanlan Lumber Company at Bend, Oregon.

Q. Do you get that under the trade name pondosa or under the trade name California pine, if you know?

A. As pondosa pine.

Q. Has that been your sole supply of western soft pine?

A. In the past ten months; yes.

Q. Before that what did you get?

A. Now, I could not say; I don't know; I wasn't there. I do know this, though, from my other experience, we have used mostly cypress. We are buying sash and doors already made; we don't make them any more at all.

Q. What kind of sash and doors are you ordering?

A. White pine.

Q. What kind of white pine is that, do you know?

A. I don't know.

Q. You don't know whether it is California, Idaho, or what?

A. I don't know.

Q. Would you distinguish between those in the point of durability and ability to stay in place, etc.?

A. No; I would not say, because I could not tell from look-
1031 ing at a door what kind of white pine it was when it goes in place.

Q. If you were to order that kind of lumber would you distinguish in any way for your customer's benefit or would you order that indiscriminately?

A. We have never discriminated.

Q. Would it be a question of price with you, which made the lower price?

A. Well, no; I would not just say that.

Q. At the same price would you have preference between those three varieties of white pine for exterior work?

A. Yes.

Q. Which would you prefer at the same price?

A. Not being so familiar with white pine I could not say. Now I am not just exactly clear on the difference of the California white pine and the Idaho white pine.

Q. Can you say whether or not that is the practice in the trade here, regarding these varieties as you have described it, the practice is similar in selling them inerchangeably?

Mr. WHEAT. I don't think he testified as to the varieties sold indiscriminately. I heard no testimony to that effect.

Mr. BURR. I don't want to characterize it if you don't concur.

Exam. SHEPPARD. I don't have any recollection that he has so testified.

1032 Q. If you got an order for white pine would you consider that you had fulfilled that order by delivering California white pine, Idaho white pine, northern white pine——

Mr. WHEAT. The witness has not said that they furnished any California white pine.

Q. Well, would you regard yourself as fulfilling that order for white pine if you furnished pondosa pine, Idaho white pine, or northern white pine?

A. Well our experience has been we would have in the yard cypress and we would probably furnish him cypress.

Q. Cypress for what? White pine?

A. I wouldn't sell it for white pine, that is unless he would be satisfied with it for the same use, because we haven't had trade enough in our trade, in this locality for white pine, enough buildings in the way of plans from architects and all that, they have not been very particular about it, and we just would probably, if we had to furnish white pine, we would order those sash and doors from some sash and door house and we would furnish them just what the sash and door house shipped us.

Q. Irrespective of pondosa white pine, California, or Idaho white pine?

A. We would order white pine doors of white pine sash and what they sent us we would furnish to the customer, if we could not change him from white pine to cypress, if we thought cypress would meet his needs and we had cypress in stock. Our
1033 demand for white pine has not been very heavy. I might add this, if you want it, that our demand for white pine has been in pattern stock. It is barn siding that we have used altogether this year.

Q. Barn siding?

A. Barn siding, eight inches wide, tongue and grooved, from 8 to 20 foot long, for barns and in any other siding.

Q. What did he order?

A. Pondosa pine.

Q. What did you order?

A. We ordered pondosa and we got pondosa pine, and we sold it as a soft pine.

Q. What did your customer ask for?

A. He asked for yellow pine, really what he asked for, and we showed him this and convinced him that it was better material for his barn than the yellow pine and sold it to him.

Q. Do you know whether or not that pondosa is yellow pine?

A. We don't think it is yellow pine.

Q. What do you think it is?

A. It is softer than yellow pine.

Q. Do you regard it as white or yellow pine, white rather than yellow?

A. Yes.

Q. Do you regard that as genuine white pine?

A. No, sir.

1034 Q. What do you regard as genuine white pine?

A. Several years ago, when we got white pine from the North, northern white pine, I regarded that as white pine.

Q. Do you regard Idaho white pine as white pine?

A. No, sir; not altogether, but I may be wrong.

Q. Do you ever deal in California sugar pine?

A. Very little. We may handle sugar pine and not know it by itself.

Q. Do you regard California white pine as genuine white pine?

A. I could not say.

Q. You don't know whether it is or not?

A. No, sir.

Q. Is it offered to you from time to time?

A. No; because our demand is so small that we haven't trade for it, and we, of course, naturally have not had any soliciting of business.

Cross-examination waived.

Mr. WHEAT. I think I will move to strike the testimony of this witness. It is not at all relevant to the complaint.

Exam. SHEPPARD. I will let it stay in for its probative value.

(Witness excused.)

M. E. THORNTON was thereupon called as a witness and, having been duly sworn, testified as follows:

1035 Direct examination by Mr. BURR:

Q. You are with what concern?

A. Thornton & Rodecker, architects.

Q. Located here in the city?

A. Yes.

Q. How long have you been here?

A. We have been located as a firm for almost four years.

Q. Do you specialize in residences or in building blocks?

A. Residences.

Q. And do you have occasion to specify for exterior finish at times on lumber?

A. Yes.

Q. Do you specify white pine for that purpose in part at any time?

A. I think our first specifications called for white pine, but we were then informed by our friends among the local lumber dealers that genuine northern pine was very hard to obtain, so since then our specifications have called for California sugar pine.

Q. What do you specify sugar pine for?

A. On a nice job we specify it for our exterior trim and sash.

Q. You say you find it hard to get northern white pine; that is partly account of the price, is it?

A. I imagine it is. I know the dealer informed us he did not have it and could not get it.

1036 Q. Did you find out whether it could be had if you were willing to pay the price and wait for it to be shipped?

A. Yes; if we would pay the price, they would get it for us.

Q. Now, why do you specify sugar pine for this exterior trim on certain classes of residences?

A. Well, because from our experience that seems to be the best texture and the best finish and works better.

Q. Better than what?

A. Better than cypress or the cheaper grades of white pine.

Q. What do you mean by white pine?

A. Well, I think white pine is closer grained, harder wood than yellow pine; I think of white pine as being a harder wood.

Q. Where do you regard white pine as coming from?

A. Well, I think the pine we get around here comes from California; the kind we like to use does.

Q. Whereabouts in California?

A. I don't know; I have never been informed.

Mr. WHEAT. The witness is referring to sugar pine?

The WITNESS. Yes. I know it all comes from California.

Q. Do you get California white pine?

A. California sugar pine; yes.

Q. California white pine—there is a distinction between the two; do you understand that distinction?

A. No; I don't.

Exam. SHEPPARD. You refer to sugar pine as white pine?

1037 The WITNESS. Yes, sir; I do. For our purposes it is just as good as northern white pine.

By Mr. BURR:

Q. As the northern white pine?

A. Well, I don't know that we have had very much northern white pine to work with.

Q. Do you know anything about pondosa pine?

A. No, sir.

Q. You don't know whether that is white pine or not?

A. I suppose it is; I don't know.

Q. You have never specified it?

A. No, sir.

Q. What means do you have of checking up as to whether or not you get California sugar pine in specifying it?

A. Well, I suppose the only means I have is comparing it to California sugar pine that we know we have had.

Q. You think you can tell whether you get California sugar pine or some substitute by inspection on the job?

A. Yes.

Mr. WHEAT. Mr. Examiner, I will move to strike the testimony of this witness as it is absolutely irrelevant and immaterial to the issues in this complaint.

Mr. BURR. I don't agree with that motion and I oppose it.

Exam. SHEPPARD. I will let it stay in and give it probative value.

(Witness excused.)

1038 W. H. HANSING was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are connected with the Cadle Tabernacle, are you?

A. Yes.

Q. Where is that located?

A. Corner of New Jersey and Ohio Streets, this city.

Q. And the Cadle Tabernacle is incorporated, or how is it managed?

A. It was incorporated, but at the present it is under receivership.

Q. That is a large convention hall?

A. Yes.

Q. How long have you been connected with the organization?

A. My father-in-law and I purchased this from Mr. Cadle in 1923.

Q. Did you manage the tabernacle for some time?

A. Yes, sir.

Q. How long?

A. Well, for a period of two years and then dropped out again, and I have been in there since June of this year.

Q. Are you manager there under the receiver?

A. Yes.

Q. When was the tabernacle built?

1039 A. In the summer of 1921.

Q. Do you know whether the doors which were placed in the tabernacle have stood up?

A. They certainly have not.

Q. I wish you would relate what happened, if you will please.

Q. Possibly to review a history of it—my father-in-law furnished Mr. Cadle the finances to build this tabernacle at the time it was built——

Mr. WHEAT. I assume you will lay the proper foundation for these inquiries?

Mr. BURR. Yes, as to the type of lumber.

Exam. SHEPPARD. I would think that would come first.

Mr. BURR. It is quite possible we may have to get a sample and submit it where this sample can be analyzed.

Exam. SHEPPARD. I think you should connect it up with future proof.

Mr. BURR. Yes.

Exam. SHEPPARD. Under those conditions I will allow it to go in.

By Mr. BURR:

Q. All right, proceed with your narration.

A. He and I have had considerable experience in building buildings over various parts of the State; we built the bank building at Plymouth, Indiana, several buildings at Muncie, and several at Albany, Indiana, and we are in the real estate business, or were at the same time, and repair buildings, etc., in various parts of

1040 the State. This matter was gone over at the time as to ad-

vancing the money and as to the construction of the building and the nature of the timber and sills and everything that went into and we were more or less interested, and the building was finally completed, and Mr. Sparks, my father-in-law, took half interest at the time of its completion and shortly after that why negotiations were started and we acquired it.

Q. We are not so much interested in all that. How about the lumber that went into the exterior finish, can you refresh that situation?

A. Nothing more than I presume it was white pine.

Q. Did you order white pine?

A. Mr. Cadle had the supervision of that part of the contract of the building.

Q. Where is Mr. Cadle?

A. Presumably living in this city.

Q. And what are his initials?

A. Howard E.

Q. Now have you had trouble with those doors?

A. Very much.

Q. What happened?

A. Well, seemingly that tenon on the lower part panel fitting in on the lower part of the door up on the upper part of the panel where it joins on the up and down panel there is rotting out and we have had to replace four doors and there are five more in very bad shape.

1041 Q. How about the sash—have you had any trouble with the sash?

A. No.

Q. The sash are all right, are they?

A. Yes.

Q. Who was the architect on that job?

A. The architect, if I have it right, was Nevin, of Louisville, Kentucky.

Q. When did you begin to have trouble with those doors?

A. It began about three years ago.

Mr. BURR. I would like to make a motion before the cross-examination goes in—I think counsel would rather have it made now—I would like to move at an appropriate time the examiner and counsel for both sides visit this building to have a look at the doors. If that is agreeable, I think it might be illuminating.

Mr. WHEAT. If the examiner please, I think that the testimony along these lines goes very far afield. It is easy for us to find on some particular job in any community some structure or some material that has not held up for one reason or another. It may be due to imperfect construction; it may be due to the fact that the material in the interior was not properly dried and had too high a moisture content, and it must be properly protected by paint. Aside from that we don't know whether this lumber was furnished here as

pondosa lumber or as California white pine or how it was
1042 supplied. It seems to me it can have no bearing on this complaint as to the deception on the part of the California lumber producers.

Examiner SHEPPARD. I will let the testimony go in, as I have been doing, in reference to pondosa, as it is admittedly the same species as white pine, or rather the California white pine. I am going to make a finding as to both and let the commission say what it pleases about it. I think it would be well for all of us—I know it would be interesting for me—to go and see those doors myself. I have been wanting to see some of this wood in decayed condition ever since we have been in this case, and I don't know what it will be, there is no testimony yet as to what the wood is, but I am going to see it and I am going to let the testimony stay in in reference to it until there is connecting testimony one way or the other on it. If the wood is pondosa, it stays in the record; if the wood is not pondosa, I will listen to a motion to strike.

(Whereupon at 11:45 o'clock a.m. a recess was taken until 1:30 o'clock p.m.)

1:30 P.M.

AFTER RECESS

Examiner SHEPPARD. During the noon recess the examiner, in accordance with motion made by attorney for the Commission, accompanied by the attorneys for respondent and Commission's attorney, viewed the tabernacle mentioned in the testimony of Mr. W. H. Hansing and inspected the doors in the front part of the said
1043 tabernacle, which he testified to had been in a deteriorated condition.

Mr. BURR. If the examiner please, I desire to offer certain four photographs as Commission's exhibits for the record, nos. 8, 9, 10, and 11, which I understand it is stipulated are deteriorated portions of the Cadle tabernacle, as to which testimony was received this morning. I ask that they be received, subject to proof later to be made, that the samples of lumber obtained by the examiner are shown to be from Pinus ponderosa.

Mr. WHEAT. I will stipulate that these are photographs of certain exterior doors of the Cadle tabernacle and I waive any technical authentication of the photographs, but I should like to reserve the right to strike them from the record unless it is ultimately shown that the doors are constructed of lumber manufactured from Pinus ponderosa tree and that these respondents in some way are chargeable with having furnished California white pine lumber which was used in the construction of these doors.

Mr. BURR. I regard these as admissible and as proper to be finally received if the proof shows that Pinus ponderosa was used for the construction work in connection with the tabernacle, as borne out by the samples when subjected to the technicians at Madison.

Examiner SHEPPARD. Let them go in subject to further connection as indicated by me this morning.

1044 (The photographs were thereupon received in evidence, marked "Commission's Exhibits 8, 9, 10, and 11", and retained by the attorney for the Commission.)

Mr. WHEAT. May it be understood of record that respondents reserve the right to object to the receipt of these last exhibits for reasons which will be offered at the appropriate time. I am offering no technical objection now as to the authentication of them.

Examiner SHEPPARD. You understand I am accepting them subject to further connection, as I stated this morning?

Mr. WHEAT. Yes, sir.

GEORGE WRIGHT was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are an architect, are you?

A. Yes, sir.

Q. Your firm is Pierre & Wright?

A. Yes.

Q. Located here in Indianapolis?

A. Yes.

Q. How long have you been here, Mr. Wright?

A. You mean in that connection or how long have I been here?

A. How long have you been an architect in Indianapolis?

A. Five years.

1045 Q. That is not the entire extent of your experience as an architect?

A. No, sir.

Q. Where were you located previously?

A. I was located in the office of Herbert Foltz, of this city, for two years, and previous to that some twelve years in the office of George C. Nimmons & Company, of Chicago.

Q. Do you practice largely with regard to residences or what class of building?

A. Our practice is varied; we have a number of residences, but we also do commercial buildings and industrial buildings. We have done two city schools.

Q. Do you have occasion to specify pine for exterior finish for some of your work?

A. We have.

Q. How do you specify it, as white pine or as California white pine, or as northern white pine, or how?

A. Ordinarily western white pine.

Q. Western white pine?

A. Yes.

Q. Then you specify by grade and requirements of that character, do you?

A. Yes, ordinarily; that will depend upon the use to which it is put, of course.

Q. I am talking about exterior finish now—you have occa-
1046 sion to call for western white pine?

A. Yes.

Q. Mr. Wright, what classes of lumber do you regard as in compliance with a specification for western white pine?

A. I wonder if that cannot be put a bit more in detail?

Q. Specifically?

A. Yes.

Q. If you were informed what you would receive would be Idaho white pine, would you regard that as living up to the specification of western white pine?

A. I would.

Q. Would you regard California white pine as compliance with your specification?

A. I would.

Q. Did you ever hear of pondosa pine?

A. I have heard of it; yes.

Q. Would you regard that as living up to your specification?

A. I am presuming I would. I probably would like to go into that a little more in detail. I mean if the material which was furnished to me was pondosa pine, why I would look into the matter a little more in detail before I would accept it.

Q. Would you accept it if you found that it was Arizona white pine under that trade name?

A. I might.

Q. How about New Mexico white pine?

A. Well, I might accept it; yes. It is a question of the
1047 character of the material. I wouldn't care so much about where it came from.

Q. If it looked nice and white and smooth texture, would you accept it if it was New Mexico white pine?

A. Yes.

Q. What is the reputation in this vicinity of white pine as a building material where exposed to weather conditions?

A. Good.

Q. Do you regard certain varieties of white pine as genuine white pine and others not genuine?

A. When you say genuine white pine I ordinarily think of what is known to the trade, I presume, as northern white pine, and we don't think we are getting much of that in this territory. White pine is perhaps a generalization that covers a multitude of different specialties in white pine.

Q. Would you have any preference as between Idaho white pine, California white pine, and pondosa pine for exterior use?

A. No; I think not.

Q. Would the word "pondosa" without "white" in the trade term place you on notice more or less than California white pine?

A. It would place me on what?

Q. Would you be on inquiry any more as to the character of it if you found out that what had been delivered was pondosa pine than if you found out California white pine had been delivered?

A. I am afraid I will have to ask you to repeat that question.

(The question was read by the reporter.)

1048 A. I understand you to say if I would be more inquisitive about it?

Q. Yes.

A. I probably would. That would be of my own ignorance of the white-pine situation.

Cross-examination by Mr. WHEAT:

Q. I gather from your testimony, Mr. Wright, that you are not particularly informed as to the botanical situation, or the botanical classification of the various pine trees from which pine lumber is obtained?

A. No, sir; I am not. I am much more interested in the lumber that we get on the job.

Q. Your own interest as an architect is in the quality and utility of the lumber which is used?

A. Yes, sir.

Q. Are you familiar with southern yellow pine lumber?

A. We have used a great deal of it.

Q. For what purpose?

A. Largely structural; we use it in rough construction.

Q. Do you use western white-pine lumber to any extent for structural purposes?

A. No.

Q. There is quite a distinction between the uses of the southern yellow pine on the one hand and western white pine on the other?

A. Decidedly so in our practice.

1049 Q. I assume you would not accept southern yellow pine upon specifications calling for white pine?

A. No, sir.

Q. Can you tell us why you specify white pine under the term western white pine—that is, why have you specified western white pine rather than northern white pine or white pine alone?

A. Well, I perhaps should have said western pine, because we accept that. That is where our pine comes from, and it may be a localism; that is what we have used. The white pine that we get in this territory is western pine.

Q. Western pine?

A. Yes.

Q. Then do your specifications ordinar'ly read western pine?

A. Western pine; yes; that is correct.

Q. They don't read western white pine?

A. No.

Q. Then it was just an inadvertence when you said in your direct examination western white pine?

A. Yes.

Q. Your specifications read western pine?

A. Yes.

Q. Why do you not specify northern white pine?

A. Because it is our feeling that northern white pine, if it is procurable, is a rarity and perhaps would cost us more money to do the same job than the material that we specify.

1050 Q. Then you are ordering western pine, knowing from where it originates and what its quality and utility are?

A. We feel so.

Q. And you expect definitely to receive pine lumber from the Western States in response to your specifications?

A. Yes, sir.

Redirect examination by Mr. BURR:

Q. Do you mean, Mr. Wright, that you never specify western white pine at all? Is that true?

A. We may have specified California white pine, but ordinarily it is western pine.

Q. Do you mean that you never specify western white pine, as you testified in your direct examination?

A. Yes.

Q. Never use that phrase?

A. I don't recall ever having used it that way.

Q. Now, when you specify western pine, is it your understanding that you are getting western white pine?

A. It is my understanding that we are getting pine which is comparable to white pine in constructions, etc., the design and makeup of the timber or wood.

Q. Is it your understanding that you are receiving a variety of pine that is equal in durability where placed on the outside of the building to the old northern white pine?

1051 A. I question it.

Q. You question if it is as good, do you?

A. Yes.

Q. Now, do you distinguish in durability for exterior use between Idaho white pine and pondosa and California white pine, or do you think they are all about the same class?

A. I don't believe that my information relative to the different materials is sufficiently technical to answer that.

Q. In other words, you don't know which is more durable?

A. I would not know exactly; I would know exactly what I was getting when I saw it on the job, so far as that distinction is concerned.

Q. Would you know when it is delivered whether it was California or Idaho or pondosa from a physical examination of it?

A. No; I wouldn't.

(Witness excused.)

WILLIAM PENCE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Pence, how long have you been with Balke & Krause?
A. About four years.
Q. What were you doing before that?
A. Capitol Lumber Company.
Q. How long were you with that company?
A. About 25 years.
1052 Q. What business are Balke & Krause in?
A. I have charge of the mill.
Q. That is an exterior-finish mill, is it?
A. Both interior and exterior.
Q. And they are also in the retail lumber business?
A. Yes.
Q. Now, what variety of soft-pine lumber does Balke & Krause handle?
A. Well, since I have been there they have had mostly Idaho white pine.
Q. And do they carry some California pines?
A. Once in a while; not very often.
Q. What distinction do you make as to character and quality for durability between Idaho white pine and California white pine, if you make any distinction?
A. I think the Idaho white pine is a little lighter.
Q. A little lighter in color?
A. Weight and color.
Q. How about texture?
A. Well, I think it is softer-grain lumber. It is more in the nature of the old cork white pine.
Q. Do you regard Idaho white pine as genuine white pine?
A. Well, I am not well enough versed to say whether I would or not.
Q. Do you regard California white pine as genuine white pine?
1053 A. That is similar to the old-fashioned Michigan cork pine.
Q. Now, do you handle any Arizona white pine or New Mexico white pine?
A. No.
Q. Do you know if you get any California sugar pine?
A. Only when we run short we probably buy a little around different yards here.
Q. When you run short, you say?
A. I say, when we run short of our stock we might get it, a little of it through different yards.
Q. In buying around at the various yards you may get sugar pine instead of what you usually carry?
A. Yes.

Q. Now, then, as to durability, do you regard Idaho white pine as rather preferable to California white pine, or the reverse as to lasting quality—do you regard Idaho or California white pine as better?

A. I think the Idaho is the best; that is my experience up to now.

Q. Have you had any experience with California white pine in standing the weather?

A. Not lately, not in the last 4 or 5 years.

Q. Can you recite any experience earlier than that?

A. I had one experience where we used some of it that was stained that was blue, probably had been cut and overnight
1054 was not on sticks and it didn't look as though it would hurt the lumber, but in 3 or 4 years afterward we discovered that it rotted out.

Q. That was bought from who, do you remember?

A. No; I don't.

Q. Do you know what section it came from?

A. No.

Q. You know it was California white pine?

A. Yes. Of course, it probably was a cheap grade.

Q. Have you had any experience with pondosa pine? Do you regard that as different from California white pine?

A. I never handled it.

Q. Which is the bulk of your purchasing for Balke & Krause in the soft pine today, Idaho or California?

A. Idaho.

Q. Are you still handling northern white pine?

A. No, sir.

Q. Is that higher in price in this market?

A. I think it is; I don't know.

Q. Now, while you were with the Capitol Lumber Company, what were they handling?

A. Well, they handled California white pine and sugar pine both.

Q. They handled some sugar pine too, did they?

A. Yes.

Q. Were they handling Idaho white pine too?

1055 A. I could not say; I don't know.

Q. You don't remember that far back?

A. No, sir. Mr. Huey bought all that, and I never paid much attention to what it was.

Q. Have you had occasion to examine the Cadle Tabernacle?

A. Oh, I did about five years ago, I think, five or six years ago.

Q. Did you examine the condition of the doors—exterior doors—at that time?

A. Yes.

Q. What sort of shape were they in?

A. Well, some of them were rotten, the tenons rotted off.

Q. Had that material been painted?

A. Well, I could not say.

Q. You don't remember?
A. No, sir.
Q. And that was about five years ago?
A. Yes.
Q. Do you recall when that building was constructed?
A. No. I judge about fifteen years ago.
Mr. WHEAT. Isn't that of record?
Mr. BURR. That is just his recollection; it wasn't as clear as I thought, perhaps, it might be.
Q. Was that material purchased from the Capitol Lumber Company?
A. Yes.
1056 Q. Can you tell me whether it was California white pine or what it was?
A. No, sir; I don't know, for I never paid any attention to it.
Q. Was the Capitol Lumber Company during that period ordering ponderosa pine; do you know?
A. I could not say.
Q. What is the reputation of northern white pine for durability in this community?
A. Well, I think it will outlast white pine.
Q. Is that its reputation among the men in your trade?
A. Well, I haven't seen any of it for several years. I have used lots of it, that is standing up yet.
Q. What locality was that in?
A. Northern Michigan.
Q. That was the old Michigan white pine?
A. Cork pine.
Q. Cork pine, Michigan?
A. Yes.
Q. Could you state whether the reputation of Idaho white pine for durability is about what you stated your opinion of it to be?
A. Well, we have never had any experience to see whether it had any faults yet. My experience in what I have had of Idaho white pine, it is the nearest thing you can get to Michigan cork pine.
Q. How long an experience have you had with Idaho white pine?
1057 A. Well, this is our second car; it has been about a year, I guess.
Q. You have only been buying it two years?
A. That is all; probably three years—I don't know.
Q. And you are not sure whether the Capitol Lumber Company used it during the days that you were with them or not?
A. I could not say.

Cross-examination by Mr. WHEAT:

Q. You said that you seldom see any northern white pine in this territory?
A. Mighty little of it; that is, the old-fashioned cork pine.

Q. How do you account for its disappearance from the market?

A. Well, I think it is played out.

Q. What pine lumber in general is taking the place of the old northern white pine in this market?

A. Well, the California pine, sugar pine, the Idaho pine, the southern California—I don't remember the name of that.

Q. But the western pines are now supplying the bulk of the trade of this territory?

A. If I understand it right, they are all termed "western pine", but they have different names like——

Q. You mean pines from the Western States generally are supplying the market needs for the most part?

A. Yes.

1058 Q. Do you buy any lumber from the Weyerhauser interests?

A. I don't believe we have. I don't do the buying; Mr. Balke does that.

Q. You don't know whether Idaho white pine is bought from the Weyerhauser companies or not?

A. I don't know; I cannot say.

Q. Do you have any pondosa pine under that name?

A. I could not say.

Q. You know that you do buy some California white pine?

A. Yes.

Q. Is it bought through brokers or do you buy directly from the western manufacturers?

A. I think he buys direct.

Q. And you order it as California white pine?

A. I could not say.

Q. You don't see the orders or the invoice?

A. I could see them, but I never interest myself in it.

Q. That is not your end of the business?

A. No, sir. I take care of the mill.

Q. How long has California white pine been known in this territory, as far as your recollection goes?

A. To my recollection, about 25 years.

Q. That name has been familiar to the trade for that period?

A. Yes.

Q. Just a question or two about these doors in the Cadle

1059 Tabernacle. Did you state that the material for those doors was furnished by the Capitol Lumber Company?

A. Yes.

Q. Did the Capitol Lumber Company manufacture the doors or merely furnish the material?

A. Yes.

Q. They manufactured the doors?

A. Yes.

Q. Were you with the Capitol Lumber Company at that time?

A. Yes.

Redirect examination by Mr. BURR:

Q. Now when you say that the northern white pine is played out are you referring to the Michigan cork pine?

A. Yes.

Q. Do you happen to know whether there is still virgin white-pine lumber coming from Canada and Minnesota?

A. I hear there is; I never seen any of it.

Q. You don't mean to testify that is played out, do you?

A. Which?

Q. Minnesota and Canadian white pine?

A. I don't know only what I have heard.

Q. It is hearsay, is it?

A. I don't want to commit myself on anything I don't know anything about.

1060 Q. Now is your omitting to use northern white pine partly a question of price—higher price?

A. I think it is; I don't know how the prices range, but I think that would be the objection.

(Witness excused.)

LELAND C. HUEY was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Huey, you are in the lumber business?

A. Yes.

Q. How long have you been in that business?

A. Since 1909.

Q. And you are with the Capitol Lumber Company?

Q. Yes.

Q. Do you carry California white pine?

A. Yes.

Q. How long have you been carrying that product?

A. Since I came in the business.

Q. Have you been carrying that practically exclusively?

A. For its purpose; yes.

Q. What do you mean for its purpose?

A. For use in door sash; certain amount of exterior trim.

Q. Then was it California white pine that you sold for the Cadle Tabernacle?

A. I don't remember the job, that has been many years ago.

1061 Q. Were you handling California white pine during that period?

A. The Cadle Tabernacle was built about when?

Q. The testimony shows 1921.

A. I was not connected with the company at that time; I was not with them from 1919 to 1923 and cannot answer the question for that reason.

Q. Is anyone connected with your company that was with it then?

A. I think Mr. Pence, the previous witness, was connected with the company in 1921.

Q. Anybody else?

A. Who would be in position to know what kind of pine we furnished?

Q. Yes.

A. Mr. Bell was secretary-treasurer of the company and is now in Leesburg; he was secretary-treasurer at the time.

Q. What are his initials?

A. Charles W.

Q. Charles W. Bell, and he is at Leesburg?

A. Leesburg, Indiana.

Q. What is his company at the present time?

A. He is retired; no business connection.

Q. Do you buy Idaho white pine, too?

A. No, sir.

Q. Do you buy California sugar pine?

A. No, sir.

1062 Q. Do you buy pondosa?

A. I understand pondosa was merely a trade name for western white pine; I think we have had some cars which have been invoiced to us as pondosa; I could not answer the question definitely.

Q. Is the bulk of your soft pine bought under the trade name California white pine?

A. Yes.

Q. What part of the belt do you buy it from?

A. Pickering Lumber Company ships a good deal of it; the Chicago Lumber Company, I don't know just where their mills are located.

Q. Who else?

A. We bought Red River; their home office is in San Francisco; I don't know where the mill is. I think these are the principal shippers.

Q. Do you have occasion to supply orders for white pine?

A. Yes.

Q. And you sell your California white pine?

A. Yes; so-called white pine.

Q. How large a proportion of the trade asks for white pine without specifying anything further?

A. Practically all ask for white pine.

Q. Some ask for California white pine?

A. Occasionally.

Q. Do some ask for pondosa?

1063 A. Occasionally, some.

Q. And you supply them California white pine under any of those orders, do you?

A. That is correct.

Q. Have you been ordering Idaho white pine at times?

A. Yes.

Q. What is your reason for preferring California white pine to Idaho?

A. Principally a matter of price. I have no experience with Idaho.

Examiner SHEPPARD. Did I understand you to say you would furnish California white pine or Idaho white pine when the specification calls for white pine?

The WITNESS. We don't furnish Idaho; we don't stock that white pine in this territory.

By Mr. BURR:

Q. You mean to say there is no Idaho white pine sold here?

A. There may, yes; I don't think any great quantity of it, though.

Q. No great quantity?

A. I don't think so; no, sir.

Q. An order for white pine could not refer to pondosa pine under any circumstances—pondosa pine would not be regarded as white pine, do you think?

A. Yes; I think it would. It is my understanding pondosa pine is merely a trade name for California white pine.

1064 Q. And when you say pondosa means California white pine you would say that would be the trade name of California or the trade name pondosa pine?

A. Correct, sir.

Q. Is there any sugar pine in this market?

A. Very little. We used to buy a little, but not any more.

Q. And there is some northern white pine in this market?

A. Not to my knowledge.

Q. If the price of Idaho white pine were the same as California white pine would you stock with it?

A. I certainly would try the wood; yes.

Q. Have you had any experience with it at all?

A. None at all.

Q. Have you ever had to replace some California white pine sash?

A. No, sir; not to my knowledge.

Q. You are sure of that?

A. Not to my knowledge; no, sir.

Q. Definitely sure—you are willing to swear that, are you?

A. Only in this way: We may have furnished new sash on an old building.

Q. Haven't you, as a matter of fact, found it necessary to replace certain white pine sash on one or more occasions?

A. No, sir.

Q. You are definitely sure of that, are you?

A. Yes, sir.

1065 Q. What you refer to as regard your purchases of white pine relate both to retail and millwork which you sell afterwards; is that true?

A. Yes.
Q. How widely do you sell your millwork?
A. Practically all in Marion County, in Indianapolis.
Q. Locally here?
A. Yes.
Q. Do you distinguish in durability where exposed to weather conditions between the old northern white pine and California white pine?
A. I think the northern white pine to be superior; yes.
Q. More durable?
A. Yes.
Q. Does the consumer, in your judgment, distinguish between the California white pine and northern white pine as to durability?
A. No, sir. By that you mean the buying trade here?
Q. Yes.
A. They consider, as I explained, the California white pine is a white pine, and by that they mean soft, durable wood.
Q. They have in mind the old reputation of the original white pine for durability?
A. That is a pretty hard question to answer. I could not say what is in their minds.
Q. The old northern white pine has a high reputation
1066 among the trade for durability in this community?
A. Yes.

Cross-examination by Mr. WHEAT:

Q. Mr. Huey, why have you discontinued carrying sugar pine?
A. We didn't find it worked so well in sash.
Q. You found by experience the California white pine is superior for the manufacture of sash?
A. We have; yes.
Q. What were the specific objections to the sugar pine?
A. It broke in the tenons and is brash and inclined to break and is harder to machine.
Q. I take it that you have not had that difficulty with California white pine?
A. That is right.
Q. For what period has your company been using California white pine in the manufacture of sash?
A. When I came here in 1901 they were using it.
Q. Then they have used California white pine continuously from that time to this?
A. Correct.
Q. So far as you know, you have never been called upon to replace any sash manufactured from California white pine?
A. That is correct.
Q. Can you approximate the volume of your annual sales of sash?

1067 A. No, sir; I could not; we have no division.

Q. Well, you have a relatively large trade in this vicinity, haven't you?

A. That is correct.

Q. Would it be thousands of sash per year?

A. I suppose we furnish possibly somewhere between three and five thousand sash a year.

Q. You say that there is but little northern white pine in the market?

A. That is my understanding; yes.

Q. You don't carry it at all?

A. We don't carry it at all.

Q. Do your customers demand northern white pine as such?

A. No, sir.

Q. Do you have any complaints from customers that you are not able to supply the old northern white pine?

A. No, sir.

Q. I think you stated that the term white pine in this territory means ordinarily California white pine?

A. Because it is largely supplied; yes, sir.

Q. And has the term California white pine been well known to the trade during your period of experience in the lumber industry?

A. Known as California white pine.

Q. How long has it been known as such?

1068 A. Are you speaking now of the retail trade or the lumber people, such as ourselves?

Q. Take the lumber people such as yourselves.

A. I would like to correct that; they have known it as California white pine for years.

Q. And they know it is what the wood is?

A. Yes, sir.

Q. Do you sell your lumber directly to consumers?

A. Yes, sir; the contractor and homeowner.

Q. I think you said ordinarily your orders are for white pine?

A. Yes.

Q. They are not for pine only?

A. White pine. The contractor's specifications will read sash to be of white pine.

Q. And it is understood that California white pine satisfies those specifications?

A. That is correct.

Q. In the purchase of California white pine do you buy it under that name?

A. Yes.

Q. How is it invoiced to you?

A. California white pine.

Q. As California white pine?

A. Or as California pine; we have it invoiced both ways.

1069 Q. The word "California" is in the invoice?

A. That is correct.

Exam. SHEPPARD. Do you buy straight from the manufacturers?
The WITNESS. Yes, sir.
Exam. SHEPPARD. I suppose they don't know how you sell it then?
The WITNESS. No, sir.

By Mr. WHEAT:

Q. I will assume from your testimony, Mr. Huey, that you are not interested in the botanical classification itself but you are selling your products on its merits?
A. We are selling the thing that they want.
Q. Then it is your effort to meet the requirements of your trade as you understand them to be?
A. That is right.
(Witness excused.)

GEORGE W. MORGAN was hereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Morgan, you are an employe of the Weyerhauser Company?
A. Yes, sir.
Q. How long have you been such?
A. Since July 1, 1928.
Q. Selling the products of the company in this territory?
A. Yes, sir.
1070 Q. Have you had occasion to talk to Mr. Huey, the last witness, with regard to the durability of pine sash made from California white pine during a period of years?
A. Yes, sir.
Q. Can you describe that? When it was?
A. Not exactly; I should say between the months of September and November of last fall, 1928.
Q. Where did this conversation take place?
A. In Mr. Huey's office.
Q. More than one conversation or just one?
A. I think we have brought it up a number of times.
Q. Will you say what he said in connection with it?
A. He has told me, as others have, that he would buy Idaho or northern pine if he could get the right price, but the market conditions here would not stand the additional price to be paid for northern and Idaho pine.
Q. Did he say anything with regard to the durability of California white-pine sash in his experience, as to the length of time that they stood up?
A. On one occasion in Mr. Huey's office we were talking about California white pine and the old genuine white pine, and Mr. Huey told me that at one time he replaced just recently that spring some sash that had not been in more than seven or eight years. He did not say for what reason now, but he told me that they had replaced

California white-pine sash and was replacing them again with California white pine.

1071 Q. Did he say anything about why they had to be replaced?

A. Only in our general conversation as to the durability of Idaho and northern white pine, and that brought up the question, giving me the inference, of course, that they had to be replaced.

Mr. WHEAT. I don't think we should have any inference.

By Mr. BURR:

Q. You were talking about the two types of wood as regards their durability, were you?

A. Yes, sir.

Q. And at that time he stated just what?

A. He stated that he was replacing sash, that it had not been in more than seven or eight years.

Q. They were made from what, these sash?

A. He told me California white pine.

Q. Did he happen to say from what territory or where that lumber had been bought from?

A. No, sir.

Cross-examination by Mr. WHEAT:

Q. Mr. Morgan, just when did this particular conversation take place?

A. I would say some time between the months of September and November of last year, in the late or early fall, some time along in the first part of the winter.

Q. Did he specify the particular job upon which it was

1072 necessary to replace the California white-pine sash?

A. No, sir.

Q. He just made that general statement, that he was replacing certain sash?

A. Yes.

(Witness excused.)

(The examiner called Mr. Huey to the stand to ask him if he wanted to make any explanation or any statements in reference to the testimony just given by Mr. Morgan.)

Mr. HUEY. I don't recall the specific conversation between myself and Mr. Morgan. Of course, from time to time, as he calls at my office rather frequently, we have discussed California white pine and the old northern white pine, and he has attempted to sell me Idaho white pine and told me it was the genuine white pine, which I suppose it is, botanically speaking. I don't recall any statement I made that we had replaced any sash of California white pine with California white pine at any time, with Mr. Morgan.

Exam. SHEPPARD. Can you remember in your experience here in your business around the city or around the county any experience of this where you did substitute new sash for old ones?

The WITNESS (Mr. Huey). No, sir; not unless it would be a natural replacement of which we would know nothing about having fur-

nished it before. If you mean that we got out some sash that
1073 had became defective and we were forced to replace it because of its being defective, the answer is no.

Exam. SHEPPARD. I had no reference to the testimony of Mr. Morgan that you said that at that time you were in the act of replacing certain sash.

The WITNESS (Mr. Huey). I don't recall any conversation or making that statement. I am quite sure we have never replaced California white pine or what we call white pine sash because of its having been defective.

Mr. BURR. Replaced it with anything?

Mr. HUEY. Yes; with anything.

Mr. WHEAT. Mr. Huey, you have not conferred with any representative of the respondents prior to taking the witness stand in this case?

Mr. HUEY. I don't even know who they are.

Mr. BURR. You have not conferred with any Government man with regard to this matter?

Mr. HUEY. No, sir; I don't know what I was called for.

E. HOWARD CADLE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your profession, Mr. Cadle?

A. Clergyman.

Q. And you are located here in the city of Indianapolis?

A. Yes. 5207 North Meridian Street.

1074 Q. What is your relation to the Cadle Tabernacle?

A. I was founder and builder of it.

Q. How many years ago?

A. Dedicated in October 1921.

Q. Do you remember how the specifications for the exterior doors read?

Mr. WHEAT. Can't we have the original?

Q. Are the original specifications in existence?

A. I would have to look for them; I think they were mislaid. I can have a copy from the contractor.

Q. Who was the contractor?

A. Nevins, Wischmeier and Morgan, Louisville, Kentucky.

Q. They were the architects on the Cadle Tabernacle job?

A. Yes.

Q. Now do you recall, subject to counsel's objection, do you recall whether white pine was specified for the exterior doors or not?

A. I do.

Q. Was it specified?

A. Yes.

Q. Was that in any qualifying phrase as to the botanical name?

A. I remember the time when we talked about the doors, there were so many exits, nineteen exits, and they thought first they should

be birch and then he said white pine would be all right, and so we specified white pine.

Q. That was after consultation with this architect firm?

1075 A. Yes; in forming the plans and specifications.

Q. When were those doors installed?

A. In August 1921.

Q. August 1921. Do you know where they came from?

A. Yes.

Q. Who did make them?

A. The Capitol Lumber Company.

Q. Do you know what lumber they used?

A. No, sir.

Q. You don't know what variety of white pine or other pine that was?

A. No, sir; I do.. t.

Q. When did those doors receive a coat of paint, do you remember that?

A. They were primed immediately and then painted; the building was was completed in October—October 1st.

Q. Was the paint on before the dedication?

A. Oh, yes.

Q. When was the dedication?

A. October 9, 1921.

Q. Do you remember if the doors laid on the ground a considerable time before installation?

A. They did not; no, sir.

Q. When did the doors start to decay?

A. In two years after they were put up.

Q. When was the second coat of paint put on?

1076 A. Two years.

Q. Did they start to decay before or after the second coat of paint?

A. Before. That is the reason we painted them, and then there was some that looked so bad that Mr. Bell then, who was the man I was dealing with with the Capitol Lumber Company, I called him down there and showed him the doors and he took four or five of them back and reglued them or something, and fixed them up. We made objection as to the doors at that time. Then after I severed my connection with its general management why I don't know what steps they took about it.

(No cross-examination.)

(Witness excused.)

WILBUR SHOOK was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Shook, you are an architect, are you?

A. Yes, sir.

Q. You are with McGuire and Shook?

A. Yes.

Q. How long have you been an architect, Mr. Shook?

A. We started the firm of McGuire & Shook in December 1916. Previous to that I was in offices here in the city from February
1077 1912 until that time here and in Lafayette serving as a draftsman architect and up through independent practice started December 1916 under this firm name.

Q. What are your jobs, mostly residences or building blocks or general practice?

A. We have a general practice; if there is any specialization I should say it would be in commercial work and institutional educational buildings, and work of that character.

Q. Do you have occasion to call for any variety of pine for exterior purposes?

A. Our specifications call for white pine for exterior trim, solid white pine for exterior doors, sash, frames. I think that is about the extent of the exterior work.

Q. Why do you specify white pine for exterior work?

A. In our opinion, we think that white pine is one of the best woods to maintain its permanency under exterior weather and conditions of the elements.

Q. What kind of so-called white pine are you willing to accept as compliance with those specifications.

A. We make them without any qualifying clause, I think. I don't remember of any. We issue specifications as white pine without any geographical qualifications. We depend in that, as we do in a good many of our items or specifications, upon the manufacturers or representatives that handle it, which in this case would be the mill, that they are not putting something in their grade of millwork, such
1078 as sash-and-door work, that is not merchantable and accepted market products.

Q. For that purpose?

A. Yes; for that purpose.

Q. Do you ever inquire into the matter to find out whether substitution is being made?

A. No, sir.

Q. You take the contractor's material if it seems to have the appearance of the material that you desire. Is that true?

A. Yes; that is true.

Q. Have you any convictions as to whether Idaho white pine would be in compliance with white-pine specifications?

A. Why, I don't really know; I should think so, and my general impression is that all northern pine would possibly come under the general specification of white pine. If there were no further qualifying clauses we feel that southern pines is yellow pine and that is about the only distinction geographically that we would place upon it.

Exam. SHEPPARD. You don't make a distinction in western pine?

The WITNESS. I hadn't thought of dividing it that way. When I mentioned northern I was taking it in that way, of course; because I know the eastern pines have always been considered in the old New

England architecture, the eastern pines were the leading woods. That was locally, it was one of the most used woods for their residential work in the old New England colonial homes, known as white pine homes.

1079 By Mr. BURR:

Q. You would consider Idaho white pine in compliance with your specifications?

A. I say that my general impression would be that it would be, but I wouldn't know Idaho white pine from any other kind, I don't believe, without making some investigation.

Q. How about California white pine, do you feel the same way about it?

A. I could not make any answer on that because I wouldn't know.

Q. If you specified white pine and you found upon inquiry that the material was California white pine, if it looked like and had the appearance called for in your specifications, would you regard that as compliance, if you found it was California white pine?

A. If it had the appearance and the apparent physical construction why I should think we would accept it.

Cross-examination by Mr. WHEAT:

Q. I assume you are not familiar with the botanical classification of pine trees?

A. I am not.

Q. And as an architect you are interested primarily in the quality and utility of the lumber rather than a matter of classification or trade name?

A. Yes, sir.

Examiner SHEPPARD. Is California white pine known in
1080 this territory very extensively, Mr. Shook?

The WITNESS. Well, I haven't associated the geographical names with white pine; white pine has been white pine.

Examiner SHEPPARD. You just specify white pine and you get what you might think is white pine?

The WITNESS. Yes. As I say, we depend upon the mill representatives and the mill in making up their millwork.

(Witness excused.)

C. O. ROGERS was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. How long have you been secretary-treasurer of the Adams-Rogers Company, Mr. Rogers?

A. Twenty-two years.

Q. They are here in Indianapolis, are they, in the retail lumber business?

A. No, sir; we are wholesale sash and door jobbers.

Q. How long have you been in that line, all that period that you mentioned?

A. Yes. You mean me personally or the company?
Q. How about the company?
A. They have been here since 1905.
Q. And you have been here since how long?
1081 A. The spring of 1907.
Q. Where do you buy your lumber for the millwork that you do?
A. Referring to white pine?
Q. Yes. You use white pine, do you?
A. Practically none.
Q. Well, what do you use in your millwork?
A. We are primarily jobbers; we make little special millwork here.
Q. And for milling purposes what lumber do you use?
A. A large percentage of it is yellow pine, cypress, and hardwood.
Q. Yellow pine of the South?
A. Yes.
Q. Do you use any so-called soft pines at all?
A. A little.
Q. For what purpose?
A. Exterior work and for doors and sash.
Q. Do you regard it as superior wood for exterior work?
A. Yes.
Q. Where do you get your white pine for that purpose?
A. From the west coast.
Q. Is it California white pine or Idaho white pine?
A. We have both places.
Q. Do you regard this as interchangeable in character and qualities?
A. Yes.
1082 Q. For that purpose?
A. Yes.
Q. Now then, referring to the wholesale lumber trade, what territory do you cover, where are your customers, retailers?
A. Wholesale sash and doors trade almost entirely in the State of Indiana; we have no wholesale lumber trade.
Q. Now where do you get your soft pine from for that purpose?
A. We buy almost entirely the manufactured product.
Q. And do you carry white pine in that line?
A. Doors and sash; yes.
Q. Already manufactured?
A. Yes.
Q. Who manufactures those for you?
A. Our parent house, Carr Rider & Adams Company, Dubuque, Iowa.
Q. That is white pine, is it?
A. Yes.

Q. What variety of white pine is that?

A. They use west coast woods almost exclusively.

Q. Do you happen to know whether it is Idaho white pine, California white pine, Arizona white pine, or New Mexico white pine?

A. I think a majority of it is from California and Idaho and possibly some from the Spokane district.

Q. Do you carry some pondosa?

A. I don't know what it is.

Q. Now do you distinguish in characteristics between Idaho and California white pine for this purpose, with regard to their

1083 value to the trade, the customer?

A. No, sir.

Q. You regard them of about equal value, do you?

A. Yes.

Q. You don't regard Idaho as being a little more durable, or do you?

A. No, sir.

Q. Now, is there a price differential between Idaho and California products that you know of?

A. I think not.

Q. Do you buy anything from the Anderson Frame Manufacturers?

A. No, sir.

Q. Do you handle frames?

A. Yes.

Q. Where do you get your frames?

A. From our own factory in Dubuque.

Q. You make all your own?

A. Our parent house does; yes.

Q. What are you using for the frames?

A. They are white pine throughout.

Q. Are they Idaho or California white pine?

A. I don't know.

Q. You don't know whether they are both or either. Is that true?

A. I think they are using some of all.

1084 Cross-examination by Mr. WHEAT:

Q. You said that you do buy some California white pine for local manufacture?

A. We buy perhaps a car a year or better for special work. We buy considerable quantity out there of manufactured moldings and lineal sash.

Q. When you buy a car of California white pine, do you order it under that name?

A. Yes.

Q. It is invoiced to you as California?

A. Not necessarily as California; we order that as white pine.

Q. Do you buy from the manufacturer or through local jobbers?

A. Manufacturer.

Q. And it is invoiced to you as California white pine, or do you recall specifically?

A. I don't know, except in one case. I have never paid much attention to it until the last car we got in; it came from California and was specifically specified as Pinus ponderosa, I believe.

Q. Was it specified as pondosa pine?

A. I think Pinus ponderosa.

Q. Could you tell us from what mill you purchased it?

A. It came from Susanville, that is the Fruit Growers Supply Company, of San Francisco, from the Susanville operation.

1085 Q. Did the invoice carry the words "California white pine" in addition to Pinus ponderosa?

A. I don't know; I don't remember.

Q. But your attention was directed to the term "Pinus ponderosa"?

A. Yes.

Q. Through what territory do you distribute the sash and doors which you obtain from your parent house of Carr, Rogers & Adams?

A. Almost entirely in this State.

Q. You have been in the trade I think you said for some 22 years?

A. Yes.

Q. Is there quite a large volume of that trade, Mr. Rogers?

A. Well, I don't know what you would call a large volume.

Q. Are there some thousands of sash and doors which you distribute annually throughout the State of Indiana?

A. Yes, sir.

Q. And have you any complaint from your customers as to the quality of the sash and doors which you are supplying?

A. If you refer to the kind of lumber that is contained in them, no. If you refer to machine work or something mechanical that might occasionally slip, of course we do have occasionally; as to the type of lumber, no.

Q. There may be a mechanical flaw in the construction of some particular sash or door?

A. It is possible.

1086 Q. But you have no complaint as far as the quality of lumber is concerned, nor as to its durability?

A. No, sir.

Redirect examination by Mr. BURR:

Q. Your customers are retailers, not builders, are they?

A. Retail lumber dealers almost exclusively.

Q. You don't come in contact with the ultimate builder or contractor, do you?

A. Only indirectly on special houses, jobs.

Q. If there was a complaint made it would be made by the customer, the complaint would be made to the man with whom he dealt rather than to you?

A. It would get to us eventually through that channel.

Re-cross-examination by Mr. WHEAT:

Q. How long have you been familiar with the term "California white pine", Mr. Rogers?

A. I would say since about 1903 or 1904.

Q. Has that term been well known to the lumber trade throughout that period, from 1903 or 1904 to date?

A. I heard of it about that time.

Q. How long has it been pretty well known, would you say?

A. Well, frankly, we don't speak down here of California white pine or Idaho white pine in this territory; we simply say
1087 white pine as distinguished from the southern yellow pine.

Q. This term "white pine" is used locally to distinguish these woods from the southern yellow pine?

A. Entirely so.

Q. And California white pine is normally accepted as being responsive to the term "white pine" as being satisfactory compliance with the term "white pine"?

A. Yes.

Examiner SHEPPARD. You make no distinction, I gather from what you have testified, between so-called "old-time northern or eastern pine" and the western pine that you get?

The WITNESS. We do to this extent: That if we have an order specified as old-fashioned northern white pine, if that is what you want to call it, we don't take it, because we would not have it and don't handle it, except at prohibitive prices.

Examiner SHEPPARD. Therefore you come to the West?

The WITNESS. To the west coast; yes.

By Mr. WHEAT:

Q. I understand if you have an order for northern white pine you don't furnish California pine or Idaho in response to such order?

A. No, sir. We would have it go to the factory; and if they could not furnish the order, we would pass it up.

Mr. BURR. You could get northern white pine if your customer is willing to pay the price?

The WITNESS. Yes.

(Witness excused.)

1088 CHARLES WAGNER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Wagner, you are secretary of the Burnett-Binford Lumber Company?

A. Yes.

Q. They are located in Indianapolis?

A. That is right.
Q. How long have you held that position?
A. That position? Eight years.
Q. Were you with them a longer time than that?
A. Eleven years.
Q. They operate a lumber retail yard here?
A. That is right.
Q. And they have a factory for special work, finished work?
A. That is right.
Q. Where is that factory?
A. This same place.
Q. Now, in your retail yard, referring to that rather than to the factory, what kind of soft pines do you carry?
A. Do you include in soft pines southern yellow pine?
Q. No; I wouldn't include yellow pines of the South, and I would rather you would not include Arkansas soft, if you carry that. I am referring now to the soft pines of the West and North.
1089 A. Well I will have to clarify myself. We carry in stock woods primarily to be used in the mill. Now, sometimes parts of those stocks are sold at retail. We carry no commercial sizes in soft pines; that is, the dimension sizes ordinarily sold at retail without being previously manufactured.
Q. Now, your retail work is incidental to your millwork, is it?
A. Our millwork is also retail. In other words, we operate a retail custom mill in which we make to order items which are sold at retail.
Q. Whatever sales you make that are lumber business, that you have not put through your factory, that is merely incidental, is it?
A. Well, it is a very important part.
Q. Now, referring to that trade, what types of lumber do you sell of soft pine?
A. None.
Q. No soft pine?
A. That is right.
Q. You don't sell to the trade any California white pine?
A. No, sir.
Q. And no Idaho white pine?
A. None.
Q. No California—or rather sugar pine?
A. No, sir.
Q. And no pondosa pine?
A. No, sir.
1090 Q. And no northern pine?
A. That is right.
Q. Now, then, what do you use in your factory in the way of white pine?
A. Just this white pine. We use California white pine some, sugar pine, and that is all.

Q. You use no pondosa pine?

A. Well, we have bought none as such; we consider pondosa and California white pine under the same class, but, so far as our purchases go, it is California white pine.

Q. Do you know whether it is California white pine?

A. Yes.

Q. Where did you get your California white pine?

A. Well, it practically all comes from California; Red River Lumber Company has made considerable sales to us, and we have bought from Charles H. Nelson.

Q. They are wholesalers?

A. No; I think they are manufacturers.

Q. And the Owens Oregon Lumber Company?

A. That is from southern Oregon, and I am not sure.

Q. What types of exterior finish to you make?

A. You mean what woods do we use?

Q. No; what are the articles that you make along the line of exterior finish—doors and frames?

A. A few doors; we make frames in large quantities and
1091 we make cornice material which is used for outside trim.

Q. This trade here regards practically everything outside as cornice, do they?

A. Everything in connection with the roof of the building and immediately attached thereto.

Q. Well, cornice has a more restricted meaning in some localities, hasn't it?

A. I think it has.

Q. What do you use for your exterior trim, such as doors and cornice and frames; do you use California white pine for that?

A. Not to any great extent.

Q. Do you use pine at all for it?

A. Seldom; we use it sometimes for doors.

Q. Exterior doors?

A. Yes.

Q. And that is California white pine?

A. Yes; but that is a very small part of our manufacture.

Q. Your cornice work is what type of lumber?

A. Cypress largely.

Q. Do you distinguish for outside purposes between California white pine and Idaho white pine?

A. Well, since we don't carry Idaho white pine, we don't.

Q. I thought perhaps you might have some definite reason for handling one class rather than the other. Are you solicited for Idaho white pine?

A. Seldom.

1092 Q. Have you any particular reason for not buying Idaho white pine?

A. No; I don't have. I am not familiar with the species.

Q. Are they able to make the same price, do you know?
A. I don't know, because we have not been solicited.
Q. Do you see the buyers yourself? Is that part of your business?
A. Yes.
Q. What is the reputation of white pine, the northern white pine, in this community for durability where exposed to the weather?
A. It is considered quite durable.
Q. Do you regard California white pine as being in the same class?
A. No; I don't.
Q. Does your trade ask for white pine?
A. Yes.
Q. And you furnish them with California white pine, do you?
A. Yes.
Q. And that is for both interior and exterior purposes, where you don't use cypress, I mean?
A. We have practically no call for white pine for exterior work except for doors.
Q. And when they call for them they do ask for white-pine doors, do they?
A. That is right.
1093 Q. And on those occasions you do use the California white pine in compliance with that order. Is that true?
A. That is right.
Q. How long has that been the case with your firm?
A. Well, only I should say for about five years have we had any white pine to any extent in our stock at all.
Q. And prior to that you were using cypress? Or you were using some other wood?
A. Prior to that time we made practically no outside doors at all, and for all other purposes we used cypress.

Cross-examination by Mr. WHEAT:

Q. Mr. Wagner, how long have you been familiar with the name California white pine?
A. Well, for about five years, I should say. Of course, I have heard it for longer than that, but I would say I am only familiar with it for that length of time.
Q. When you order California white pine do you order it under that name?
A. Yes, sir.
Q. And the lumber is invoiced to you as California white pine?
A. I believe it is.
Q. For what purpose do you use sugar pine? I am not sure that that was clear on direct examination.
A. I only mentioned sugar pine a while ago, because at one
1094 time we had a stock of sugar pine. We don't even have it; I don't know whether we have any great amount at present. Sugar pine is used largely for pattern work.

Q. At one time did you use more sugar pine than you now use?

A. Yes, sir.

Q. Why have you changed from sugar pine to California white pine?

A. Largerly on account of the difference in price.

Q. Do you find California white pine satisfactory for your purposes?

A. Yes, sir.

Q. I think you said in answer to questions from counsel for the Commission that your orders come to you under the name "white pine"?

A. Yes.

Q. They ask for white-pine doors or frame or exterior trim?

A. Well, they don't ask for it for exterior trim; that is, we don't furnish it for exterior trim, but what orders we have on which we furnish California white pine, if this answers your question, are filled in answer to requests for white pine; yes.

Q. And why do you feel free to furnish California white pine upon those orders?

A. Most of our California white pine is worked into interior finish, cabinet work, and for that purpose we consider California white pine fully as good as any other white pine.

1095 Q. Is that generally understood in the trade, that an order for white pine is made satisfactory by furnishing California white pine?

A. I cannot answer.

Q. How is it in your own trade?

A. In our own trade it is satisfactory.

Q. Have you any complaints from your customers about it?

A. We have had none.

Redirect examination by Mr. BURR:

Q. I think you said for interior work you regard it just as good as genuine white pine or as the northern white pine?

A. Yes.

Q. Do you regard it as being as good for exterior purposes?

A. No; I don't.

Q. Now, as regards the price of sugar pine, have you found that to be higher than California white pine in price?

A. Yes.

Q. When Idaho white pine is ordered do you find that to be higher in price than California white pine?

A. I am not familiar with the price of Idaho white pine.

(Witness excused.)

C. L. SCHAAB was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

1096 Q. You are with the Allen A. Wilkinson Lumber Company, Mr. Schaab?

A. Yes, sir.

Q. They are located where?

A. Our general offices are at the corner of Pine and Michigan Streets, Indianapolis.

Q. You are in the retail and wholesale lumber business?

A. Yes.

Q. And you run a factory, do you?

A. No.

Q. A small mill?

A. Small mill.

Q. That is for making finished work, is it?

A. Oh, odd stock, occasionally an odd door; maybe an odd garage door.

Q. Do you make cornice work and things of that kind?

A. Well, possibly occasionally; I don't think we do much, though.

Q. Now, what variety of soft pine do you carry in your trade?

A. Well, we don't carry any, I don't think, except perhaps at one or two places.

Q. You don't carry soft pine at all to speak of?

A. No, sir. I think we have two yards, maybe, where we have a little.

Q. Do you have any calls for white pine?

A. No.

1097 Q. Do you have any calls for California white pine?

A. No, sir.

Q. What is your business, cypress?

A. Well, no; it is usually yellow pine.

Q. Southern yellow pine?

A. Yes.

Q. Do you carry any pondosa?

A. Yes; I think we have some at one yard.

Q. Do you dispose of that as white pine on orders for white pine?

A. I could not tell you. It is a retail yard, and I assume he does, though I don't know; it is a retail yard, and it is 125 miles from here, and I don't know what he sells it for, but I assume he sells it for white pine.

Mr. WHEAT. You don't know?

The WITNESS. No; I don't know.

Mr. WHEAT. I think any assumption ought to go out of the record. I move to strike out the witness' assumption.

Exam. SHEPPARD. It is so ordered. Go on.

By Mr. BURR:

Q. Who does the buying for your concern?

A. I do.

Q. Do you buy for both yards?
A. We have 32 yards.
Q. Do you buy for the whole property?
A. Yes.
1098 Q. And you say you don't buy any white pine to speak of for any of your yards?
A. We do not. You didn't ask me if we buy it for any of them. We buy it for two yards.
Q. Where are they located?
A. I don't really know the destination, but I think we have one yard that bought this year from California; I don't remember whether pondosa or California, but I think it came from California; that is just common b'ard no. 2.
Q. What was it that lead you to buy out of your usual custom?
A. I couldn't tell you that.
Q. Was it an order for white pine?
A. I couldn't tell you that; I don't know.
(No cross-examination.)
(Witness excused.)

EDWARD JAMES was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are with Burns & James, are you?
A. Yes.
Q. You are a partner of that firm?
A. Yes.
Q. You are located here in the city of Indianapolis?
A. Yes.
1099 Q. And your business is what?
A. Architect.
Q. How long have you been in the architect business?
A. Do you mean in practice?
Q. Yes.
A. Three years.
Q. And how long has that firm been in existence as a firm?
A. Burns & James for three years; the firm before that for fifteen years. Mr. James has had the firm for eighteen years. I have been associated with the firm for three years.
Q. Do you have occasion to specify white pine for exterior purposes?
A. We use white pine very seldom for exterior purposes.
Q. Well, now, do you mean only once or so a year, or how often?
A. Only when the owner specifically asks for white pine.
Q. When the owner asks for white pine do you then specify white pine in your requirements?
A. Yes.
Q. And what means have you for checking up as to what species of white pine you receive?

A. Only the integrity of the dealer with which we deal.

Q. In your specifications do you have it read white pine or northern white pine or some particular variety of white pine?

A. We do not; only white pine.

Q. If you specify white pine in accordance with the request
1100 of your customer and you learn that it was California white pine that had been furnished, would you regard that as compliance with your specifications?

A. Yes.

Q. If it is Idaho white pine, would you regard it as compliance?

A. Yes.

Q. And how about it if it were sugar pine?

A. If sugar pine is considered white pine, I would consider that as complying. I have never specified anything calling for sugar pine.

Q. You wouldn't know without checking up whether sugar pine was compliance?

A. I would not.

Q. How about pondosa pine? Do you regard that as compliance?

A. I have never used pondosa pine, so I would not know that, either.

Q. If you were told it was pondosa pine, would you make further investigation?

A. I would.

Cross-examination by Mr. WHEAT:

Q. You are not familiar with the botanical classification of pine trees?

A. No; I am not. I am a designer and not a specification writer.

1101 Q. And I assume that you are interested primarily in the quality and utility of the lumber rather than in the botanical classification of trees?

A. Exactly.

(Witness excused.)

Exam. SHEPPARD. We will take an adjournment, to convene in the city of Chicago in the office of the Federal Trade Commission, Transportation Building, room 2243, on the morning of October 18th, at 10:00 o'clock.

1102 Before the Federal Trade Commission

Docket Nos. 1620–1669

In the matter of White Pine cases

CHICAGO, *October 18th, 1929.*

Met pursuant to notice, 10:00 o'clock a.m.

Before William W. Sheppard, examiner.

Appearances:

Eugene W. Burr (Washington, D.C.) for the Federal Trade Commission.

Allan O. Matthew and Carl I. Wheat, attorneys for the respondents.

1103 PROCEEDINGS

Examiner SHEPPARD. You may proceed, gentlemen.

JOHN MOELING was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Moeling, you are a retailer, are you, in the lumber business here in the city of Chicago?

A. Yes, sir.

Q. How long have you been in that line of business?

A. Since 1924.

Q. And you are with the Sterling Lumber & Supply Company, are you?

A. Yes, sir.

Q. Where are they located?

A. 11900 South Halsted Street, city of Chicago.

Q. What is your position with that firm?

A. Vice president; in charge of purchases also.

Q. What types of lumber for retail purposes do you deal in?

A. Practically every type that is manufactured in this country.

Q. Well, what types of pine?

A. Yellow pine, white pine, pondosa pine, California white,
1104 sugar pine, so-called.

Q. Now, in the sales of your lumber for retail purposes, do you supply orders calling for white pine on occasion, Mr. Moeling?

A. Yes, sir.

Q. And do you carry Idaho white pine?

A. Yes, sir.

Q. You supply orders on occasion with Idaho white pine, do you?

A. Yes, sir.

Q. Calling for white pine?

A. Yes, sir.

Q. Do you carry the northern white pine?

A. Yes, sir.

Q. Where is that from, Minnesota or Canada or what part?

A. Well, it is grown in the central lake regions of Minnesota, Wisconsin, and the southern end of Canada. I think those are the three principal parts.

Q. Now, when you get orders merely calling for white pine you feel free, do you, to supply those orders from northern white pine on occasion?

A. What was that again?

Mr. BURR. Read the question.

(Question read.)

The WITNESS. Yes; I do.

1105 By Mr. BURR:

Q. Now, do you supply orders for white pine with California white pine also?

A. Yes, sir.

Q. How long have you been handling California white pine?

A. I daresay it came in this market about nine years ago. I have only been connected with the company since 1924, and they were handling it then.

Q. Do you handle the pondosa pine, so called?

A. Yes, sir.

Q. Now, when you get orders for white pine do you feel free to supply those orders with pondosa pine?

A. Unless it is specified for northern white pine.

Q. You would, then, unless it was specified northern white pine, feel free to supply either Idaho white pine, California white pine, or pondosa?

A. Yes, sir.

Q. You would not supply the yellow pine that you say you buy?

A. No, sir.

Q. What is that? Southern yellow pine?

A. Southern yellow pine; yes.

Q. Which variety of white pine do you regard as most durable where it is exposed to the weather?

A. The northern white pine.

1106 Q. Well, which would you regard as next most durable?

A. The Idaho white pine.

Q. You think that is more durable than California white pine?

A. Oh, undoubtedly.

Q. What makes you think so?

Mr. MATTHEW. Don't you think you had better qualify him to answer that question?

Examiner SHEPPARD. Let him answer that question first.

A. (By the witness.) The western pines are used for cornice lumber here, and we have had numerous cases where they have rotted out under the paint and siding in cornice lumber.

By Mr. BURR:

Q. That was what variety of lumber that rotted out?

A. Pondosa and California white pine.

Q. Do you recognize any distinction as regards durability between pondosa and California white?

A. No, sir. They are practically the same.

Q. These four varieties of lumber that you have described—the northern white, the Idaho white, the pondosa, and the California

white—have they a reputation for durability in this section among retailers in the order in which you have named them?

A. I would believe so; yes.

1107 Q. Now, how about sugar pine? Do you sell that on orders for white pine where there is no specification as to what kind of white pine they desire?

A. Yes, sir.

Q. Now, how would you rate sugar pine for durability, if you have had experience to qualify you to answer that question?

A. I had this discussion up about a year ago——

Mr. MATTHEW. Is the witness going to give hearsay testimony?

Mr. BURR. I do not know what he is going to say.

The WITNESS. With the Forest Products Laboratory, Madison, Wisconsin.

Mr. MATTHEW. Of course, that is hearsay.

By Mr. BURR:

Q. And you were going to testify to what they told you, were you?

A. I was going to say——

Q. Well, I am afraid that would come under the hearsay rule, sir, and we will ask you to omit that.

Examiner SHEPPARD. Read the question to him.

(Question read.)

A. (By the witness.) Sugar pine, as far as durability for outside use, would rate with the pondosa and California white pine.

1108 By Mr. BURR:

Q. You do not think it is equal to the Idaho white for durability.

A. For durability outside? California white?

Q. I mean with Idaho white.

A. No; I would think not.

Q. How long have you had experience—that is, your firm—with Idaho white?

A. For the past three years.

Q. Three years?

A. Yes.

Q. How long has it been selling in this community, so far as you know?

A. Practically three years now. It formerly had been much higher priced, and when a large mill went on a production basis they had to sell out, and it came on this market.

Q. Mr. Moeling, you conduct millwork operations here, do you?

A. Yes, sir.

Q. And you make outside finish, do you?

A. Mainly in the millwork itself, interior finish.

Q. Do you make any outside finish at all?

A. Yes; we do.

Q. Do you make exterior doors?

A. Yes, sir.

1109 Q. Do you make exterior window frames?

A. Yes, sir.

Q. Where does your competition along that line come from?

A. The furnishing of millwork competition?

Q. The millwork exterior that I have just asked you about.

A. Principally in the city of Chicago.

Q. Do you have Mississippi Valley competition along those lines?

A. In some few items where the nonunion manufactured materials are liable to come into the city. Of course, the Mississippi Valley mills are nonunion, and on smaller jobs they do not come into the city, with the exception of manufacturing storm sash; that is, stock items.

Q. Now, in making your exterior finish, you order what varieties of pine lumber?

A. Principally pondosa pine and some California white.

Q. Do you use any Idaho white for the manufacture of exterior doors and sash?

A. Very little, because Idaho white pine is a small, many knotted type of log that does not furnish good shop lumber when used in cutting up.

Q. Now, do you use northern white pine for exterior finish?

A. Yes; we do.

Q. When customers come and ask for exterior finish of this pine, they ask for white pine, do they, occasionally?

1110 A. Yes, sir.

Q. And you furnish either the northern white pine or the California white pine, or which of them?

A. If they just say white pine, we furnish pondosa pine.

Q. Yes.

A. And if it is specified the true northern white pine, of course we give the true northern white pine.

Q. Now, under what circumstances do you furnish California white pine?

A. Under a general stock plan just calling for white-pine sash and frames and doors.

Mr. BURR. That is all.

Examiner SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Moeling, as I understand it, you have been in this lumber business for five years?

A. Directly; yes.

Q. Your experience has been entirely in this city?

A. No; I worked for four months in the California white and sugar pine region for the McCloud River Lumber Company.

Q. But apart from that, that has been your experience in the lumber industry?

A. Well, I have always lived in a mill town in the South
1111 and knew southern yellow pine, and have been in contact practically all the time with the lumber industry.

Q. And how many years were you in contact with the southern lumber industry?

A. Approximately—well, I don't know. Since I was born; that was seventeen years before I came up here.

Q. I take it, then, you are quite familiar with the southern yellow-pine lumber?

A. Yes, sir.

Q. Of the different species? Your answer is yes?

A. Yes.

Q. And for the past five years approximately you have been in the Chicago market?

A. Yes, sir.

Q. You carry southern yellow pine in addition to the pine lumber concerning which questions have been asked you upon direct examination?

A. Yes, sir.

Q. Do you ever furnish any southern yellow-pine lumber upon orders for white pine?

A. No, sir.

Q. Why not?

A. Because it is southern yellow pine.

Q. And its properties and uses are quite different from the properties and uses of the white pines, generally speaking?

1112 A. Generally speaking, yes.

Q. The southern yellow pine is largely a structural timber, is it not?

A. I would say yes.

Q. It has greater strength and hardness than the white pines?

A. Greater strength, yes, and hardness than the white pines.

Q. You have no difficulty in distinguishing between southern yellow pine lumber on the one hand and the white pine lumbers on the other hand?

A. It depends on the grades.

Q. Ordinarily the distinction is easily made?

A. Ordinarily the distinction is.

Q. You have stated you use pondosa pine very largely in your millwork?

A. Yes, sir.

Q. And I think you stated in greater measure than California white pine; that is, to a greater extent?

A. It just so happens; yes.

Q. There is no particular reason for using pondosa pine in larger volume than California white pine in this particular work?

A. There is no reason; no particular reason except a buying reason.

Q. That is, you can purchase the pondosa pine at a some-
1113 what lower price than California white pine?

A. Well, this particular mill manufactures more items and it is possible to get a greater mixed car, so that we would be able to buy smaller quantities from this particular mill. It just so happens. With somebody else it might be a different proposition.

Q. So this lumber is purchased, then, in mixed carloads, very largely?

A. By mixed carloads I mean mixed grades of the same kind of lumber.

Q. Of pondosa pine?

A. Of pondosa pine; yes, sir.

Q. It happens to satisfy your purposes better than an ordinary carload shipment of California white pine?

A. Yes.

Q. I understood you to say that you do not use the Idaho white pine to any extent in your millwork because it is not well suited to your purposes; is that true?

A. It does not make a grade of shop lumber such as we use to interchange with the so-called northern cork white pine; it does not make as good a job for cutting up as ash and grained lumber.

Q. Then it is for that reason that you do not use the Idaho white pine to any extent for shop purposes?

A. Yes.

1114 Q. It is not adapted to your requirements?

A. Yes; that is it, for true white pine.

Q. You do use some northern white pine in your shop work?

A. Yes.

Q. Does your use of northern white pine in shop work preponderate over the use of the pondosa pine?

A. No; it is only for special jobs of a schoolhouse type that we have had a good many of. They specify the true northern cork white pine.

Q. And when your specifications call for northern white pine you do supply the northern white pine?

A. The northern white pine; yes.

Q. And when you are asked to furnish white pine you feel free to furnish either northern white or California white or pondosa pine?

A. Yes.

Q. I assume, Mr. Moeling, that you do not purchase and use the pondosa pine merely because of its name, but that you obtain it and use it because of the uses to which it may be put in your business?

A. Yes.

Q. That is, the name is immaterial to you?

A. Yes.

Q. I assume in turn that if the present trade name of Cali-
1115 fornia white pine were replaced by such a name, for example, as California pondosa pine, it would make no difference in your present practice as to the purchase and use of the pine lumber?

Mr. BURR. Just a moment. I would like to object to that. It is hypothetical, and it is not the province of this witness to predict as to what the situation would be under a change of nomenclature.

Mr. MATTHEW. I think the examiner ruled upon this very question a number of times and allowed it in this form. I recall distinctly that counsel objected to a blanket question as to a change to any name, but when I made it specific in other instances he did not object, or in any event the examiner ruled that it was proper. I think it goes right to the issue in this case.

Mr. BURR. Read the question.

(Question read.)

Mr. BURR. I think the examiner ruled upon that very point. Here he substitutes the word "California pondosa pine", and the Commission has no authority, nor has it any purpose, to specifically order the use of any particular name.

Mr. MATTHEW. The question does not assume it.

Mr. BURR. Just a moment, now. And it seems to me that there is an assumption there which is immaterial to this issue. Even the Commission is not going to suggest what name should be used.

1116 Mr. MATTHEW. Counsel entirely misconceives the purpose of that question. The purpose of the question, as must be perfectly obvious, is to ascertain whether the word "white" in our trade name carries this lumber into the trade or not.

Mr. BURR. That is a conclusion for the Commission to draw rather than the witness.

Mr. MATTHEW. No; I am asking what the witness would do in his business. The Commission can draw any inference that it desires.

Mr. BURR. It is hypothetical. How does he know what the market conditions would be under a changed name?

Examiner SHEPPARD. I think, gentlemen, it is immaterial. This witness, of course, has no idea, and the fact is it is a question that is entirely up to the Commission. They may not order any change, or they may, I don't know; that is something that the future will have to reveal. But Mr. Burr's point is this, that it is immaterial what this witness thinks about it, and I think so, too. I do not think an inquiry of that kind is pertinent to the issue whatsoever. I think I will bar that hereafter, because it is not relevant or material to the issue involved here, in my judgment, at all.

1117 Mr. MATTHEW. Mr. Examiner, if I were asking a question which called for a conclusion as to what might happen in the general trade in a hypothetical set of circumstances, possibly the question might be objectionable, but when I am asking as to this witness' own field of action and making my question as specific as I did, it seems to me that it is entirely pertinent and relevant, because finally the Commission will want to determine whether or not there is truth in the blanket charge brought against us that our lumber is masquerading under a false name and in that way is replacing the so-called genuine white pine.

Mr. BURR. It is hypothetical for the reason that this witness cannot tell what a change in market conditions might do.

Mr. MATTHEW. We are not asking about changes in market conditions.

Mr. BURR. I know, but you are asking him to presuppose what he would do, without any knowledge on his part of what the market conditions would be under a change in trade name, or what the customs would be?

Examiner SHEPPARD. As I stated a while ago, I do not think that inquiries of that kind are at all pertinent to the issue involved here. I think I will bar them hereafter.

Mr. MATTHEW. Will the examiner allow an exception in the record, please?

Examiner SHEPPARD. Yes; surely.

1118 By Mr. MATTHEW:

Q. Mr. Moeling, I take it that you purchase lumber because of its quality and the uses to which you believe it to be adapted?

A. Yes, sir.

Q. You are not interested in the botanical classification of trees, I assume, as far as the purchase of lumber is concerned?

A. Only when it is so specified on the contract.

Q. But as a practical lumberman your concern is with your customer's needs and with the quality of the lumber?

A. Yes.

Q. And it is for that reason that you feel free to furnish pondosa pine in certain cases upon orders for white pine?

A. Yes, sir.

Q. You believe that you are satisfying your customer's requirements in those particular cases?

A. Yes.

Q. And it is for the same reason that you, to a large extent, use pondosa pine in your millwork, is that true?

A. Yes.

Q. I take it that the term "white pine" in this territory has come to mean something more than northern white pine, am I right in that, from your testimony?

A. Yes.

1119 Q. The term "white pine", then, may include northern white pine, Idaho white pine, California white pine, and pondosa pine?

A. Yes.

Q. And your purpose is to ascertain the desires of your customer in each instance?

A. Yes.

Q. Are we to gather from your testimony that the Idaho white pine is hardly a competitor with pondosa pine and California white pine in the shop grades?

A. In the shop grades that is correct; yes.

Examiner SHEPPARD. It is or is not?

The WITNESS. It is not a competitor; they do not make shop grades.
Examiner SHEPPARD. That is what you understood, Mr. Matthew?
Mr. MATTHEW. That is what I understood.

By Mr. MATTHEW:

Q. Your experience personally with Idaho white pine is confined approximately to the past three years?

A. The past three years; yes.

Q. Then you have not been in a position, as far as personal experience is concerned, to satisfy yourself as to the relative durability of Idaho white pine, have you, for exterior finish, for example?

1120 A. Of course, it is only three years that I have actual definite knowledge of. I have tried to ascertain from outside sources.

Q. Yes; but I am asking you as to your personal experience. It is confined to three years as far as Idaho white pine is concerned?

A. I will answer that so far it has proven very satisfactory, as far as three years can go. That is all the further that I could give an answer.

Q. Yes. Have you furnished much Idaho white pine for exterior use during that period?

A. Yes.

Q. Have you furnished as much Idaho white pine for exterior use during that three-year period as the amount of pondosa and California white pine?

A. Yes, sir.

Q. Is the use of Idaho white pine as far as your interest is concerned, greater in volume than the use of pondosa and California white pine?

A. No; it is less.

Q. Is it less with respect to use for exterior trim?

A. No; it is not.

Q. You use more Idaho white pine for exterior trim than pondosa and California white pine?

A. Yes. I would say our condition would not be general,

1121 though, because we have a particular trade out there calling for a different kind of wood. I could say that the pondosa and California were more generally used throughout the city.

Q. You expressed the opinion that sugar pine would rate with California white pine and pondosa pine as far as the element of durability is concerned?

A. As far as durability is concerned; yes.

Q. Is that based upon any personal experience?

A. Not personal experience, just what I have studied.

Q. It just reflects the information which you have tried to obtain in order to qualify you adequately in the lumber trade, I assume?

A. Exactly.

Q. Do you carry any great amount of sugar pine?

A. Not a great deal; no.

Q. Are your sales of sugar pine increasing or decreasing?

A. They are remaining about stationary.

Q. Are your sales of Idaho white pine increasing or decreasing?

A. It is hard to say that, because right now we have a very slow condition in the lumber industry here, and every wood is decreasing at present. I would say relatively they are about the same.

Q. Well, in making your last answer you had reference to all of these pine lumbers?

1122 Examiner SHEPPARD. Decreasing, you say?

The WITNESS. Decreasing. Our volume is decreasing; has been decreasing for the past two years.

By Mr. MATTHEW:

Q. In other words, you have a slow lumber market?

A. A slow lumber market in Chicago.

Q. And you are not able to state whether the pondosa and California white pine sales are relatively greater than they were some three or four years?

A. I would say they were the same.

Q. In other words, the course of that market is about the same as the market for sugar pine?

A. For all other pine.

Q. Then there is no difference in the relative sales of these several varieties of lumber?

A. No.

Q. Do you purchase any of your lumber from the Weierhaeuser interests?

A. Yes.

Q. Do you obtain most of your white pine from the Weierhaeuser interests?

A. I would say the great portion, yes; from Weierhaeuser.

Q. And do you purchase pondosa from Weierhaeuser?

A. Yes, sir.

Q. The greater portion of your purchases?

1123 A. A good proportion, yes.

Q. I think you stated that you purchase relatively small quantities of the California white pine under that name?

A. Yes; relatively small portions.

Q. When you receive an order for white pine without any qualifying term, how do you determine whether to furnish northern white or Idaho white; that is, how would you make your choice between those two lumbers?

A. I would say that there is no choice. It is only a matter of stock conditions between Idaho and northern white pine.

Q. And again, if you receive an order for white pine without any qualifying term, how do you make your choice between northern white, Idaho white, California white, and pondosa?

A. Well, my studies have been the result of correspondence—my knowledge has been the study of correspondence I have had with authorities. As I understand, there are two definite classes of lumbers——

Q. Pardon me just a moment. I think you do not understand my question. I am asking as to how you determine what particular lumber you will supply upon an order for white pine?

A. I get in touch with the customer.

Q. And after getting in touch with the customer you undertake to furnish him what you understand he desires and what
1124 you believe will best be adapted to his needs?

A. Yes.

Q. You were questioned as to durability, and may I ask you whether you would distinguish between the durability of sapwood and heartwood?

A. In respect to the pines, or in respect to the general classes?

Q. No; with respect to the pines, and particularly these several pine lumbers as to which we have questioned you. In other words, we will take northern white, Idaho white, or any other of these pines. Is the sapwood or the heartwood the more durable of the two?

A. The heartwood is the more durable than sapwood of all the pines.

Q. That is true of all of these pines, is it not?

A. Yes.

Q. You said that it has been ascertained in at least some instances that pondosa pine or California white pine which you have supplied for exterior use has failed, has decayed for some reason?

A. It has; yes.

Q. Do you know whether in those instances the material which decayed was sapwood or heartwood?

A. Mainly sapwood.

Q. Do you know of any case where the sapwood of the
1125 northern white pine has been subjected to similar tests?

A. The test was in the use of the lumber. We have not had a come-back on northern white pine in any case.

Q. Do you know of any case where the sapwood of northern white pine has been used in similar fashion?

A. Yes; we have used it ourselves.

Q. In your millwork?

A. In our millwork; yes.

Q. For interior use or exterior use?

A. Exterior use.

Q. The sapwood?

A. The sapwood; yes.

Q. Has that been protected by paint?

A. Protected by paint; yes.

Q. I assume that ordinarily you would recommend that sapwood be thoroughly protected, that paint, that is, be used for exterior purposes?

A. Oh, entirely.

Q. Now, in the cases where you said the pondosa or California white pine failed when exposed to exterior conditions, can you let me know whether it was lumber which you purchased as pondosa pine or which you purchased as California white pine, or have you any such record?

A. Well, I have cases of both failing. The item was cut sash stock——

1126 Q. Can you give us the specific instance?

Mr. BURR. He did not quite finish his answer.

Mr. MATTHEW. Pardon me, I thought you had finished.

A. (By the witness.) And was used in sash on a building, and the general practice is to have them primed as soon as they are on the building. In this instance of the sapwood failing, it was failing under the paint and where the paint apparently was in good condition, as far as we were able to determine. It showed that the wood had failed under the paint.

By Mr. MATTHEW:

Q. Now, what was this instance specifically, if you please? Can you identify the particular job?

A. I could with reference; yes. I could not right here. I was out on the job myself, and the sash has since been replaced.

Q. With what did you replace it?

A. With the same sash material.

Q. Pondosa pine?

A. In this instance it was California white pine.

Q. Why did you replace it with California white pine rather than with northern pine?

A. It is in general use, and our specifications for that sort of job generally call for white pine; cheap bungalow construc-

1127 tion, and that was the material asked for on the job by the builder and owner.

Q. That is, you supplied this lumber to a builder?

A. Yes, sir.

Q. And was it the builder who asked you to have this sash replaced?

A. It was the builder and owner; yes.

Q. Did the builder and owner understand that you were replacing it with California white pine?

A. They understood that we were replacing it with the same material that had gone in there beforehand.

Q. Did they know what material was furnished initially?

A. The owner did not know, and the contractor knew that it was the same material that he had generally received on all his jobs of that similar nature.

Examiner SHEPPARD. Had white pine been specified in that case?

The WITNESS. White pine; yes.

Examiner SHEPPARD. Without a qualification?

The WITNESS. Without a qualification.

Examiner SHEPPARD. And you delivered California white pine?
The WITNESS. We delivered California white pine.
Examiner SHEPPARD. All right.

By Mr. MATTHEW:

Q. The builder understood exactly what he was getting?

1128 A. The builder understood what he was getting; yes.

Q. Now, can you identify that job specifically—that is, give me the location of the residence and the date of construction, approximately?

A. I think I could if I could check up with the bookkeeper on this particular job.

Q. You cannot do it right now, but you could by going to the office?

A. I could by going to the office; yes.

Q. Now, this was cut sash stock; by that you mean that the sash had not been completely constructed?

A. In buying cut sash stock this lumber is made from a low-grade shop grade of lumber and cut at the mill, and to the sizes that will make sash, so that in shipping lumber it is shipped ready to use without the knots all cut, and bundled to the desired shape, ready for graining.

Q. Then you did not manufacture the complete sash yourself?

A. Well, they cut the wood to the rough size, the mill does. We receive that wood and machine it and assemble it and deliver it to the job as a sash unpainted and unglazed.

Q. Now, how many of these sash frames failed in the manner that you have described?

A. Not a great many. Over the past four years I would say that we had knowledge of six or seven cases. Of course, there may

1129 be some that we have no knowledge of, but I daresay we would hear of a great percentage of them.

Q. By six or seven cases you mean six or seven individual sash?

A. Individual sash; yes.

Q. How many sash were there in this particular job concerning which you have testified?

A. This job was a five- or six-room bungalow; I think a six-room bungalow; and there would be an average of between two and three windows to the room, with two sash to the window. That would be between 34 and 36 sash—that is, the whole sash in the building.

Q. Did you replace all the sash in the building?

A. No; we replaced simply the ones that had been defective.

Q. How many were there?

A. To tell you the truth, I could not remember exactly in this individual case.

Q. You do not remember whether there were two or three or more?

A. It was either one or two on this particular building.

Q. Now, you say that as far as your knowledge goes there are only six or seven cases where you have had complaints of the failure

of material manufactured by you and supplied from California white or pondosa pine?

A. Yes.

Q. Can you approximate the volume of your business during
1130 that same period—that is, can you tell me whether you furnished thousands of sash or hundreds of sash during that period?

Examiner SHEPPARD. I believe you said a four-year period a while ago?

The WITNESS. Yes; a four-year period.

Examiner SHEPPARD. All right, and give us an answer to Mr. Matthew's question as to the volume of sash.

A. (By the witness.) The volume of sash would run in thousands.

By Mr. MATTHEW:

Q. Thousands per annum?

A. Yes, sir.

Q. Now, can you give us any other specific instance where there has been a failure upon which we might check up in some way?

A. I could after conferring with the mill manager or the people who have direct charge of them.

Q. You have none specifically in mind right now?

A. None specifically in mind.

Q. I would gather from your testimony that these failures have been quite exceptional?

A. Quite exceptional; yes.

Q. And they have not been sufficient to lead you to discontinue the use of California white pine and pondosa pine for these purposes?

1131 A. No.

Q. Could any of these failures have been due in part to the circumstance that the lumber might not have been properly dried?

A. They could have been due to a great number of circumstances. Of course, after you get to a job and some failure has occurred, why, you cannot definitely know all that has transpired between the time you delivered the sash to the building and the time you get there. If it had possibly been wet before a priming coat was put on, why, that might lead to rot underneath, or if in some way moisture could get in by the sash standing there, of course that would affect it, too.

Q. Now, it is not an uncommon thing for the construction to be defective in that very respect, is it, that the sash is not properly protected against moisture getting in, with the result that decay may commence?

A. Yes. It does not happen every day, of course, but I mean you hear frequently of cases where it does happen.

Examiner SHEPPARD. You mean in other woods?

The WITNESS. In other woods, too; yes.

By Mr. MATTHEW:

Q. Do you find the California white pine and pondosa pine quite suitable for interior use?

1132 A. Quite suitable; yes.

Q. Do you use it quite extensively for that purpose?

A. Not quite extensively, because that particular type of finish is suitable for an enamel finish, and the woods particularly used in this city are birch, and oak with gum. Now, where an enamel job is used, why, we do use the pondosa or the California pine.

Q. Do you find it satisfactory for that purpose?

A. We find it satisfactory.

Q. Is it as satisfactory as northern white or Idaho white for that particular purpose?

A. The wood is not quite as soft or as easily worked, but for all general purposes it is as satisfactory. The northern white and Idaho white are easier worked and cut than pondosa or California white.

Q. After the work has been done in your mill and the material has been actually installed for interior purposes, do you find it as satisfactory, as far as your experience goes——

A. Yes.

Q. As the northern white or Idaho white pine?

A. Yes.

Mr. BURR. That was for interior, wasn't it?

Mr. MATTHEW. Interior.

By Mr. MATTHEW:

Q. Does it take a finish as well as the Idaho white and

1133 northern white?

A. Practically; yes.

Q. Do you use southern yellow pine to any extent for interior finish?

A. Yes; we do.

Q. And do you use it to any extent for exterior finish?

Mr. BURR. If the examiner please, I would like to know the purpose of this southern proposition. I have a great many witnesses, and I believe that is immaterial. I do not want to be captious, however.

Examiner SHEPPARD. I have been letting that go in, Mr. Burr, because it is the respondent's purpose to show the difference, the comparison between these pines and the southern pines, on the one hand, and the other northern pines on the other hand.

Mr. BURR. I am agreeable.

Examiner SHEPPARD. Go on; answer the question. Read the question.

(Question read.)

A. (By the witness.) Yes; we do.

By Mr. MATTHEW:

Q. Do you use the southern yellow pines and the white pines interchangeably for exterior and interior purposes?

A. Oh, no.

1134 Q. Now, will you distinguish between the uses of the two groups? Now, for the moment I am putting the southern yellow pine in one group, and I am including pondosa and California white, northern white, and Idaho white in another group.

A. Between the two groups?

Q. Yes.

A. Yellow pine is the stronger wood, that is, where strength and heavy use is necessary. The white pine is easily worked and will stand the weather better and take a paint or enamel finish better than the yellow pine. I would say the heavy against the finished product.

Q. Then may I ask you this question, whether the California white pine and the pondosa pine in general are employed for purposes similar to those in which northern white and Idaho white pine are employed?

A. They are employed for similar purposes; yes.

Q. And in general they are not used for the same purposes for which the southern yellow pines are used?

A. In general, no.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Do you regard it as necessary to paint California white
1135. pine for exterior purposes?

A. Yes, sir.

Q. Do you regard it as equally necessary to paint northern white pine where it is used outside?

A. That is, for preservation?

Q. Yes.

A. For preservation, yes.

Q. Do you think that northern white pine stands up better without paint than the California white pine would?

A. Undoubtedly.

Q. Where do you get your California white pine from?

A. Do you want me to name the company or the section of the State?

Q. Yes, if you are agreeable.

A. From the Longbell Lumber Company, I think, and the McCloud River Company, at McCloud, California.

Q. How long has that been the case?

A. For four years.

Q. Now, where a customer, as you testified on your direct examination, asks for white pine, there is a certain percentage of cases where

you get in touch with him to find out which variety of white pine he prefers, is there?

A. Yes, sir.

Q. Now, you do not always do that, do you?

A. No.

1136 Q. How large a percentage would you say that you have gotten in touch with the customer afterwards to query him as to whether he preferred northern white pine or California white pine or Idaho white pine?

A. Somewhere between two and five percent.

Q. Now, you testified on cross-examination with regard to one job, I believe, where you said a number of sash had rotted out, the first job that you referred to.

A. Somewhere between one and three sash.

Q. Then did you refer to another particular instance where you had had trouble with several sash or with only one?

A. No particular instance. I remember that those instances have come up. I do not remember the particular job, though.

Q. Now, I think you said six or seven times complaints had been made, did you? Was that correct?

A. Yes. The complaints were brought to me by the mill manager and talked over with the idea of the policy of replacement.

Q. I see.

A. And I got the conditions from him. I did not see the jobs actually.

Q. And when this occurred, was it more than one sash at times, or was it one sash always, or what was the situation?

A. No specific cases there. I remember at least one where there was a single sash and one where there were two, as I

1137 recall. I would not want to say definitely.

Q. I think you said how many times, six or seven times, that complaints, individual complaints, had been made?

A. Roughly, six or seven. I would not want to be set down on that. It may be one or two more, or it may be one or two less.

Q. Now, was that always just one sash? I think you said only six or seven sash on your cross-examination; is that correct?

A. It may be six or seven, it may be five, or it may be nine.

Q. Well, six or seven instances, but several sash as an average, or only one sash each time?

A. I would not want to be pinned down to an average there.

Q. All right. Have you ever had northern white pine fail where put in for exterior use?

A. You mean due to rotting out?

Q. Yes.

A. I have no personal experience of a job failing with northern white pine.

Mr. BURR: That is all.

Mr. MATTHEW. May I request the witness to supply us, at his convenience, before this hearing adjourns, with the particular instance

concerning which I interrogated him on cross-examination?

1138 Examiner SHEPPARD. Mr. Moeling, if you can, when you go back to your office, search your files and see if you can bring us definite information of any one, two, or several cases in reference to which you have been interrogated about. Come back here at two o'clock.

The WITNESS. If I can make it by two o'clock.

Examiner SHEPPARD. Or three.

The WITNESS. I will come back as soon as I can. The office is at 119th and Halsted Street, and that is a long ways from here.

Examiner SHEPPARD. You come back, then, in the morning at ten o'clock.

(Witness excused.)

Examiner SHEPPARD. Gentlemen, I want to tell you both that in these specific instances that witnesses bring out from time to time on both sides, I want them made as definite as you can. I am going to insist that you make them definite.

ROBERT WORK was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are an architect, Mr. Work?

1139 A. Yes, sir.

Q. How long have you been an architect?

A. I got my license in 1912.

Q. And you are located here in Chicago?

A. Yes, sir.

Q. Are you practicing for yourself, or, if not, what is your firm name?

A. My firm name is Russell Wolcott & Robert Work, Architects.

Q. Is your work house or business-block building, in the main?

A. We build mostly houses.

Q. Residences?

A. Residences.

Q. And in connection with your work do you have occasion to specify white pine for any exterior uses?

A. We do; yes.

Q. How do you specify? What language do you use? Just white pine, or what?

A. We usually call for white pine.

Q. And what means do you have of checking up as to what species or variety or trade name of white pine you receive?

A. You mean how do we recognize the wood?

Q. Yes; how do you check it up?

A. Well, our superintendents report to us on the wood. In

1140 our practice in the Chicago district we have very few questions. The mills know what we want and they give it to us, and we deal with a comparatively small number of mills. Out of

town we go to the trouble of expressing what we want exactly and say "northern white pine" and the quality of it at some length.

Q. Now, if you specified white pine and California white pine were delivered on the job, and you ascertained it was California white pine, and if in appearance the freedom from knots and all that kind of thing suited you, would you accept that as a compliance with the specification of white pine?

A. We would be inclined to bar it out on account of paint. Northern white pine holds paint better than any other wood we have used.

Q. Well, when you specify white pine, what do you mean by that specification?

A. We understand white pine to mean northern white pine.

Q. Would you accept Idaho white pine as a compliance with that specification?

A. I do not know Idaho white pine; I could not tell. I know, or at least I think I know, what white pine is.

Q. But you would throw out California white pine invariably, no matter how acceptable it might look; is that true?

A. Not invariably; no. That would depend some on the quality of the work.

1141 Q. I mean for exterior use now.

A. For exterior use, frames and sash and outside doors, which is practically what we use it for, we would insist on northern white pine.

Q. Have you at any time rejected California white pine when it was furnished?

A. I do not know that I have; I do not think I have. The custom, when a mill wants to substitute a wood, is to bring us samples of the wood and ask us if that will do.

Q. Well, now, have you any technician there that is able to distinguish invariably between genuine white pine, we will say northern white pine, and California white pine?

A. No; I do not know that I have.

Q. Well, if the samples looked O.K. in quality, you would accept them?

A. I think I could tell what was northern white pine and what was California pine and sugar pine and those sort of things. I imagine I would know it was not white pine. I might not know whether it was Idaho or California, but I would know it was not northern white pine.

Q. Does the term "white pine" among architects in the city of Chicago have a definite meaning?

A. I believe it has.

Q. What is that meaning?

A. I think it refers to the northern white pine.

1142 Q. Are you still able to get northern white pine of good quality here?

A. We have had a great deal of difficulty.

Q. Where does it come from in the main?
A. From Minnesota, I think; mainly the Mississippi Valley.
Q. Would you accept sugar pine as a compliance with a specification for white pine?
A. I have in some cases, but I do not think it is as good as white pine.
Q. How about pondosa pine? Would you accept that?
A. I do not know it.
Q. I beg pardon?
A. I do not know it by that name. I do not know pondosa pine.
Mr. BURR. I think that is all, sir.
Examiner SHEPPARD. Cross-examine.
Mr. MATTHEW. No questions.
(Witness excused.)

JOHN CHALMERS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name?
A. John Chalmers.
Q. You are a retailer, Mr. Chalmers?
1143 A. Yes, sir.
Q. A retailer of lumber?
A. Yes, sir.
Q. And your firm is Lord & Bushnell, is it?
A. Yes, sir.
Q. What position do you hold in that firm?
A. Secretary.
Q. And you are here in Chicago?
A. Yes, sir.
Q. You also do some wholesaling, do you?
A. Yes, sir.
Q. What species of white pine do you carry?
A. The pine that has been commonly known as white pine from the northern forests of central United States, in recent years.
Q. What is that? Northern white pine, you mean?
A. What has been commonly known as northern white pine; yes, sir.
Q. Now, do you carry also the Idaho?
A. What is commonly known as Idaho white pine; yes, sir.
Q. How long have you been handling Idaho white pine?
A. Fifteen to twenty years.
Q. How long have you handled California white pine, if you do at all?
A. Well, what is commonly known by trade practice in the
1144 last ten years as California white pine or western white pine or pondosa white or Oregon soft pine, which we classify as generally alike, we have carried for about fifteen years, if that is what you have reference to.

Q. Yes. Now, then, when you have orders for white pine, without specifying any particular variety, what do you furnish to your customer?

A. Northern white pine.

Q. Do you ever furnish Idaho?

A. No, sir.

Q. Under what circumstances have you furnished Idaho white pine?

A. When we sell it as Idaho white pine.

Q. You never furnish it to a man who orders northern white pine unless you talk with him about it and tell him it is the Idaho white pine; is that true?

A. Absolutely.

Q. Now, does "white pine" have a significance here in this city among architects and buyers of wood?

Mr. MATTHEW. Just a moment. I think you ought to strike out the reference to architects.

Mr. BURR. Well, I am agreeable. I will strike the question entirely.

By Mr. BURR:

Q. Are your retail operations among the largest in Chicago?

1145 A. Yes, sir.

Do you regard the soft pines in general as having varying characteristics and qualities for exterior use?

A. Yes, sir; in a small degree.

Q. What is the preferable variety of white pine for exterior use, in your judgment?

A. The northern white pine.

Q. For what reason?

A. The lasting qualities.

Q. What would you rate as next to that, in your experience?

A. Your question was?

Q. For exterior use, as regards durability.

A. Exposed nakedly to the weather?

Q. You mean without paint?

A. Yes. That is what you are referring to.

Q. Yes; you might answer that, exposed nakedly.

A. Under those circumstances, I believe northern white pine would come first and Idaho white pine second.

Q. Do you regard sugar pine as a true white pine?

A. Not being a technician, I do not know.

Q. Do you handle any sugar pine?

A. Yes, sir. I am taking it that these words are all common words and not botanical.

Q. I am not asking you for botanical words at all, sir, at present, and probably shall not.

1146 A. Well, don't start it. [Laughter.]

Q. You are not posted on the botanical names of the various species?

A. No, sir. I do not even know whether it is white pine, but that is in common use—the word.

Q. Do you know whether California white pine is a genuine white pine or not?

A. I was not educated in twenty-three years as its being white pine, only as it has been presented to the market in the last ten or twelve years. They have called it white pine, but it is nothing like we understood to be white pine from the north, from the central Mississippi Valley States. But it has been called that, and therefore it has been marketed under that name.

Q. Do you market it under that name yourself?

A. We have no objection to that—yes; we do that; yes.

Q. When they ask for it?

A. No; but we have up to the last two years. I should not make that right up to date.

Q. Well, you have not sold it on orders for white pine without specification. Where you get orders for white pine you do not sell California white pine, do you?

A. No, sir.

Q. That was my understanding of your testimony. But you sell it under that name—California white pine?

1147 A. At the present time we would say to a buyer, "This is either California white pine or pondosa or western white pine."

Q. Do you distinguish any difference in durability for exterior use between pondosa and California white pine?

A. No. That question is very broad, because we have purchased in the past lumber under those names, and you get lumber that is different. I am trying to say that a California white-pine invoice might have what somebody else would call pondosa pine. I presume you are talking right up to date. Now, a few years ago California white pine, pretty nearly everybody called it that, from California, but they do not today.

Q. Some call it other names besides California white pine, even though it comes from California; is that true?

A. Yes; I think so. That is our understanding of it. We have checked some.

Q. Now, from what sections are you buying California white pine?

A. Well, various—oh, nothing today. We do not buy any California white pine.

Q. You are not handling it today; is that true?

A. Yes; we handle what is known as that, but when you make a specific question of buying California white pine we do not pay any attention to that word out there, because that is

1148 merely a trade name now, as we understand it, and we have tried to buy it as the so-called westeri soft pine.

Q. And do you try to sell it as western soft pine?

A. No—yes, western soft pine or pondosa pine. That is the way we are using the distribution efforts now.

Q. In other words, you are trying to avoid the use of the term "California white pine" when you can, are you?

A. Yes, sir.

Q. Why do you do that?

A. Well, we gained the general knowledge a few years ago that it was requested by the Government not to use the word for those woods that grow from the Northern States, the line of the United States down through California, of that type, and it is not misleading to our customers to call it California white pine.

Q. You say it is not?

A. It is misleading to our customers. We have called for northern white pine in every line.

Q. To call it California white pine, did you say?

A. Yes—oh, just a minute now. Perhaps that answer is not clear, because with that word "California white pine" it is a distinguishing mark. Your question is what?

(Question read.)

A. We are trying to avoid the use of California white pine as misleading to the consuming public.

1149 Q. Well, now, is that true of your wholesale business or your retail business or both?

A. Both.

Q. Do you sell to retailers who are not posted on the distinction between California white pine and the so-called genuine white pine?

A. Oh, I do not know.

Q. You do not know as to that?

A. I do not know what they know.

Q. How large is your wholesale business annually in the soft western pines; I mean as distinguished from the hard southern pines? How many cars approximately do you carry?

A. In a wholesale way, I understand—you may have a different idea of wholesale than I have. Your question is hard to answer. I do not believe it is susceptible of a fair answer.

Q. I merely wanted an approximation of how many cars go through your company in the course of an average year of the western pine lumber, merely to give an idea to the examiner here.

A. Between twenty and thirty cars, carloads.

Q. Between twenty and thirty cars?

A. Something like that; yes, sir.

Q. That is your wholesale business?

A. No; through our company, you said this time.

1150 Q. Altogether?

A. You changed your question.

Q. Yes; I know. That is wholesale and retail, both, is it?

A. Yes, sir; the western soft pine, if that is what you mean, Oregon, is that correct?

Q. Aren't all the western pines soft? Do you regard California white and pondosa as soft pines?

A. They call it douglas fir pine, some people.

Mr. MATTHEW. May I ask Mr. Burr, if you include Idaho white pine in your question?

By Mr. BURR:

Q. You have included Idaho white pine in your answer, have you?

A. Yes, sir.

Mr. BURR. That is all.

Examiner SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. You stated that you purchased some pondosa pine from California?

A. They call it that.

Q. Well, was it ordered by you under that name and billed to you as pondosa pine?

1151 A. My general recollection is that it was. If you are getting around to a specific question, I probably could not say.

Q. Could you give me the name of the mill from which you purchased the pine?

A. No.

Q. That is, you do not recall; is that it?

A. Yes.

Q. Well, is it a fact that the bulk of the pine lumber which you obtain from California is billed to you as California white pine?

A. In what period of time?

Q. Well, we will take the past two or three years, or any other period that you may wish to cover. I am just trying to get the general practice.

A. It has changed so in the past five years that your question is very broad.

Q. I am asking you about the California pine.

A. Yes.

Q. I am excluding for the moment, now, the pine lumber that comes from the inland empire and the Pacific Northwest. Is it not a fact that practically all of the pine lumber which you obtain from California, excluding now for the moment sugar pine, has always been billed to you as California white pine, and is now so billed?

A. The large majority of it; yes.

1152 Q. There has been no recent change in practice in that respect, has there?

A. Some percentage in the last five years; yes, sir.

Q. As to California?

A. Yes, sir; I think so.

Q. But you cannot tell to what extent?

A. No.

Q. Now, if you receive an order for California white pine, do you supply California white pine?

A. We give them the pine that—we call them up and tell them we will give them this western soft pine that comes from the western States out there.

Q. You feel free to furnish lumber which you have purchased either as pondosa pine or California white pine upon such an order?

A. Depending on the grade.

Q. Yes. But assuming that you are satisfying the customer as to grade, you furnish the pondosa pine or California white pine upon such an order?

A. Under that assumption; yes, sir.

Q. In your wholesale department do you sell California white pine under that name?

A. No, sir.

Q. What name do you use?

A. Oh, you would have to have a lot of talking to get it straightened out, whether it is western soft pine or pondosa pine, depending on what we think he wants, then we straighten it out before selling.

1153

Q. Am I to understand that you do not sell California white pine in your wholesale department under that trade name?

A. No, sir; we do not.

Q. That was about two or three years ago that you changed your practice in that respect?

A. No; we did not have that business before that; no, sir.

Q. Then you never have sold California white pine under that name of California white pine?

A. Oh, yes.

Q. Well, do you sell it now under that name?

A. Oh, yes; sure.

Q. In both your wholesale and retail departments?

A. No, sir.

Q. Merely in your retail department?

A. Yes, sir.

Q. Why distinguish between the two departments in that respect?

A. Because we do not have any of that business.

Mr. MATTHEW. May I have the answer?

(Answer read.)

By Mr. MATTHEW:

Q. Now, will you explain that? That you do not have any of what business?

1154

A. Will you read that question?

(Question read.)

A. In the wholesale.

Q. Then we are to understand that as far as your wholesale department is concerned you do not deal in California white pine?

A. We are willing to, but we cannot get any orders. We have not sold any that I know of.

Q. So since you do not sell any California white pine in your wholesale department, you have not any practice as to the sale of California white pine in that department?

A. Not in recent years, no.

Q. Do you sell pondosa pine in your wholesale department?

A. Yes, sir.

Q. And you sell that under the name pondosa pine?

A. Yes, sir.

Q. Now, you stated that it was your impression that some two or three years ago the Government requested that the term "California white pine" should not be used. Is that about the substance of your testimony?

A. That is an impression, yes, sir. I may be wrong about that.

Q. Where did you get that impression?

A. Just public papers, that is all.

1155 Q. It was merely from reading in the press? It was not obtained through somebody's conversation with you at all?

A. It might have been.

Q. You are not certain?

A. No. It is too far back.

Q. How does the volume of your dealings in northern white pine compare with the volume of your dealings in the western soft pines? I include in that letter term the Idaho white and the California and pondosa pine.

A. That is, relatively speaking between the two varieties?

Q. I am dealing with your current business, approximately your current business?

A. We sell mostly northern white pine.

Q. You sell a greater amount of northern white pine than western soft pines?

A. Yes, sir.

Q. I think in answer to a question put by Mr. Burr you stated that your wholesale dealings in western soft pines amounted to fifteen or twenty carloads a year. Am I right in so recalling your testimony?

A. I do not think so; no, sir.

Mr. BURR. I think you said twenty. It was wholesale and retail.

By Mr. MATTHEW:

1156 Q. That was your wholesale and retail dealings in the western soft pines, approximately twenty carloads per annum?

A. Yes.

Q. Can you estimate the volume of your dealings in the northern white pines?

A. Oh, it varies, of course; but thirty or forty carloads, or fifty carloads. It varies.

Q. All right. We can say from thirty to fifty carloads per annum?

A. Yes.

Q. Do you purchase your northern white pines to any extent from the Weierhaeuser interests?

A. To some extent; yes, sir.

Q. Is the bulk of your northern white pine obtained from the Weierhaeusers?

A. I do not know about that.

Q. You do not know as to that?

A. Your question is broad. I do not know whether we buy the bulk of it from Weierhaeuser.

Q. Well, I want to find out just what you know.

A. Subpoena my records from the office.

Q. I am asking you for your best recollection now.

A. I do not know.

Q. You do not know?

A. No.

Q. Do you buy any Idaho white pines from the Weier-
1157 haeuser interests?

A. We do.

Q. Can you tell me whether you buy the bulk of your Idaho from the Weierhaeuser interests?

A. We do; yes.

Q. Do you buy any pondosa from the Weierhaeuser interests?

A. Yes, sir.

Q. Do you know whether the bulk of your pondosa pine comes from the Weierhaeuser interests?

A. I do not know.

Q. I want to ask just one or two further questions about the way you handle orders for white pine, Mr. Work. You testified that when you receive an order for white pine without any qualifying term, you supply the northern white pine?

A. Yes, sir.

Q. Then you do not in any instance furnish Idaho white pine upon an order for white pine only?

A. Not without asking the customer about it.

Q. And ordinarily is an order for Idaho white pine received by you under that name of Idaho white pine?

A. Oh, yes.

Q. That is the practice in the trade?

A. In our trade. I do not know about the trade.

Q. I am asking about your particular case. And when you
1158 receive an order for California white pine, you furnish the California white or pondosa pine?

A. Well, we explain to the customer. That has occurred, I believe, where the order reads "California white pine" in certain grades.

Q. Then you undertake to supply your customer in each instance with what you understand that he desires?

A. Yes, sir.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Do you deal with the Shelvin-Hixon interests?
A. Yes, sir.
Q. In northern white pine?
A. Yes, sir.
Q. Do you get Idaho white pine from them also?
A. I do not think so.
Mr. BURR. That is all.

(Witness excused.)

C. W. JACOB was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

1159 Q. What is your name?
A. C. W. Jacob.
Q. Mr. Jacob, you are with the John Bader Lumber Company?
A. Yes, sir.
Q. You are located here in Chicago?
A. Yes, sir.
Q. How long have you personally been with that company?
A. Twenty years.
Q. And how long has the company been in existence?
A. Oh, about fifty years—forty, I would say.
Q. Are they one of the larger retailers of lumber in this city?
A. A medium-sized yard.
Q. What is your office with that company?
A. President.
Q. How long have you been such?
A. Twelve years.
Q. What varieties of soft white pine, now, excluding the hard pines of the South—what varieties of soft pine do you purchase?
A. What are commonly known as northern white pine, pondosa pine, California pine, Idaho pine, sugar pine.
Q. Now, when you say California pine, do you refer to the product that is sold under the name "California white pine"?
A. Well, it is sold to us under that name; yes, sir.
1160 Q. How do you sell it?
A. We class it with the pondosa pine and call it western pine; we classify the California white pine and the pondosa as practically one wood.
Q. You do not use the term California white pine to your trade?
A. We sell it here as western pine.
Q. Well, now, do you get orders occasionally for white pine?
A. For white pine? Yes, a good many orders.
Q. Now when you get such orders without any specification of northern or any term going along with the words "white pine", do you feel free to furnish the so-called western pine?
A. Possibly within the last four or five years.

Q. In other words, if they ask for white pine and do not say what kind they want, you would furnish what you buy as pondosa or California white pine, would you?

A. In repeating the order, we always repeat the words "Western pine" when they want white pine.

Q. Western pine?

A. Yes, sir.

Q. How do you mean, in repeating the order? Invoicing it to them?

A. For instance, the general term might be called white
1161 pine, but I would say that better than eighty percent of the lumber that is used now in the common building trade is western pine, due to the fact that the northern pine cannot be gotten.

Q. It is actually western pine?

A. Yes.

Q. But you do not mean that the retailers generally are following your practice or naming it western pine, or do you?

A. I do not know.

Q. Well, there is California white pine sold here in the city under that trade name by retailers, is there?

A. I imagine so.

Q. Well, now, suppose someone orders from you white pine, then if I understand you correctly you might furnish western pine, and you would in that case tell the dealer you were furnishing western pine, would you?

A. Yes, sir.

Q. Do you regard this western pine, including in that term, as I understand you to do, both pondosa and California white pine, do you regard that as a genuine white pine, or do you not?

A. Well, I regard all the woods that are commonly known as pine, or possibly including the species as white pine, considering the sapwood possibly as good as the other for exterior purposes.

Q. Well, do you recommend to your trade that the western
1162 pine, so-called, that you handle is a real white pine?

A. Well, I do not know what real white pine is.

Q. And you do not advise them as to whether or not this is white pine, is that true?

A. We advise it to them as to the adaptability for the purpose which it is intended. Along those lines we advise them.

Q. Well, now, do you furnish it for exterior purposes?

A. Yes, sir.

Q. Do you regard it as equally durable with the northern white pine for exterior use?

A. With the same percentage of sap to the wood, yes.

Q. Well, is the percentage of sap as great with the western white pine, or is it greater than in the case of the northern white pine?

A. I would say the percentage of sap in the northern white pine would be greater than the western.

Q. Would be greater?
A. Yes.
Q. Where are you getting your northern white pine?
A. From Weierhaeuser, Shevlin-Hixon, and the Dells Lumber Company.
Q. That is up in Idaho?
A. No; it is up in Eau Claire, Wisconsin.

Q. Now, you said the percentage of heartwood is greater,
1163 do I understand you correctly, in the western pine than it is in the northern pine?
A. Yes, sir.
Q. Then you would recommend that for exterior purposes rather than northern white pine?
A. Under those circumstances, when the percentage of sap is greater in the one wood, yes.
Q. Are you getting a second growth or virgin white pine from the northern white pine lumber mills?
A. I guess we get both of them.
Q. I beg pardon?
A. I imagine it is both.
Q. Now, from the Weierhaeuser people, do you get any second-growth lumber?
A. I do not think so. I do not know that; I would not say that definitely. I can tell you where we do get some.
Q. Where is that?
A. From the farther south, in the States where they are sawing their hard woods and hemlocks now, and they have reached the point where there is a good deal of the second growth comes in.
Q. Second growth of northern white pine?
A. Yes; it is noticeable to me because of the grain being coarse.

Q. That is from Minnesota?
1164 A. I would say from the middle part of Wisconsin.

Q. You are getting some second-growth northern white pine from central Wisconsin?
A. That is what I would call it.
Q. Do you ever buy Canadian white pine?
A. Well, we buy what is commonly termed by us lumbermen as Jack pine.
Q. No; I mean Canadian white pine.
A. We have gotten some from British Columbia; yes.
Q. Is that Idaho white pine or northern, do you know?
A. I would have to know more about it than I do to tell you the difference.
Q. You would recommend, then, would you, the pondosa pine or the California white pine under your trade name of western white pine, in preference to northern white pine for outside use, would you?
A. No, sir.

Q. You would not?
A. No, sir.
Q. Well, what would you use for exterior use?
A. I told you the percentage of sap would enter into it a good deal for exterior purposes.
Q. Then which would you recommend?
A. I would recommend the one that had the least amount of sap.
1165 Q. In the particular type that you had on hand?
A. Yes, sir.
Mr. BURR. That is all, sir.

Cross-examination by Mr. MATTHEW:

Q. You testified, Mr. Jacob, that in your opinion approximately eighty percent of the lumber that is used in the local building trade is western pine lumber?
A. No; for exterior purposes.
Q. Oh, for exterior purposes?
A. Yes.
Q. Now, at the time when you first entered upon the lumber business in this area, was the percentage of western pine lumber as great as that?
A. When I entered in, we did not handle any western pine.
Q. What pine lumber then held the market?
A. Northern white pine.
Q. Now, to what reason do you ascribe the substantial displacement of the northern pine in this market by the western pines?
A. It was practically impossible to get the northern pine.
Q. Then the western pines are finding their way into this market largely by reason of the shortage of northern pine?
1166 A. Yes, sir.
Q. And, I assume, likewise, by reason of the circumstance that generally they are adapted to practically the same purposes for which northern pine has always been used?
A. Yes; generally speaking.
Q. Do you get as high a grade of northern white pine at the present time as was obtained when you first entered upon the lumber business in this community?
A. Will you ask that question again?
(Question read.)
A. You mean grade for grade?
Q. Yes.
A. They are the same; the rules have not changed any.
Q. Was there a time when the grading rules for virgin white pine provided that sap would be regarded as a defect?
Mr. BURR. If the examiner please, just a moment. I do not believe the Commission wants to go into the question of the grading rules, and I think the examiner made such a declaration. It seems to me if we get into this grading-rule proposition we would be getting into a

maze of complications which the Commission need not go into and should not be called upon to go into in this case.

Examiner SHEPPARD. I do not presume you are going to follow that far.

1167 Mr. MATTHEW. Mr. Burr is always so very prompt that he does not always allow me to develop my thought.

Examiner SHEPPARD. He is a good lawyer; he ought to be prompt.

Mr. MATTHEW. In many respects, he is too good a lawyer.

Examiner SHEPPARD. Go ahead.

Mr. MATTHEW. Let me just say I have not any interest in the grading rules except as they may relate to the relative amount of sap in the northern white pine today as against the northern white pine of twenty years ago.

Mr. BURR. If the examiner please, he is opening up the whole proposition and requiring me to go into this whole proposition of grading rules, which is a technical proposition, and I do not believe we want to qualify the members of the Commission to be experts in the whole lumber industry.

Examiner SHEPPARD. You gentlemen both remember what I said before about this grading proposition. We are not going into it in detail. I am going to allow this question because I do not think Mr. Matthew is going to follow it up very far.

Mr. BURR. He is going to require me to follow it up pretty far, I am afraid, Mr. Examiner, but I shall make no further objection, in harmony with your honor's ruling.

Examiner SHEPPARD. Read the question to the witness.

1168 (Question read.)

A. I guess they do yet in certain grades.

By Mr. MATTHEW:

Q. You are not familiar with any change as far as the requirement as to absence of sapwood is concerned?

A. No, sir.

Q. You have testified that the northern pine which you now obtain does contain a good deal of sap; at least you stated that it was your impression that there is a larger percentage of sap in northern white pine than in the western pines which you obtain?

A. In the grades that are commonly used for exterior purposes; yes.

Q. What are those grades?

A. The common board grade and the selects.

Q. Well, is the texture of the northern white pine which you now obtain in these grades as good as the texture of the northern white pine which you obtained twenty years ago?

A. I would say yes.

Q. Is the texture of the second-growth pine which you are now obtaining as good as the texture of the virgin-growth pine?

A. Practically speaking, a little coarser grained.

Q. Which is a little coarser grained?

A. The second growth.

1169 Q. And you get more of the second-growth pine than you did twenty years ago, I take it?

A. I imagine so.

Q. I gathered from your direct examination, Mr. Jacob, that you are not informed as to the botanical classification of pine trees?

A. I would not want to be asked in that form at all.

Q. And your interest as a practical lumberman is in the quality of the lumber which you obtain and the use to which it is best adapted?

A. Yes, sir.

Q. And I take it further that when you furnish as western pine lumber which you have purchased either as pondosa pine or California white pine, and in your repeat orders use that term, you are undertaking to satisfy the desires of your customer as you understand them?

A. Yes, sir.

Q. So far as you are informed, your customer knows exactly what he is getting from you?

A. Yes, sir.

Mr. MATTHEW. That is all.

By Examiner SHEPPARD:

Q. Mr. Jacob, do I understand you to follow this procedure: You buy California white pine and then advertise it to your trade as western pine?

1170 A. We do not advertise it. We sell it as a western pine.

Q. You sell it as western pine; you do not advertise it?

A. No, sir.

Examiner SHEPPARD. All right.

Redirect examination by Mr. BURR:

Q. Now, the securing of a supply of northern white pine for resale by you is governed by the competitive situation, is it?

A. Prices are about alike of the woods, grade for grade. We do not handle all species of northern white pine in the selects, and so forth; we do not get into them in shops.

Q. I beg pardon?

A. We do not get into the shops or selects of northern white pine.

Q. Your testimony, then, related to what varieties of lumber when you testified about northern white pine, the common grades?

A. For exterior purposes, I think the question read.

Q. In other words, all your testimony goes to common grades of northern white pine so far as you referred to northern white pine, is that true?

A. Used generally in the building construction, not for sash and door work, remanufacturing.

1171 Q. You do remanufacturing work?

A. No; we do not. I am referring to that.

Q. Now, your testimony with regard to northern white pine has related only to common lumber?

A. To the building needs, principally.

Q. I beg pardon?

A. To the building needs, and shelving.

Q. You stated a moment ago about not referring to the select grades.

A. Well, it would not be used to remanufacture, for instance, for sash and doors.

Q. But you do not remanufacture?

A. Well, we would sell to the man who remanufactures, but we do not have that class of trade. We do not remanufacture.

Q. But you do sell to the millwork establishments, is that true?

A. Very little.

Q. Well, now, coming back again, what grades of northern white pine do you handle?

A. Well, we handle the 1, 2, and 3 and 4 and 5, common.

Q. Common, but not select grades?

A. Wait a minute.

Q. Go ahead.

A. We do not handle any shops, but we handle possibly the C and better white pine.

1172 Q. C and better white pine?

A. Yes. We do not handle any D, either.

Q. And when you say white pine you are still talking about northern white pine?

A. Yes, sir.

Q. Now, when you talk about not being able to get northern white pine, are you considering the question of competitive conditions for the resale of it in competition with other grades?

A. There have been times; yes.

Q. Is it a question of the price, not being able to get it at a price to compete, or is it not being able to get it at all?

A. Not at all times price, by any means.

Q. I beg pardon?

A. Not at all times price, by any means. It is impossible to get it.

Q. It is impossible to get it?

A. Yes, sir.

Q. Do you know whether or not Canadian white pine is coming into the market?

A. Yes, sir.

Q. Do you handle it?

A. Yes, sir.

Q. Is that or is it not virgin timber?

1173 A. I would say it was virgin timber.

Q. The lumber that you get from the Weierhaeusers in Minnesota, you say that is virgin timber?

A. I think so.

Q. How about Shevlin-Hixon? Is that virgin timber?
A. I think so.
Q. Is Shevlin-Hixon Canadian or in Minnesota?
A. I think they are Canadian.
Q. Well, now, how about the other white pines that you are getting, if any, from Minnesota? Is that or is it not virgin timber?
A. It would be hard for me to answer that definitely.
Q. Where it is virgin timber, the percentage of heart wood is very much larger than in the case of second growth, is it not?
A. Yes.
Mr. BURR. That is all.
Mr. MATTHEW. That is all.
(Witness excused.)

CHARLES H. HOHMEIER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name?
1174 A. Charles A. Hohmeier.
Q. You are with the Charles A. Hohmeier Lumber Company?
A. Yes, sir.
Q. How long has that concern been in the retail lumber business?
A. About seven years.
Q. And how long have you been at the head of it? All that time?
A. About seven years.
Q. You are in business here in the city of Chicago, I take it?
A. Yes, sir.
Q. Do you run a millwork shop, mill and lumber?
A. Mill and lumber.
Q. Do you do any wholesaling?
A. No, sir.
Q. Now, referring to soft pines, including the western pines and the so-called Idaho white pine and the so-called California white pine and also the pondosa, will you state how large your annual purchases are, approximately? Just give me roughly.
A. About twelve cars.
Q. About twelve cars a year of the northern and western soft pines; is that true?
A. Yes, sir.
Q. Now, do you have on occasion orders calling for white
1175 pine without a further specification or description?
A. Yes, sir.
Q. Do you regard yourself as at liberty to furnish Idaho white pine under that description?
A. Yes, sir.
Q. Do you regard yourself at liberty to furnish California white pine under that description?
A. Yes, sir.

Q. How about pondosa pine?

A. Yes, sir.

Q. You would do that without necessarily explaining what you were furnishing, would you?

A. I would.

Mr. MATTHEW. Just a moment. I am going to object to leading the witness.

Mr. BURR. I am getting in a hurry, I guess.

Mr. MATTHEW. Suppose you strike the question and reframe it.

Mr. BURR. All right.

By Mr. BURR:

Q. Now, on occasion you consult with the customer, do you, about what kind of white pine he wants?

A. If the customer just orders white pine he is liable to get Idaho or northern or pondosa or even redwood, if he does not com-
1176 plain. We just furnish him anything and depend on him to complain, because we know he perhaps said white pine just because he wanted siding. It will happen in siding, I meant to say.

Q. Well, now, how large an amount of northern white pine do you get?

A. Oh, probably three out of the twelve per year.

Q. What is your largest purchase among those varieties of pines that we have referred to?

A. California mainly; California white pine.

Q. What section of California do you get that from?

A. I would not know so well. We buy it from a broker here in Chicago, and we depend on him to sell us California white pine when we order it, and we always get it.

Q. What is the nature of your factory business?

A. We make special sash and doors and sometimes trim that should be made of white pine.

Q. Now, what you testified with regard to your retail trade, is that true also of your sash and door trade that you sell retail?

A. Yes. If we had California white pine we made it of that. If we had Idaho we made it of that. With pondosa, we never felt at liberty to use that without taking that up, because it is not called white pine. Pondosa, I understand, is a new name for the old western pine.

Mr. BURR. I see. I think that is all, sir.

1177 Re-cross-examination by Mr. MATTHEW:

Q. Mr. Hohmeier, as I recall your testimony upon direct examination, you said that when you receive an order for white pine you sometimes feel free to furnish either California white pine or Idaho white pine or pondosa pine or even redwood?

A. Yes, sir.

Q. You further stated, I believe, that your practice in that respect is due to your understanding that your customer merely wants lumber for siding purposes?

A. Yes, sir.

Q. Now, when you furnish redwood upon an order for white pine, it is not your understanding, of course, that redwood is a white pine?

A. No, sir.

Q. You are merely trying to satisfy your customer's needs as you understand them?

A. Yes, sir.

Q. Do you use any northern white pine in the manufacture of sash and doors?

A. Yes, sir.

Q. How do you determine whether you will use northern white pine or some other wood in making up your sash and doors?

1178 A. Just depending on the supply on hand. If I have northern on hand I use that, and if I have California on hand I always feel free to use that.

Q. Do you use any Idaho white pine in the manufacture of sash and doors?

A. Yes, sir.

Q. That again depends on whether you have it on hand?

A. Yes, sir.

Q. Do you find California white pine makes up satisfactorily into sash and doors?

A. California white pine? I believe it does.

Q. Is your trade generally content to accept California white pine?

A. Yes; if they want it. If they come in and say, "We want something good and soft", of course, we always give them northern or Idaho. If we have not got it, we will say, "We will give you the substitutes we have got—California is fairly soft—and see if you can make that go." If they just call for white pine, we will give them California, Idaho, or northern.

Q. Generally your customers are satisfied with the California white pine that you furnish?

A. Yes; they are.

Mr. MATTHEW. That is all.

1179 Redirect examination by Mr. BURR:

Q. Well, now, this lumber for siding, is that exposed to the weather after use?

A. Yes.

Mr. BURR. That is all.

(Witness excused.)

STANLEY KWASIGROCH was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. Stanley Kwasigroch.

Q. Mr. Kwasigroch, you are with the Northwestern Lumber Company?

A. Yes, sir.

Q. Here in the city of Chicago?

A. Yes, sir.

Q. How long have you been with them?

A. Fourteen years.

Q. How long has that company been going?

A. Fifteen years.

Q. What is your position with the firm?

1180 A. Secretary and treasurer.

Q. You handle pine lumber, do you?

A. We have for the last three years.

Q. It is only three years that you have been handling any soft-pine lumber?

A. I mean we have been advertising and buying for the last three years.

Q. Your firm has been handling it during the entire fifteen-year period, I take it?

A. Yes; I have.

Q. You are in the retail line. Do you wholesale also?

A. We do not.

Q. Have you any milling establishment there?

A. No; we have not.

Q. Now, you have orders for white pine on occasion, do you?

A. White pine?

Q. Yes, sir.

A. We do not. It is very seldom we have any orders for white pine. Since I have been taking care of it here for three years, we have had practically in the last six years the same customers.

Q. The same customers?

A. Yes; and they already know what they are buying; it is western pine and pondosa pine. The only thing I handle is

1181 pondosa pine, and we handle about three or perhaps four cars a year.

Q. Three or four cars a year of what?

A. Of pondosa pine.

Q. Of pondosa. You also handle Idaho pine, do you?

A. We do not.

Q. Do you handle northern pine?

A. We do not.

Q. Do you handle sugar pine?

A. No; nothing, just pondosa.

Q. Just pondosa only?

A. Just pondosa only.

Q. Well, don't you have any orders for white pine?

A. No; we haven't any.

Q. Where do you get your pondosa from?
A. Bend, Oregon, Brooks-Scanlon.
Q. How do you invoice your sales?
A. We invoice our sales most of the time on this pondosa pine as western pine and occasionally pondosa pine.
Q. Do you ever call it western white pine?
A. We do not.
Q. Do you ever call it California white pine?
A. We do not.
Q. Do you ever have any calls for California white pine?
A. We have not had a call.
Mr. BURR. That is all.
1182 Mr. MATTHEW. No cross-examination.
(Witness excused.)

JOSEPH ROTHFIELD was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please.
A. Joseph Rothfield.
Q. You are with the Charles Levy Lumber Company, are you?
A. Yes, sir.
Q. And located on Belmont Avenue, Chicago?
A. Right.
Q. How long have you been with that concern?
A. Four years.
Q. And how long has the concern been going?
A. Five years.
Q. And what is your position with the company?
A. Vice president.
Q. Now, what varieties of soft white pines do you carry, classing pondosa and California white pine as soft pines?
A. We carry pondosa only.
Q. I beg pardon?
A. We carry pondosa pine.
1183 Q. Well, do you buy some California white pine?
A. No, sir.
Q. Can you testify to that positively, sir?
A. Yes, sir.
Q. Do you have orders for white pine in your trade?
A. For the western soft pines.
Q. I beg pardon?
A. Soft pines.
Q. Do you have any orders for white pine?
A. No, sir. If we do, we go out and buy it once in a while from our friend Chalmers, here, or Mr. Jacob, if we get a call for California white pine.

Q. You do get calls for it?

A. Very rarely.

Q. Do you get any calls for white pine without specifying Idaho or California or any other classification, just white pine?

A. Well, the general requests are for soft pine. We do a building business only.

Q. What?

A. A building business only, for exterior purposes and shelving.

Q. Exterior purposes and shelving?

A. Yes.

Q. A building business only; is that right?

1184 A. That is, we furnish our lumber to the building trade.

Q. To the building trade, and only for shelving, aside from furnishing to the building trade?

A. That is it.

Q. Well, now, do the building trade, any of your customers, ask for white pine without any specification?

A. Yes, they do, and we give them pondosa.

Q. And you furnish them pondosa?

A. That is right.

Q. Where do you get your pondosa from?

A. Weierhaeuser.

Q. Do you get anything from California at all?

A. No, sir—wait, I will take that back. I think we bought one car or two cars from the Longbell Lumber Company, shipped from California.

Q. That would be California white pine?

A. Yes; that would be California white pine.

Q. Would you feel free to furnish that California white pine if you had it in stock to a purchaser who asked for white pine?

A. Yes, sir.

Q. Do you handle any northern white pine at all?

A. No, sir.

Mr. BURR. That is all.

1185 Cross-examination by Mr. MATTHEW:

Q. Mr. Rothfield, I understood you to say in the early part of your direct testimony that you practically never receive any orders for white pine without any qualifying term. Was I wrong in so understanding your testimony?

A. I did not get that, sir.

Examiner SHEPPARD. Read the question.

(Question read.)

By the WITNESS:

A. By qualifying term you mean northern white pine or western pine?

By Mr. MATTHEW:

Q. Yes; that is, your customers do not order white pine?

A. Occasionally they do. They say white pine. Most of the time they say soft pine.

Q. Now, when you receive an order for soft pine what do you supply?

A. Pondosa.

Q. And this is largely pondosa lumber which you have purchased from the Weierhaeuser interests?

A. Yes.

Q. Now, when you receive an order for white pine what do you furnish?

A. Pondosa.

1186 Q. And I think you said at one stage of your testimony that you sometimes purchase pine from Mr. Jacob's company?

A. Where we get a special order specifying California white pine of a clear grade.

Q. Why do you feel free to furnish pondosa pine upon an order for white pine?

A. It generally fits the purpose for which it is used, stepping and facing.

Q. Exterior steps, do you mean?

A. Yes; exterior steps on the back porches.

Q. Does the term "white pine" in this market mean any particular variety of white pine?

A. Well, in the building business, which is the only thing that I am acquainted with, it does not appear that it does.

Q. That is, you might furnish upon such an order either northern white or Idaho white?

Mr. BURR. He does not deal in northern white.

The WITNESS. We do not handle northern white.

Mr. MATTHEW. I think he said in some instances he would go out and purchase northern white.

The WITNESS. No; I did not say northern; I said California clear stock.

By Mr. MATTHEW:

Q. You never have any northern stock?

1187 A. No.

Q. The term "white pine" in this trade, so far as you are familiar with it, would include the pondosa pine?

A. That is right.

Mr. MATTHEW. That is all.

(Witness excused.)

Mr. BURR. I move to adjourn until two o'clock.

And thereupon a recess was had until two o'clock p.m. of the same day, Friday, October 18th, 1929.

1188 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669

CHICAGO, *October 18th, 1929.*

Met pursuant to recess, at 2 o'clock p.m.

Before William W. Sheppard, examiner.

Appearances:

Eugene W. Burr (Washington, D.C.) for the Federal Trade Commission.

Allan C. Matthew and Carl I. Wheat, attorneys for the respondents.

1189 PROCEEDINGS

J. A. BISHOP was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name, please?
A. J. A. Bishop.
Q. You are a retailer of lumber, are you, Mr. Bishop?
A Yes, sir.
Q. What firm name?
A. Bishop Lumber.
Q. Are you at the head of that firm?
A. No, sir.
Q. What position do you occupy?
A. Vice president.
Q. How long have you held that position?
A. About three years.
Q. How long has the Bishop Lumber Company been in existence?
A. About ten years.
Q. What types of lumber do you handle, Mr. Bishop?
A. General construction lumber.
Q. And what varieties of pine do you use?
A. What varieties of pine?
1190 Q. Yes. What kinds of pine do you use?
A. Well, we have Norway pine and a white pine.
Q. What kind of white pine do you carry?
A. Northern white pine, sugar pine, western pine.
Q. Do you carry California white pine?
A. Yes.
Q. Do you carry pondosa pine?
A. Yes, sir.
Q. You carry northern pine, you say?
A. Yes, sir.

Q. Do you carry Idaho white?
A. Yes, sir.
Q. Do you receive orders for white pine occasionally, Mr. Bishop?
A. For white pine?
Q. Yes.
A. Yes, sir.
Q. And which of those varieties of lumber do you furnish when you get orders for white pine?
A. They usually specify whether it is a soft pine or a hard pine.
Q. When you get orders for a soft pine, what do you furnish?
A. An Idaho or sugar pine or a northern white pine.
Q. On orders for white pine do you ever furnish California white pine?

1191 A. On orders for California white pine?
Q. No; on orders for white pine do you ever furnish California white pine?
A. Well, if we know the type of work, or it is specified. Ordinarily we do not.
Q. I did not get your answer.
A. In the case of California being substituted for soft pines, we would not do that. There is a difference between the California and Idaho in that respect.
Q. You would substitute Idaho, would you?
A. We would not figure that Idaho was a substitution. We would figure if they wanted a white pine they would probably use a soft pine.
Q. Would you figure that you could furnish sugar pine under an order for a white pine?
A. Yes.
Q. Then, you would furnish interchangeably, according to the condition of your stock, an Idaho white pine, a sugar pine, or a northern white pine; is that true?
A. No; we do not do that, because there is a difference in price and a difference, probably, in the grade. It would probably be indicated by the grade and the nature of the work that was required for the lumber.
Q. Well, do you regard all three of those as being white pine?

1192 A. The sugar pine?
Q. The sugar pine, Idaho white, and northern?
A. Yes; I would.
Q. Now, then, why would you refrain from supply California white pine under such an order?
A. Well, it is not the species of wood that they would require for that order. It is a harder pine, I think.
Q. It is a harder pine?
A. Yes.
Q. How about pondosa? Isn't that also a harder pine?

A. That is probably also the same species.

Q. Which variety of pine do you prefer for exterior use?

A. Well, I do not know. That is probably a personal opinion. It is a matter of taste, I imagine, for interior use.

Q. For exterior use, now. Did I say interior?

A. I thought you did.

Q. Now, for exterior purposes which variety of pine do you regard as preferable?

A. Well, personally, I would think that the Idaho or the northern white pine would be. The northern white pine would be probably the best.

Q. Why?

A. Well, I figure it is a species of wood that resists the general weather conditions better than the others.

Q. Have you had any experience with California white pine
1193 or pondosa pine?

A. Not directly; only in a merchandising way.

Q. As regards its durability?

A. None; only in a merchandising way.

Q. What is the reputation of northern white pine in this community here among retailers and architects for durability for exterior purposes?

Mr. MATTHEW. You have not qualified him as to architects.

Mr. BURR. Well, I will cut out architects for the present purpose.

By Mr. BURR:

Q. What is the reputation for durability where exterior uses are to be made of the lumber, of northern white pine, among the retailers?

A. It is supposedly very good.

Q. What is the reputation, would you say, of Idaho white pine for durability where exposed to the weather?

A. I imagine that they are very similar in species, and therefore they are similar in their possibilities of resisting wear and weather and one thing and another. Take Thinkwell——

Mr. MATTHEW. I do not believe the witness has answered the question.

1194 Mr. BURR. I asked as to the reputation, and you gave your personal opinion, I believe.

Q. Now, what is the reputation of Idaho white pine in this community among retailers? Do you know the reputation of Idaho white pine among retailers for durability where exposed to the weather?

A. It has the reputation of being very good.

Q. What is the reputation of California white pine where exposed to the weather?

A. I do not know.

By Examiner SHEPPARD:

Q. Mr. Bishop, do I gather from what you have said that you consider the California white pine and the pondosa pine a harder wood than the old-time northern white pine or the Idaho pine?

A. Yes, sir.

Examiner SHEPPARD. All right.

By Mr. BURR:

Q. For what purposes do you recommend California white pine when you are asked for your best judgment as to what ought to be purchased?

A. Well, I do not know. It depends on the type of building and depends on where they are going to use it and what kind of use they are going to put it to. There may be possibilities where it could be used as a substitute or used to an advantage, or something
1195 of that kind. I do not know. California white pine may be used to an advantage where I would not know where it was best to use it. I could not answer.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. What proportion of your pine lumber of the species or names concerning which you have testified is represented by the northern white pine?

A. I did not quite understand your question.

Examiner SHEPPARD. Read the question.

(Question read.)

A. (By the witness.) I could not answer that question.

By Mr. MATTHEW:

Q. Now, do you carry relatively a large amount of northern white pine, or are your dealings mostly in some other white pine?

A. Well, I would not say so. I think we carry a fairly average stock of the northern white pine and the Idaho white pine.

Q. Do you sell as much northern white pine as Idaho white pine?

A. Well, year in and year out, I don't know how I would be able to answer that.

1196 Q. You cannot tell which would preponderate as far as volume of sales is concerned?

A. I think it is just a guess; I would say probably the Idaho was a little in the major part of it.

Q. Do you sell more Idaho white pine than California white pine?

A. No; I would not say so.

Q. Do you think you sell more California white?

A. Than Idaho?

Q. Yes.

A. Yes; I think so.

Q. Now, are you including in California white pine the lumber that you receive under the name of pondosa pine?

A. No; I am not. The pondosa I was not including in that.

Q. Well, do you sell more pondosa pine than Idaho white pine?
A. Yes; I think so.
Q. Then you sell more pondosa than California white?
A. Yes, sir.
Q. Do you purchase your lumber supplies to any extent from the Weierhaeuser lumber interests?
A. To any extent?
Q. Yes.
A. I have bought lumber from the Weierhaeuser people, although not regularly.

1197 Q. Do you buy the larger part of your northern white pine stocks from the Weierhaeuser companies?
A. No.
Q. How about the Idaho white pine?
A. I have bought some from the Weierhaeuser people.
Q. And the pondosa pine?
A. Yes; I have bought pondosa from them.
Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Are the Weierhaeuser companies your principal source of supply?
A. No.
Q. Where does your California white pine come from?
A. Well, it comes from California, and it comes from, I think from Oregon; some of it comes from Oregon and some of it from Washington. Of course, your stuff from Oregon may be classified as the pondosa. If it is in California, it may be the California. I could not answer that.
Q. Do you distinguish between pondosa and California white pine?
A. Do I distinguish between pondosa and California?
Q. Yes.
A. Yes.

1198 Q. Well, now, are you sure you get any so-called California white pine from the State of Washington?
A. No; I would not say from the State of Washington, but I said from Oregon.
Q. Yes. I think you testified you got some from Washington. You are referring to pondosa, then, are you not?
A. Yes; I was including Washington in there as a possibility.
Q. Do you buy that same type of lumber from New Mexico or Arizona?
A. I could not answer that.
Q. Do you know what concern you deal with in California for the California white pine?
A. I have bought some from the Red River.
Mr. BURR. I see. That is all.
(Witness excused.)

CHESTER H. WOLCOTT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. Chester H. Wolcott.

Q. Mr. Wolcott, you are an architect here in the city of Chicago?

A. Yes, sir.

1199 Q. How long have you been in that profession?

A. Eighteen years.

Q. What is the name of your concern?

A. Under my own name.

Q. And you have been practicing under your own name for that entire period, have you?

A. I have had partnerships with two others.

Q. I see. Now, your line of work is residences or business blocks, or what is it?

A. About ninety per cent residences.

Q. Do you have occasion to specify for exterior purposes any variety of pine on occasion?

A. Yes, sir.

Q. What do you specify?

A. White pine for sash and doors; exterior work usually.

Q. Do you specify it in the term "white pine" or do you specify in a more restricted sense or language?

A. Lately in a more restricted sense, because in our work we find great confusion as to what white pine is.

Q. Will you explain that, please?

A. There are many varieties of so-called "white pine", as I understand it from our mills.

Q. Now, what specifications besides the term "white pine" do you put into your specification column?

A. We have been using the words "western pine."

1200 Q. I beg pardon?

A. Western pine.

Q. You have been, you say?

A. Yes.

Q. You have been of late, you say?

A. Yes.

Q. You have been using the specification "western pine", is that right, for exterior trim?

A. Yes.

Examiner SHEPPARD. That is, when you want white pine?

The WITNESS. Yes.

By Mr. BURR:

Q. Now, what varieties of pine would you regard as a compliance with your specification of western pine?

A. A pine of a good color and grain, free from knots, and so forth.

Q. You go ahead and specify, in addition to the words "western pine" you then go ahead and specify as you just answered, do you?

A. Yes; something like that.

Q. Well, now, what variety of wood do you regard—I am not now talking about the grade or the freedom from knots—what variety of wood do you regard as a compliance with your specification of western pine?

A. I do not know quite how to answer that question; I do
1201 not quite get you.

Q. Well, do you regard Idaho white pine as a compliance with your specification?

A. I would; yes, sir.

Q. You do not use the word "white" in connection with your specification; is that true?

A. I have not recently.

Q. You cut out the use of the word "white" and you now specify "western pine", then you go ahead and specify the grade?

A. Yes.

Q. And the condition it should be in?

A. Yes. We have samples submitted.

Q. Now, then, if you got northern white pine, would you regard that as a compliance?

A. Yes, sir.

Q. Even though it does not grow in the West?

A. Yes.

Q. How about California white pine? Would that be a compliance?

A. I am not very familiar with that.

Q. Well, if you were told that California white pine had been delivered on the job and that it, in appearance and freedom from knots and the apparent grade, and so forth, was apparently satisfactory, would you accept it as being in compliance with your specification?

A. Yes; I would.

1202 Q. How about Idaho white pine?

A. The same applies to that.

Q. How about California sugar pine?

A. I do not know that.

Q. You do not know that?

A. No, sir.

Q. How about pondosa pine? Would that comply with your specifications?

A. Not to the extent that the others would; no.

Q. Now, do you regard the California white pine and the Idaho white pine and the northern white pine as all being white pines?

A. I do not know the California variety.

Q. Do you regard the other two as genuine white pines?

Mr. MATTHEW. You had better qualify him on that.

Mr. BURR. No; I do not think he needs qualification. I am trying to get his view.

The WITNESS. I would say that the northern white pine in my practice is regarded as the true white pine.

By Mr. BURR:

Q. Well, now, I think when you first began your testimony you testified that your requirements for exterior trim were a white pine; is that correct?

A. Yes. Not for all buildings, but that is the typical timber; yes.

1203 Q. That is the preferable type, is it, in your judgment?

A. Yes.

Q. And you have ceased, as I understand your testimony, to use white pine when you desire white pine for exterior trim and have substituted the term "western pine" for this exterior work; is that true?

A. Yes.

Q. Now, what experience led you to make that change, if you can tell?

A. Because we could not get northern pine.

Q. You could not get northern pine?

A. No.

Q. Do you realize that there is a difference in price between northern pine and the various varieties of western pine?

A. I am not familiar with that.

Q. Now, when you say that you could not get the northern pine, are you referring to prohibitive price conditions as regards the northern white pine?

A. Well, my experience has not been very wide in this matter. We deal through Chicago mills and cabinet shops, and after being told several times that the northern white pine was very difficult to get, we said, "What have you?"

Q. Yes.

A. That is what led to the expression "western pine."

Q. You referred awhile ago to the confused state of the

1204 trade as regards these western pines. Will you explain that a little bit?

A. The confusion is all in my own mind, perhaps.

Q. Well, explain that, if you will.

A. I cannot tell the difference, neither can many of the men in my office, from a small sample of wood, whether it is northern or what I call western.

Q. Yes.

A. I am frankly unable to tell at times the difference.

Examiner SHEPPARD. Does that arrive from the contractors?

The WITNESS. Yes; from the mills.

By Mr. BURR:

Q. Now, what is known as or given a name, including the word "white", in view of the confusion that you refer to, would you regard that as a genuine white pine if the word "white" was in the trade term?

Mr. MATTHEW. I object to that.

Examiner SHEPPARD. That is a conclusion I have got to draw. I do not care to have him testify to that.

Mr. BURR. All right. That is all.

Examiner SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

1205 Q. Mr. Wolcott, I take it that as an architect your primary interest is in the quality and utility of the woods which will be furnished for particular work, and that you are not especially interested in the botanical classification of the species of trees?

A. Very true; yes.

Q. Quality and utility are important in your mind?

A. Yes; and effects, grain effects.

Q. That would be included in the word "quality", I take it?

A. Yes; I presume it would.

Mr. MATTHEW. That is all.

(Witness excused.)

T. J. CURLEY was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Curley, you are with the William C. Schreiber Lumber Company?

A. Yes, sir.

Q. That is here in Chicago?

A. Yes, sir.

Q. What is your position with that firm?

A. President.

Q. How long have you been in that position?

1206 A. Five years.

Examiner SHEPPARD. Are they retailers or wholesalers?

The WITNESS. Retailers and wholesalers.

By Mr. BURR:

Q. You do not do any millwork, do you?

A. Commercial planing.

Q. Now, what varieties of soft white pines do you deal in?

A. Soft white pines?

Q. Soft pines, I should say—not white.

A. Northern white pine, Idaho white pine, sugar white pine.

Q. Do you deal in California white pine?

A. Yes.

Q. Do you deal in pondosa?
A. Yes.
Q. Do you regard those as soft white pines, or are they a little harder?
A. A little harder.
Q. You do not regard them as being in the same class with the hard southern pines of the South, or do you?
A. No.
Q. Now, do you have on occasion, Mr. Curley, orders calling for white pine without there being more descriptive than merely that term?

A. We do; but we try to understand our customer's require-
1207 ments before we attempt to fill the order.

Q. Well, do you ever on occasion fill an order for white pine with California white pine?
A. Not without calling it California white pine.
Q. Yes; but would you, if you got an order for white pine, invoice it to them as California white pine and go ahead and furnish it?
A. Invoice it as California white pine and furnish California white pine; yes.
Q. You would do that, would you?
A. Yes.
Q. Which varieties of wood, when your opinion is asked, do you recommend for exterior trim?
A. Northern white pine and Idaho white pine.
Q. Don't you recommend California white pine for that work?
A. As a price proposition; yes.
Q. What do you mean by that?
A. That it is a lower priced wood than we consider Idaho or northern white pine.
Q. Do you regard it as being equally serviceable for exterior purposes?
A. Not in my opinion.
Q. Which do you regard as the very best variety of pine for exterior trim?

A. I would place on an equal basis the Idaho white pine and
1208 the northern white pine.

Q. Do you deal in any sugar pine?
A. Yes.
Q. How do you regard that for exterior trim as to durability, if you use it for that purpose?
A. Sugar pine for the exterior trim—I do not recommend it on account of the sugar that is in it, which we deem unsatisfactory for that purpose entirely.
Q. Do you sell any variety of lumber for pattern stock?
A. Yes; we do.
Q. What do you recommend for that where your opinion is asked?
A. Northern white pine, Idaho white pine, or sugar pine.

Q. Do you ever sell the California white pine for that purpose?
A. No.
Q. Where do you get your California white pine from?
A. The firm or place?
Q. Yes; if you do not mind naming them.
A. The St. Cloud River Lumber Company, the Algoma Lumber Company, and the Madeira Sugar Pine Company are our principal sources of supply.
Q. Of the California white pine?
A. Of the California white pine; yes.
Q. Now, the Maderia Lumber Company—they do not call it California white pine, do they?
A. They call it por doso pine now.
1209 Q. They call it pondosa pine now, do they?
A. Yes.
Q. Do you get your sugar pine from there?
A. Some.
Q. Where do you get the rest of it from?
Examiner SHEPPARD. Are they respondents?
Mr. BURR. Who?
Examiner SHEPPARD. The one you just mentioned.
Mr. BURR. The Sugar Pine Company?
Examiner SHEPPARD. Yes.
Mr. BURR. No, sir; they are not.

By the WITNESS:

A. The Owen Oregon Lumber Company; we have had some from them, at Medford, Oregon.

By Mr. BURR:

Q. You have had some sugar pine from there?
A. Yes, sir.
Q. Now, as to durability for exterior use, do you distinguish between pondosa pine and California white?
A. For exterior purposes? The only distinction I make between the two woods is that I consider the California white pine a softer wood than the so-called pondosa or western pine.
Q. Do you happen to know whether they are the same variety of tree, or don't you pay any attention to that?
A. Except only as to the texture.
1210 Q. What is the reputation of northern white pine for durability where exposed to the weather in this community?
A. Very good.
Q. What is the reputation of Idaho where exposed to the weather?
A. Very good.
Q. Do you know the reputation of California white pine where exposed to the weather?
A. For ordinary purposes, used for ordinary purposes, that is all, as a price proposition.

Q. What do you mean by "as a price proposition"?

A. It is a lower-priced item in the Chicago market for selling to the consuming trade.

Q. Do you find that a good many of your customers are building for speculative purposes for resale immediately?

A. At times.

Q. Where there is competition between the genuine white pines and California white pine, would the price proposition be particularly attractive to that class of trade? Is that your experience?

A. To the factory trade it would be.

Q. What do you mean by factory trade?

A. The cabinet men and sash and door factories can buy it at considerably less than they can the northern or Idaho white pine.

1211 Q. Well, now, when you say that California white pine is used for exterior purposes as a matter of price, what do you mean?

A. I mean that there is no restriction cast around the item of wood itself, and an architect in specifying as a rule cannot determine the difference, and that the wood is substituted for white pine. The reason for it being substituted is the lower price, lower cost to the sash and door men or to the interior men.

Q. And the architect cannot tell the difference after the substitution; is that true?

A. As a general rule.

Q. Do you think there is much of that substitution where there is a specification for white pine?

Mr. MATTHEW. If he knows.

By Mr. BURR:

Q. If you know.

A. Do I think there is much substitution?

Q. Yes.

A. About ninety-five percent.

Q. You think in about ninety-five percent of the cases the architect does not get genuine white pine?

A. Yes; where he specifies white pine only.

Examiner SHEPPARD. You mean the lumber sellers, retail and wholesale, substitute the California white pine for a specification calling for genuine white pine or white pine?

1212 A. I do not mean the lumber sellers; I mean the factory manufacturers that remanufacture this into sash and doors and exterior trim. It is commonly known among the sash and door men if a specification comes in for white pine they will furnish California white pine or so-called western pine or pondosa pine, without attempting to get the genuine northern white pine or Idaho white pine.

By Mr. BURR:

Q. Is California white pine as durable for exterior trim, in your judgment, as the Idaho or the northern white pine?

A. No.

Q. Do you find that you are able to compete with genuine white-pine materials when you come up against competition where there is a substitution of California white pine for genuine white-pine specifications?

A. Do we find that we are able to compete?

Q. Yes.

A. With genuine white pine?

Q. Yes.

A. We do not attempt to. We try to determine which particular wood is acceptable.

Q. Is acceptable?

A. Is acceptable; and we handle the varieties of woods that you mentioned.

1213 Q. Then on a specification for a white pine, if you found that they were going to permit California white-pine bids to be considered, you would bid on California white pine, too, would you?

A. We would specify California white pine and bid on California white pine.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. As I understand it, Mr. Curley, when you receive an order for white pine you ordinarily furnish either northern white or Idaho white pine, but you never will furnish California white pine upon such an order without first ascertaining whether it will be acceptable to your customer?

Mr. BURR. He did not so testify.

Mr. MATTHEW. I understood him so to testify.

Mr. BURR. No.

By Mr. MATTHEW:

Q. I am asking you now.

A. Not without verifying the wood.

Q. Let me get this, then. You will, in response to certain orders for white pine, furnish either northern white pine or Idaho white pine?

A. Yes.

1214 Q. You feel free to furnish either of those two species of lumber in response to an order for white pine?

A. Yes.

Q. Now, you stated that in some instances you will furnish California white pine upon an order for white pine?

A. Only after finding out if California white pine is acceptable.

Q. Yes. Then I am right in understanding that you never furnish California white pine upon an order for white pine without first ascertaining whether that will be acceptable to your customer?

A. Right.

Q. And you invoice the California white pine to him as such—that is, as California white pine?

A. Yes.

Q. And you undertake to make it clear to your customer just what he is getting in each instance?

A. Yes.

Q. Do you distinguish between the durability of heartwood and sapwood, respectively?

A. Yes; in my opinion the heartwood is more lasting than the sapwood under certain conditions.

Q. Well, when exposed to the weather on the exterior of a building, without paint, it is your understanding that the heartwood is far more durable than the sapwood?

1215 A. Than the sapwood.

Q. And that is true with respect to all these several varieties of pine, is it not?

A. Yes.

Q. Do you obtain any material quantity of Idaho white pine in the shop grades?

A. From seventy-five to a hundred thousand feet of lumber on hand, according to the demand of the trade here in the Chicago territory, in our business.

Q. You are talking about your own stocks?

A. I am talking about our own stocks.

Q. This is Idaho white pine stock?

A. Idaho white pine.

Q. In the shop grades?

A. In the shop and better grades.

Q. Shop and better?

A. Probably more than that with shop and better; it would probably be one hundred and fifty thousand feet.

Q. What about the shop alone?

A. Shop alone, about seventy-five thousand feet.

Q. And how does that compare with your stock of northern white pine in the shop grades?

A. It is interchangeable with our northern stock. We do not make any distinction.

Q. When you answered my inquiry, then, as to your stock of

1216 Idaho white pine, you included the northern white?

A. I tried to eliminate some of it. That would probably increase that about thirty thousand feet.

Q. As I get it now, then, about thirty thousand feet of your stock would be northern white pine and the remainder of seventy-five thousand would be the Idaho white pine?

A. Idaho white pine.

Q. In the shop grades?

A. In the shop grades.

Q. Can you tell us approximately the amount of your stock in California white pine in the shop grades?

A. About two hundred thousand feet.

Q. How about pondosa?

A. We class all of our California and western pines as pondosa, being principally California white pine, buying it for texture.

Q. Then your two hundred thousand feet figure represents the combined stocks of California white pine and pondosa pine?

A. Yes.

Q. I understand that California white pine predominates in that figure?

A. Yes; in shop grades I am talking about.

Q. I was talking about the shop grades; yes. I am not sure whether you stated on your direct examination whether you do any millwork or not.

1217 A. I stated planing-mill work, which means surfacing, and running the pattern.

Q. Now, you referred to the substitution of the California white and pondosa pine by the manufacturers for white pine, and as I recall the substance of your testimony you said there was very extensive substitution of California white and pondosa pines for white pine?

A. By manufacturers I meant the sash and door plants around Chicago. Yes; I did.

Q. Now, by that you meant, did you not, that the sash and door manufacturing plants around Chicago used predominantly the California white and pondosa pines in their manufacturing operations?

A. Yes.

A. And do they distinguish between California white pine and pondosa pine, either in their manufacturing operations or in furnishing their product to their customers?

A. I do not know. I could not answer that question except in this way, that if they were to call us for a price on that lumber they would want to know whether that was California white pine or so-called pondosa pine?

Q. What is your understanding as to the reason for such an inquiry?

A. California white pine being of a softer texture than the ordinary pondosa pine.

1218 Q. For that reason it is regarded as somewhat more satisfactory for shop use?

A. Than the pondosa pine, as I understand, the pondosa coming from the State of Washington and northern Oregon and Montana and some parts of Idaho.

Q. What is the basis for your statement that 95 percent of the orders for white pine sash and doors are filled by sash and doors manufactured from California white or pondosa pine? Is that just a general impression?

A. A general impression.

Q. It is just a general impression?
A. Just a general impression.
Q. Do you know why northern white pine is not used more extensively by the sash and door manufacturers in the Chicago district?
A. The price.
Q. Is it for that same reason that Idaho white pine is not used more extensively?
A. The price, the same reason.
Q. It is not a matter of the name of the wood, then, but it is a matter of price?
A. The price; yes.
Mr. MATTHEW. That is all.
(Witness excused.)

1219 RICHARD POWERS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Please state your name.
A. Richard Powers.
Q. Mr. Powers, you are an architect, are you, sir, in the city of Chicago?
A. Yes.
Q. How long have you been in that profession?
A. 19 years.
Q. During that entire time in this city?
A. For the last four years in this city.
Q. Prior to that time where were you?
A. In Boston, Massachusetts.
Q. What is the reputation of white pine for durability where exposed to the weather, Mr. Powers?
A. We have always considered it to be very good.
Q. Is there any other variety of white pine that you would regard as equally or practically equally good for exterior trim?
A. Any other variety? The only thing I said was just generally white pine; that is, we regard that exteriorly as a very good wood to use.
Q. Well, do you regard Idaho white pine as being in the
1220 same class as the northern white?
A. Personally, I cannot answer that, because the end of my work has been chiefly that affecting design, and the matter of specifications I have left usually to a subordinate to handle. But we have never specified any particular brand of white pine. The specifications would read "white pine."
Q. If you learned that sugar pine had been delivered on the job when you specified white pine for exterior purposes, would you regard that as a compliance, provided the grade, and so forth, were satisfactory?
A. I do not believe I would be qualified personally to pass on that. I would want to go to someone with more authority and ask them.

Q. Someone outside of the firm, you mean?

A. Someone outside of the firm who I considered to be an authority on matters of that kind.

Q. What if you found that California white pine had been delivered on the job? Would you regard that, if the grade, and so forth, were up to your specifications—would you regard that as a compliance?

A. I think I would feel just exactly the same way in regard to that—that I am really not in a position to know. The only thing we usually require is good, straight-grained wood, free from knots, sap, streaks, or things of that sort.

Q. But you do require white pine, do you?

1221 A. We call for white pine, we specify white pine—that is, for certain things; yes.

Mr. MATTHEW. Pardon me, but it seems to me as long as the witness says he does not deal himself with the specifications and is not familiar with these various woods, it would be hardly a proper foundation for these other questions. I object on that ground. I have not interrupted, but I do not see how the witness can answer this latter question when he says specifically he has not dealt himself with the specifications and is not qualified to pass upon the several points.

Mr. BURR. If the examiner please, I will ask him a question or two more.

By Mr. BURR:

Q. What is your position with your organization there? You are at the head of it, are you?

A. Yes; I am at the head of it.

Q. And the specification writer acts in accordance with the policies which you lay down, does he?

A. That is correct.

Q. And the matter of the specification of white pine for exterior use is a policy of your own, is it not, rather than his?

A. Correct; yes.

Q. Now, then, how would you ascertain whether any given

1222 variety of lumber had actually been supplied when you specified northern white pine?

A. Well, I personally do not know whether I would be able to tell whether it was northern white pine or not.

Q. Well, have you no one in your organization who could tell?

A. Yes; I assume they could tell, but I think in a great many cases it is difficult to distinguish as between certain brands of white pine.

Q. Have you, as a matter of fact, a man who is a trained technologist in wood matters in your organization?

A. Not especially trained in wood matters; no.

Q. Well, do you or do you not, as a matter of policy, rely upon the character and standing of your contractor with regard to the variety of pine wood that is delivered on the ground?

A. We rely chiefly upon the mills with which we do business, which are usually a selected list. I think probably, if I may be permitted to explain, the nature of the work, which is a high-class residential work——

Q. Yes.

A. Doing that sort of work, you naturally restrict yourself to certain different mills and contractors whom you know can deliver the quality of work you want, and very often in the case of specifications to which we are referring now I say "white pine",
1223 knowing that this mill, whichever mill is doing it, will supply the best thing they have. That is my point.

Q. Well, now, when your office inspects the lumber that is actually delivered, if the appearance is good and the freedom from knots and the grade are satisfactory, do you, as a matter of general policy, check up the variety through someone outside of your organization?

A. Not as a matter of general policy.

Q. In other words, if the lumber is satisfactory in appearance under your specification, you rely upon the contractor's fidelity to your specification, do you?

A. That is correct.

Q. If someone outside of the organization were to be called in to identify the lumber, would you or would you not have it called to your attention?

A. Would you please repeat that?

Mr. BURR. Read the question.

(Question read.)

A. Yes; I would. (By the witness.)

By Mr. BURR:

Q. How many times during the past year have you gotten help from outside to find out whether the exterior pine material was in accordance with your specification for white pine?

A. I have not had that called to my attention in my experi-
1224 ence in Chicago.

Q. Not once?

A. Not once.

Mr. BURR. That is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. I take it, Mr. Powers, that you are not particularly informed as to the botanical classification of the several species of pine trees?

A. I am not particularly well informed as to that; no.

Q. You are not advised as to the scope of the so-called white pine group or the scope of the yellow-pine group, or others?

A. Very vaguely, very vaguely.

Q. Your interest as an architect, I take it, is in the quality and utility and appearance of the material which is to be furnished for your work?

A. That is correct; yes, sir.

Q. Now, you have had no personal experience with sugar pine for exterior purposes?

A. Not here in Chicago; no.

Q. Have you had experience with sugar pine elsewhere?

A. In practice in the East we used to call—if we had a par-
1225 ticularly fussy piece of exterior work involving carving we tried to obtain what we called sugar pine: I do not know whether the name was an accurate one, but it was considered to be in that office a very good material to employ for such a purpose.

Q. That represents your principal experience with sugar pine?

A. Yes.

Q. Have you had any particular experience with Idaho white pine?

A. With Idaho white pine?

Q. Yes.

A. Not that I am aware of; no.

Q. Do you know whether or not the northern white pine achieved its just repute for durability largely because of the fact that it was a heartwood that was commonly utilized for exterior purposes?

A. Well, I really do not believe I am sufficiently posted to answer that question.

Q. You do not personally, then, distinguish between durability of heartwood and sapwood?

A. As a general proposition; yes.

Q. Generally you would recognize that heartwood is the more durable of the two?

A. Yes.

Mr. MATTHEW. That is all.

(Witness excused.)

1226 FRED L. LAMMERS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. Fred L. Lammers.

Q. Mr. Lammers, you are engaged in what line of business, sir?

A. In the sash and door and interior trim business.

Q. And how long have you been so engaged?

A. Twenty-five years the first of next February.

Q. And you are located where?

A. Bayport, Minnesota.

Q. And you have been there during your entire experience, have you?

A. Yes, sir.

Q. Now, have you had experience in the forest at all, Mr. Lammers?

A. Part of four years.

Q. Where was that?

A. In northern Wisconsin and Minnesota.

Q. Just what were you doing in the forest? What was your line of duty?

A. I was clerking and helping oversee logging operations there for my father.

Q. What other practical experience in the forest have you had?

1227 A. I have operated some small portable mills myself, going around also through the northern part of Minnesota and Wisconsin and buying small mill stocks.

Q. Now, in your mill what class of finish are you making—exterior or interior, or both?

A. We make both, but lately our product has been largely higher-class fine interior work in one branch of our business, and in the other business exterior trim business put up in packages.

Q. What do you use for your exterior trim?

A. That will depend entirely upon the specifications of the architects for whom we are doing work. In our locality a large part of it is specified as white pine, being close to the white pine mills.

Q. It is specified to you as white pine?

A. As white pine.

Q. Under those circumstances what do you furnish?

A. In these finer jobs we furnish white pine. We are quite familiar with the architects, knowing their specifications, and when they specify white pine they mean northern white pine. If we are in doubt, we see them about it and furnish white pine, if that is called for.

Q. Now, then, for your exterior work how much California white pine do you use in the course of an average year?

A. Last year we cut approximately three million feet of

1228 California pine.

Q. From whom do you get that?

A. We buy that in the Klamath Falls district from sawmills companies, Billock & Bay, Ewauna Box, Red River Lumber Company, and we buy a lot from wholesalers, coming from different firms out there.

Q. Now, do you regard the California white pine bought from the sections that you do business with as a satisfactory wood for interior purposes?

A. For interior purposes? Yes, sir.

Q. Do you regard it as satisfactory for exterior purposes?

A. We do not furnish it only just when we find that the competition demands that we furnish that in competition with other factories.

Q. Will you be kind enough to explain what you mean—explain the circumstances more fully?

A. If we figure a plan from an architect that we do not know who is specifying white pine, if we find that he does not know what white pine is and has just specified "white pine", we go to

him and ask him if white pine is satisfactory; we ask him if pine is satisfactory and what pine he wants—California pine, pondosa pine, or northern white pine. If we find that any one of them is satisfactory, we will furnish either the pondosa pine or the California white pine, and we so specify in our bids. If it is northern
1229 white pine we figure and specify northern white pine in our bid. We know a good many of the architects and know just what they want. We know that most of them, when they specify white pine, they mean northern white pine.

Q. And when they want northern white pine they get it from you, do they?

A. They get it from us.

Q. Well, now, when you find out what an architect is willing to accept when he specifies a white pine, and he is willing to accept California white pine, thereafter, then, if he specifies white pine, what do you furnish?

A. We would furnish California white pine.

Q. Rather than northern, would you?

A. Rather than northern. We would have to do it in competition with competitors.

Q. Do you have occasion to meet these architects personally, or is this all secured by writing?

A. Usually through personal contact.

Q. You have a conference with them, do you?

A. I usually visit with them and show them the different woods.

Q. What do you do? Travel over to see them?

A. Most of them are right in our vicinity, there in the Twin Cities. It is only a matter of running over to see them.

1230 Q. Now, do you find that architects there are uniformly well informed as to the distinction between white pine and California white pine?

A. Not as a general rule.

Q. Is there confusion as to what those various classes of woods are and as regards their comparative durability?

Mr. MATTHEW. I do not think he is qualified to answer the latter part of your question.

Mr. BURR. He says he comes in contact with them.

By Mr. BURR:

Q. Counsel has interposed an objection. Let me ask you this first. Which variety of pine do you regard as the most durable where exposed to the weather for exterior use?

A. From our experience, northern white pine.

Q. In what category do you place Idaho white pine in that respect?

A. Well, we have not used as much Idaho white pine on account of being so close to the northern white pine mills, but an architect that knows anything about pine usually will accept the Idaho white pine as a substitute for northern white pine, considering it is in the same class.

Mr. MATTHEW. Well, I do not think that is quite responsive to the question as to durability.

By Mr. BURR:

Q. Do you regard the Idaho white pine as having a high
1231 degree of durability where exposed to the weather?

A. From our experience; yes.

Q. Now, then, do you find that among architects there is a confusion of ideas as to the respective merits of the so-called white pines, including the so-called California white pine, as regards their comparative durability for exterior use?

A. We find they know less about the California. They know northern white pine and usually that is what they want, the northern white pine. They know something more lately of the Idaho white pine, and will take the Idaho white pine.

Q. Well, do you find them confused as regards the California white pine and its status as a white pine?

A. They seem to be confused about that.

Q. Do you find there are architects who regard California white pine as a genuine white pine?

Mr. MATTHEW. Just a minute.

Examiner SHEPPARD. I think you are going a little too far. I do not know that this man can tell what all these architects know about these things. I will let him testify as to what he knows.

Mr. BURR. I think a man can find out in five minutes over the table what a man knows about the comparative values of these woods, just as we find out what the witness knows right here.

Mr. MATTHEW. But it is hearsay now, because I cannot
1232 examine these architects to which he refers.

Examiner SHEPPARD. I will let you testify, Mr. Lammers, as to what you think about these things, but I do not think your testimony as to the architects would do me much good.

Mr. BURR. I think the question is tantamount to a question that the examiner has permitted as regards confusion, where witnesses were allowed to testify as regards a confusion of mind in the trade.

By Mr. BURR:

Q. Do you find there is a confusion of mind among the architects with whom you actually confer with regard to these matters as to the status of the California white pine, as to whether or not it is a genuine white pine?

A. There seems to be this confusion.

Q. There seems to be what?

A. There seems to be a confusion.

Mr. MATTHEW. Isn't that the same question which the examiner ruled out?

Mr. BURR. I think it is more strongly fortified.

Examiner SHEPPARD. No; I let him testify in answer to that question, Mr. Matthew, because I think his experience in that will

enable him to have the knowledge necessary. That is the knowledge gained from coming in contact with these men.

1233 The WITNESS. There seems to be a confusion.

By Mr. BURR:

Q. How often in the course of the average year would you estimate you confer with architects orally on these matters?

A. That would vary, depending upon—oh, I would say on the average six or eight or ten times a year I am called in.

Q. Now, in your factory you make windows and exterior doors, do you—the frames for them?

A. We do.

Q. Have you had any experience as to the durability or lack of durability of California white pine or pondosa pine?

A. We have in pondosa pine right in our own factory. We have replaced windows in warehouses that have been in there approximately six years—between six and seven.

Q. Now, those were ponderosa, were they?

A. Those were ponderosa.

Q. Were they bought as California white pine or as pondosa?

A. They were bought as pondosa.

Q. Do you remember what mill you got them from, Mr. Lammers?

A. We made the windows ourselves in our own factory out of pondosa.

Q. Do you know what factory you bought your pondosa from?

A. I am not sure.

Q. You are sure it was pondosa, though?

A. I am sure it was pondosa. We also replaced some win-

1234 dows in another industrial building right in our city that were there approximately six or seven years that were made by another firm and shipped in there, and they rotted out so that they had to be replaced.

Q. How long had they been in place?

A. Approximately seven years.

Q. Did you testify how long those in your own factory had been in place?

A. Between six and seven years.

Q. Had those, do you know, been painted after they had been placed in?

A. They had been painted once in our plant after they had been in the building. In the other plant, I can not say.

Q. Now, how about the paint? Had that deteriorated?

A. The paint had peeled off.

Q. I beg pardon?

A. The paint had peeled off from the wood, causing the windows to rot.

Q. I beg pardon?

A. Causing the windows to rot; absorbed the moisture and the windows rotted.

Q. How much of that do you lay to the character of the ponderosa, and how much to the lack of paint?

Mr. MATTHEW. Is he qualified to answer that?

Mr. BURR. Yes.

1235 By Mr. BURR:

Q. Can you state that?

A. I could not say exactly. It possibly should have been repainted, but it was not, and rotted out.

Q. Have you had any opportunity to observe how northern white pine acts when it is not painted? Does that rot out rapidly?

A. I can tell from experience with the woods. Our boards there on the windows in camps and things like that, we would use rough boards there in particular, and they had lasted 18 years when I left there, and I don't how much longer.

Q. Unpainted?

A. Unpainted.

Q. Now, you mentioned two experiences with ponderosa pine, I believe. Have you had any others?

A. I was in a bank, the First National Bank at Stillwater, one time, talking with the president of the bank in his office, and he called——

Mr. MATTHEW. Pardon me just a moment.

Examiner SHEPPARD. Don't let us know anything about what he told you. That is hearsay.

The WITNESS. He called my attention to a frame that had rotted out. He asked me if we had furnished it. I told him, no; we had not. The sill had rotted out. I saw that. I also saw the

1236 wood after the frame was taken out, and later on he called my attention and asked me if it was northern pine and I told him, no. I took my knife and cut into the piece underneath the weather strip, and I could see it was ponderosa pine.

By Mr. BURR:

Q. Do you know of your own knowledge how long that building had been constructed?

A. Approximately from six to eight years.

Examiner SHEPPARD. That was at Clearwater?

The WITNESS. That was at Stillwater.

Examiner SHEPPARD. Stillwater, Minnesota?

The WITNESS. Yes.

By Mr. BURR:

Q. How much northern white pine do you buy in the course of a year, ordinarily?

A. Varying from ten to fifteen carloads.

Q. Do you have any trouble to get the northern white pine that you need?

A. We have not had any trouble so far.

Q. Are you able to get virgin northern white pine lumber?
A. We are.
Q. Are you able to get it in a satisfactory quality?
A. Yes, sir.
Q. From whom do you buy the northern white pine?

A. We buy from the International Lumber Company, Inter-
1237 national Falls; R. G. Chisholm Lumber Company, Ft. Francis; the Virginia & Rainey Lake Lumber Company; the Rushton Lumber Company; the Cloquet Lumber Company and the Northern Lumber Company at Cloquet; then we buy small mill shops.

Q. The Cloquet outfit is a Weierhaeuser outfit, isn't it?
A. Yes, sir.
Q. Are any of the others Weierhaeuser outfits?
A. I do not know what interest Weierhaeuser has in any of the other outfits.
Q. Now, is that all Minnesota white pine?
A. Minnesota and Wisconsin and some Canadian pine that goes into Ft. Francis there. I understand that stock is cut in Canada.
Q. Is any of this second growth?
A. I presume it is second growth in all northern pine today.
Q. In all northern pines?
A. In all northern pines. The stock we get is usually virgin stock, the type of lumber that we buy.
Q. You are not buying second growth?
A. We do not buy any common grades that the small stocks come out of. We buy some small mill stocks with second-growth stock.
Q. Well, now, would you be prepared to state that there is always a second growth, in spite of the fact that we have testimony here that the Weierhaeuser material is all virgin timber?

1238 A. There are young trees growing up all the time. I do not know whether you would call that second growth?

Q. Did you get that from hearsay, or is that your own personal experience?
A. I have seen it. It is personal observation.
Q. You have seen it?
A. I have seen the timber growing up—young timber.
Q. Oh, surely.
A. Well, now, that is second growth.
Q. Do you know whether second growth is really being cut?
A. I have seen small stocks cut.
Examiner SHEPPARD. That goes in the common grades, doesn't it?
The WITNESS. Yes.

By Mr. BURR:

Q. It is customary even in virgin timber to take the young growth, too, is it not?
A. Yes.

Q. Now, are you called in occasionally as a consultant rather than as a material man?

A. I have been by architects.

Q. What is your recommendation with regard to what should be used for exterior finish in the way of pine?

A. In the class of work that we have we usually specify northern white pine.

1239. Q. Well, I mean as a consultant.

A. Well, that would depend upon the building. Usually in real fancy house work northern white pine is specified.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Is Idaho white pine lumber relatively a newcomer in your industry?

A. We have not used so much Idaho white pine lumber until just the last few years.

Q. Is your use of Idaho white pine lumber increasing relatively?

A. Yes.

Q. What accounts for your increase in the use of Idaho white pine lumber?

A. Getting in territory where it is specified.

Q. You are not intentionally substituting it for northern white pine lumber, I take it?

A. No.

Q. You use the Idaho white pine only in response to specifications for Idaho white pine?

A. We use it where Idaho white pine or northern white pine is specified sometimes. Other times we have Idaho white pine on hand, for certain work that we can use either, and then we use

1240 the Idaho white pine.

Q. You feel free to furnish either indiscriminately in that case?

A. Yes.

Q. Now, throughout what period of time have you been using Idaho white pine in your manufacturing operations to any substantial extent?

A. That would vary, depending upon the year. For approximately five or six years we have been getting considerable Idaho white pine.

Q. Does that represent substantially the extent of your experience with the Idaho white pine?

A. Yes.

Q. Then you have not, as far as your personal experience is concerned, been able to subject the Idaho white pine to as extended durability tests as northern white pine?

A. No.

Examiner SHEPPARD. Let me interject a question right there.

By Examiner SHEPPARD:

Q. As a matter of fact, Mr. Lammers, has a sufficient time passed by in your judgment for a test of any of these so-called substitute white pines as to durability?

A. Not in our factory.

Q. Doesn't it take years and years to tell whether a white
1241 pine would stand up as well as the old northern and eastern pines?

A. I can only speak just in our own case; that is all. We have been using the white pines for so many years.

Q. That is what I am talking about. Now, these other pines that are sold now in competition with the northern white pine have not had the opportunity to prove their value, have they?

A. I presume not in this territory.

Examiner SHEPPARD. All right.

By Mr. MATTHEW:

Q. That is true as to Idaho white pine and other western pines?

A. From our experience.

Q. Do you use any California sugar pine?

A. Yes, sir.

Q. For what purpose?

A. We use it for frames and sash.

Q. Do you use that interchangeably with the Idaho white and northern white?

A. Well, we have.

Q. How long have you used it?

A. Approximately ten years.

Q. Is its use in your factory increasing or declining?

A. That is hard to state, because our work varies.

Q. So far as your observation goes, you cannot tell whether
1242 your use of sugar pine has been increasing or declining during the past ten years?

A. No.

Q. Throughout what period have you been using California white pine in your manufacturing operations in any substantial measure?

A. Four years.

Q. I think you stated that you use the California white pine very largely for interior work?

A. Yes.

Q. Do you find it quite satisfactory for that purpose?

A. It is for paint work; yes.

Q. I beg pardon?

A. For paint work it is satisfactory.

Q. And for that purpose does it satisfactorily serve the same uses which were served by northern white pine?

A. We were not in this business at that time. Until we started using California pine we were not using northern white pine for this work.

Q. This is entirely new?

A. This is a new industry with us.

Q. And from the beginning, then, you have utilized California white pine?

A. And pondosa pine.

Q. And pondosa. Do you use them interchangeably?

1243 A. Yes.

Q. And you have no preference as between California pine and pondosa pine?

A. We do not sell it as California white pine.

Q. Under what name do you sell it?

A. Pine.

Q. And it goes into the trade, then, just under the designation of pine?

A. Pine.

Q. Do you use any southern yellow pines in such work?

A. Yes, sir.

Q. Just what is the nature of the use that you make of the southern yellow pine as contrasted with the use that you make of California white and pondosa pine?

A. We use southern white pine; it is specified usually in the window frames, in the jambs in window frames.

Q. You mean southern yellow pine?

A. Yes; and finish, the largest use of that item in our business.

Q. Southern yellow pine?

A. Southern yellow pine for interior trim and jambs for window frames.

Q. Just how would you distinguish the use of the southern yellow pine from the use of the California white pine and pondosa pine?

1244 A. That is specified in our specifications as to getting out our material by the architects.

Q. I see. Then you are merely complying with the architect's specifications?

A. We comply with the architect's specifications.

Q. Do you use more California white and pondosa pine than southern yellow pine in this interior work?

A. Yes, sir.

Q. How much more?

A. We only use approximately a hundred thousand feet of yellow pine a year, and we buy approximately three million to three and one half million feet of California white pine and pondosa pine a year.

Q. What proportion of that total of three million and a half feet is represented by California white pine and what proportion by the pondosa pine?

A. Seventy-five percent California white pine.

Q. Do you distinguish between the durability of heartwood and sapwood, respectively?

A. Do I personally?
Q. Yes.
A. Yes.
Q. Heartwood is the more durable?
A. From my woods experience.

Q. I will ask you if this is approximately a correct state-
1245 ment, that the northern white pine achieved its reputation for durability largely because of the predominant use of the heartwood?

A. Yes.
Q. You would not recommend the sapwood of any pine for exterior use unless it would be quite thoroughly protected, would you?
A. The architect usually specifies "no sap." As all our wood or material goes out in the wide, we could not conceal any sap with paint.
Q. Then, when the architects make such specifications—that is, which include the requirement "no sap"—are those specifications directed impartially both to northern white pine, Idaho white pine, and other varieties?
A. They are.
Q. In other words, it is an objection to the use of sap?
A. Yes.
Q. You spoke of an instance, Mr. Lammers, a case in your own factory, where portions of window sash had rotted out after six or seven years in the place. I think you stated that the original paint had peeled off at some time before this decay took place?
A. I said the paint had peeled off.
Q. Can you tell us whether the parts of the sash that decayed were represented by a sapwood or heartwood?

1246 A. I could not.

Q. Can you tell us whether they were adequately protected from moisture?
A. Any sash on the outside would be subject to weather elements.
Mr. BURR. What was that answer?

By the WITNESS:

A. I said any sash on the outside would be subject to the weather elements.

By Mr. MATTHEW:

Q. This decay took place entirely on the outside?
A. I do not recall that. I know they were just falling right to pieces.
Q. Now, you have never seen sash made out of Idaho white pine under similar circumstances subjected to the same test?
A. Not in our experience, because we have not had that experience in Idaho white pine.
Q. Then you gave the case of another building in your community in which some of the sash had decayed after six or seven years.

A. Yes, sir.

Q. You stated that there you did not know whether the sash had been painted or not?

A. I did not know whether it had been painted after it had been put in. They were painted originally.

1247 Q. Do you know whether the parts that decayed were of heartwood or sapwood?

A. I do not.

Q. Now, you gave another case which I think you identified as that of the First National Bank in Stillwater?

A. Yes, sir.

Q. You said the sill had rotted out in one of those?

A. The window frame.

Q. That is the lower rail of the window frame?

A. Yes.

Q. Was that of sapwood or heartwood?

A. I am not familiar enough to tell you.

Q. You made an examination of that?

A. I made an examination of the wood, but I do not recall whether it was sapwood or heartwood.

Q. How close an examination did you make? Did you just look at it?

A. Sufficient to cut a piece off with my knife to examine and tell the kind of wood it was.

Q. You just examined it at that time?

A. At that time.

Q. I assume you did not use a microscope?

A. No, sir.

Q. You just examined it with the eye—the naked eye?

A. Yes, sir.

1248 Q. And you decided from that that it was ponderosa pine?

A. Yes, sir.

Q. Are you satisfied that you can distinguish ponderosa pine from other pines from a mere inspection with the naked eye when the wood is in the decayed condition that you have described?

A. In a good many cases; not all cases.

Q. There is often difficulty in making that distinction, is there not?

A. There are certain pieces of wood that you cannot detect.

Q. Where you cannot detect, did you say?

A. Yes.

Q. Do you purchase any of your pondosa pine from the Weierhaeuser interests?

A. Very little.

Q. You cannot tell us what proportion of the northern white pine is obtained from companies in which the Weierhaeuser people are interested?

A. From memory I would say 75 percent of our white pine is not purchased from the Weierhaeuser interests.

Q. Do you include the Virginia & Rainey Lake Company?

A. Yes.

Mr. BURR. In which category?

The WITNESS. Not purchased from them.

By Mr. MATTHEW:

1249 Q. You say you do not purchase from them?

A. I say 75 percent was not purchased from the Cloquet or the Virginia & Rainey Lake.

Q. You know of the Weierhaeuser interests in the latter company?

A. The Virginia & Rainey Lake?

Q. Yes.

A. Only through hearsay.

Q. Well, do you consider the Virginia & Rainey Lake purchases in the 75 percent?

A. No, sir.

Q. Do you include them in the 25 percent?

A. Yes; in the 25 percent.

Q. I am not sure, Mr. Lammers, that I developed fully the reasons which prompted your company to use California white pine and pondosa pine primarily in this interior work.

A. We went into the eastern market where the California white pine and pondosa pine holdings were being sold for interior trim. We had to furnish the same stock that they were using. We use the California pine largely now on account of the percentage of cuttings that we get out of it. Approximately 65 to 70 percent of our cuttings are six-foot and longer, and that is the reason we use the California pine, so as to obtain longer cuttings than you can get out of pondosa pine.

Q. That is, you are using the lumber, of course, which is

1250 usually termed as the lumber of the shop grades?

A. Shop and short selects.

Q. Have you attempted to get any Idaho white pine in the shop grades?

A. We have used it.

Q. Have you found it as satisfactory for your purposes?

A. We have very little call for Idaho white pine trim.

Q. Do you know whether you can get as much as 65 percent of cuttings out of the Idaho white pine in the shop grades?

A. I know we cannot.

Q. You know you cannot?

A. We could not get it out of California white pine, either.

Q. I thought you said you could get 65 percent.

A. I said we bought it so we can get more. I said 65 percent and more of our cuttings are six-foot and longer.

Q. I misunderstood you. Can you give me the approximate percentage of cuttings which you get out of the shop grades of California white pine?

A. No, I cannot; because our specifications vary. We cut up the board to what the board will produce. We have different tests on different mills.

Q. Well, can you contrast the Idaho white pine with the California white pine in the shop grades with respect to the percentage of usable material in the boards?

A. We have not cut enough of the Idaho white pine to give
1251 you a definite answer as to the percentage of cuttings.

Q. Have you found that the California white pine in general satisfies your trade when furnished for these interior purposes?

A. Yes.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. I believe you said that it was sometimes difficult to distinguish pine and ponderosa from other varieties of wood on account of decayed condition. Is that true, that you so testified?

A. Not on account of decayed condition. I said it is hard to distinguish two different boards. Lots of times you can tell exactly whether it is California white pine or California sugar pine. However, you cannot distinguish every single board. I do not pretend to be expert enough to do that, although I do say I can distinguish a lot of different kinds of wood.

Q. Well, now, when you made a test there for the bank man—was that at Stillwater?

A. At Stillwater.

Q. Did you cut down below the decayed condition to get your information as to what variety of lumber it was?

1252 A. I took the underside of the sill and cut out as much as I could with my jackknife just to see if I could detect the kind of wood. He asked me my opinion as to the kind of wood.

Q. And you cut down below the decayed condition, did you?

A. The decayed condition was on top. This was on the under side of the board.

Q. Now, is there a greater percentage of sapwood in the California white pine, the northern white pine, or the Idaho white pine that you get?

A. Our experience is, in the California white pine.

Q. It has a greater percentage of sap?

A. Yes.

Q. Now, when you cut the northern white pine up for exterior trim purposes, are you able to get the sap portion so adjusted that it will not be exposed to the weather in most cases?

A. We find on the edges of the boards we occasionally have a little sap. We turn the board in then so as to not have the sap exposed to the weather when we rip the board out.

Q. Are you able to do that, in the main?

A. When they specify "no sap" we have to do it.

Q. It is feasible to do that, is it?

A. Yes.

Q. Well, now, is it equally feasible to place the sap portion of the California white pine boards so that it won't be exposed to the weather?

1253 A. Well, we do not run but very little of the California white pine into exterior moldings.

Q. So you do not make the attempt; is that true?

A. We do not make the attempt.

Mr. BURR. That is all.

Mr. MATTHEW. May I ask one more question, please?

Examiner SHEPPARD. Yes.

Re-cross examination by Mr. MATTHEW:

Q. Is the sapwood objectionable when the material is to be used for strictly interior purposes?

A. No, sir; we have never had any complaint on it.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Do your specifications prohibit the use of sapwood for interior trim?

A. No; because it is generally always used for paint or enamel work. Sapwood is not objectionable there for interior.

Mr. BURR. For interior. I see. All right, sir.

(Witness excused.)

1254 JOHN MOELING was thereupon recalled, having been previously sworn, testified further as follows:

Cross-examination (resumed) by Mr. MATTHEW:

Q. Mr. Moeling, when you were on the stand this morning you were asked to consult your records with a view to informing yourself more definitely as to a certain case where complaint had been made to you that the bottom rails of certain window sash furnished by your company for the construction of a residence had decayed. Have you made that investigation?

A. I have.

Q. And what facts are you now able to report?

A. I talked to our mill manager, who had direct charge of the job, and had him call up the contractor who made the installation of the sash, and found out it was——

Mr. BURR. Wait a minute, now. This is all hearsay, is it not? Counsel is objecting to hearsay, and I think I will have to do the same.

Mr. MATTHEW. If you want to object to it, all right.

Mr. BURR. I think I will object to it.

By Mr. MATTHEW:

Q. Then there is nothing that you are able to report from your records or from your personal knowledge as to this particular failure?

A. I saw the sash after it came back, and we debated over
1255 what happened there, and that is as far as I can go. I have gotten most of the material from the contractor and the millman.

Mr. BURR. What do you mean by most of the material?

A. (By the WITNESS.) Well, we debated the reason for this sash went bad, that it rotted under the paint, and of course whatever I know is their view, so if that is hearsay, why, I could not talk on that point.

Mr. BURR. I do not believe I will ask for hearsay.

By Mr. MATTHEW:

Q. Well, now, to what extent was there failure in the sash in this particular incident? How many windows?

A. This particular case was one bottom sash, the bottom part of the sash that comes in contact with the sill, and that had entirely gone to pieces. The paint on the outside was in a good state of preservation, and yet the wood on the inside was punky. You could stick your knife in it, like that [indicating].

Q. What was your independent conclusion as to the apparent cause for the failure?

A. That moisture was in that particular piece of wood in some way, and it was sapwood.

Q. It was sapwood?

A. And that moisture was in that and it caused it to go to pieces under the paint.

1256 Q. That was the only sash in this particular job which failed?

A. This one job, that was the only sash, yes, that I know definitely of.

Q. Now, did I ask you to inform yourself about any other cases?

A. We have another case where I personally saw the job. The sash had just simply been varnished on the job to give a light effect in the room. They were not painted on the inside, but simply varnished—that is, with a colored paint—and the sash turned black. All the sides, both top and bottom, of the sash had turned black under the varnish, and we investigated that case very closely.

Q. Was that failure due to improper painting?

A. That is our opinion. We investigated the job.

Mr. BURR. Did you investigate it personally?

The WITNESS. Personally; yes.

Mr. BURR. All right.

The WITNESS. Although the contractor says it was——

Mr. BURR. Wait a minute, now. I do not care for what the contractor said at all.

Q. (By Examiner SHEPPARD.) I want to ask you, is this last instance that you were narrating here covered in your testimony this morning, or is it another one?

1257 A. I spoke of six or seven sash that I had heard about, and the one I mentioned here was one that I had seen. Now, these cases, I brought up that these were the only two jobs I could definitely say did happen and could give the addresses and contractors.

Examiner SHEPPARD. All right, proceed.

By Mr. MATTHEW:

Q. These are the only two cases which you have been able to find in your record of which you have any personal knowledge, as I understand it?

A. Yes.

Q. Can you give us the name of the contractor in each instance?

A. Yes.

Q. Will you, please?

A. The one in the first instance of the bottom part of the sash rotting out was Mr. John Tenninga. His address is 32 West 111th Place.

Q. Chicago?

A. Chicago, and the job address is 12232 Eggleston Avenue.

Examiner SHEPPARD. Chicago?

The WITNESS. Chicago; yes. And the contractor in the second instance was Mr. B. Peonie, who, incidentally, has gone bankrupt in the past year.

Mr. BURR. I object to that.

1258 Examiner SHEPPARD. Just leave out the bankruptcy proceedings.

The WITNESS. The job was at 102nd and Emerald. I could not get the exact address. When it was put in, there were two houses around there, and we did not have it on our books.

By Mr. MATTHEW:

Q. Mr. Peonie was the contractor, as I understand, in that case?

A. In that case; yes.

Q. Were you able to form any conclusion of your own as to the reason for this sash turning black in the second instance?

A. Moisture had come up through the bottom part of the sash and had affected the sash.

Q. Then, it had been inadequately protected against moisture?

A. Yes.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Have you consulted at all with Government counsel with regard to your testimony?

A. No; I have not. To tell you the truth, I do not know how I got up here.

Q. You came up under subpoena, did you?

1259 A. Under subpoena; yes.

Q. And you consulted with nobody before you first appeared?

A. No. My father and I talked it over, and I was trying to find out how I was called up.

Q. Did you consult with counsel for the defense during the period between your first testimony and the second testimony this afternoon?

Mr. MATTHEW. Now, that is immaterial. I have no objection to it, but I imagine that the examiner will deem it absolutely immaterial.

Examiner SHEPPARD. Yes; I am not interested in that one way or the other, Mr. Burr. I think that attorneys on both sides have a perfect right to talk to their relative witnesses, one way or the other.

(Discussion out of record.)

(Witness excused.)

CHARLES H. HAMMOND was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. Charles H. Hammond.

Q. Mr. Hammond, you are an architect, are you, sir?

1260 A. Yes, sir.

Q. You are with Perkins, Chapman & Hammond, are you?

A. That is correct.

Q. Are you a member of the American Institute of Architects?

A. I am.

Q. Do you hold any official position in that organization?

A. I am president.

Q. How long have you been president? Just during the current year?

A. No; going on the second year.

Q. How long have you been an architect in the city of Chicago?

A. 22 years.

Q. What is the nature of your work, sir, residence work or otherwise?

A. All classes of work.

Q. Do you have occasion to specify any variety of pine for exterior purposes, Mr. Hammond?

A. Yes, sir.

Q. What do you generally specify for that purpose?

A. White pine.

Q. Do you have any means through your own organization of checking up as to what is delivered when you specify white pine, or do you rely upon the character and standing of your contractors?

A. That is about the only way you have, it seems to me,

1261 these days.

Q. The latter?

A. The latter; yes. We have our superintendents that check up on those things. If we have any question arise, we take steps to get an expert to determine.

Q. Now, when you specify white pine, do you regard northern white pine as a compliance, if the grade and quality and appearance are satisfactory?

A. Yes.

Q. Do you regard Idaho white pine as a compliance under the same circumstances?

A. I do.

Q. Do you regard California white pine as a compliance?

A. It all depends. We naturally think that the northern pine, and I imagine from my own knowledge that Idaho and northern pines are about the same thing, as far as I know.

Q. I see.

A. The California pine is a cheaper pine.

Q. Well, if you are given the rate for California white pine, the cheaper rate, and if the quality as regards grade, appearance, and so forth, is in accordance with specifications and is satisfactory, would you regard the California white pine delivered on the job as a compliance with the specification for white pine?

A. We would unless we specified northern white pine. If
1262 we want the best, we specify northern white pine.

Q. You do, on occasion, specify the word "northern" with your white-pine specification?

A. Yes, sir.

Q. And sometimes is it true that you do not so specify but just say "white pine"?

A. Yes.

Q. And when you specify white pine, would you regard the California white pine, if the grade were satisfactory, as a compliance?

A. Yes, sir.

Q. Do you distinguish, as regards the reputation for durability for exterior purposes, do you distinguish between Idaho and northern white pine, on the one hand, and California white pine, on the other?

A. That is a pretty difficult question. I think that northern pine is the best. Now, to my knowledge, I would not know whether the California pine had the same life that the Idaho pine had, but I believe that the northern pine is the best pine that is made that we get.

Q. Now, with regard to the so-called "pondosa pine", if you specify white pine without using the word "northern", and pondosa pine of a satisfactory appearance and compliance with grade were furnished, would you regard pondosa pine as a satisfactory compliance?

1263 A. No, sir.

Q. Why not?

A. Because it has not the wearing qualities.

Q. Do you distinguish between the wearing qualities, where exposed to the weather, of pondosa pine with California white pine?

A. Well, I would never specify pondosa pine, and if we thought we were getting it we would throw it out.

Examiner SHEPPARD. How about white pine, I mean the California white pine?

The WITNESS. Well, if I specified northern pine and I could determine that I was getting California pine, I would throw out the California pine.

Examiner SHEPPARD. You do not make any distinction, then, between the California white pine and the pondosa pine?

The WITNESS. No.

By Mr. BURR:

Q. Well, if you specify white pine and do not specify northern white pine, but merely white pine, and California white pine of a satisfactory appearance and compliance with grade were furnished, would you accept that?

A. That might be true, but I think that would be rather a loose specification.

Mr. BURR. That is all.

1264 Cross-examination by Mr. MATTHEW:

Q. Mr. Hammond, did the term "white pine" originally denote just the northern white pine?

A. I think it denoted the pines that are all through the northeastern part of this country and up along through the northern part of the Great Lakes and Minnesota and through there.

Q. Yes. That is the true northern white pine that you have referred to in your testimony?

A. Yes.

Q. More recently the term "white pine" has come to include Idaho white pine in common acceptance?

A. I believe it has.

Q. And when you want to make certain that you will get the original northern white pine, you specify it by that term, northern white pine?

A. Yes, sir.

Q. Do you ever specify Idaho white pine under that name?

A. Not that I remember.

Q. Or California white pine?

A. No; but you can buy California white pine if you call for it.

Q. I mean do you ever specify it?

A. No; we do not.

1265 Q. Do you ever specify California sugar pine?

A. Not to my knowledge.

Q. Are you familiar with the sugar-pine lumber?

A. Just in a general way, that is all. I do not know that I could determine the difference between the two.

Q. Between sugar pine and California white pine?

A. Yes, sir.

Q. I take it you are not personally informed as to the botanical classification of these several trees?

A. No, sir.

Q. Your interest as an architect is in the quality and utility, including, of course, the durability of the lumber that is furnished for your work, I take it?

A. Yes, sir.

Q. And you are not particularly interested in botanical classifications?

A. No, sir.

Q. Now, you said that you would accept either the northern white or the Idaho white upon specifications calling for white pine, and you also stated that for certain purposes you would accept California white pine which appeared to be of a proper grade and appearance. Is that correct?

A. That is correct.

Q. Have you found that California white pine satisfies your requirements for certain purposes?

1266 A. Yes; it does.

Q. Do you use it for interior work?

A. Very little.

Q. For what purposes mainly do you employ California white pine?

A. I was speaking of the white pines in general.

Q. The California white pine.

A. Well, we might use it for basement work where there was some dampness, or something of that kind, on occasions, or use it for sash or things of that kind.

Examiner SHEPPARD. Exterior work?

The WITNESS. Exterior work.

By Mr. MATTHEW:

Q. That is California white pine?

A. Yes, sir.

Q. Do you distinguish between the durability of heartwood and sapwood, respectively?

A. Yes, sir.

Q. Is it your understanding that the reputation of northern white pine for durability is largely based upon the use of heartwood?

A. Well, the absence of sap.

Q. Or the absence of sap. Throughout what period have you been acquainted with the use of Idaho white pine?

A. It is only for the last few years.

1267 Q. Just about what do you mean by a few? Four or five?

A. I would say so; maybe five or six years.

Q. And throughout what period have you been familiar with California white pine?

A. Over a period, I should say, of less than that.

Q. Would you say three or four years?

A. Yes, sir.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Do you regard certain of the pine family as belonging to the white pines?

A. Yes, sir.

Q. Which would you say belonged to the white pines of the commercial varieties of lumber?

Mr. MATTHEW. Do you mean botanically speaking?

Mr. BURR. I mean, the word "white pine" is not merely a botanical but also a utility classification, I take it.

Mr. MATTHEW. I think you really ought to distinguish in the question. I have not been captious heretofore, but I think you should do that.

Mr. BURR. I do not want to take any advantage of anybody, and because the question is not satisfactory from the ideal standpoint I will withdraw it.

1268 By Mr. BURR:

Q. Do you regard northern white pine as a genuine white pine?

A. Yes; I do.

Q. Do you regard Idaho as a genuine white pine?

A. Yes; I do.

Mr. MATTHEW. Do you mean botanically?

The WITNESS. I mean in the book that is gotten out by the National—by the Bureau of Standards; they classify them about the same way; that is, they list them together, the northern white pine and your California pine and your Idaho pine and the Canadian pine.

By Mr. BURR:

Q. You regard all of those as white pine, do you?

A. Yes, sir.

Q. I see. Where do you place pondosa pine? Do you regard that as a white pine?

A. I regard it as an inferior grade of white pine.

Mr. BURR. That is all.

Re-cross-examination by Mr. MATTHEW:

Q. When you speak of white pine do you mean white pine for the purpose of utility rather than the mere botanical classification?

A. Yes. I do not know what the botanical classification is

1269 at all, sir.

Q. Then you had in mind just the general utility of the lumber?

A. The utility of the lumber; the classification that is known to the trade.

Mr. MATTHEW. That is all.

(Witness excused.)

S. L. SPEISE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name, please?

A. S. L. Speise.

Q. Mr. Speise, you are with the Speise Lumber & Coal Company, are you?

A. Yes, sir.

Q. What position do you hold with that firm?

A. Sole proprietor.

Q. And how long have you been in the lumber business in that way, Mr. Speise?

A. For the last five years.

Q. Located right here in the city of Chicago?

A. Yes, sir.

Q. Mr. Speise, what types of lumber do you carry? I refer now to the softer of the pines.

1270 A. Well, the southern yellow pines.

Q. Those are pretty hard, are they not?

A. They are harder than the white pines.

Q. Yes. Well, now, which of the white pines, say, do you carry?

A. We carry mostly the California white pine.

Q. Yes.

A. And some northern white pine, and a very little pondosa.

Q. Any Idaho?

A. None at all.

Q. Where do you buy your California white pine?

A. From the Longbell Lumber Company.

Q. Practically all of it from them?

A. Practically all of it.

Q. Where do you buy the little pondosa that you do carry?

A. Well, I remember buying one car from Brooks-Scanlan.

Q. From whom do you buy the northern white pine?

A. From the Hines Lumber Company.

Q. I beg pardon.

A. From the Hines Lumber Company. It comes from the Virginia & Rainey Lake district.

Q. Is that an original growth or is that second growth?

A. Well, I should judge, in my opinion, it would be the—well, I really cannot say definitely.

Q. You are not sure?

1271 A. I am not sure.

Q. Now, do you have orders for white pine occasionally?

A. Well——

Q. I mean where the order asks for white pine?

A. When they say white pine, my contractors as a general rule do not distinguish between any particular species of white pine.

When they specify white pine, we sell mostly the California white pine, and if we are out of any particular size of the California white pine we may have it in the northern white pine.

Q. The northern white pine is somewhat higher in price, is it not?

A. Not the kind we buy; in fact, we find that the northern white pine, some sizes are cheaper than the California white pine. For instance, the 1 by 4 in practically all lengths is approximately from three to four dollars per thousand cheaper than the California white pine would be in the same size.

Q. And that is Northern white pine that you buy from these concerns that you mentioned, is it?

A. Yes. We buy the smallest size. But when it comes to the 1 by 12, for instance, why, then the Northern white pine would be a good deal higher, and we buy that mostly—we buy the California white pine.

Q. Well, now, you have calls for exterior trim lumber, do you?

A. Yes; a good deal of it.

1272 Q. And where they ask for white pine, as a rule they get the California white pine, do they?

A. The California white pine.

Q. Or the northern white pine, whichever you have in stock; is that true?

A. Whichever we have more of.

Q. On a specification for white pine?

A. Yes; on a specification for white pine. My contractors seem to prefer the California white pine because it is softer.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Throughout what period have you been in business, Mr. Speise, here, did you say?

A. Five years. For myself, for the last five years, and previous to that I was connected with another concern for about seven years.

Q. How long have you been familiar with the trade name "California white pine"?

A. Oh, ever since I have been in business.

Q. Is the term well known to the trade?

A. No; it is not.

Q. It is well known to the lumber dealers, I take it.

A. The lumber dealers are familiar with it.

1273 Q. Now, am I correct in an understanding that in the 2 by 4 size you can furnish the California white pine?

A. Not the 2 by 4's. I said 1 by 4's.

Q. Pardon me. You can furnish the 1 by 4's in California white at a lower price than the northern white pine?

A. Not as a rule. We buy a car of the northern white pine—we bought some Norway timbers for instance. Timbers come from the same district which we term as "Norway." And if the car

is not sufficiently large enough, we will fill in with some other sizes, like, for instance, the 1 by 4's of the northern white pine, which is somewhat cheaper in price than the 1 by 4's of the California white pine.

Q. Well, now, did your testimony relate to Norway pine?

A. Well, I did mention that we buy timbers like 6 by 6 and 4 by 6 and 4 by 4.

Q. That is Norway, is it?

A. That is Norway.

Q. Well, now, do you buy the northern white pine, too?

A. Yes; in the very same car we get both kinds.

Q. Both Norway and northern?

A. We get Norway and northern white pine.

Q. Now, the Norway is used where you need strength in the timber?

A. Exactly.

Q. But the northern white pine, you buy that variety, too, 1274 do you?

A. We buy that where softness is required.

Q. And your testimony as regards your furnishing under a specification for white pine either northern white pine or California white pine relates to that northern white pine rather than to the Norway, does it?

A. Yes. For exterior work we never furnish any Norway, only where strength is required, and that is bought mostly in timbers.

Q. And where they specify white pine you would furnish northern white pine or the California for exterior trim purposes?

A. For exterior trim.

Mr. MATTHEW. That is all.

(Witness excused.)

WILLIAM ZEIGLER NOURSE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Nourse, you are in the profession of architects, are you?

A. Yes, sir.

Q. And how long have you been practicing that profession?

A. Oh, about 22 years, I guess.

Q. And have you been in Chicago during that time?

1275 A. Yes; all of that time.

Q. Your present connection is with the Howard Shaw Associates; is that true?

A. Yes.

Q. How long has that concern been in existence?

A. Well about three years, since the death—a little over three years, after the death of Mr. Howard Shaw.

Q. And his was a firm that had been in existence for some time, was it not?

A. Oh, yes. He practiced simply under his own name. There was no firm of Howard Shaw. Then after his death five of us who had been with him for some time arranged for the name and have carried no since.

Q. Now, Mr. Nourse, your work is largely residences of what type of structure?

A. Well, perhaps I ought to say that ours is more largely residence than it is the other, although we have some very large commercial work and some theatre work.

Q. Do you have occasion to specify any variety of pine?

A. Yes, we do.

Q. For exterior trim purposes?

A. For exterior and interior.

Q. What variety do you generally specify, and in what terms?

A. Well, for exterior work we are quite particular about the
1276 sash and the doors being the northern white pine, solid, and then the rest of the exterior millwork, all depending upon the amount; that is, there is on the building and on the effect we are after, if it is a residence. You see, sometimes we use oak, sometimes cypress, and sometimes northern white pine, or sometimes just pine, all depending also upon the appropriation that we have to spend for the building.

Q. Now, you do not specify merely white pine for exterior trim, is that true?

A. Sometimes we do, or sometimes we simply say pine. As I say, it all depends upon the character of the house and the amount of money that we have to spend.

Q. Well, now, how do you distinguish? If a man has not got much money to spend, it is then, is it, that you specify merely pine?

A. Well, it depends upon how much we have on the outside, you see. If there is going to be a great deal of timber work, sometimes we do want that in pine, then again we will take it in oak or cypress. But in general we are after the northern clear white pine for exterior work.

Q. I understand sometimes for exterior work you specify pine and sometimes northern white pine?

A. Yes.

Q. Now, then, you said it was a question of finances to some extent?

A. Yes; surely.

1277 Q. Now, then, if the builder does not desire the higher price, then you specify pine rather than northern pine, is that true?

A. Yes; exactly.

Q. The northern pine you find to be higher in the market, do you?

A. Well, I cannot answer that definitely. It often depends on the mills. Many times, in talking with mills about different kinds of woods, we find that one will be higher on one kind of wood of which they may have a stock and another one may be lower.

Q. Now, when you specify northern white pine, have you at times found that some other variety was actually delivered on the job?

A. Well, I cannot answer that definitely. I do not think we have, because we aim—we are very particular about the mills that do the work for us, and any mill that we are not acquainted with, we insist upon their sending down a piece of the wood that they are going to use.

Q. I see.

A. And we often do that with the mills that we are very well acquainted with.

Q. Well, are you prepared to competently check up as to whether or not California white pine or northern white pine has actually been furnished when you get your sample?

1278 A. You say, are we able to do that?

Q. Yes. Do you find it feasible in your own organization to check that up? Have you the expert wood technology that would enable you to do it?

A. Well, I do not believe we have; that is, right offhand. Usually when there is any question we bring a piece of it back, you see, and then call in some of the experts. But we have never had to do that on any job. Perhaps we have received some things that we should not have received.

Q. Well, now, if California white pine were delivered on the job, of satisfactory grade and appearance, do you think you would be able to detect whether or not it was northern white pine or California?

A. I personally would not.

Q. Well, do you have——

Mr. MATTHEWS. May I offer an objection there? The witness has stated that as far as he knows he has had no case where California white pine has been furnished upon a specification for northern white pine.

Mr. BURR. I want to find out whether he has the facilities for knowing in case there were a substitution. He says he does not know whether there has been a substitution or not. Now, I want to find out whether in case California white pine were actually delivered on the job he would be able to detect it.

1279 The WITNESS. We simply, as I say, would bring that back, the same as we would bring back a piece of wire or a piece of pipe, and if we thought it was different from our specifications or it could not be proved it was out specifications, we would call in experts. That is always the way we do with wire. But you see that you may not be able, because you are not doing that kind of work all the time, to pass on it.

By Mr. BURR:

Q. Well, if the wood delivered on the job is up to grade and appearance, are you prepared to say whether or not you could tell that

it was northern white pine as contradistinguished with California white pine or Idaho white pine?

A. No; I personally could not, because I personally do not go out on jobs enough and I am not looking at these three pieces of lumber, northern and Idaho and California, enough to actually tell you that.

Q. Well, do you leave it to the character and standing of your contractor, or have you a man in your organization that can tell——

A. Well, our own——

Q. Pardon me just a moment. Or have you a man in your organization who is competent to tell whether it is California white pine or northern white pine or Idaho white pine?

A. Yes; I think two of our partners are competent to tell

1280 right at the start.

Q. Are they the men that go down and look at the lumber that is actually on the job?

A. They are the ones that are on the job oftener than I am.

Mr. BURR. That is all.

Mr. MATTHEW. No cross-examination.

(Witness excused.)

HARRY L. STREET was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name, please?

A. Harry L. Street.

Q. Mr. Street, you are in the retail lumber business, are you, sir?

A. Yes, sir.

Q. How long have you been in the retail lumber business?

A. About 35 years.

Q. All the time here in Chicago?

A. Yes, sir.

Q. That is the Street Chatfield Lumber Company, is it, sir?

A. Yes, sir.

Q. And what is your position with that company?

A. President of the company.

1281 Q. Now, do you handle Idaho white pine?

A. Very little.

Q. You do handle some, do you?

A. Occasionally.

Q. But it is practically negligible?

A. Practically negligible.

Q. Do you handle northern white pine?

A. We do.

Q. Do you handle California white pine?

A. In a small way.

Q. Where do you buy that from?

A. Well, we have bought some from the Pickering Lumber Company, and we have bought some from Longbell. That would be my recollection.

Q. How about sugar pine? Do you carry that?
A. No. Very, very little, if any.
Q. Do you handle pondosa pine?
A. We do handle some more of that than of the sugar and California pine.
Q. Now, where do you get your pondosa from?
A. Well, I have not the list right in my mind, but I suppose we buy it of any good mill, for instance, Shevlin-Hixon.
Q. Where do you get the northern white pine?
A. Well, we buy that of practically every mill up there. We buy it where we can buy it to the best advantage, practically
1282 any white-pine mills.
Q. Now, when you get orders for white pine, which of those three varieties that you handle most of, the northern, pondosa, and California white pine, do you furnish, or do you furnish any of them? What is the situation?
A. Well, it depends. That question depends upon whether you are technical or not. The Chicago retail trade——
Q. Well, I want your practice on it. I am not the man who is ordering. Somebody orders white pine.
A. Well, the Chicago retail trade very seldom orders white pine. A contractor brings in an estimate and on it are a certain number of pieces of 1 by 4, no. 1 common S 4 S, and so on, 1 by 6, 1 by 8, 1 by 10, and 1 by 12. That is about the way it runs. Now, 1 by 12 is largely used for interior work, for shelving. That we carry quite largely in pondosa pine. The 1 by 4 and 1 by 6 for outside cornice stone, we carry that more in either cypress or white pine or Canadian white spruce, and we carry no shop or cut-up lumber, because we do not handle millwork in that sense.
Q. Well, now, for exterior trim, do you not have specifications for white pine on occasion?
A. If we did we would furnish white pine.
Q. And when you furnish white pine, what would be furnished?
A. Either northern or Idaho or California. We would not distinguish.
1283 Q. How long has that been your policy?
A. Well, as long as the California and Idaho pines have been coming into this market.
Q. And about how long is that?
A. Well, I would roughly estimate 10 or 15 years; it seems to me, for some time.
Q. Would you furnish pondosa in the same fashion?
A. Not if they call for white pine, strictly white pine.
Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. When you have an order for white pine, how do you determine whether you will furnish the northern white pine or Idaho white pine or California white pine?

A. Northern, California, or Idaho?
Q. Yes.
A. It would depend quite largely on the stock we had on hand. We would consider the three interchangeable.
Q. Have you found them satisfactory to your trade?
A. I do not recall any complaints.
Examiner SHEPPARD. All for outside exterior use?
The WITNESS. Yes.

By Mr. MATTHEW:

Q. You also stated that the Chicago retail trade very sel-
1284 dom orders white pine, and then you explained the form in which the orders are received; I was not clear as to just what you meant by that part of your explanation, Mr. Street. Is the variety of lumber indicated at all in these orders?

A. Chicago is in rather a peculiar position. We have to handle yellow pine, hemlock, fir, spruce, all those woods that come in here on freight rates that are sufficiently equal so we have to handle them. One time we can buy one cheaper than the other. The trade here is accustomed—a no. 1 common dimension—for instance, 2 by 4 or 2 by 6, a contractor that would specify no. 1 common, we feel at liberty to furnish either yellow pine or hemlock or fir; any one of those three. We do not state on the estimate that it is one or the other; we simply say 2 by 4, no. 1 common.

Q. You do not say no. 1 common pine?

A. No; just 2 by 4, no. 1 common. That is for the rough dimension. For the finishing lumber, if it is specified no. 1 common S 4 S, we feel at liberty to furnish either a Canadian spruce or a northern white pine or Idaho white pine or California white pine. If it is a very long-grade building, some of the cheaper class of buildings, we would feel at liberty to furnish the pondosa pine.

Q. Then you distinguish between pondosa pine and California white pine in filling orders?

1285 A. We have to to some extent, because there is a less price on the pondosa pine.

Q. Is that the principal reason for the distinction?

A. In the offer it is. It is a case of dollars and cents.

Q. Do you find that there is some distinction in quality or appearance between the lumber which you purchase as pondosa pine and that which you purchase as California white pine?

A. Why, the appearance of the pondosa pine to me is more on the order of the southern yellow pine. It has got that little pitchy streak in it that seems to differentiate it quite easily from the other pines—the softer pines.

Q. Do you classify the California white pine as one of those softer pines in your answer?

A. Yes; I would.

Q. In general, then, you find the California white pine is softer than the pondosa?

A. Yes.

Q. And less pitchy?

A. It has some pitch pockets in it, but the pondosa pine has a sort of a resinous streak in it—a little more so, excepting the sapwood—than the other pines.

Q. I think you testified that you deal little, if at all, in sugar pine?

A. Practically not at all. That is almost entirely a cut-up wood for mill sash and door houses.

1286 Q. I take it that you are not familiar with the botanical classification of the various trees from which this lumber is obtained?

A. Well, no. In a general way I am; but I think I would say no to that.

Q. Well, you are not interested in the botany of the trees?

A. No.

Q. Your interest is in the quality?

A. The practical use to which it is to be put.

Q. Yes. And you find that your trade is satisfied with the California white pine which you furnished?

A. Yes; and they are satisfied with the—in fact, I could frankly say they are satisfied with any pine. Ninety percent of the building is speculative building in Chicago, and I presume that possibly only 25 percent of it has an architect connected with it, and those men will specify simply no. 1 common, four sides, and they will accept either, as I say, spruce or any pine or cypress.

Q. Either pine or spruce or cypress?

A. Or pondosa. They will accept what we give them, really, on that class of a job.

Q. Then it is your task, I take it, to satisfy what you understand to be your customer's wishes and needs?

A. Yes; and the contractor's job, where it is specified strictly
1287 white pine, where white pine is specified, of course we furnish the white pine.

Mr. MATTHEW. Yes. That is all.

Redirect examination by Mr. BURR:

Q. What do you mean by a strict specification?

A. Well, we get perhaps one out of twenty estimates that we figure, or one out of twenty-five. It may be a building on which an architect is employed, and he may make certain specifications; for instance, for no. 1 white pine, and we will ask the contractor does he mean he wants regular northern or Idaho white pine on that, and he says yes he does; it is their job; all right, we will furnish that. In another case we might ask the contractor, "Is this just the ordinary specification? Do you just mean the common no. 1, four sides?" And the contractor will say yes.

Q. Well, now, ordinarily in cases where they do specify white pine, you would furnish either the California or the northern pine, as you might have them in stock; is that true?

A. Yes.

Mr. BURR. I think that is all.

Re-cross-examination by Mr. MATTHEW:

Q. How do you determine whether the specification called
1288 for the northern white pine or for white pine generally, or can be satisfied by supplying any one or two or three numbers?

A. Generally by the character of the building. You take a residence out in the country, where it is largely frame, with a great deal of pine outside trim and all, we naturally suppose the architect wants a white pine trim on that. On a brick house in town, where there is very little trim on the outside of any kind, why, of course, anything in the pine line will be satisfactory. The main point as I see it is more in the sash and doors and those items which we really do not handle very much of.

Q. When it is your understanding that the true northern white pine is desired, you furnish that?

A. We do.

Mr. MATTHEW. That is all.

(Witness excused.)

ALLEN E. ERICKSON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name, please?

A. Allen E. Erickson.

Q. Mr. Erickson, you are an architect, are you, sir?

A. Yes, sir.

1289 Q. With what concern are you affiliated?

A. Individually in practice, licensed since 1920, also director of the Architects' Small House.

Q. How long have you been an architect?

A. Since 1920.

Q. And your work is largely for residence purposes, is it?

A. Yes, sir; 95 percent.

Q. Now, do you have occasion to specify white pine for exterior trim on occasion?

A. Yes, sir; quite frequently.

Q. And when you so specify, how do you word your specification?

A. Heretofore it has occurred that we specified merely clear white pine. I believe now we specify northern white pine if we intend and wish to have that on the job.

Q. What led you to change the wording of your specification?

A. Because instances had occurred where particularly the siding as specified was delivered in California sugar pine instead of the northern white pine which we expected and which we did have on some of the window frames, trim, and doors.

Q. Now, how did you ascertain that it was not northern white pine?

A. The instances were very specific. It was my own home, in 1927, and I specified the best, as I say, clear white pine, and ex-

pected to pay for it, and I did pay a high price, and I
1290 found when it was delivered to the job, part of it go on quickly and naturally I hated to have it ripped off, and I argued with the Chicago retail lumber dealer who happened to furnish it, but could get no satisfaction from him. He said, "That is all the pine siding, beveled siding, ten inches, that we have. Do you want it or don't you?" So tentatively I accepted it, but had to replace quite a few doors, and today it is in such a shape that I wish it was never put on, because it is bowed out in a concave manner and is entirely unsatisfactory.

Q. Unsatisfactory?

A. To me, yes, as an architect.

Examiner SHEPPARD. Did you say that was sugar pine?

The WITNESS. California sugar pine.

By Mr. BURR. California sugar pine?

A. Yes.

Q. Whom did you get that from, do you know?

A. The Morton Grove Lumber Company.

Q. Where are they located?

A. Norton Grove, Illinois.

Q. Illinois?

A. Yes.

Q. Do you know where in the West it came from?

A. I do not know; no.

Q. You know it was sugar pine and not California white
1291 pine, do you?

A. I was told so, and it had the characteristics of sugar pine, everything I could think of.

Q. Now, if California white pine were delivered when you specified northern white pine, would your firm require that it be pulled out or would you accept California white pine?

A. Not from now on; we would not accept it.

Q. I beg pardon?

A. I would not accept the sugar pine.

Q. I did not say sugar pine, I said California white pine; if California white pine were delivered on the job.

A. I do not believe I would accept it if I specified northern white pine; no.

Q. Well, now, prior to this experience that led you to specify northern white pine, did you have any means for ascertaining whether your specification was lived up to and white pine was delivered?

A. The means was purely the means I have of knowing anything which I do; just my personal experience, up to the time of that experience.

Q. Were you, up to the time of that experience, competent to tell the difference between northern white pine and California white pine?

A. I would say no; I had not studied or looked into the difference in them.

1292 Q. You think you can tell by inspection today, do you, the difference between northern white pine and California white pine?

A. I would not say I am positive that I could.

Q. Would you accept Idaho white pine if you were informed that that had been delivered on the job when you asked for northern white pine?

A. No; I would accept no substitutes.

Q. You would accept no substitutes after your experience?

A. After putting in the specification "northern."

Mr. BURR. That is all.

Mr. MATTHEW. No questions.

(Witness excused.)

O. M. BARR was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. O. M. Barr.

Q. Mr. Barr, you are an architect, are you, sir?

A. No, sir; I am not.

Q. You are a retailer of lumber, are you not?

A. I am a retailer of lumber, sir.

Q. How long have you been in that business?

1293 A. 42 years.

Q. Constantly in the city of Chicago during that period?

A. Cook County; yes.

Q. Now, do you do any millwork?

A. I have done it. I am not engaged in that at the present time, though.

Q. When were you last engaged in millwork operations?

A. I closed the mill about six years ago.

Q. What varieties of soft pine did you carry?

A. You mean when we were engaged in the millwork?

Q. No; I mean in the retail business today.

A. We carry principally northern pine, both white and Norway, some Idaho white, we call it, and some western pines.

Q. Western pines?

A. Yes.

Q. Now, what do you mean by western pines?

A. I mean pondosa pine. I will change that, sir.

Q. All right, sir.

A. The name pondosa pine, as I understand it, applies to that within the last, well, ten years, anyhow. We used to call it western pine. We call it pondosa pine now as a matter of definition or trade name, I suppose.

Q. And do you carry California white pine?

A. I have carried it. Not at the present time, though.

Q. You do not carry any California white now?

1294 A. I think we have a little in operation.

Q. You used to use it more heavily than you do at present?

A. When we had the mill I used it for shop purposes; yes.

Q. Oh, I see. Your change to the present status of using very little California white was made as the result of your giving up the mill operations?

A. Yes, sir.

Q. Now, then, Mr. Barr, do you have orders on occasion for white pine without further specification, for exterior trim, I am referring to particularly?

A. I think I might say we do.

Q. What do you furnish when you get orders for white pine without any further description of what is desired?

A. Well, that is a hard question to answer, young man. What do we furnish if we have an order for White Pine and do not have it; is that what you mean?

Q. No; what do you furnish when you get an order for white pine and the specification does not say what kind of white pine is desired, where they just say, "We want so much white pine", with a description in the specification of what it is to be, and the grade, and it does not say whether they want northern white pine or Idaho white pine or California white pine? What do you furnish them?

A. I think, if the customer is discriminating, we would tell him what we had; and if it suited him, we would give it to him.

1295 We might have Minnesota pine, we might have Idaho white, or we might have California. But the customer as a rule would not be able to distinguish between two of those woods, anyhow.

Q. Which two?

A. Well, the Minnesota and the Idaho white.

Q. You mean if he were to see them on the job?

A. Yes; I would say he cannot distinguish the difference.

Q. Do you think he could distinguish the difference between Idaho and California?

A. I think he could if he was anything of an expert.

Q. Well, is your customer much of an expert?

A. Well, the average mechanic cannot be called an expert except in his line of business.

Q. Yes. He cannot be called an expert as a lumberman, can he?

A. Not as a lumberman; no.

Q. Well, now, if your customer were delivered California white pine and it was up to grade and appearance and was satisfactory in other respects, do you think that he would be able to say that it was not genuine white pine?

A. I would think the average man would be able to say so; yes.

Q. Well, now, once again, what do you generally do when somebody asks for white pine and does not specify further? What do you let him have?

A. Well, I would say this, that if a man called for a 12-inch
1296 board, 16 feet long, white pine clear, we would frankly tell him that we did not have it, or if we had it in California pine we would give it to him.

Q. I see. Well, now, is that true of other dimensions besides 12-inch boards? Why specify 12-inch boards as part of your answer?

A. Well, because the most difficult item, perhaps, to furnish in strictly white pine on the list is that dimension.

Q. Well, now, how about the exterior trim? If he asks for white pine, do you handle that?

A. That is what it would be used for.

Q. I beg pardon?

A. That is what it would be used for, probably, yes; for exterior trim. I would say that is what it would be used for, and I would say if they got a good piece of California pine that was not full of blue sap, that they got what they wanted.

Q. You would regard that as a compliance with his specification for white pine if you gave him California white pine, would you?

A. I would not; no.

Q. You would not?

A. No; I do not think I would. If it suited the man all right or suited his customer, if he took it and it suited him, that is enough, ain't it?

1297 Q. Well, I am not on the witness stand, you know. Do you distinguish in point of durability between California and northern white pine?

A. Do you mean whether I can?

Q. Yes. Do you regard the two as varying in quality of durability where exposed to the weather?

A. I will say I can distinguish them; yes.

Q. Which do you think is the more durable?

A. Well, you mean grade for grade?

Q. Yes; grade for grade. If the grades were satisfactory, which is more durable, in your judgment, the northern white pine or the California white pine?

A. Well, I would say that if I was selecting it for myself to use on my porch, I would take the northern white pine.

Q. How about the contrast, if there is any, between Idaho white pine and California? Which would you select?

A. I would select the Idaho for my own use, understand. Now, you know why I do that, don't you?

Q. I think you think it is more durable, I don't know; is that true? I will ask you.

A. Well, now, here, there is one thing that will preserve wood, and that is paint.

Q. Paint?

A. Yes. Now, the wood that will take the most paint will last the longest, won't it?

1298 Q. That will take the most paint?

A. The soft board will take the most paint, won't it?

Q. Which do you call the soft board?

A. The Idaho pine board.

Q. It will take paint more than the California pine; is that true?

A. It will absorb more paint. That is the reason I would select it; not because it grew in Idaho or Minnesota or California but from the standpoint of durability. That is what I mean.

Q. Which, if neither was painted, would stand up the longer?

A. If neither was painted?

Q. Yes.

A. Well, we do not take lumber out where it is not painted.

Q. There is not any such animal?

A. Well, they might do it in some places, but we do not do it around here. A man who does not paint his screen door has no business to have a screen door.

Mr. BURR. I think that is all, sir.

Cross-examination by Mr. MATTHEW:

Q. Throughout what period have you been familiar with California white pine?

A. Well, as shop lumber, I would say for fifteen years.

1299 Q. And throughout what period have you been familiar with Idaho white pine?

A. About the same period. You understand that it is within the last fifteen or twenty years that those western woods have been coming into this market. Prior to that time we bought everything in Wisconsin and Minnesota. Now, as those western woods have started coming in here, naturally we have been buying them, because, perhaps, we thought we got better lumber or because we got it for less money. That is the reason we bought them.

Q. Well, are the western pines being marketed in the Chicago area in greater volume today than the northern white pines?

A. When you say western you mean anything west of the Mississippi River, do you?

Q. I will take the Idaho white pine and the California white pine and pondosa pine, the Pacific slope pine.

A. I think there would be more of those handled than the northern; yes.

Q. What is the explanation for that change?

A. Well, in the first place, there is more of it. In the second place, having naturally more of it, it does not cost so much; grade for grade, I am speaking.

Q. That was my understanding. Then the supply of northern white pine has become somewhat diminished in recent years?

A. Yes, sir; I think so.

1300 Q. I assume, Mr. Barr, that your apparent familiarity with the Idaho white pine and the California white pine has not been sufficiently extended for you to have any definite opinion as to their relative merits for different purposes or as to their relative durability as compared with the old northern white pine?

A. That might be so. At the same time I have had considerable experience with those very woods.

Q. Yes; I understand.

A. You understand, for shop purposes.

Q. Yes.

A. Now, the California white pine is an excellent shop lumber. By that I mean you make doors of it, you make sash of it, you make screens of it, you make all kinds of material. Idaho pine is used more for exterior work, like porches and cornice boards and that kind of stuff.

Q. Now, you found the California white pine quite satisfactory for the shop purposes which you have specified?

A. Yes, sir.

Q. Now, will you explain a little more fully why the Idaho white pine is not used to a similar extent for those same shop purposes?

A. Grade for grade it costs more money. That is one reason.

Q. Is it available in the same quantity in the shop grades?

A. I don't think it is.

1301 Q. Does it furnish the same cutting values as California white pine in the shop grades?

A. I would say it does not.

Q. Then is it a fair conclusion that the California white pine finds greater use than Idaho white pine for shop purposes because it is better adapted to that use?

A. I should say it cuts up better. It has a little different character of knot. You know what I mean by knot?

Q. Yes.

A. The Idaho pine board may be a valuable board, but it may look as if it had the smallpox, but it won't make a good door. That is the idea.

Q. And it is for that reason that the California white pine is used to a greater extent than the Idaho white pine in making doors?

A. That is the idea.

Q. And the Idaho white pine is hardly an effective competitor of the California white pine in the shop grades?

A. Not for me it ain't.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Would you recommend California white pine for exterior door purposes?

1302 A. I would use it for my own use.

Q. For exterior doors?

A. Yes.

Q. Do you regard it as durable for that purpose?

A. You are talking of door styles now, aren't you, and rails?

Q. I am talking about the doors themselves where exposed to the weather, exterior doors.

A. Yes; I would recommend it.

Q. Do you think it is as durable as northern white pine for exterior purposes?

A. Well, I told you why I did not think it was a little while ago. It is a little bit coarser-grained wood. There is a little bit more pitch in it, and that part of the door don't take the paint; therefore I would say that the soft-pine board is the best board for the purpose.

Q. For outside use?

A. For outside use.

Q. Well, doesn't that apply then also to doors as well as to other exterior things?

A. Yes; it applies to doors, the outside of the door; yes.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. If a door manufactured properly from California white
1303 pine is adequately protected by paint, would it, in your opinion, have substantial durability when utilized for outside purposes?

A. You cannot get anything better. For door purposes, you said, didn't you?

Q. Yes.

A. All right; that is my answer.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Are you referring there to exterior door purposes?

A. For general door purposes.

Q. General door purposes?

A. Yes.

Q. Well, now, I will make it specifically for outdoor purposes, where they are exposed to the weather?

A. Well, there are two sides of a door. The inside would be all right. The outside might be affected by the weather.

Q. Then you would prefer a finish on the outside of the door where exposed to the weather of northern white pine, would you?

A. Yes.

Q. That is all.

A. And I told you why, old man.

Mr. BURR. Yes; I know you did.

1304 Re-cross-examination by Mr. MATTHEW:

Q. I suppose that the California white-pine doors have not been tested for a sufficient period of time and under a sufficient variety of conditions to enable you to pass final judgment as to their real durability?

A. Well, fifteen years is a pretty good test.

Q. Well, they have answered the test of that period of time quite satisfactorily?

A. We very seldom have any complaint on them.

Mr. MATTHEW. That is all.

Mr. BURR. That is all.

(Witness excused.)

Examiner SHEPPARD. Is that all, Mr. Burr?

Mr. BURR. Yes; that is all.

Examiner SHEPPARD. Adjourn this meeting to the city of Madison, Wisconsin, to convene in the Federal courtroom which is in the Post-Office Building, at ten o'clock, on the morning of the 21st of October.

(Thereupon an adjournment was had until 10 o'clock, a.m., October 21st, 1929, at Madison, Wisconsin.)

1305 Docket Nos. 1620–1669, inc.

MADISON, WISCONSIN, *October 21, 1929.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before William W. Sheppard, examiner.

Appearances:

Mr. Eugene W. Burr, for the Commission.

Messrs. Matthew & Mr. Wheat for the respondents.

Examiner SHEPPARD. Well, gentlemen, if you are ready, we will continue the hearing pursuant to the adjournment taken in Chicago on the 16th.

Mr. BURR. Call Mr. Koehler, please.

A. KOEHLER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Koehler, what is your profession, sir?

A. I am a wood technologist employed by the Forest Service.

Q. How long have you been in that employ?

A. Eighteen years.

Q. And have you been all that time with the Forest Products Laboratory?

1306 A. No. The first two years I was in Washington with the Forest Service.

Q. During the remaining sixteen years or thereabouts you have been with the Forest Products Laboratory?

A. Yes, sir.

Q. That is with the Department of Agriculture, is it?

A. Yes.

Q. What have your duties been in connection with your work for the Forest Products Laboratory here; just roughly outline, if you will, please, sir?

A. Largely to become familiar with the cellular structure of wood for purposes of identification; and to determine the variations in the cellular structure in each species that is important.

Q. To whom do you report?

A. To Mr. Winslow, the director at the laboratory.

Q. Now, in connection with that line of work, will you state whether or not you had occasion along about 1923 to examine a specimen which was furnished you by Mr. Aymar Embury II?

A. Yes, sir. I recall I had such occasion.

Q. Hand you Commission's exhibit for identification, no. nine. Will you state whether that is copy of a letter which you wrote in connection with the matter that I have just referred to and, in that connection, will you also be kind enough to consider before you
1307 answer the letter which purports or is apparently a carbon copy of certain correspondence?

A. Yes. This appears to be a true copy of a letter which I wrote.

Q. Referring to Commission's exhibit no. 9 before you——

A. Yes.

Q. The report which you then made was accurate insofar as you were able to determine, was it?

A. I identified the wood as western yellow pine and I think I will have to go into explanation here.

Q. All right, sir, I wish you would. Now is as good a time as any.

A. It is possible to divide the pines into two distinct groups which are called by various names, but Forest Service uses the names yellow-pine group and white-pine group. We identified this wood very distinctly as it belonged to the yellow-pine group. Its soft texture indicated that it belonged to the western group of the yellow pines, and since western yellow pine is the principal species by far of that group which is cut into lumber, we pronounced this wood as western yellow pine.

Q. Now this western yellow pine goes botanically under the name of Pinus ponderosa, does it not?

A. It does.

Q. Is it possible to distinguish Pinus ponderosa lumber from the other species of yellow pines if taken in large quanti-
1308 ties, say by the carload lot, would you be able to distinguish Pinus ponderosa from Pinus echinata?

A. Yes; in large quantities.

Examiner SHEPPARD. Is that the southern yellow pine?

Q. That is the Arkansaw soft pine, so-called, is it?

A. Yes.

Q. What other local name has the Pinus echinata?

A. Shortleaf pine.

Q. Would it be possible for you to determine the difference between Pinus ponderosa and longleaf southern pine?

A. Yes; in large quantities.

Q. What of the Pinus palustris?

A. Yes.

Q. How about the loblolly, would you be able to detect in large quantities this difference?

A. Yes.

Q. Now, it is possible for you to receive a small sample of each of those varieties and tell infallibly which it is?

A. No, it is not.

Q. What is that, if you please?

A. Each wood of each species of pine varies more or less, depending upon the conditions under which it grew and the age of the tree; and it is possible to obtain small pieces from the outer part of any of the southern pines which looks so much like the wood of
1309 the western yellow pine that we cannot be sure as to which species is represented by a sample.

Q. Now, if a piece of heartwood were given you, got from the outside, but from the heartwood, would you be able to microscopically, as a wood technician, to say this is Pinus ponderosa and this other one is Pinus echinata?

A. Not always.

Q. So it is not merely the outside of the log but a specimen from the interior of the heartwood itself; is that true?

A. Yes.

Q. Can you infallibly by microscopic tests distinguish between the small part of either the heartwood or the sapwood of any one of the so-called yellow pines from any one of the so-called white pines; is that feasible?

A. Yes; without question.

Q. How about the white pines? Which do you regard as belonging to the white pine group? That is, I refer to commercial white pine species and natives of this country only.

A. The white pine group consists of a number of species of which the commercially important ones are northern white pine——

Q. Botanically named——

A. Pinus strobus. Western white pine, Pinus monticola; sugar pine, Pinus lambertiana; those are the three important species.

1310 Q. Now, when you receive a specimen or sample of pine can you ascertain definitely whether that sample grew on a genuine white pine tree?

A. Yes.

Q. Are you able to determine from a small sample which species of the white pines you have mentioned such sample belongs to?

A. No. Not from a small sample.

Q. Would you be able to determine in large quantities, a truck load, the difference between monticola, lambertiana, or strobus, as the case may be?

A. We believe we can.

Q. Can you outline for me the distinguishing marks—if you can do so without being technical so much the better—can you outline for me what your tests are that enable you to say this piece is white pine and other piece, we will say, is yellow pine?

A. The most reliable test for identification is that in the yellow pines there are certain cells which run horizontally in the tree known as the ray cells which have projections extending inward from the outer walls; whereas, in the white pines these projections are entirely absent in the ray cells.

Examiner SHEPPARD. Is that revealed by the eye or the microscope?

A. By the microscope only.

1311 Q. Now, how long has that distinction been recognized among wood technologists?

A. I cannot give the exact date, but I know it was recognized in Europe before the forest service in this country ever did any work on it.

Q. Do they, in Europe, divide pines into white and yellow groups?

A. I am not certain of the designations they use for their pines. They have no native white pine of their own. All the European pine belongs to the yellow-pine group so I am not certain as to what designations they use.

Q. The division of the species that you gave a few moments ago I would ask whether that is recognized by botanists generally and wood technologists generally in this country?

A. You mean the differences I pointed out?

Q. The division of the pine trees into white and yellow groups and woods that you have mentioned in each of those respective groups; is that true?

A. Yes. That is generally recognized by botanists.

Q. I believe the examiner had in his custody a couple of samples that we had from Indianapolis. They have now been produced this morning and I would like to ask you to determine, as nearly as you may, what wood these samples that I now hand you are.

Examiner SHEPPARD. The examiner wants to state that

1312 the two samples of wood that were handed to me by Mr. Burr on the morning of the 16th of October in Indianapolis, Indiana, when the examiner and the attorneys in this case inspected the Cadle Tabernacle are the two pieces of wood that I hand to Mr. Burr and which he now puts before the witness.

A. I might say this will take a few minutes.

Q. Take all the time you want.

Examiner SHEPPARD. Go to the light if you want to.

Mr. BURR. You can retire to the other part of the room if you want to and put a microscope on there or whatever you please.

Q. Have you made an examination of the specimens furnished by the examiner, Mr. Koehler?

A. I have.

Q. What do you find it to be?

A. I find they both belong to the yellow-pine group.

Q. Now, can you tell whether they more nearly approximate the average of Pinus ponderosa or more nearly approximate the average of the southern pines as to the texture and hardness and so forth?

A. They are nearer the Pinus ponderosa.

Q. But you cannot identify them definitely as Pinus ponderosa by the use of the microscope, as I understand your testimony; is that correct?

1313 A. No. I cannot.

Examiner SHEPPARD. You mean the two samples are nearer similar to the Pinus ponderosa than they are to the yellow pine long-leaf?

A. Yes.

Q. You are certain they are not any of the white pines, are you?

A. I am certain.

Q. Are they sapwood or heartwood; can you tell that?

A. I cannot tell. They are discolored. It is not possible to say definitely.

Q. The passage of time is such you cannot identify them in that respect?

A. Yes.

Mr. BURR. If the examiner please, I will offer those as Commission's exhibit 12 and 12-a and ask they be received in evidence.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. None.

Examiner SHEPPARD. Receive them in evidence.

(Two pieces of wood received in evidence marked "Commission's Exhibits 12 and 12-A.")

Mr. MATTHEW. May it be understood, Mr. Examiner, that the objection which we made to the testimony given at the Indianapolis hearing as to the specifications of the architects as to the mate-

1314 rials to be furnished has not been waived by our offering no objection to the tender of these specifications. In other words, we understand counsel for the Commission intends to connect up these various facts appropriately?

Examiner SHEPPARD. Yes. I understand that.

Mr. BURR. I am going to try to connect them up and I think in all probability I can do so. If the examiner please, I neglected to offer Commission's exhibit for the record no. 9.

Examiner SHEPPARD. It has already been identified?

Mr. BURR. It has already been identified.

Mr. MATTHEW. As to that, if the examiner please, if I understand the correct practice, the letter written by the witness is not proper to be introduced in evidence, but that may be used to refresh his recollection. He can state what he found to be the fact when he examined the specimen of wood that was submitted to him, if I understand the practice correctly.

Examiner SHEPPARD. Let me get the facts right. Is this the gentleman who wrote the letter himself?

Mr. BURR. Yes, sir.

Examiner SHEPPARD. Get the facts from him. There is no use to put the document in when we have the witness before us.

Q. You may refresh your recollection, Mr. Koehler, by the
1315 use of Commission's, for identification, no. 9 and state what you found and reported to Mr. Aymar Embury Second?

Examiner SHEPPARD. That is the proper practice.

A. As I recall from an examination of the correspondence, this sample of wood which was submitted was identified as belonging to the yellow-pine group.

Mr. MATTHEW. Identified by you?

A. By myself, because it had the soft texture of the western yellow pines and because the species Pinus ponderosa is the principal one of those cut into lumber were pronounced it as Pinus ponderosa.

Q. Do you recall whether or not the texture and degree of hardness or softness indicated to you as to whether or not it approximated more nearly an average of Pinus ponderosa than it did to the average of the southern yellow pines?

A. I do not recall the sample, but I would not have stated that it was the western yellow pine unless it did.

Examiner SHEPPARD. In other words, it was more near the ponderosa than the longleaf?

A. Yes.

Mr. MATTHEW. Are you stating your recollection now after refreshing it by examining the copy of your report, Mr. Koehler? Is that so, do you now recall the matter?

A. I do not recall the sample itself.

Mr. MATTHEW. Do you recall making an examination of
1316 of the sample and making a report on it?

A. Yes.

Mr. MATTHEW. And having read a copy of the report you recall its substance?

A. Yes.

Q. Mr. Koehler, do you recall a trip that you made to Detroit the latter part of January or first of February of the year 1927 with regard to certain outside finish for the Detroit Community Fund building?

A. I recall the trip, but the wood in connection with which I made the trip was not outside finish, it was window sash.

Q. Window sash?

A. Yes.

Q. Now, the window sash is exposed to the elements, is it?

A. Yes.

Q. It is on the outside of the building but not classified as outside finish?

A. Yes.

Q. I see. Have you refreshed your recollection by the use of the report that you made at that time?

A. I have.

Q. Will you state what occurred at that time; why you went down there and what you found to be the case?

A. We were asked to send some one—we were asked by the Martin Crossman Company of Detroit to send some one to Detroit to
1317 to examine certain window sash which were in place to see whether or not they were white pine as the specifications specified. I examined a number of slivers taken from these sash under the microscope and found them to belong to the yellow pine group and the fine texture of the wood indicated strongly that they were western yellow pine.

Q. Was there any indication as to whether they were sapwood or heartwood?

A. As I recall, I was not asked to pass on that and I don't remember now.

Examiner SHEPPARD. You can refresh your recollection if you want to from the paper here; if you so desire, Mr. Koehler, glance through it and see if you can answer Mr. Burr's question more definitely as to the sapwood.

A. There is nothing in the report on the question of sapwood and heartwood and I do not recall that that question was asked.

Q. Do you know what was actually done as the result of your report or what disposition was made of the matter?

Mr. MATTHEW. Just a minute, is not that hearsay, as far as this witness is concerned?

Q. Do you know of your own knowledge?

A. No; I do not.

Q. You made your report down there to the persons interested, did you?

1318 A. Yes. I made a verbal report to them.

Q. Along the same lines that you just testified that you found it to be that type of lumber?

A. Yes.

Q. Was that a verbal or written report?

A. It was a verbal report I made to them.

Q. At a meeting of those interested, was it?

A. Yes.

Mr. MATTHEW. As I understood it, Mr. Burr, you were showing the witness what purported to be a written report?

Mr. BURR. Now. It is a written report to his chief.

Q. Is it not?

A. Yes.

Mr. BURR. Would you like to see it, sir?

Mr. MATTHEW. Yes. May I look at it, please?

Mr. BURR. You may wish to cross-examine with that in hand.

Q. Now, have you had frequent occasion to report as to the identity of samples of pine furnished you where there were complaints made to you as to the lack of durability?

Mr. MATTHEW. May I have the first of that, please?

(Question read.)

A. We have had a number of such inquiries. I do not know whether they can be called frequent or not.

1319 Q. Well, there have been a number of such cases, and you made a report to what effect?

A. In most cases where window sash was submitted as pine which decayed it was identified as belonging to the yellow pine group, and the soft texture indicated that it was probably western yellow pine.

Q. Have you loaned to counsel for the Commission the correspondence in a number of such matters?

A. I have.

Mr. BURR. Now, if opposing counsel is agreeable we can put these in. If he objects, I think his objection is well taken. Do you care to take it under advisement?

Mr. MATTHEW. Well, I think the tender is objectionable, Mr. Burr. If you will allow me the correspondence to glance through it during the noon hour——

Mr. BURR. I will be very glad to do it. I think the witness will have no objection loaning them to you, as he loaned them to me.

Examiner SHEPPARD. He cannot object to them intelligently without an examination, so take them and look over them. I do not mean you need to do it at this time.

Mr. BURR. Now, if the examiner please, I intended until my recent conference here to put in statistics, compilations, and figures of the Forest Products Laboratory, but after consultation with the

1320 many members of the force and consideration of the figures themselves I am inclined to think that the issues are sufficiently clear and it merely complicates the situation to put these in. Now, we are here, and opposing counsel have been under the impression, for which I am responsible, that I was planning to put in all these figures.

In view of the fact that I think it will serve merely to confuse the Commission rather than to clarify the situation, counsel perhaps are taken at a disadvantage, and I think they should have the same opportunity that I have had to see, while we are here, if they desire to put in these figures; and if they desire to make any motion which will look forward to their having an opportunity to go into the matter and reach a decision I will be glad to join them in such motion.

I would say, however, that I have nine witnesses this afternoon from Madison, so that we will have to go on this afternoon, but if opposing counsel desire to go into the matter the rest of the morning and part of tomorrow or if they can decide earlier than that that they do not want to put them in, why that is agreeable.

Examiner SHEPPARD. Off the record a minute.

(Discussion off the record.)

Mr. BURR. I will say further for the record, the figures
1321 which I was most interested in were the compilations on durability, but I find after consultation that they are not disposed to stand upon them and regard them as not satisfactory from the standpoint of comprehensiveness or accuracy, or both, and that those durability figures would be subject to grave doubt, and I think perhaps some of the other figures might be subject to doubt as not having been sufficiently comprehensive.

I think opposing counsel will want to take the whole matter under advisement just as I have and see what they desire to do.

Examiner SHEPPARD. All right.

Mr. MATTHEW. Referring to the durability reports, have you in mind particularly Bulletin No. 173?

Mr. BURR. No. I do not think I have. I have got in mind everything they have on the subject of durability.

Mr. MATTHEW. Isn't that one of the reports?

Mr. BURR. I am not sure of the number. I think Mr. Koehler can tell you.

Q. Isn't that one of the bulletins dealing with durability?

A. Yes.

Q. What number?

A. 173.

Q. Mr. Koehler, there has been a compilation on durability that has been recalled, as there, after having been issued?

A. I believe so, but I am not an authority on that subject
1322 and, therefor, would not wish to testify.

Mr. BURR. If counsel want to go into it, I would like, Mr. Winslow, if you will make available such memoranda as you prepared for my benefit to opposing counsel.

Mr. WINSLOW. I will be extremely glad to do so.

Mr. BURR. While we are here let us put them in rather than return here at a later date, if counsel desire to.

Mr. MATTHEW. I do not know as we shall, Mr. Burr, but I think it is very courteous of you to give us this opportunity.

Mr. BURR. Oh, not at all.

Mr. MATTHEW. But, we will try to advise you at the first opportunity today.

Examiner SHEPPARD. Take your time, Mr. Matthew. If you want to all right, and if not, all right.

Mr. BURR. I have nothing more until two o'clock.

Examiner SHEPPARD. We have a cross-examination.

Cross-examination by Mr. MATTHEW:

Q. Mr. Koehler, you stated toward the latter part of your testimony upon direct examination that in most cases where you had been furnished with samples of window sash which had decayed you found that they had been made of yellow pine and probably of the

1323 western yellow pine. I would gather from that that in some instances you found that they had been made of some other woods?

A. I modified my statement that where the sash were pine and had decayed they were found to belong to the yellow-pine group.

Q. Did you say that in every instance where pine sash was found to be decayed you found it belonged to the yellow-pine group?

A. I would like to refresh my memory if I can see that correspondence over there.

Q. My impression was you said that in most cases that had been found to be the fact?

A. This does not give the information on cases where some other pine besides wood of the yellow-pine group was concerned, and I cannot recall definitely whether we received any samples of sash which decayed and belonged to the white-pine group. That may be possible.

Q. You just do not recall?

A. Yes. Can I say, by word of explanation——

Q. Certainly.

A. That I do not handle the decay work. Someone else in the laboratory does that. It is just when the question of the identity of the wood was concerned that I would have anything to do with it.

Q. Have you had any cases where the wood submitted has
1324 proved spruce?

A. I don't recall it now.

Q. All you have in mind now is cases where you found the wood belonged to the yellow-pine group?

A. Yes.

Q. Counsel asked you as to the Arkansaw soft pine which you identified botanically as the Pinus echinata, I believe.

A. That is its name.

Q. The Pinus echinata has quite a wide range throughout the South?

A. Not necessarily wide rings.

Q. No. Wide range?

A. Oh, range; yes.

Q. Does it vary as to its quality quite materially throughout its range?

A. Enough so that the pine from Arkansas is, to a large extent, graded separately commercially and called "Arkansas soft pine."

Q. In some sections of the southern yellow-pine belt does the lumber yielded by Pinus echinata so resemble the lumber yielded by the longleaf yellow pine or Pinus palustris, I believe you termed it, that they are thrown together for commercial purposes?

A. Yes.

Q. Could you be certain that in these several instances where you have identified wood as yellow pine that it is not
1325 Arkansas soft pine or Pinus echinata?

A. In some cases we couldn't be certain at all. In other cases the chances are ninety-eight out of a hundred, I might say, that it is not Arkansas pine.

Q. How are you able to satisfy yourself that a given specimen of wood is Pinus ponderosa rather than Arkansas soft pine?

A. Because Pinus ponderosa, in general, has a finer texture than the Arkansas soft pine.

Q. But individual specimens quite closely resemble one another, you stated, I believe?

A. They do; yes.

Q. You could not say positively now that any of these wood samples which you examined came, in fact, from the Pinus ponderosa tree rather than from the Pinus echinata tree in the Arkansas soft-pine belt?

A. In most cases not; only because small specimens were submitted.

Q. In the early part of your direct examination you were asked to give the important tests of distinction between the pines which belonged in the white-pine group, and those which belonged in the yellow-pine group, and you gave one which you regarded as the most reliable test. In that connection may I ask you, Mr. Koehler, whether the term white pine is to be regarded as a botanical term?

A. It is used by botanists.

1326 Q. And the word "yellow pine" similarly is used by botanists?

A. Yes.

Q. Is it, technically speaking, in either instance, a technical term?

A. Yes. When the technical terms are not used those are the terms that are commonly used.

Q. That is the common and popular term in the absence of the technical term or in the alternative?

A. Yes.

Q. What is the technical term which is the alternative of white pine?

A. There is no technical term for the whole group, but the species have their technical name in each group.

Q. Is there any technical term which is the alternative of yellow pine?

A. No.

Q. The most we can say is that certain of these pines have been conveniently grouped together and termed members of the white-pine group and others have been grouped together for convenience and termed members of the yellow-pine group; is that a fair statement?

A. Yes.

Q. What are the main features which distinguish the pines which belong in the white-pine group from those which go into the yellow-pine group?

1327 A. You mean the tree, as a whole, or the wood?

Q. What determines whether it is to go into one group or the other?

A. As I have already stated, in the wood all the species of the yellow-pine group have projections of the cell wall extended inward into the cell; whereas the white pine they are entirely absent.

Q. I got that point. Perhaps I should have added I wanted to get the other factors which are regarded as distinguishing.

A. In the leaves, the needles of the yellow-pine group have what is called two fibro-vascular bundles; whereas in the white-pine group they have one bundle in each leaf. That is the principal characteristic difference in the leaves that holds in all cases. There are other characteristics which hold in most cases, but not in all cases.

Q. You have in mind, for example, the number of leaves of a bundle?

A. Yes. The common white pines have five needles in a bundle.

Q. And the yellow pine?

A. The yellow pine, it varies from usually two to three, but two of them also have five needles in a bundle.

Q. Is there a white pine known as the "Pinus quadrifolia"?

A. There is such a species, and we classify it as belonging to the white-pine group.

Q. How many leaves are there in a bundle in that instance?

1328 A. Four.

Q. That is indicated by its Latin name, of course?

A. Yes.

Q. Is there any other that has only one leaf?

A. Yes.

Q. What is that termed?

A. Pinus monophylla.

Q. That is recognized as white pine, as well?

A. There is some difference of opinion as to whether it should be called white pine or pinion. Some authorities classify all the white pines together, including the pinions as white pine; others subdivide the white pines so as to make a separate group out of the pinion pines.

Q. Now, the characteristics which you have stressed as distinguishing features may be regarded as botanical features, may they not? That is, the elements which would be stressed for the purposes of botanical classification?

A. Yes.

Q. Are the mechanical properties of these woods considered at all in determining their classification?

A. No.

Q. Why not?

A. Because they vary and overlap.

Q. You are familiar with the mechanical properties of these several pines that are under discussion?

1329 A. Only in a general way. I am not an authority on the subject.

Q. Your work does not carry you into a consideration of the mechanical properties?

A. No.

Q. Then you are unable to state whether the consideration of the mechanical properties of this wood, considered as wood, would throw a particular species into one group or the other?

A. I think I am enough familiar with it to say that it does not enter into it.

Q. I do not think you, perhaps, got the purpose of my question. I will reframe it. Let us address ourselves directly to the lumber which comes from Pinus ponderosa and consider it solely with reference to its mechanical properties. Now, in turn, let us consider the mechanical properties of the pines which are usually thrown in the white pine group and, in turn, the mechanical properties of the pines which are characteristic of the yellow pine group. Now, in considering the wood from that point of view, can you state whether or not the lumber yielded by the Pinus ponderosa tree belongs more appropriately in the white pine group of lumber or in the yellow pine group?

A. I would rather not answer that question, because I am not an authority on that subject.

Q. That is really outside of your proper field?

1330 A. Yes.

Q. Can you tell us who there may be here in the Government service who is an authority on that particular question, namely, the mechanical properties of these pine lumbers?

A. Mr. Newlin, of the Forest Products Laboratory.

Q. Mr. Newlin is a resident here at the present time?

A. Yes.

Q. Is there a Mr. Wilson who is likewise in the service here?

A. Yes, sir.

Q. Is he a resident here likewise?

A. Yes, sir.

Q. You stated, Mr. Koehler, upon your direct examination that you encountered considerable difficulty in identifying small specimens of heartwood, but that when you were supplied with samples of sapwood you have no difficulty in distinguishing the sapwood of the yellow pine from the sapwood of the white pine?

A. No. I believe you are mistaken there.

Q. Will you clear me up on that? I am not sure I got your testimony correctly.

A. I said that in either case, sapwood or heartwood, if I have only small specimens available, I cannot positively say whether it is western yellow pine or one of the southern yellow pine.

Q. But you did state that you could infallibly distinguish

1331 the sapwood of any yellow pine from the sapwood of white pine?

A. Yes.

Q. Then I also understand that you can infallibly distinguish the heartwood of yellow pine from the heartwood of white pine?

A. Yes.

Q. Then I misunderstood your testimony upon direct.

Mr. MATTHEW. May it be understood, Mr. Examiner, that we may reserve further cross-examination until we have had a chance to look over this material which you have furnished us?

Mr. BURR. Certainly.

Examiner SHEPPARD. Yes. Just hold yourself in readiness until you are recalled.

Mr. BURR. If the examiner please, I suggest we get the reporter to stick one of my stickers on each of these and we will have them marked for identification first.

(Eight pieces of wood marked "Commission's exhibits 13 to 20, both inclusive, for identification.")

Mr. BURR. Let the record show that some eight samples have now been marked for identification, "Commission's exhibits for identification nos. 13 to 20, inclusive."

Redirect examination by Mr. BURR:

Q. Mr. Koehler, all of these are samples of cross sections of
1332 various specimens of certain species of pine, are they not?

A. They are.

Q. From near the bark or including an edge of bark to and including the center of the tree?

A. They are.

Q. In each case?

A. Yes.

Q. Now, will you state what the Commission's exhibit for identification no. 13 is?

A. No. 13 is a sample of longleaf pine.

Q. Do you regard that as an average sample or is that a sample to illustrate variation or what is the nature of the sample that is so marked?

A. I picked Commission's exhibit 14——

Q. 13 and 14 you mean?

A. Yes; 13 and 14 as showing approximately the range in the texture of the southern yellow pine.

Q. Is that to say they are both Pinuc palustris?

A. No. Sample no. 13 is longleaf pine and sample no. 14 is shortleaf pine. I might say that these do not necessarily represent the extreme range. They were taken from samples which we had in our collection, but represent approximately the range in texture that may be obtained from the southern yellow pines.

Q. Does that show the range of pitch?

1333 A. No. Not pitch.

Q. But by texture you mean what, hardness or softness or smoothness or what?

A. By texture I mean the percentage of the hard grain as it is commonly called in comparison with the softer portion of the grain.

Q. Do these two samples that you refer to contain both heart and sapwood?

A. They do.

Q. How is the sapwood to be distinguished from the heartwood in these two samples?

A. The sapwood is lighter colored in part than the heartwood and in these two samples it also contains some blue stain.

Mr. MATTHEW. That is, the sapwood does?

A. Yes. In these two samples it is confined to the sapwood.

Q. Now, will you describe the next group of Commission's exhibits for identification?

A. Samples 15, 16, and 17 show a range in the texture of Pinus ponderosa again as we happen to have it in our collection and not necessarily a complete range in texture.

Q. Commission's exhibit 15 seems to have wide annual rings. Is that characteristic?

A. No. You may obtain wide rings or narrow rings in any species.

1334 Q. Depending upon the rapidity of growth, is that true?

A. Yes.

Q. That depends upon the fortuitous circumstances of climate and conditions, on the side of the hill, and so forth?

A. Yes.

Q. And how many close neighbors the tree has?

A. Yes.

Q. Where does one distinguish in Commission exhibit 15 as to where heartwood and sapwood come?

A. Again by difference in color, the sapwood being lighter colored than the heartwood.

Q. And the same is true of 17 and 18, is it?

A. Yes.

Examiner SHEPPARD. They are easily distinguishable in 17 and 18.

Q. How are 18, 19, and 20 to be classified?

A. Samples 18, 19, and 20 represent three specimens of Pinus monticola, also showing a range in texture as we had them available.

Mr. BURR. If the examiner please, I desire to offer for the record these samples that have been so identified as Commission's exhibits 13 to 20, inclusive.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. None at all.

Examiner SHEPPARD. Let them go into the record as

1335 exhibits 13 to 20, inclusive.

Q. Did you select these specimens in part as representative of the heart and sap wood content of these species or did not you have that in mind?

A. No. I did not have that in mind when I selected them.

Q. I think I will ask you the general question whether you have anything in the way of further comment upon those specimens?

A. I selected them particularly to show the variation that may be obtained in Pinus ponderosa so far as the texture is concerned. Sample no. 15 has a coarser texture as is indicated by the width of these dark bands of hard grain as they are commonly called than

sample 16, which is more nearly the average for western yellow pine; whereas sample 17 has very narrow bands of the hard grains making them rather inconspicuous.

I selected the southern pines to show approximately the extremes that are obtained in the southern pines as a whole for comparison, and I selected some samples of Pinus monticola showing different types of texture also for comparison. It will be noticed that in the Pinus monticola the hard grain is not so pronounced as in the Pinus ponderosa or southern yellow pines whether the rings are narrow or wide.

Q. Can you tell from what sections or section the samples of Pinus ponderosa were secured from?

1336 A. You mean section of the country?

Q. Yes; section of the range of the species?

A. I can by referring to my notes, if I may.

Q. I wish you would. I wish you would tell us where all eight of the samples came from.

Examiner SHEPPARD. Yes. I would like to know it. Begin with exhibit 13.

A. Exhibit 13 came from near Jacksonville, Florida. Exhibit 14 from near Liberty, North Carolina; exhibit 15 from near Castle Rock, California; exhibit 16 come from the same tree as exhibit 15; exhibit 17 came from near Missoula, Montana; exhibit 18 came from near Haugen, Montana; exhibit 19 came from also near Haugen, Montana; exhibit 20 also near Haugan, Montana.

Q. Now, referring to Commission's Exhibit 14, I wish you would say whether or not the specimens of the so-called Arkansas soft pine, also belonging, I believe you said, to Pinus echinata, would show, if properly selected, would show factors similar to Commission's Exhibit 16 and even possibly 17 as regards texture, the extreme soft texture of echinata if secured?

A. I do not believe that any considerable piece of Pinus echinata would approximate exhibit 16 and 17 in texture. Small pieces might.

Examiner SHEPPARD. Do I understand you to say the
1337 species you have just testified to more nearly approximates exhibits 13 and 14?

A. No.

Examiner SHEPPARD. They are both yellow pines?

A. The question was, as I understood it, whether the softer texture Pinus echinata approximates exhibits 16 and 17 in texture, and I said no.

Examiner SHEPPARD. Then I asked you if it did approximate exhibits 13 and 14 which is longleaf yellow pine, one of them.

A. I believe that exhibit 14 is a representative sample of the softer textured southern yellow pine.

Examiner SHEPPARD. Then it is more like this than it is like the ponderosa?

A. Yes.

Q. Those are rather small trees for the average. Are they all virgin timber?

A. Some of these specimens were taken some distance up in the tree and therefore do not represent the size of the tree at the stump, but I think in geneal they are smaller than the average for the species.

Q. I believe you testified there are certain five-leaf yellow pines. Are they of commercial importance?

A. Yes; there is one in Arizona which frequently has five
1338 needles in a bunch, although there are exceptions, which is cut into lumber.

Q. Is that the Pinus arizonica?

A. Yes.

Q. What other five-leaf yellow pines are there?

A. The Torrey's pine, which is very limited in distribution in California.

Q. It is confined to a little bit of seacoast there?

A. Yes.

Q. Is that cut commercially?

A. No.

Q. Any other?

A. No.

Re-cross-examination by Mr. MATTHEW:

Q. Mr. Koehler, have you in your collection any specimens of Pinus ponderosa lumber obtained from the forest in the Klamath Falls area?

A. Yes; I believe we have.

Q. Might we be allowed to examine those?

A. I will have to bring them in some other time.

Mr. BURR. Perhaps you would like to see them out there.

Q. Perhaps visitors may be allowed in your laboratory?

A. Oh, yes.

Q. You stated in response to questions put by counsel for
1339 the Commission that some of these specimens which you have before you may have been obtained from the top portion of the trees. Is that true of the Pinus ponderosa specimens?

A. Yes. I have three different heights there. I cannot tell offhand what height in the tree they were taken.

Q. So it is quite apparent these were obtained from trees which are smaller than the average commercial tree?

A. I believe so.

Q. Were any of these specimens obtained from second-growth trees?

A. I don't know offhand. The term second growth in itself is indefinite in meaning. It would be pretty hard to say in some cases whether they have or have not. Sample no. 14 may possibly have been obtained from a tree which would be classified as second growth.

Q. How about samples 15 and 16?

A. No. I collected them myself and they were collected in the virgin forest.

Q. How about samples 18, 19, and 20?

A. The same way. They were collected from the virgin forest.

Q. Did they come from a single tree?

A. No. They are three different trees.

Q. Have you seen any specimens of Pinus monticola which are much harder and flintier in type than any of your specimens 18, 19, and 20?

A. Not as a specimen as a whole, but any species we occa-
1340 sionally obtain wood in part of the tree which is harder than these samples.

Q. I assume you have in your laboratories specimens of lumber obtained from Pinus strobus?

A. We have, but they were not of these dimensions, covering the wood from the pith to the bark so as to show the range in the texture of the species and therefor I did not try to produce any.

Q. Is there quite a variation in strobus lumber throughout the range of that tree?

A. You mean variation in texture?

Q. Yes.

A. Well, all species vary more or less, but strobus does not vary as much as some of the pines do.

Q. Now, if you were to furnish samples of ponderosa pine obtained from trees of the average commercial size, would those specimens reveal as great a percentage of sap as is indicated by your specimens 15, 16, and 17?

A. Yes; I think they would.

Q. The percentage of sap in your specimen no. 16, for example, is apparently at least fifty percent of the entire specimen, is it not?

A. Yes; in this case. I did not have reference to a percentage amount of sapwood. I have reference to the width of the sapwood in itself.

1341 Q. Well, I have in mind the percentage of the sapwood to the diameter of the trees if you will. Now, in the ordinary commercial tree you do not find as great a percentage of sapwood in relation to the total diameter of the tree as is indicated by the specimens which you here submit as 15, 16, and 17, would you?

A. They would not.

Q. I am not certain whether you stated that your specimens of monticola wood are likewise obtained from relatively small trees?

A. Yes. I believe they are a little smaller than the average commercial run of logs.

Q. It is true, is it not, that the average commercial run of logs from the Pinus monticola represent much smaller diameter as far as timber is concerned than the average run of logs used in the production of Pinus ponderosa?

A. If you take Pinus ponderosa as a whole I doubt it, because in the Rocky Mountain region Pinus ponderosa is a relatively small tree. On the other hand, in the Sierras that may be, and to confine the Pinus ponderosa only to the Sierras I think that would be true.

Q. The Pinus ponderosa from its range in the Sierra Nevada Mountains ordinarily represents a much larger tree than the Pinus monticola?

A. I wouldn't say much larger, but from what I have seen
1342 of the timber I think it would run a little larger.

Q. Have you personally been in the Klamath Fall Basin?

A. No.

Q. What part of the Sierras have you observed the Pinus ponderosa personally?

A. I have been around McCloud and around Standard.

Q. Standard is in Tuolumne County?

A. Yes.

Q. In the lower part of the Sierra Nevada Range?

A. Yes.

Q. Southerly, southwesterly portion?

A. Yes. And around Susanville.

Q. Susanville is in Lassen County, California?

A. Yes.

Examiner SHEPPARD. Is there any ponderosa in the Cascades, western slope?

A. I cannot say definitely.

Examiner SHEPPARD. How about that around Bend, Oregon?

A. Yes; that is ponderosa.

Examiner SHEPPARD. That is in the Cascades. That is largely on the eastern slope of the Cascades, is it not, that is on the eastern drainage?

A. I really don't know how the drainage runs there.

1343 Mr. BURR. I will stipulate Bend is on the eastern slope.

Q. Just one question about this Colorado timber to which you refer. You said the trees were relatively small and the stands are relatively unimportant in area, are they not, commercially speaking?

A. Not locally. Lumber is cut there for local uses, but so far as shipment to the East is concerned they are unimportant.

Q. Is lumber on the whole obtained from this Colorado section quite different from the lumber which is obtained from the Sierra Nevada and Klamath Fall Basin?

A. Yes. It would contain more knots for one thing. Their timber is shorter bodied, be less clear lumber in the Colorado pine.

Q. Does it tend to run to harder and pitchier type than the lumber from the Klamath Fall Basin and Sierra Nevada Range generally?

A. I believe it does.

Redirect examination by Mr. BURR:

Q. In the subdivision of the work of the Forest Products Laboratory does it fall within your scope and duties to take note of the

percentage of heartwood and sapwood of these various species, or is that assigned to some one else?

A. I have done some of that in connection with the describing the wood of different species, but others have also done work on that.

1344 Q. The reports on the subject have not been prepared by you?

A. No laboratory reports have been prepared by me.

Q. Would you say that the specialist of the laboratory for that particular branch was some one other than yourself?

A. Yes; there are others who have more data than I.

Q. I think that is all.

Examiner SHEPPARD. All right, Mr. Koehler, you are excused, except you may be recalled for further examination a little later.

Mr. BURR. I think I will ask for an adjournment until two o'clock. I have these witnesses coming this afternoon on a similar character to the reports and some architects and some retailers. Then I shall be ready to adjourn, so far as I am concerned, subject to recall in the West. In the meantime you may take as much time as you desire to make up your minds with regard to this other material.

Examiner SHEPPARD. We will take an adjournment until two o'clock.

Adjournment thereupon taken until two o'clock p.m.

1345 2:00 o'clock p.m., hearing resumed.

Examiner SHEPPARD. Well, we are ready to proceed, gentlemen.

Mr. MATTHEW. If the examiner please, with your consent and the consent of counsel for the Commission, I would like to ask leave to put on a witness out of turn at this time.

Examiner SHEPPARD. Yes. It will be all right.

C. W. HORNIBROOK was thereupon called as a witness on behalf of the respondents and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Will you please state your name and your place of residence?

A. C. W. Hornibrook, Klamath Falls, Oregon.

Q. What is your business, Mr. Hornibrook?

A. Sales manager of the Ewauna Box Company.

Q. Where is the manufacturing plant of the Ewauna Box Company located?

A. In Klamath Falls.

Q. That company is one of the respondents in these proceedings?

A. Yes, sir.

Q. How long have you been the sales manager of the Ewauna Box Company?

A. Not quite two years.

1346 Q. What kind of lumber primarily is manufactured and marketed by the Ewauna Box Company?

A. California white pine largely.

Q. How many years have you been in the lumber business, Mr. Hornibrook?

A. About 19 or 20 years.

Q. Will you relate your lumber experience and in some little detail, if you please?

A. I started working in some of the northern Wisconsin mills during school vacations, manual labor. Later, after leaving school, I was employed by Mr. Coman of Menomonie, Michigan, first as a tallyman and later as an inspector of northern softwoods and hardwoods.

Q. When you speak of northern softwoods what particular varieties of lumber have you in mind?

A. The northern white pines, hemlock, Norway pine, tamarack, balsam.

Q. How many years in the aggregate were you in the lumber business in these Northern States?

A. About nine or ten years.

Q. Will you continue, please?

A. Part of that time I was employed as timber cruiser for a Milwaukee firm, cruising Georgian Bay white pine or Canadian white pine; and after the war bought and sold southern hardwoods
1347 and ran one mill in South Carolina until they closed up.

Q. Where was that mill?

A. At Lumber, South Carolina.

Q. What kind of lumber was manufactured at that point?

A. North Carolina pine; various hardwoods, such as gum, ash, elm, oak, soft maple.

Q. Will you continue your lumber experience following that?

A. I left there for California and was employed by the Fruit Growers Supply Company at their plant at Susanville, California, in a clerical capacity and later as operator of their dry kilns.

Q. In what year did you enter the employ of that company?

A. It was January of 1922, if I am not mistaken. I later ran a mill in Los Angeles, cutting spruce and western hemlock.

Q. Just how long did you remain in the employ of the Fruit Growers Supply Company?

A. About two and a half years.

Q. Following that, did you enter the employ of this Los Angeles company?

A. Yes, sir.

Q. What was the name of that company?

A. Los Angeles Lumber Produce Company, manufacturing spruce and hemlock.

Q. How long did you remain there?

A. A little over a year; and then handling the sales of the
1348 Hutchison Lumber Company, of Oroville, California, until their plant was destroyed by fire.

Q. What was the period during which you were employed by the Hutchison Lumber Company?

A. From early 1925 until late in 1927.

Q. What kinds of lumber were manufactured and marketed by that company?

A. California white pine, sugar pine, white fir, red fir, and western cedar.

Q. I think you stated you had charge of the sales of that company?

A. Yes, sir.

Q. In what year did you leave the employ of that company?

A. In the fall of 1927 when their plant was destroyed by fire and went to work for the Ewauna Box Company.

Q. You have been in the employ of the Ewauna Box Company since that date?

A. Yes, sir.

Q. Are you generally familiar, Mr. Hornibrook, with the kinds of pine lumber which are being the subject given consideration in this case, that is, the northern white pine, sugar pine, and Idaho white pine?

A. All except the Idaho white pine. I have had no real contact with it.

Q. But you are familiar with the others?

A. Yes, sir.

1349 Q. And have you some familiarity with the construction of doors?

A. Yes, sir.

Q. How is that familiarity gained?

A. From observation at the various Middle Western plants.

Q. You frequently visit those plants in the course of your activity as sales manager?

A. Yes, sir.

Q. Were you in attendance upon the Indianapolis hearing in these proceedings on October 16th of this year?

A. Yes, sir.

Q. Were you present at the morning session when certain testimony was given respecting the doors of the Cable Tabernacle?

A. Yes, sir.

Q. Did you accompany the examiner and representatives of the parties during the noon recess when an inspection was made of the Cable Tabernacle?

A. Yes, sir.

Q. Did you take any photographs of parts of the Cable Tabernacle on that day?

A. Yes, sir.

Q. When were they taken, if you please?

A. Right the afternoon of that day.

Q. Have you prints of those photographs here?

A. Yes, sir.

1350 Q. The prints that you have in your hand are the prints to which you refer?

A. Yes, sir.

Mr. MATTHEW. May we ask to have these identified, if the examiner please. They are marked on the back from A to J, inclusive. I think they might be identified as a single exhibit unless it is desired to be given a separate number. I suggest they be marked for identification as respondent's exhibits 20-A to 20-J, inclusive.

Examiner SHEPPARD. Yes.

(Photographs marked for identification "Respondent's Exhibits 20-A to 20-J, both inclusive".)

Q. Mr. Hornibrook, I direct your attention to the first of these photographs which have been identified as exhibit 20-A and ask you to state what it is and what it shows?

A. Just a general view of the doors which I understood were under the discussion at the particular time.

Q. Those were the doors which were first inspected in the course of that trip?

A. Yes, sir.

Mr. MATTHEW. I think the examiner and counsel will allow me to state, those were the doors on the Ohio Street entrance near the intersection with Ogden Street. I think it will show on the later photographs.

Q. Now, will you continue?

1351 A. This first picture just shows the defective bottom rails without much detail.

Q. Now, you pass to the next photograph identified as exhibit 20-B?

A. This was a close-up view of the bottom rail and also parts of the styles on the right-hand door. Shows the defective condition of the door; also shows one of the open joints. I inserted a lead pencil of ordinary size in the open joint there just as a matter of comparison to show the size of that opening.

Examiner SHEPPARD. On the right?

A. Yes, sir.

Q. That lead pencil in the crack between the right-hand style and the upper portion of the bottom rail?

A. Yes, sir.

Q. And the portion of the bottom rail which is most seriously decayed appears there very clearly at about the center of the picture?

A. Yes, sir.

Q. As I understand it, this is the right-hand door of the two which are shown at a little greater distance in exhibit 20-A?

A. Yes, sir.

Q. Now, will you pass to exhibit 20-C?

1352 A. Exhibit 20-C is a view of the bottom rails of two other doors in the same building to show the breakage in the joints caused by their use of green lumber or the doors not properly assembled, or both.

Q. May I ask the name of the pieces of the door which extend vertically above the lower rail?

A. Those are muntins.

Q. Are they properly installed?

A. No. None of the parts of the door are built in accordance with the accepted practice of manufacture of doors. It has been the custom for a number of years in the manufacture of doors to combine the mortise edge and the other part in once piece. These doors here, styles, muntins, and rails were square edge on all sides and had the molding nailed on the outside, made possibly through shrinkage or expansion the opening of more bent sills.

Q. Referring for a moment to your exhibit 20-B, does that likewise show whether or not the moldings were separate or whether they are a part of the style?

A. It shows where the molding that had been at the top of the bottom rail had been taken off and shows the moldings on the side of the left-hand style and on the muntins where they are nailed onto the door.

Q. Had your completed your characterization of exhibit 20-C?

A. Yes, sir.

Q. Pass to your next exhibit, 20-D.

1353 A. This is just another picture taken of another door to show that the doors were either not properly assembled or were made out of lumber not properly dried. The pencil there gives an idea of the size of the opening to permit the entrance of water or moisture, making conditions favorable for decay.

Q. The pencil in this instance appears at what point?

A. At the left of the right-hand style at the juncture with the lock rail.

Q. The right- or left-hand style?

A. It is at the right of the left-hand style.

Q. Toward the left center of the picture?

A. Yes, sir. The pencil shows the various other openings there between the several members.

Q. Do those conditions likewise indicate——

Examiner SHEPPARD. Mine is a good deal darker than your picture. I do not see it.

A. Right there.

(Question read.)

Q. Either improper construction or the use of green lumber?

A. Yes; or possibly a combination of both.

Q. Will you continue with exhibit 20-E?

A. That is just a close-up view of the same door as in picture exhibit 20-D. It shows the separation of the two members more plainly.

1354 Q. Does the same pencil appear approximately at the center of the photograph?

A. Yes, sir.

Q. Will you turn now to exhibit 20-F?

A. This is a picture of another door showing the same feature that some of these other pictures have shown.

Q. That is, it shows the gap between the transverse rail and the left-hand style?

A. Yes, sir; and also between the rail and the muntins.

Q. Will you take exhibit no. 20-G?

A. This was a picture of the door which had been replaced in the building which had not been painted.

Q. Now, this is a door which was likewise inspected at the time when the examiner and the parties visited the premises on the 16th?

A. Yes, sir.

Mr. MATTHEW. And the examiner will allow me to state this is the door on the Ogden Street side, as I recall it.

Examiner SHEPPARD. Yes.

Q. Will you continue?

A. This picture was taken to give a general view of the door which was made, if my judgment was correct, of sugar pine in the styles and rails and ponderosa pine in the panels.

Mr. BURR. Was that door in good shape now?

A. Yes, sir; considering that it had not been painted.

1355 Q. Give any evidence of checking any place?

A. There was some very slight evidence of checking in the panels which the photograph has not shown, but it was not material checking considering the time it had been in.

Q. And also the fact it had not been painted?

A. Yes, sir.

Mr. BURR. How long had it been in, do you know?

A. We were informed two years.

Mr. MATTHEW. I think one of your witnesses stated that it was two years. The record will show.

Mr. BURR. Yes. I think so.

Q. You have nothing aside from what the record shows on that?

A. No, sir.

Q. Will you pass to exhibit 20-H?

A. This was a close-up view of the door which I took, hoping to show the condition of the door. The door showed no signs of breakage at the joints and apparently had been properly manufactured out of dry lumber.

Mr. BURR. This is again the new door, is it not?

A. Yes, sir; and while there was a slight amount of check that does not show in these pictures in the panels, the fact they were perfect flat grain and did not check any more than they had would seem to indicate that the Pinus ponderosa under poor conditions would show up better than the doors which they had complained of.

1356 Q. Returning to the preceding photographs, 20-A to 20-F, inclusive, what conclusion did you reach as to the reasons for

the poor condition and the decay which was obvious there—which was evident there?

A. The doors were apparently very cheaply manufactured with a view of cutting expenses as much as possible and proper care had not been taken either to assure dry lumber or to properly assemble the various members of the doors. The doors properly manufactured with waterproof glue today from dry lumber would not open up the way these had, in my opinion.

Q. Were the doors properly hung?

A. No, sir. One of these pictures, exhibit 20-B, will show that the door was not hung evenly or else the sagging which is apparent there had developed from loose members afterwards. The right-hand style will be noticed is quite a little off the sill, whereas the left-hand portion of the door is resting right on the sill.

Q. Now, will you pass to the two concluding photographs identified as exhibits 20-I and 20-J?

A. Both of these pictures were taken to show the cheap class of construction throughout the building, and to show particularly the cracked stucco, showing that the stucco was not of the proper mixture or was not heavy enough and bears out the statement that the building was built as cheaply as possible.

1357 Mr. MATTHEW. We desire to offer in evidence the several photographs which the witness has just identified.

Examiner SHEPPARD. Any objection, Mr. Burr?

Mr. BURR. No objection whatever.

Examiner SHEPPARD. Let them go in, Mr. Reporter, and received as respondent's exhibits, appropriate numbers.

(Respondent's Exhibits 20-A to 20-J, both inclusive, received in evidence.)

Mr. MATTHEW. Cross-examine.

Mr. BURR. That is all.

G. H. LIPPERT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your business, Mr. Lippert?

A. Architect.

Q. You are with Balch and Lippert here in Madison?

A. Yes, sir.

Q. How long have you been in the profession of architect?

A. Since 1915.

Q. During that entire time in Madison?

A. Yes, sir.

Q. Now, Mr. Lippert, in your work are you engaged on residences largely or is it general practice with buildings, or what is the situation?

1358 A. We have a general practice.

Q. Do you have occasion for exterior work where the material is to be exposed to the weather to specify white pine?

A. Yes, sir.
Q. Beg pardon?
A. Yes, sir.
Q. What is your general classification for wood where there is exposure to weather conditions?
A. Well, we have—our general practice is more or less governed by the character or the quality of the job we wish. If we want what you call a very high-class job, we would specify eastern white pine; otherwise we just specify what we call a white pine, a western pine, or northern white pine.
Q. What do you not specify eastern white pine, what kind of white pine do you expect to get?
A. We would generally expect what we call a northern pine.
Q. By a northern pine you mean pine from what locality?
A. From around Wisconsin, Minnesota, perhaps Canada.
Q. Would you regard Idaho white pine as compliance with the specification for white pine?
A. I believe I would; yes.
Q. Would you regard California white pine as a compliance with it?
A. I don't know very much about California white pine.
1359 Q. Well, if you found that the material that had actually been furnished was said to be California white pine and in appearance and grade it measured up to your specifications, would you accept it or reject it?
A. I think I would reject it.
Q. You think you would reject it?
A. Yes.
Q. How about sugar pine, would you reject sugar pine if you found that was what had been delivered?
A. No. We get a lot of sugar pine. We think we do at least as much as we are able to judge we believe there is considerable sugar pine.
Q. Now, what means of checking up do you have as to whether or not your specifications for pine are actually lived up to? Are you familiar with the wood so that you can yourself be sure of what kind of white pine is delivered?
A. Well, of course, we must base our judgment mostly on our personal experience. We have made no scientific study of the woods, except that we have had the pines, the different pines, and we try to study the character as near as we can.
Q. Well, now, which of the pines do you regard as genuine white pines?
A. We have always regarded the eastern—what we call the eastern pine—as the genuine white pine.
Q. Do you regard the northern white pine of Wisconsin
1360 and Minnesota as genuine white pine?
A. Yes. Of course, I will retract that when I say the eastern white pine, because I mean there again of high quality.

Q. Not second growth you mean?

A. Yes.

Q. I see. Do you regard the Idaho white pine as genuine white pine?

A. Well, I don't know. I never have thought of it except as white pine.

Q. You said a moment ago, I believe, you would accept the Idaho white pine as compliance with your specification for white pine?

A. Yes; we would have to base it as a white pine.

Q. Do you regard California white pine as a genuine white pine?

A. I suppose it is genuine white pine; yes.

Q. Why, then, wouldn't you accept it if it appeared to measure up in grade and appearance and texture, if it appeared to measure up in your specifications in other respects, why wouldn't you accept it as a compliance with your specification for white pine? I believe you so testified?

A. Well, of course, this same would hold true with all pines. The quality of your pine, that is, what I mean, the durability of it and the defects of it is due to climatic conditions. Where we have severe winters naturally your wood in your pines must be tougher
1361 wood, and that means that it will stand up under use more severely in buildings. California white pine we just simply consider as a pine that we use and never would stand up, because it never has had a severe weather test. It grows in a soft balmy climate and it does not get the toughness that these northern pines would get. That is why when we want a good A number one job we go where the winters are the severest.

Examiner SHEPPARD. Do you make any distinction between what you call eastern pine and what Mr. Burr calls northern pine?

A. Why, I don't think there is very much distinction; no. I think it is more just——

Examiner SHEPPARD. It is all white pine, isn't it?

A. Yes. For instance, people—if you will specify an eastern white pine in the specification, people think they are getting a high class lumber, where I believe that the northern Wisconsin or all these northern points are about on equality.

Q. Do you get any of the northern pine from Minnesota?

A. I don't know for sure where it comes from.

Mr. BURR. That is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Lippert, what gave you the impression that the California white pine grows in a soft balmy climate?

A. Well, of course, by that I may have exaggerated some.
1362 I mean they do not get any twenty degrees below zero weather, while we do.

Q. Do you know what the weather conditions are in the area where that pine grows?

A. Just hearsay. That is all.

Q. You do not know that the winter conditions are perhaps just as severe as they are in your northern white pine area?

A. Well, the only thing I know, talking with California men, that I was in a place once where there was four California men; started to snow; they all went to the window, because it was the first snowstorm they had seen, so I took it for granted they do not know what severe weather conditions are.

Q. Do they come from the pine belt in California?

A. I do not know as to that.

Q. As a matter of fact, Mr. Lippert, you really are not familiar with the climatic conditions in the territory where the California white pine of commerce is produced, are you?

A. I never have experienced a winter there, but my judgment would tell me they do not have the severe winters that we do.

Q. Do you know anything about it?

A. No.

Q. You do not know anything about the weather conditions of the McCloud River section or Klamath Basin?

A. No.

1363 Q. Or around Westwood and other parts of the Sierra Nevada range?

A. No.

Q. You said you would be inclined to reject California white pine when furnished upon your specifications calling for white pine, but you thought that you would accept sugar pine, why are you disposed to accept sugar pine?

A. Well, I form my judgment that the sugar pine is more or less put under the same severe climatic tests that our northern pine is.

Q. You did not know that the sugar pine grows in the forest generally with the California white pine, in the same stand?

A. No; I did not.

Q. I assume, Mr. Lippert, that your experience and your study as an architect have not carried you into a consideration of the habitat of the various forest trees which yield lumber used in your work?

A. No.

Q. That is true, is it not?

A. That is, I would say this, it has not to the extent of just fathoming out in a general study of it, but no scientific study.

Q. You do not know anything about, for example, just where sugar pine is obtained and whether it grows with the white

1364 pine of California or not?

A. No.

Q. You are not interested in the botanical classification of the trees in any event?

A. In a general way, no.

Q. Your interest really is in the quality and the utility of the lumber which is to be used?

A. Yes, sir.

Q. You stated that you are of the opinion that you are getting a good deal of sugar pine now. Do you mean that you believe sugar pine is being furnished upon your work?

A. I think we have had some sugar pine; yes.

Q. Do you ever specify sugar pine by name?

A. No, sir.

Q. You think then it has been furnished upon specifications calling for eastern white pine?

A. No.

Q. Or northern white pine?

A. No.

Q. You are satisfied you have been getting the true northern white pine upon specifications calling for that particular variety of lumber?

A. Yes, sir.

Q. Then upon what specifications do you think that you are getting some sugar pine?

1365 A. Whenever we have what we call an open specification, just merely mention the white pine.

Q. Then when you have an open specification, which you have characterized as a specification of white pine, you do think you obtain some sugar pine?

A. I think so; yes.

Q. What leads you to think that?

A. Well, you can generally—what I base my opinion on is more or less the general inspection of the wood.

Q. That is, your inspector has reported to you that it is sugar pine, is that it?

A. Yes; merely that he didn't think it was northern pine or white pine, but it lived up to the specification; sugar pine, what we would call an Oregon pine or something like that.

Q. Has he reported that it is sugar pine, is that it?

A. He said sugar pine; yes.

Q. Sometimes reported it was Oregon pine?

A. Oregon pine.

Q. What do you understand he meant by Oregon pine?

A. Just based it as a pine that was used—sent in once in a while to fill in orders, liable to be most anything.

Q. May not be a white pine at all, as far as you know?

A. No.

Q. But it does not carry the name "white" in the term at all?

1366 A. No.

Q. Do you accept any southern yellow pines upon your work?

A. Yes, sir.

Q. Do you prescribe them for the same purposes which you specify white pine?

A. No, sir.

Q. To what uses do you specify southern pine?

A. Use them mostly for timber work, that is, heavy-duty work.

Q. That is where structural strength is required?

A. Structural millwork—millwork—mill construction, I should say.

Q. Do you distinguish between the short-lead pine and the long-leaf pine?

A. Not very much; no.

Q. That is, you use them interchangeably for the same purpose?

A. Yes.

Q. Do you ever receive any or accept any Arkansas soft pine?

A. We never had any experience with Arkansas white pine.

Q. No, pardon me, Arkansas soft pine. Do you know it by that name?

A. No. I do not.

Q. So far as you know it does not reach this territory under that name?

A. No.

Q. You would not know that lumber if it was brought to
1367 your attention?

A. No. At one time we were told to specify Ozark white pine. We tried to trace down Ozark white pine and we could not find any definite locality for it or where it was or anything. It may have been the same thing.

Q. Are you able to yourself distinguish between the southern lumber and the northern white pine?

A. I think I am; yes.

Q. Can you distinguish the Idaho white pine from the northern white pine?

A. I believe I could; yes.

Q. And sugar pine?

A. And sugar pine; yes.

Q. Could you readily distinguish sugar pine from other varieties of pine?

A. The eastern pine and that; yes.

Q. You could distinguish it likewise from the Idaho pine?

A. Well, I don't think so. I think it would be about the same thing. Pretty hard to tell the difference between the two.

Q. Can you distinguish the California white pine from the northern white pine and the Idaho white pine?

A. I don't know. I never have heard in this territory of the California white pine.

Q. So far as you know, the California white pine does not come into this territory?

1368 A. No. I never heard of it in here.

Mr. MATTHEW. I think I have no other questions.

Redirect examination by Mr. BURR:

Q. Now, if you knew that California white pine grew where there was about twenty or thirty feet of snowfall, and the weather condi-

tions brought about a low temperature, you would accept it if it was delivered on the job just the same as Idaho white pine, would you?

A. I think I would; yes.

Mr. MATTHEW. Mr. Lippert, would you accept it because of your opinion that it would satisfy your tests of quality and utility, or would you be accepting it merely because of its name, or are you interested in the name?

A. I would not be interested in the name at all; no.

Q. Would you accept it more readily as and for white pine on account of it having the words "white pine" in its trade name?

A. I believe I would; yes.

Recross-examination by Mr. MATTHEW:

Q. You said you would be willing to accept sugar pine upon a white-pine specification, did you not?

A. Yes, sir.

Q. The word "white" is not in the words "sugar pine" at all?

1369 A. No; but it is common knowledge to all of us sugar pine is more or less considered as an equality with white pine in that district.

Q. Then you accept sugar pine not because you think sugar pine is white pine, not because it has the word "white" in the trade name, but because you understand it to be the white pine satisfactory for your purposes, isn't that it?

A. Yes.

Q. Isn't it the same test you would apply to California white pine, irrespective of name?

A. If I didn't know sugar pine; yes. Not knowing California white pine and knowing sugar pine if the thing came up and the California white pine was presented to me, I would accept it.

Q. You would undertake to inform yourself in any instance, would you not? That would be your purpose?

A. Yes.

Examiner SHEPPARD. You do not know you got any white pine when you specified—I mean the California white pine?

A. No.

Examiner SHEPPARD. You do not know that has ever happened to you?

A. No.

1370 Mr. BURR. You do not know it has not happened to you, do you?

A. No; I don't.

Mr. BURR. That is all.

C. W. DAVIS was thereupon called as a witness and, having been duly sworn, thereupon testified as follows:

Direct examination by Mr. BURR:

Q. You are at the head of the Davis Lumber Company, are you, sir?

A. Yes, sir.

Q. How long have you been at the head of that company?

A. Comparatively new concern, about a trifle less than two years.

Q. How long have you been in the lumber business here in town?

A. About nineteen years.

Q. What concern were you with before the C. W. Davis Lumber Company was started?

A. Yawkey-Crowley Lumber Company.

Q. Do you do any millwork?

A. Well, not on our own account, but we do it through others, lots of it.

Q. Do you do any wholesaling or is it entirely retail?

A. It is practically retail; a little jobbing to the country towns.

Q. In connection with your retail lumber business, do you
1371 receive orders or specifications for white pine on occasions?

A. Yes, sir.

Q. What lines of lumber do you deal in?

A. Well, we have white pine, southern pine, Douglas fir, northern hemlock, cypress, redwood, oak, birch, some gum.

Q. Referring particularly to the pines what varieties of pine do you carry aside from the hard southern pines in this country?

A. Our stock of pine is entirely northern, comes from Fort Francis.

Q. What State is that?

A. Ontario, Canada.

Q. You carry no western pines, do I understand?

A. We have in the past, but this new concern has not.

Q. The concern that you were with up to a couple of years ago, what varieties of pine did they carry?

A. We carried California white, California sugar, Arizona pine, Idaho, northern white.

Q. Where did you get your northern?

A. From what district?

Q. Yes.

A. The other concern or now?

Q. With the other concern?

A. Well, that came from different sources, Idaho, and Shevlin, Carpenter & Clark, Minneapolis, who handle the Fort Francis
1372 stock.

Q. Did you handle any of this northern white pine from Wisconsin, Minnesota, and Canada?

A. Well, years ago when we were able to get it; yes.

Examiner SHEPPARD. More difficult now?

A. Oh, yes. The grade is poor and the source is limited.

Q. There are still good virgin white pine from Canada, are there not?

A. I believe so; yes, sir.

Q. There are still good virgin white pine from Minnesota, are there not?

A. A limited amount.

Q. It is higher in price than it used to be, isn't it?

A. Yes, sir.

Q. When you say you are able to get it, do you mean with quantities with which it can compete with Idaho?

A. A retail yard in a town of this size buys a mixed car and the stocks from a town like Virginia, Minnesota, are badly broken. It is hard to get a mixed car in the items that you might want.

Q. When I asked you about northern white pine you said you got it from Idaho; is that what is known as white pine Idaho or northern pine?

A. The northern pine comes from Fort Francis, Canada, and the Idaho pine of course comes from Idaho.

1373 Examiner SHEPPARD. You make a distinction?

A. Yes; the northern and the Idaho.

Q. Where do you get your sugar pine from?

A. We do not stock it, but in the past it has come from California.

Q. I am referring to the firm which you say carried sugar pine.

A. Oh, yes, California.

Q. Up to a couple of years ago?

A. Yes.

Q. Confine your testimony to the same firm; where did the Arizona pine come from?

A. I think Flagstaff.

Q. Where did you get the California white pine?

A. Largely from McCloud.

Q. Let me ask you, when you got orders for white pine did you regard yourself as justified in supplying northern white pine under such an order?

A. Surely.

Q. How about sugar pine?

A. Sugar pine has a purpose. We used to sell it for pattern lumber and some interior work.

Q. If you got an order for white pine for pattern work, you would supply sugar pine as a compliance, would you?

A. Yes.

Q. How about Idaho or California white pine, or Arizona,

1374 would you supply those on an order for white pine?

A. I would hesitate to supply Arizona, but both northern Idaho and California would go.

Q. Where did you get your Idaho?

A. Why, usually from Potlatch and Humbird, various places in Idaho.

Q. Which was, I will say, with this other firm your largest source of supply, the California, sugar, Arizona, Idaho, or northern?

A. Idaho.

Q. Next to that would be what?

A. California.

Examiner SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. When you received orders for white pine during the period of your connection with the—what is the name of that company?

A. Yawkey-Crowley Lumber Company.

Q. How did you determine whether to furnish northern pine, Idaho white pine, or California white pine?

A. It depended largely on the stock on hand and sometimes the demands of the customer.

Q. The customer sometimes specifies northern white pine?

A. They like the softer type.

1375 Q. And when they specified northern white pine it indicated their desire that you furnish that particular kind. Did you supply it?

A. We either gave them that or Idaho; yes.

Q. Under what conditions would you furnish the California white pine?

A. Well, that was sold largely for interior trim and cupboard work, not so much for exterior purposes.

Q. Did it prove satisfactory for interior trim and cupboard work?

A. Absolutely.

Q. You recall no serious complaint about its use for that purpose?

A. No, sir.

Q. Is the term California white pine pretty well known to the lumber trade for a considerable period of years?

A. Yes, sir.

Q. How long has it been known in this territory?

A. Oh, I think, to my knowledge, for fifteen years, possibly.

Q. I take it, Mr. Davis, that it was your effort in each instance to supply the customer that which you understood he desired and what would satisfy his purposes?

A. Yes, sir.

Q. Your interest has been primarily in the quality and the utility of the lumber which you furnished rather than in

1376 the name which it might have?

A. Yes.

Mr. MATTHEW. I think that is all.

Redirect examination by Mr. BURR:

Q. Did you ever have any trouble with California white pine where it was sold for purposes exposed to the weather?

A. I don't think that I could say that we have. It has a little harder texture; it has a tendency to cup in the pile——

Q. To what?

A. It has a tendency to cup in the pile. The top boards dish in, and for cornice work we felt it was not quite as desirable as the softer texture.

Mr. BURR. That is all, sir.

Re-cross-examination by Mr. MATTHEW:

Q. Did your lumber company to which you refer likewise handle the southern yellow pines?

A. Yes, sir.

Q. Have they found extensive use in this territory?

A. Formerly there was an extensive use for interior work, but the last five or six or seven years the tendency is to California white pine for that purpose.

Q. Can you explain why the California white pine has been
1377 displacing yellow pine for that purpose?

A. It is a trifle softer, easier to work, and takes paint just as well.

Q. Is the California white pine more nearly comparable with the northern white pine for such use than the southern yellow pine?

A. Yes, sir.

Mr. MATTHEW. That is all.

ALBERT J. DYSLAND thereupon called as a witness, and after being duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are an architect, are you, Mr. Dysland?

A. I am not, sir. My brother is an architect. I am his associate. I am in the building business.

Q. You are in the building business?

A. Yes, sir. The Better Homes Company.

Q. Do you have occasion to specify white pine in your building operations?

A. Yes, sir.

Q. In what terms do you so specify?

A. We usually use D white pine or clear for exterior work.

Q. Do you specify northern white pine or Idaho white pine or California white pine or any specification with the words white pine?

1378 A. Usually not; no, sir.

Q. When you specify in that fashion for exterior trim do you regard Idaho white pine as a compliance with the specification?

A. I think so.

Q. And northern white pine?

A. Yes, sir.

Q. How about California white pine?

A. I do not think so.

Q. You do not think so?

A. I do not think it is used for exterior work in this district.

Q. If the pine that was for exterior purposes seemed to be up to grade in specification in other respects, would you regard it as compliance with your specification for white pine?

A. I always refer to the Forest Products Laboratory to find out about that when I am stuck.

Q. And you do not know what their report would be; is that right?

A. Yes, sir.

Q. How many times in the course of the last year have you referred matters to the Forest Products Laboratory?

A. Half a dozen times, at least. I did right today.

Q. Would you regard sugar pine as compliance with your order?

A. I do not think so.

Q. Have you ever refused California white pine or sugar
1379 pine as a compliance with a specification for white pine?

A. I do not think we have ever had any offered us, any sugar pine.

Q. Would you know whether California white pine had been offered you?

A. I wouldn't be able to tell. They might put it across on us.

Mr. BURR. That is all. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. I take it you are not particular familiar with California sugar pine?

A. I am not.

Q. Or the California white pine?

A. Not particularly; no, sir.

Q. You do not use either in your business?

A. Not to our knowledge.

Mr. MATTHEW. That is all.

OSCAR C. LOFTSGORDON, thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are with Loftsgordon Brothers Lumber Company, Madison?

A. Yes, sir.

Q. How long have you been connected with the lumber company?

A. Oh, about twenty-one years, twenty years.

1380 Q. Do you do any wholesale business?

A. No, sir.

Q. Do you run a mill?

A. No; we do not.

Q. Now, excluding the hard southern pines of the South, what varieties of pine do you handle?

A. Northern, California, Idaho, "pondosa."

Q. Now, do you at times have orders for white pine, Mr. Loftsgordon?

A. Surely.

Q. Which of those varieties of the pines that you mentioned do you furnish on orders for white pine?

A. Again, please.

Q. I say, when you get orders for white pine which ones of those four varieties of pine which you say you handle would you feel at liberty to furnish under an order for white pine? Is that clear?

A. That would depend on what—in regard to grade, for instance in pondosa we get that in common lumber, while in the white pine it is more in the upper grades.

Q. You feel free, so far as the variety is concerned, to furnish such of those varieties on an order for white pine as you may have in stock of the right grade, do you?

A. Yes.

Q. In other words, you would supply northern white pine
1381 as white pine, pondosa as white pine, Idaho white pine as white pine or California white pine as white pine, is that true?

A. We would supply Idaho and northern. We feel that is on the same——

Q. Would you say that pondosa would not be supplied by you as a white pine?

A. No. I don't think so.

Q. You don't think it would be?

A. No.

Q. How about California white pine, would you supply that on an order for white pine if you had the right grade, suppose they asked for clear?

A. Yes.

Q. Would you supply a California white pine?

A. Yes.

Q. If the order was for clear white pine you would supply the California, would you?

A. I think so.

Q. That would be for either exterior or interior use, would it?

A. Yes; in the upper grades.

Q. Do you distinguish as to qualities of durability between these varieties of pine that you mentioned? In other words, do you think that any one of those four is better able to stand weather conditions?

1382 A. I think the Idaho and the northern were.

Q. Are the better?

A. Are better, yes; softer texture.

Q. Have you had any experience with California pine or pondosa pine where exposed to the weather where they have not given satisfaction or withstood rotting conditions?

A. No.

Q. You do not remember any specific instance or experience of that kind?

A. No, sir.

Mr. BURR. I think that is all, sir. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Do you carry northern white pine in the upper grades?

A. We do, to a small extent.

Q. Why not to a large extent?

A. Well, it is rather hard to get and the prices are somewhat higher. We carry the Idaho mostly.

Q. You carry Idaho mostly in the upper grades?

A. Yes, sir.

Q. Do you carry any California white pine in the upper grades?

A. Yes; we do.

Q. Do you carry more Idaho white pine in the upper grades than of California white pine?

1383 A. Yes, sir.

Q. Under what circumstances do you furnish California white pine upon orders which you receive for white pine? That is, how do you determine whether you are to furnish northern white pine, Idaho white, or California white?

A. Well, I don't know. Northern and Idaho we furnish, we figure, is about the same anyway.

Q. So if you had an order just for white pine you would feel free to supply either the northern white or the Idaho white, depending in some part at least, I suppose, upon the condition of your stock; is that right?

A. Yes, sir.

Q. When do you furnish California white pine?

A. We figure that California is about equivalent to the Idaho only it is not quite so soft a texture.

Q. What I am trying to determine is how you make a choice between these three or more varieties of lumber you carry. I understand your customer just orders white pine without any additional term—am I right in that—or does he say I want northern white pine or Idaho white pine or California white pine?

A. We don't have orders really that specify whether it is northern or Idaho in our experience.

Q. In what language is the order customarily framed?

A. White pine.

1384 Q. In some instances you furnish northern white?

A. Yes, sir.

Q. And some instances Idaho and other instances California. How do you decide how the choice shall be made?

A. That would depend on the stocks, I suppose.

Q. Any other circumstances?

A. Not that I know of.

Q. Do you carry the California white pine in the common grades?

A. Very little.

Q. For the most part you carry the pondosa in the common grades?

A. Yes. In the shiplap really. That is about all.

Q. When you get an order for white-pine shiplap, did you ever furnish pondosa for that?

A. Yes, sir.

Q. Why do you feel free to furnish pondosa pine upon an order for white-pine shiplap?

A. All the common grades like that—it isn't used for exterior use.

Q. For that reason you feel that your customer's order is satisfactorily met if you furnish the pondosa pine?

A. We would think so; yes.

Q. I would assume from that, Mr. Loftsgordon, that your interest is in the quality and utility of lumber, rather than the particular trade name which it may happen to bear.

A. To an extent, I suppose.

1385 Q. The word "pondosa" does not carry the word "white" in it or the word "yellow" or any other word, in fact, except pondosa pine?

A. No, sir.

Q. And yet you are at liberty, you feel, to furnish pondosa pine common when you have an order for white pine shiplap?

A. Yes, sir.

Q. So the name is not the material factor, but it is the quality of the lumber and the particular use to which it is put; am I correct in so stating it?

A. I think so; yes.

Q. Is the use of California white pine in this territory increasing in volume as far as your observation goes?

A. Yes; I would think it is.

Q. Is the use of northern white pine increasing or declining?

A. Declining, I think.

Q. To what circumstances do you ascribe these two changes?

A. Well, I don't know. I would think that the grades and also prices.

Q. Let us take the element of grades, what is the difficulty with the grades of the northern white pine?

A. I don't think they are quite up to the standard of Idaho, grade for grade.

Q. Then the Idaho white pine is increasing in volume in this territory, too?

1386 A. I would think so; yes.

Q. What accounts for the increase in the volume of the California white pine?

A. Well, I don't know as I can say that.

Q. Well, I won't ask you to speculate about it. For what purposes is the California white pine ordinarily used in this territory so far as your knowledge goes?

A. Well, in common lumber, to quite an extent, and also some finish.

Q. How long have you been familiar with California white pine?

A. Oh, I don't know, probably twelve or fifteen years.

Q. Has the term been well known to the trade during that period?

A. I can't just say; I suppose.

Q. I am referring to the lumber trade generally in this community?

A. Yes. The term has been used, white pine, that is why I can't say. Lumber bills come in, they specify white pine.

Q. But as far as your lumber business is concerned you have been familiar with the term California white pine for how many years did you say?

A. I would say about twelve or fifteen years.

Mr. MATTHEW. That is all, thank you.

Redirect examination by Mr. BURR:

Q. I believe you said you would feel free to furnish pondosa for inside work on an order for white pine, but not for
1387 outside work, is that true?

A. Well, for the common lumber that would not be interior finish or anything like that.

Q. I understand, for common lumber?

A. Yes, sir.

Q. It is true, is it, that you would not furnish pondosa as white pine for exterior work; is that true?

A. No. I do not think we would. In fact, we don't carry pondosa in the higher grades.

Q. But you would, I believe you testified, furnish California white pine for exterior purposes?

A. Yes, sir.

Q. Is that because you regard it as a white pine and therefor fit for exterior work?

A. It is of that soft texture almost nearly as soft as Idaho.

Q. And you think fitted for outside work?

A. I would think so; yes.

Q. Is that because you regard it as a white pine that you think it fitted for outside purposes?

A. Yes, sir.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. What do you mean by the statement, regard it as a white pine; what do you understand the question to mean?

1388 A. Well, assume.

Q. Do you know anything about the botanical classification of the trees from which pine lumber is obtained?

A. No. I am not experienced in that.

Q. Your interest as a practical lumberman is just in the quality and use of lumber?

A. Yes, sir.

Q. Do you handle the southern yellow pines?

A. Yes, sir.

Q. What varieties of lumber?

A. Shortleaf and longleaf.

Q. Could you readily distinguish the shortleaf and longleaf yellow pine from the California white pine?
A. I think I could; yes.
Q. Generally, are they used for different purposes?
A. Yes, sir.
Q. For what purposes are the southern yellow pines used?
A. More for interior finish.
Q. The southern yellow pines?
A. Yes, sir.
Q. And used for structural purposes to quite an extent?
A. In the common; yes.
Q. Do you handle any sugar pine?
A. No. We do not.
Q. You do not know whether sugar pine is a white pine or not?
1389 A. Well, I know it grows in the same locality that California does.
Q. But you do now know whether it was technically a white pine or not?
A. I haven't had enough experience with it to——
Mr. MATTHEW. That is all, thank you.
Mr. BURR. I will call Mr. Frank Riley. Is Mr. Riley here?
(No response.)
W. K. COLLINS, thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. You are with Collins Brothers Lumber Company, are you, Mr. Collins?
A. Yes, sir.
Q. How long have you been with that concern?
A. About six years.
Q. What is your function in the partnership?
A. General manager.
Q. You are one of the partners, are you?
A. Yes, sir.
Q. How long have you been in this line of business?
A. About six years.
Q. Is it entirely a retail or do you do some wholesale or milling work?
1390 A. It is entirely retail now.
Q. Now, excluding the southern hard pines, what varieties of pine does your firm deal in?
A. Northern white, Idaho, pondosa, and California white.
Q. About how long has that been the case; for some time?
A. Yes.
Q. You have been handling all four of those for some time?
A. Yes. The California pine just in the past two or three years.
Q. Do you handle any California sugar?
A. No.

Q. Do you have orders for white pine on occasion from your customers?

A. Yes, sir.

Q. Do you feel free to furnish them California white pine?

A. We handle very little California white pine, but where we do handle it we have handled it to furnish as white pine.

Q. Was that for exterior trim or inside work?

A. Exterior, and some for inside work.

Q. You regard that as a satisfactory wood for exterior purposes, do you?

A. We do.

Q. How about Idaho and northern white pine; you would furnish those on orders for white pine would you?

A. Yes, sir.

1391 Q. How about pondosa?

A. In some territories we do furnish pondosa.

Q. On orders for white pine?

A. On orders for pine. That is accepted as white pine in those particular localities.

Q. You say on orders for pine, do you mean on orders for white pine or orders for pine, meaning white pine?

A. It is orders for pine, meaning white pine.

Q. Is there some parts of your territory when they say pine, they mean white pine?

A. Yes, sir.

Q. What parts of your territory would that be?

A. At certain of our yards, in Madison, for instance, we would handle either the Idaho or northern white and handle practically no pondosa.

Q. In Madison?

A. In Madison.

Q. Where else have you yards?

A. In Beloit, Brooklyn, Mount Horeb, Ridgeway, and Edmund.

Q. You have quite a chain?

A. Well, just a few.

Q. Which variety of pine do you buy and sell the greatest portion, the northern, Idaho, pondosa, or California white?

A. Northern white.

Q. What is the reputation of northern white pine as to
1392 durability where it has got to be exposed to the weather?

A. Well, I believe it has the best reputation for that purpose.

Q. What would you say came next?

A. Idaho.

Q. Has California white pine a good reputation for exterior use in this locality?

A. I cannot say as to that.

Q. What kind of reputation has pondosa got, if any?
A. Possibly it would be after the Idaho pine.
Q. After the Idaho, but before the California?
A. I cannot say as to that.
Q. Is California white pine a comparatively new entrant into this territory so far as you know?
A. So far as our company is concerned, it is.
Q. But some of your competitors have carried it for a longer time, do you know?
A. I believe so.
Mr. BURR. That is all.
Examiner SHEPPARD. Cross-examine.

Cross-examination by Mr. MATTHEW:

Q. I assume, Mr. Collins, that there was a time when the term white pine in this territory meant northern white pine only; is that so?
A. That was before my time.
1393 Q. You entered upon the lumber business just some six years ago?
A. Yes, sir.
Q. So these last six years represent your entire connection with the lumber trade?
A. Yes, sir.
Q. But during that time has the term white pine meant more than northern white pine?
A. Yes, sir.
Q. It included Idaho white pine for some time?
A. Yes, sir.
Q. You say, Idaho white pine will satisfy an order for white pine?
A. Yes, sir.
Q. And in some instances you said the California white pine will satisfy such an order?
A. Yes, sir.
Q. Why do you feel free to furnish California white pine upon an order for white pine?
A. Well, we feel that it is a white pine in the sense of usage.
Q. Do you carry any yellow pines?
A. Yes, sir.
Q. Southern yellow pine?
A. Yes, sir.
Q. Are they readily distinguished from the California white pine?
1394 A. Yes, sir.
Q. In general are they used for different purposes than California white pine?
A. With us they are.

Q. For what purposes are southern yellow pine used as far as you are concerned?

A. Interior trim for the most part and construction lumber.

Q. The California white pine is practically never used as construction lumber, is it?

A. Yes; we use that as construction lumber.

Q. Construction lumber?

A. Yes, sir.

Q. Is it used extensively for construction lumber?

A. It is a little more expensive. We carry that at some of our yards as a little better grade of lumber for special purposes.

Q. It has a softer texture than southern yellow pines?

A. Yes, sir.

Q. In general, is it used largely for the same purposes for which the northern white and Idaho white pine are used?

A. In the upper grades, I would say it is where it is being used.

Q. You find your trade is satisfied with California white pine?

A. In the few cases where we have used it they have been satisfied with it.

1395 Q. You are not particularly familiar with the botanical classification of the pine trees, I assume, Mr. Collins?

A. No, sir.

Q. Your interest as a lumberman is in the quality and usefulness of the lumber?

A. Yes, sir.

Mr. MATTHEW. That is all.

E. J. POTTER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Potter, you are an architect, are you, sir?

A. I am.

Q. How long have you been such?

A. Practicing thirteen and a half years.

Q. Your firm name is what?

A. Law, Law & Potter.

Q. You have been the entire period in the city of Madison?

A. Yes, sir.

Q. Now, Mr. Potter, do you have occasion to specify white pine for exterior work for the buildings that you are professionally connected with?

A. Yes, sir.

Q. In what terms do you generally specify for exterior purposes?

A. We specify northern white pine.

1396 Q. And what means do you have, if any, for ascertaining whether you get what you specify?

A. Well, visual inspection is all that we have ever used as a means of determining.

Q. Well, if you were placed on an inquiry on the matter and you found that the lumber actually delivered was Idaho white pine, would you regard that as compliance with your specification for northern white pine?

A. No, sir.

Q. How about sugar pine?

A. We would not.

Q. Pondosa? How about pondosa?

A. I am not familiar with the term. We just use the common trade names for it.

Q. Well, there is a great deal of the so-called ponderosa, botanically named, that is now given the trade name of pondosa. You have not come in contact with lumber under that trade name?

A. I have not.

Q. How about California white pine? If you learned it was that would you regard that as compliance with the specification?

A. I would not, absolutely. I have been advised against it.

Q. Have you had any experience with California white pine where it was exposed to the weather?

1397 Mr. MATTHEW. I think the latter part of the witness' prior answer should be stricken as not responsive.

Examiner SHEPPARD. About being advised against it?

Mr. MATTHEW. Yes.

Examiner SHEPPARD. Let that go out, Mr. Reporter.

Q. Why would you not regard California white pine as a compliance with your specification for white pine?

A. After consultation with experienced mill men I have been advised that it is not likely to stand up for the length of time we would expect the building to last or as long as northern white pine would.

Q. Do I understand on a specification for white pine you would accept nothing but northern white pine?

A. (No response.)

Q. Oh, you specify northern white pine?

A. Northern white pine; yes, sir.

Q. You insist on getting the genuine northern white pine?

A. We believe we get it or we want to get it.

Q. Do you accept second-growth white pine?

A. We have never specified as to the growth.

Q. What is the reputation in this community of northern white pine for durability where exposed to the weather?

A. We do not know of any wood that will last longer outdoors than northern white pine.

1398 Examiner SHEPPARD. Did you say you specify white pine or northern white pine?

A. Northern. I brought a specification along to show you.

Examiner SHEPPARD. So many people that testified in this case just specify white pine. You put the northern in front of it?

A. Yes. This is in regard to wood sash and any part regarding the wood. (Reading:) "Sash generally shall be double hung; shall

be one and three quarters inches thick; and shall be built in accordance with the details, using sound, clear, well-seasoned, and dry, clear northern white pine selected for sash work."

Mr. BURR. I think you may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Would you recommend sapwood for exterior use?

A. I—we have never differentiated as to sapwood for exterior use.

Q. Then, you do not distinguish between the durability of the sapwood and heartwood of northern white pine?

A. We have not specified as to that.

Q. Well, granting that, do you distinguish, yourself, between the durability of either of those two woods, respectively?

A. Well, I don't know as to the durability of the two.

Q. Then, when you speak of the reputation of northern white pine for durability you do not distinguish between the sap-

1399 wood and the heartwood?

A. No.

Q. And you do not know that the just repute of northern white pine for durability when used for outside purposes is based upon the use of heartwood?

A. No. I did not know that.

Q. Are you familiar with Bulletin No. 16 of the United States Department of Commerce, Bureau of Standards, relating to lumber nomenclature?

A. I am not familiar with it. I have seen the bulletin.

Q. You know that northern white pine is the accepted and recommended trade name for this lumber which we referred to as northern white pine?

A. I don't know whether it is used as a standard term or not. That is the way we refer to it always around this locality.

Q. That is the recognized name?

A. That is the recognized name; yes.

Q. Is the term Idaho pine likewise a recognized name?

A. It is used in that way around here.

Q. How long have you been familiar with Idaho white pine by name?

A. Well, I have read the advertisements in the magazines for years, but I am not familiar with the wood.

Q. Why is it that you would not accept Idaho white pine upon specifications calling for northern white pine?

1400 A. Because years ago I discussed that matter with one of the best mill men that I knew of. A man who has been in the business somewhere between thirty and forty years; and he advised me most strongly against it because in his experience he had put in window frames and sash particularly that he had to go back and take out afterwards. I do not know after how long a time, but I went to him and asked him about the use of the western pines as compared with the so-called northern white and he advised me always to use northern white.

Q. I was referring to Idaho white pine. You so understood?
A. Yes. Well, as I recall, he told me to stick to the northern white entirely.
Q. But you understood my question related to the Idaho white pine?
A. Yes, sir; I did.
Q. How long have you been familiar with California white pine?
A. Why, the only thing I know about it is the advertisements that I have seen in the magazines.
Q. You are not personally familiar with the California white pine?
A. I am not.
Q. You do not know how long it has been used in this community?
A. No. I couldn't say. I know it has been used for a number of years.

1401 Mr. MATTHEW. That is all. Thank you.

J. J. LUETSCHER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Luetscher, what is your line of business, sir?
A. I am a carpenter by trade and contractor.
Q. You put up houses?
A. Yes, sir.
Q. You contract to put them up, do you?
A. I do.
Q. With the owner?
A. Yes, sir.
Q. And in connection with that work have you had opportunity to observe how various classes of the soft pines stand up where exposed to the weather?
A. I have.
Q. Have you had any experience as regards northern white pine?
A. I certainly did.
Q. How does that stand up?
A. It stands up good.
Q. How about Idaho white pine; does that stand up good or not so well or what?
A. Not so well.
Q. Not so good?

1402 A. No.

Q. How about sugar pine; have you had that exposed to the weather?
A. I think that is worse.
Q. How about California white pine?
A. I didn't know there was any such wood, white pine, in California; is there?
Q. Have you come in contact with the so-called——
A. I have used all of those.

Q. The so-called California white pine? Have you had occasion to know, to buy, what is known as California white pine?

A. Well, not any further than what was told me by the lumberman what it was.

Q. Do you distinguish between California sugar pine and California white pine?

A. I think I could.

Q. You think you know the difference between the two, do you?

A. I kind of think I do; yes.

Q. Have you bought anything as California white pine, that you knew to be California white pine, and used it?

A. It is mostly called western pine.

Q. Western pine or western white pine?

A. No; western pine. Maybe some call it white pine, but it is known more as western pine than white pine, western white pine.

1403 Q. Beg pardon?

A. They leave the white pine out mostly. I haven't given it such particular notice as between white pine or western pine.

Q. Well, now, is that a different wood from Idaho white pine, that comes from the West, too?

A. Well, it is a little different; yes.

Q. Is that different from California sugar pine?

A. Yes.

Q. That is different, is it?

A. Yes. That is different.

Q. Did you ever come in contact with the wood known as pondosa pine?

A. No. I don't think so. Maybe I have used it, but I didn't know that it was such.

Q. How about this western pine; is that durable where exposed to the weather?

A. I have had experience with sash and outside blinds and porch work.

Q. How does it stand up?

A. It don't stand up very good. I could show you some outside blinds that is made out of western pine from Idaho; maybe it was western white pine, I couldn't say as to that, and they ain't five years old, and they are rotten, and it wasn't lack of paint, either.

Q. They were well painted, were they?

1404 A. Sure. It isn't five years old, the house, my son's house. That is why I know. And another case I come acress, when they first started to use western pine, in Judge Zimmerman's house, the sash were about seven years old, and the bottom rails, the tenons, rotted right off. I put in new sash. I didn't build the house originally, but he is a neighbor of mine and I have done some of his repair work. That was one of the things I noticed about western pine. Whether that was Idaho or California I couldn't say. It wasn't Wisconsin pine. I know that.

Q. Has it all been replaced, or is some of it there yet?

A. Not all of it. It all depends on which side of the house the sash really are. If they dry out fast, it isn't so bad.

Mr. BURR. I think that is all.

Mr. MATTHEW. No cross-examination.

PHILIP M. HOMER was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your line of business, Mr. Homer?

A. Architect.

Q. How long have you been an architect?

A. About ten years.

Q. Located entirely in the city of Madison?

A. Yes, sir.

1405 Q. What is your firm name if you have one?

A. I haven't any. I am the firm.

Q. All by yourself, huh? And what is your line, residences chiefly?

A. General practice.

Q. In connection with that practice, do you have occasion to specify pine for exterior purposes?

A. Yes, sir.

Q. How do you specify?

A. We usually specify northern white pine for exterior purposes, such as sash and things of that sort.

Q. Do you vary from that at all?

A. Yes. I use a lot of cypress.

Q. But when you want pine it is always northern white pine, is it, for exterior work?

A. Yes, sir.

Q. Do you accept any substitutions for that if you know it?

A. Not if I can help it.

Q. You would not take Idaho or sugar or California white?

A. I don't know anything about Idaho. I know sugar pine when I see it and I don't want it.

Q. How about the California white, do you know that when you see it?

A. I don't know as I could distinguish California white pine. I ordinarily specify the northern white pine. I do, as I
1406 say, know sugar pine when I see it. I have had several occasions when that has been brought to my attention. I recall one job where the contractor wanted to use sugar pine——

Q. And you rejected it, did you?

A. Yes, sir.

Q. Would you know if California white pine of the required grade and appearance, freedom from knots, and so forth, if that were de-

livered on the job, would you be able to tell that from northern white pine, do you think?

A. I am not so sure whether I could or not. We usually know the contractors with whom we are dealing [redacted] and we find that they are pretty familiar with what we specify and, as a rule, they give us—at least, we think they give us—what we specify.

Q. You trust to their fair dealing as regards the variety of wood, do you?

A. In most cases we do, but a small contractor we know nothing about we are apt to be pretty careful.

Q. Check him up better than those that are familiar with your requirements?

A. Yes.

Mr. BURR. I think that is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

1407 Q. Why are you unwilling to accept sugar pine upon a northern white pine specification?

A. Where am I willing to?

Q. No. Why are you unwilling?

A. Well, from the information that I have been able to get from various millmen—not only millmen but from some of the local contractors, carpenter contractors—they inform me that sugar pine is very, very soft—it is—and the tendency toward shrinkage is pretty great, and I think toward rotting.

Q. I assume you are not particularly familiar with the botanical classification of the pine trees?

A. I would not say that I am.

Q. You do not know whether sugar pine is classified as a white pine or not?

A. No; I would not. I know that it is a white wood. I know sugar pine, I think, when I see it.

Q. But you reject it because you are apprehensive that it would not satisfy the purposes for which you have specified the northern white pine?

A. Yes; from the information that I have got from contractors who have used it.

Q. And you insist, then, that northern white pine itself be furnished upon your specifications for that wood?

A. Yes, sir.

1408 Examiner SHEPPARD. Where does your northern white pine come from that you use here? Where do you get it from; what part of the country?

A. I imagine the northern part of the State is where it comes from.

Examiner SHEPPARD. In your own State here?

A. I think so; yes.

Examiner SHEPPARD. All right. Thank you, sir.

J. S. TIMLIN was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your business is the retail lumber business, is it?
A. Yes, sir.
Q. You are the head of the concern, are you, sir?
A. Yes, sir.
Q. How long have you been in the lumber business here?
A. Three years.
Q. Where were you before that? In the lumber business elsewhere?
A. In the milling business, in the retail business, Price County, Phillips.
Q. In this State?
A. Yes. Thirteen years there.
Q. Were you there in your own name just as you are here?
A. Just as we are here.
Q. In your concern in the State of Wisconsin have you dealt
1409 in the soft pines, excluding now the southern harder pines?
A. Yes.
Q. What varieties of soft pine have you used?
A. Northern white pine, Idaho white pine, Idaho pondosa, and western pine.
Q. Western pine; when did you use western pine last?
A. I think we have some in stock now.
Q. Do you regard that as different from pondosa pine?
A. Not very much.
Q. Some of the firms call in pondosa and some western pine; is that true?
A. No. I think Idaho is strictly the pondosa. I am not so positive of that. It may run pretty well into the western terriory, Oregon, Washington.
Q. What do you mean by western pine; is that a white pine or what is it?
A. No. I do not think it is a white pine.
Q. Do you handle any California white pine?
A. Well, I never was in the West to see it grow, but I do not know that there is a California white pine. There is a sugar pine and a western pine in California.
Q. From whom do you buy your own western pine?
A. Buy it from the Sugar Pine Lumber Company and from the Red River Lumber Company and we got some from Idaho, western Idaho.
1410 Q. In buying from the Red River Lumber Company, are you sure that you do not get it under the name of California white pine?
A. We probably do. I suppose we do.

Examiner SHEPPARD. Haven't you ever seen your invoices?

A. Yes.

Examiner SHEPPARD. How is it invoiced to you; do you remember?

A. White pine.

Examiner SHEPPARD. California in front of it?

A. California, what we get from California. We get some from southern Oregon.

Examiner SHEPPARD. Is that just as white pine?

A. It appears to me—I am not positive—but it appears to me they specify that as pine.

Mr. MATTHEW. May I suggest if the witness is in doubt on the point—I think it is better in any event to consult his invoices.

Examiner SHEPPARD. If he is in doubt about it; yes, sir. He put it in three different ways. I think he himself is doubtful.

Mr. BURR. Perhaps we better excuse the witness to come tomorrow.

Mr. MATTHEW. I do not want to annoy him, but as I
1411 understand you are really doubtful.

Examiner SHEPPARD. We would like to be sure about that, both for you and for this record.

A. Well, I could do that very easily.

Examiner SHEPPARD. I think I will excuse you and let you go and come tomorrow morning.

Q. Suppose you come down tomorrow morning at ten o'clock and bring along some of the invoices of where you get your western pine product that you handle. Will you do that, if you please?

A. Sure; glad to.

Mr. MATTHEW. May I suggest he bring invoices of the California white pine and of the sugar pine? As I understand it, you buy sugar pine.

A. No. We don't handle sugar pine.

Q. You buy some lumber from the Sugar Pine Lumber Company?

A. Yes; but we do not buy sugar pine from them.

Q. The lumber you do buy from the Red River Lumber Company, you say?

A. Yes.

Q. You might bring a representative invoice from the Red River Lumber Company.

A. Yes. I can bring along some invoices from the Sugar Pine Lumber Company. Of course, we specify we buy pine, not sugar pine.

1412 Q. Also from southern Oregon?

A. I think the Red River Lumber Company branches that they——

Q. I should like to have the invoices of the various concerns you buy what you have called here western pine.

A. I will do that.

Mr. BURR. Counsel call it California white pine, but you were not clear whether you bought any under that trade name. What we want is everything you buy under the term western pine.

Examiner SHEPPARD. Be here tomorrow morning at ten o'clock and we will put you on first and let you go.

FRED W. RAYNE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your line of business, Mr. Rayne?
A. Retail lumber.
Q. How long have you been in that line?
A. All my life.
Q. Always here in Madison?
A. I spent two years at Whitewater, Wisconsin, in the same line.
Q. How long have you been in the business right here?
A. Since 1906.
Q. Now referring to softer pines, exclusive that is of the southern hard pines, will you state which varieties of lumber you purchase and sell?

1413 A. From the south?
Q. No. Excluding those?
A. We buy and sell northern hemlock——
Q. No. Just the pine, if you please.
Examiner SHEPPARD. Northern and western pine.
A. We buy northern white pine and Norway pine, Idaho white pine, pondosa pine and California white pine and California sugar pine.
Q. Which is your largest supply of those six varieties?
A. We are getting most of it from Idaho, Idaho white pine.
Q. Next to that what would you say is your largest?
A. Northern white pine.
Q. How long have you been handling California white pine?
A. About five years.
Q. Do you get specifications for white pine calling for orders in the language asking merely for white pine without further specification of Idaho or northern or elsewhere?
A. We get specifications for white pine, but we seldom designate where it shall come from.
Q. They seldom do designate?
A. Seldom.
Q. Most of the orders then are just asking for white pine?
A. Yes, sir.
Q. And those six varieties that you describe as goods that you carry, which of them do you feel justified in supplying

1414 to fulfill an order for a white pine?
A. Why, we would just supply three of those grades mentioned for white pine.
Q. Which three?
A. Northern, Idaho, and sugar.
Q. Would you supply California white on those specifications?
A. Yes, sir.

Q. Beg pardon?
A. Yes.
Q. That makes four then.
A. I mentioned three: Northern white, Idaho white, and California sugar.
Q. How about California white? I asked that question and you said, yes, as I understood you.
A. Personally I do not think it is white.
Q. Would you supp[l] it on occasions if you had the right grade?
A. If they just asked for pine; yes.
Q. If you were asked for white pine?
A. I might explain that it was termed white pine; it is called white pine, yes.
Q. Well, would you regard that as compliance with the specifications such that you would deliver that if they asked for white pine?
A. I would, in that we buy it as such.
Q. You have done it, have you?
1415 A. Yes, sir.
Q. Which do you regard as the best wood for exterior trim?
A. Northern white pine.
Q. And next to that which would you place?
A. Idaho white pine.
Q. Do you regard both of those as preferable to either the California white or the California sugar?
A. Yes, sir.
Q. How about the pondosa; where do you rank that?
Examiner SHEPPARD. Are you familiar with the pondosa?
A. Yes, sir; we buy the pondosa.
Examiner SHEPPARD. Then you can answer Mr. Burr's question; go ahead.
A. I might classify it one wood better than California white pine.
Q. You think it is better than California white pine?
A. It is a better looking board.
Q. Which would you recommend for exterior purposes, the California white or the pondosa?
A. Neither.
Q. Do most of your specifications for white pine constitute orders for exterior material?
A. Yes.
Q. And under those circumstances you have furnished the northern, the Idaho, and the California white; is that true?
1416 A. Yes, sir.
Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. For what purposes do you supply Norway pine?
A. We buy it for dimension purposes.
Q. In what terms is it customarily ordered by your customers?

A. It is sold at our suggestion and as a substitute for other dimension items.

Q. Just what do you mean by dimension lumber?

A. Joists and studding and rafters.

Q. That is for general structural purposes?

A. Yes, sir.

Q. Is it ordered by your customers as Norway pine?

A. I repeat myself. The customer may have ordered dimension and we may have suggested the delivery of Norway because we had it probably not having the fir or hemlock which we usually sell for dimension.

Q. Then the orders do not specify any particular pine nor do they call for any particular variety of lumber except that the request is for dimension lumber?

A. Occasionally we have an order for Norway pine.

Q. But usually it is just an order for dimension lumber?

A. Yes, sir.

Q. Do you ever furnish Norway pine upon orders for white pine?

1417 A. No, sir.

Q. Do you know whether Norway pine is ever received mixed up with lots of northern white pine?

A. Sometimes bought that way, mixed Norway and white pine.

Q. And when you buy it in mixed lots, northern white and Norway pine, how is it sold?

A. As bought. We do not separate it.

Q. Is it sold as northern white pine or white pine or how?

A. It is bought by us in a number three grade and just sold for common purposes, principally shiplap.

Q. That is, it is common lumber?

A. It is common lumber.

Q. If you received an order for number three white pine common you would feel free to furnish some of this mixed lumber?

A. No, sir.

Q. Then upon what type of orders do you furnish mixed white and Norway number three common?

A. In shiplap which is sheathing lumber principally, perhaps in one-by-six flooring.

Q. Then in such instances the order comes in the form of shiplap or in flooring?

A. There may be affixed the name pine shiplap or flooring.

Q. But it is not customary for them to order northern white?

A. No, sir.

Q. Or even white pine lumber?

1418 A. No, sir.

Q. Do you purchase your Idaho white pine largely from the Weyerhauser lumber interests?

A. Largely.

Q. Purchase your northern white pine largely from the same interests?

A. I would say we have bought more from the Shevlin Carpenter & Clark Company.

Q. You purchase some from the Weyerhauser interests?

A. Yes.

Q. You purchase some of the pondosa pine from the Weyerhauser interests?

A. We do not.

Q. You purchase none from them?

A. None.

Q. From whom do you obtain your pondosa pine mainly?

A. We bought considerable from the Shevlin Carpenter & Clark Company at Minneapolis, through our sales agents for the Shevlin-Hickson Company of Bend, Oregon, from where it is shipped, and we buy the rest of it principally from wholesalers not always knowing where it is coming from.

Examiner SHEPPARD. That is the pondosa?

A. That is the pondosa.

Q. When you first entered upon the lumber business did the term, white pine, mean usually just northern white pine?

1419 A. When I entered the business the bulk of it was coming from the North, but I believe even then we were getting it from Idaho.

Q. Then, did the term "white pine" at that time usually mean the northern white pine?

A. We would construe an order at that time of white pine from either place.

Examiner SHEPPARD. That is in 1906, wasn't it?

A. In 1906.

Q. So as early as 1906 the term "white pine", as you recall it, would include either northern white or Idaho white?

A. Yes, sir.

Q. Would it include California sugar white, or did it include California sugar white?

A. We did not stock California sugar pine at that time.

Q. Had you any familiarity with California sugar pine as of that time?

A. No, sir.

Examiner SHEPPARD. Does that include sugar pine now, the word "white pine"?

A. I included sugar white pine in my personal idea of what was really white pine.

Examiner SHEPPARD. So that word has had a broadened meaning as time has gone by, hasn't it?

A. Yes, sir.

1420 Examiner SHEPPARD. I mean it has included more woods than the original wood which designated it way back yonder?

A. I would say so.

Examiner SHEPPARD. You would?

A. Yes.

Q. Now, as I recall one of your answers upon your direct examination, you said that when you received orders for white pine you felt free to furnish northern white pine or Idaho white pine or sugar pine, and in either case you felt that you had satisfactorily complied with the specifications; is that right?

A. Yes; and you would include California white pine in that it is sold as such.

Q. I am not asking you about California white pine for the moment; I will ask you that shortly. You did state definitely that you would feel free to supply either one of those three woods in the first instance?

A. Yes, sir.

Q. Why do you feel free to furnish California pine upon an order for white pine?

A. My personal opinion of the wood.

Q. Then it is not based upon a trade custom or a trade nomenclature?

A. No, sir.

1421 A. It is because you personally understand that sugar pine is botanically a true white pine, is that it?

A. It is my opinion that it is. I am not familiar with the botanical terms.

Q. Then you are not interested in the botany of these woods?

A. No, sir.

Q. You are interested rather in their quality and their usefulness?

A. Yes, sir.

Q. Then the term sugar pine, although it does not contain the word white, to your mind, satisfactorily identifies a white pine?

A. In my mind it does.

Q. How do you determine whether you will furnish sugar pine in any case upon an order for white pine?

A. We supplied our stock with the upper grades of sugar pine, and we rather want to talk and sell sugar pine for purposes where they want the upper grades.

Q. You have in mind certain specific purposes; is that it?

A. Yes.

Q. That is, you are trying to satisfy the requirements of your customer as you understand them, is that it?

A. As best we can handle their orders from our stock.

Q. Do you carry the northern white in the upper grades?

A. We carry a D select grade in a small way, not a very

1422 large stock.

Q. How does it happen that you did not carry a larger stock?

A. It has been to our advantage to go to Idaho or California for the grade.

Q. Why to your advantage?
A. Price advantage.
Q. Is that the only factor?
A. Yes.
Q. Now, do you carry the northern white, the Idaho white, and the California sugar pine in corresponding grades? Do you understand the import of my question?
A. No.
Examiner SHEPPARD. Read it.
Mr. MATTHEW. Let me reframe it if I may, Mr. Examiner, please.
Q. You stated a while ago that you carried the California sugar pine in the upper grades. Do you recall your answer to that effect?
A. Yes.
Q. Just what grades did you mean by the upper grades?
A. D select grade, C select grade, and B and better grades.
Q. You carry the sugar pine in D select, C select, and B and better. Do you carry northern white in those same grades?
A. We carry northern white only in the D grade.
Q. Why not in the C and in the B and better?
1423 A. For the reason that our purchases from California have tied us over so that we didn't need to buy from the north.
Q. So you are carrying the sugar instead of the northern white in those highest grades?
A. The stock move slowly so what we had continued on our stock later in the C and better grades.
Q. What grades do you carry in the Idaho white?
A. D select and C select.
Q. Why not B select and better?
A. For the same reason that our California stock moved slowly and we did not need to replace it after having once put in a stock of it.
Q. Well, my difficulty is still this, why did you not initially stock up with the northern white and the Idaho white in these highest grades rather than to resort to California sugar pine for the highest grades?
A. At the time we put in our stock of California upper grades it was of advantage to us on account of price then being considered low.
Q. That is the only reason for your stocking up with the California sugar pine in these higher grades than with the northern white or Idaho white?
A. Yes, sir.
Q. Do you carry the California white in these same grades?
A. No, sir.
1424 Q. What grades of California white pine do you carry?
A. I don't think we have any in stock.
Q. So then naturally it cannot be your practice to furnish California white pine upon orders for white pine?

A. No, sir.
Q. How long since you carried California white pine?
A. We had a car of it in 1920 or 1921.
Q. And you have carried none since?
A. One and only car.
Q. That is the only car of California white pine that you have ever carried?
A. Yes, sir.
Q. Do you supply the Idaho northern white and California sugar pine for exactly the same purposes?
A. Yes.
Q. You make no distinction as to the particular lumber which you will furnish to your customers from those three varieties?
A. Not in the select grades.
Q. How about other grades?
A. We do not carry the common in sugar pine.
Q. Do you carry the common in Idaho white?
A. Yes, sir.
Q. And northern white?
A. Yes, sir.

1425 Q. How do you determine whether you will furnish northern white or Idaho white when common lumber is asked?
A. We have both stocks and furnish what we have.
Q. The customer asks for northern white pine common, do you feel free to furnish Idaho white common?
A. Not without telling them that it is Idaho.
Q. Do you sometimes do that?
A. Yes.
Examiner SHEPPARD. Is it the same thing with the sugar pine?
A. We do not carry sugar pine in common grades.
Q. For what purposes is the California sugar pine ordinarily used in this territory?
A. Would be used for outside porch work, for building of columns or facer, or for outside window and door frames and for cornice work or for the building of cabinets, cupboards, or interior trim.
Q. I understand from your direct examination that you do not rate California sugar pine as high as Idaho white for exterior use?
Mr. BURR. Did he so testify?
Mr. MATTHEW. If I am wrong he can state so. I am asking him.
A. Can I have the question again?
(Question read.)

1426 A. I did class the Idaho ahead of California sugar.
Q. And you class northern white ahead of Idaho white?
A. Yes, sir.
Q. And yet you feel free to furnish any one of these three variety of lumber upon orders of white pine?
A. Yes, sir.
Q. Even though you know that it is desired for exterior use?
A. Yes, sir.

Q. You stated that you would not recommend pondosa pine for exterior use. May I ask whether you would recommend it for interior use?

A. It would be all right for that purpose.

Q. Do you sometimes supply it for interior?

A. We only have it in the common grades, selling it for sheathing or shelving or something of that kind.

Q. Did you ever furnish pondosa pine in those grades upon orders for white pine?

A. No, sir.

Q. In what form do these orders which you supply with pondosa pine normally come?

A. Where the customer merely wants sheathing or shelving.

Q. And he does not ask for white pine nor does he even ask for pine. He just requests lumber for sheathing or shelving.

A. He may ask for pine lumber. The chances are he does not know what pondosa means, but may say pine.

1427 Q. I will go with you he does not know what pondosa means, but ordinarily he merely asks for pine lumber for sheathing or shelving?

A. Yes, sir.

Q. He is not interested in knowing whether it is white pine or any other kind of pine?

A. No, sir.

Mr. MATTHEW. I think that is all. Thank you.

Redirect examination by Mr. BURR:

Q. Now, when you testified that you got mixed lots of northern white pine and Norway, do you mean mixed cars where you order certain specifications of Norway and certain specifications of white or do you just ask for a car of mixed common with the two. What is the situation there? I do not quite understand it.

A. Sometimes we made a price on one by eight shiplap where the percent of white pine and Norway pine is different. There may be eighty-five of Norway pine and fifteen percent of white pine.

Q. How do you order that material where it comes mixed?

A. Just as pine, shiplap.

Q. Pine shiplap, and then the manufacturer, the lumber mill, is justified in giving you anything between all Norway and all

1428 northern white or anything in between in the way of mixture, is that true?

A. The percent is usually stated, whether fifty percent or eighty-five percent.

Q. Stated by you in your order?

A. Stated by the party selling.

Q. How do you order?

A. We order the way he has represented it to be. We may order fifty percent white pine and fifty percent Norway, being satisfied with that percentage.

Q. Then what do you do when you get it, do you put it all in the same stack or do you store—sort it?

A. Put it all in the same stack.

Q. And you sell it then as a mixed pine, do you?

A. Sell it as pine.

Q. So there is no misunderstanding anywhere along the line, is that true?

A. There should be none. We understand the party we buy from and we are just selling pine shiplap.

Q. When you sell pine shiplap there is no implication that is white pine or anything of the kind, is there?

A. No, sir.

Mr. BURR. That is all, sir.

FRANK RILEY was thereupon called as a witness, and, having been duly sworn, testified as follows:

1429 By Mr. BURR:

Q. What is your line of business, Mr. Riley?

A. Architect.

Q. How long have you been an architect?

A. Twelve or fifteen years.

Q. During that entire time in the city of Madison?

A. No, sir.

Q. Where were you previously?

A. Boston.

Q. How long have you been an architect here, sir?

A. About eleven years.

Q. Did you come direct from Boston here?

A. No; from Europe.

Q. I mean have you had experience in your profession elsewhere than Boston and Madison?

A. Yes; in Europe.

Q. You practiced there, did you?

A. I worked over there.

Q. In connection with this profession, do you have occasion to specify any variety of pine for exterior purposes?

A. No. We never mention grades, just simply order white pine, or occasionally, longleaf or shortleaf.

Q. For exterior purposes?

A. Not for exterior purposes.

Q. Do you specify any variety of pine for exterior work?

1430 A. No; simply say white pine.

Q. Simply say white pine?

A. Yes, sir.

Q. You do specify white pine then for exterior purposes on occasions, do you?

A. Yes, sir. Unless it happens to be an oak house.

Q. When you specify white pine for exterior use do you regard northern white pine as a due compliance with your specification?

A. Yes, sir.

Q. How about California white pine?

A. We are dependent a little bit on the mills in Madison—the lumber yards. We specify—we follow the course of least resistance I am afraid. I would specify and expect what they give us. It helps us a little bit. In Boston it was different.

Q. Just a minute, I will come to Boston in a moment. When you specify here in Madison white pine and you found California white pine was delivered on the ground, would you regard that as compliance—if it met with the grade and other requirements?

A. We accept it, but we are not as pleased with it as northern white pine.

Q. You regard northern as more durable, do you?

A. Yes, sir.

1431 Q. Do you regard the delivery of Idaho white pine as compliance?

A. We like that less than the California.

Q. Upon what ground?

A. I cannot say definitely, just perhaps opinions of a couple of contractors here in town whose opinions I respect.

Q. California is a little cheaper than the Idaho?

A. California is a little cheaper, I think; yes.

Q. Do you prefer the California on the ground of it being cheaper?

A. We do not go into it that deeply.

Q. Well, you do not know whether the contractor prefers it because it is a little more reasonable, or do you?

A. I don't know; no. I have found that they will accept a car of Idaho one shipment and a car of California in another shipment. It depends a little bit on how readily it comes.

Q. In your experience in Boston did you find that they would accept California white for white pine?

A. No; they would not. They were very much more particular with their white pine than they are here, I think.

Q. Do you handle pondosa pine?

A. Don't know it by the name. I might be able to tell it.

Q. If you found pondosa when they delivered on the ground when you specified white pine, would you accept it as if it were satisfactory?

A. I don't know the——

1432 Mr. MATTHEW. He might be informed of the pondosa and not—he might be told it was Cuban pine.

Mr. BURR. If he was told, if it was pondosa pine, I asked him whether he would accept it as the white pine ordered.

A. I imagine, if the appearance was nearly identical, quite similar.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. You stated, Mr. Riley, that in Boston California white pine would not be accepted upon an order for white pine?

A. Well, I think they were a lot more particular about their white pine than they are here. I know specifications from the Boston office specify more definitely the type of lumber they wanted used.

Q. You would understand when they specify white pine in Boston ordinarily they mean the northern white pine?

A. Yes.

Q. And Idaho white pine would not be accepted on such specifications?

A. Not in those days. That was twelve or fourteen years ago.

Q. Your testimony as to Boston was given as to your experience in that period?

A. Yes. I know nothing of it since then.

1433 Q. Would California white pine be accepted as satisfactory compliance with an order for white pine in Boston as of that same period?

A. That is a hard question to answer because, as a rule, the architect did not go into the woods quite as deeply as that. He did have more reliance, I think, on his contractor or his lumberyard.

Q. You understood as of that period the term white pine in Boston meant the northern white pine?

A. Yes, sir. I don't know where the pine came from for the older houses. I imagine it came from the East and later on it came from here.

Q. You stated in answer to a question for counsel for the commission that you were familiar with pondosa pine under that name?

A. I merely seen it advertised. I know the name as a pine, but I wouldn't know it if I saw it.

Q. I think you also said if pondosa were delivered upon the job and appeared to be satisfactory in appearance and quality you might accept it, or was that your answer?

A. Yes, sir.

Q. Are you familiar with the term Arkansas soft pine?

A. Yes.

Q. Do you know the lumber?

A. I don't believe I do; no. If a piece was of the same
1434 size, I believe I couldn't tell it. It is apt to be delivered.

Q. If Arkansas soft pine was delivered on the job and appeared to be the same in appearance and quality, would you accept that?

A. Yes.

Q. The same as the pondosa?

A. Yes.

Q. Are you familiar with the southern pines generally?

A. No.

Q. I suppose you would have the same difficulty in determining whether to accept pine which happened to be a southern yellow pine?

A. I am afraid so. We do not have much occasion to go into it.

Q. As an architect you are not familiar particularly with either the botanical classification of the pine trees or with the several kinds of lumber which they yield, are you?

A. No.

J. J. LUETSCHER was thereupon recalled as a witness, having been previously sworn, and testified as follows:

Redirect examination by Mr. BURR:

Q. Mr. Luetscher, you testified a few moments ago that you had had trouble with some exterior appurtenances of one of the houses that you built, did you?

A. Yes, sir.

1435 Q. You built that for your son, or did you say your son-in-law?

A. My son. He built that himself.

Q. He built that himself?

A. Yes; he did.

Q. Do you know when that was built, of your own knowledge?

A. About four and a half years. That is one of the blinds [witness indicating].

Q. You brought a blind down, did you?

A. Yes, sir.

Q. Do you know how that blind was ordered?

A. How it was ordered?

Q. Yes; what kind of a blind was ordered?

Mr. MATTHEW. If he knows of his own knowledge.

Q. Yes. Do you know what was ordered?

A. That I couldn't say.

Q. How long ago was that blind put up?

A. Less than five years.

Q. Less than five years?

A. Yes. I think it will be five years in the spring.

Q. Do you object to our cutting a piece off of that?

A. No, sir. You can't spoil it.

Examiner SHEPPARD. I rather agree with you.

Q. Take your knife and cut a piece of it off.

A. There is one [indicating] ordered in that same lot, that new one.

1436 Mr. BURR. That will be all for the moment. I will call Mr. Koehler, please.

Mr. MATTHEW. Before anything further is done, I think, in order to have a proper foundation there has got to be some evidence that lumber under the name of California white pine was furnished upon an order calling for white pine.

Examiner SHEPPARD. Those things will have to come out, otherwise there will be no consideration given to this.

Mr. BURR. If the examiner please, if I now prove that is the pondosa pine or a variety of yellow pine, not only giving the appearance of pondosa pine but yellow pine, I think it will be more persuasive evidence if it is proved to be ordered as California pine, but on the durability of the wood it is not necessary to ascertain whether this was ordered as white pine or whether it was not, whether it was furnished as pondosa pine or California white pine. You remember of my telling you that I was going to accept evidence along the line of the pondosa. I now want to ascertain whether this is a yellow pine strongly resembling, as the witness testified this morning with regard to the sample brought from Indianapolis, strongly resembling the pondosa. I do not know whether it is or not. If it is not, we will strike the testimony. If it is, I desire to have it remain in for such value as the Commission and examiner may attach to it.

1437 Mr. MATTHEW. I think the examiner will appreciate the fact we can easily go around the country and find decayed specimens of every kind of wood in the world, including the renowned strobus.

Examiner SHEPPARD. Do not take this, Mr. Reporter.

(Discussion off the record.)

A. KOEHLER, thereupon recalled, having been previously sworn, and testified as follows:

Redirect examination by Mr. BURR:

Q. Mr. Koehler, you have made an examination of part of these blinds which Mr. Luetscher has testified to, have you?

A. I have.

Q. And what parts of the blind did you make examinations of?

A. I examined the lower rail and the lower panel.

Q. Were you able to ascertain whether it is pine or not?

A. It is pine.

Q. Is it yellow pine or white pine?

A. It belongs to the yellow pine group.

Q. Would you say whether the lumber is heart or sap, could you distinguish?

A. I believe that is a sapwood.

Q. How about the other piece?

A. Which other piece?

Q. You said you examined part of the panel as well, did you not?

1438 A. I cannot tell that under the microscope and the panel is either rotten or covered with paint so I cannot see its natural color.

Q. But you are able to tell that both pieces are of yellow pine, are you?

A. Yes.

Q. How about the texture, does that lead you to the belief that the yellow pine is ponderosa or is it some heavier or harder variety of yellow pine?

A. The texture indicates that it is not southern yellow pine, therefor it is very likely that it is Pinus ponderosa.

Q. What was the condition of the parts of the blind that you examined there?

A. Partly decayed.

Q. Was the panel in an advanced state of decay?

A. Yes.

Q. Such as there were places where the decay had entirely perforated the panel and left a hole?

A. Yes.

Q. How about the other part that you have examined? What was the state of decay there?

A. It was well permeated with decay.

Q. What signs of promptness of protection by paint are there upon this blind?

A. It has been covered with paint.

1439 Q. Are there any signs of more than one coat?

A. I couldn't tell.

Mr. BURR. I think you may cross-examine, sir.

Recross-examination by Mr. MATTHEW:

Q. Is it possible that this wood may be Arkansas soft pine?

A. No. Not in my opinion.

Q. As I recall your testimony this morning, you said that you could not state infallibly whether a given specimen of yellow pine was from a ponderosa tree or from perhaps one of the southern yellow-pine group?

A. That is in smaller sizes, but in a size like this I feel certain it is not southern yellow pine.

Q. It is not possible that it could be the Pinus echinata from the Arkansas territory?

A. No.

Q. It is absolutely impossible?

A. Yes. That is my belief.

Q. In other words, you feel that that is a certainty for all practical purposes, Mr. Koehler?

A. Yes.

Q. What are the apparent reasons for the decay which took place in these wood specimens concerning which you have just testified?

1440 A. Since the bottom rail and the lower end of the panel are decayed, it looks as though moisture accumulated where the panel joined the rail and perhaps where the lower rail joined the muntins and promoted decay.

Q. Conditions of that particular character, that is where moisture can get in in the fashion that you have described, are especially conducive to decay, are they not?

A. Yes.

Q. And sapwood is furthermore more likely to decay rapidly under those conditions than heartwood?

A. Yes.

Q. You would agree, would you not, Professor Koehler, that the sapwood of any species of pine is less resistant to decay than the heartwood?

A. Yes.

Q. I assume that you have not given particular study to the construction of doors and sash?

A. I have not.

Q. Nor given particular consideration to the features of construction which promote or prevent decay?

A. I have not.

Q. Of course you are not familiar with the terms or conditions under which this particular blind was ordered?

A. No.

Q. May I ask you if you would subscribe to this statement respecting the decay of sapwood and heartwood respectively:

1441 "The natural decay resistance of all common native species of wood is in the heartwood; when untreated the sapwood of practically all species has low decay resistance and generally has short life under decay-producing conditions. The decay resistance or durability of heartwood in service is greatly influenced by differences in the character of the wood, the attacking fungus, and the conditions of exposure. Therefore great differences in length of life may be obtained from pieces of wood that are cut from the same species or even the same tree and used under apparently similar conditions."

A. I believe that is correct.

Mr. MATTHEW. That is all. Thank you.

By Mr. BURR:

Q. Do you understand that the ponderosa has a far greater percentage of sapwood than the genuine white pine?

A. Yes.

By Mr. MATTHEW:

Q. You would not recommend the sapwood of any of the pines for exterior use without adequate provision for protection against decay, would you?

A. I would not.

J. J. LUETSCHER, thereupon recalled as a witness, having been previously sworn, and testified as follows:

By Mr. BURR:

1442 Q. Referring to that blind, Mr. Leutscher, that you testified about, will you state whether or not it was painted at the time it was installed or when it was painted?

A. It was painted before it was installed.

Q. Did you do that job, or superintend that job?

A. Yes; to a certain extent I did.

Q. Do you know whether it was a good job of painting?

A. Yes; he bought his own material and had a man working by the day—the best paint he could get.

Q. Has it been painted since and protected subsequently?

A. No. He just painted it this year. He painted his house this summer. That is how he discovered that those blinds were rotten, you see.

Q. How many times during the time that the blind has been up has that been painted, if you know?

A. It had four coats of paint. He put on four coats of paint on the blinds.

Q. Two coats of paint when he first put them up and then two this year?

A. No. He put on one more coat on the blinds than he did on the rest of the house. He put on four coats on the blinds.

Q. In the beginning, you mean?

A. Yes.

Q. Four coats in the beginning?

A. He painted them over in the winter, you see. I just
1443 talked with him before I come up here so I know what I was talking about.

Mr. MATTHEW. In other words, this is hearsay.

Q. Do you know?

A. I know the house was painted with the best material, and it has four coats of paint.

Mr. MATTHEW. Who told you so?

Q. Do you know that of your own knowledge or is it just what somebody told you?

A. He told me that.

Q. Do you remember seeing it was painted in the beginning or don't you?

A. Yes. I was there. I done some of the work. I built the stairs and mantels and that stuff. I was around there most of the time.

Q. Do you know of your own knowledge, sir, that it was painted in the beginning?

A. That I know. He painted them all before he put them up. I can swear to that.

Q. Do you know about its being painted recently of your own knowledge?

A. No. They have not been painted since.

Q. They have not been painted but the once?

A. No. Four coats of paint.

Q. Four coats of paint in the beginning?

1444 A. Yes.

Q. Is this green paint on here the original coat of paint, the last of the four original coats?

A. Yes. The difference in the color is because this was up against the house [indicating].

Q. The job of painting is in good shape or is it in bad shape?

A. Well, it did not peel off. It didn't check.

Q. In other words, do you regard the paint, aside from the rot, is the paint in good shape on that blind?

A. I do; yes, for the time it being on there. That is four years, four and a half years.

Q. Is it still in shape to turn rain water?

A. Well, it should be. I think it is; yes. It has a good body on there.

Mr. BURR. You may examine.

Recross-examination by Mr. MATTHEW:

Q. How do you know it had four coats of paint?

A. I just told you before, I was told it had four coats of paint.

Q. You do not know except for that advice?

A. I didn't ask him neither.

Q. But that is all you know. That is your entire source of information as to the number of coats of paint put on?

A. Yes.

1445 Mr. MATTHEW. I think that ought to go out as hearsay.

Examiner SHEPPARD. Yes. I will order the testimony of the witness in reference to what his son told him about the pain struck out.

Q. Who made this door, or blind, as you call it?

A. Blind.

Q. Who made it?

A. Outside blind. Why, I think Curtis & Yale.

Q. You don't know?

A. He bought his millwork from Curtis & Yale, and these blinds came with it.

Q. Who are Curtis & Yale?

A. Sash and door people up in Wausau.

Q. In Wausau?

A. Yes. That is one place, anyway. They were bought from Collins & Son; Collins and Son furnished them. They were bought through Collins & Son.

Q. Collins & Son, lumber people here?

A. Local lumber dealer.

Q. Is it a well-constructed blind?

A. Yes. I call them well constructed.

Q. Let me call your attention to one side here where it appears there is quite a bit of shrinkage.

A. Yes. The panel shrunk.

Q. Leaving quite an unpainted area here.

1446 A. When that rotted off up here [indicating] this blind, this is the bottom of the blind right here, when that rotted away this dropped down.

Q. Let us take the upper part of this panel here and on the left-hand side, as I show it to you, there again apparently is more shrinkage.

A. Wood don't shrink endwise very much, you know. It ain't supposed to shrink at all.

Q. It has shrunk laterally?

A. Yes; sidewise.

Q. And there is an area, an unpainted area, that is exposed there?

A. Yes. It is split out. It is tighter on one side than the other, and it comes off from one side, shrunk.

Q. Is it possible the lumber in this panel may have been rather green when it was put in, with the result it shrunk afterwards?

A. I don't think so.

Q. What occasioned the shrinkage?

A. Maybe it isn't shrinkage. I just thought about that now. That panel might have been an eighth of an inch shorter than the groove inside, and it moved.

Q. Might have been a little defect in construction there?

A. Well it might not be—it wasn't full. It ain't supposed
1447 to be full. That panel swelled out, and if it was a tight fit in there it would open the joints here, and it is not practical to make it that way. The panel should be just a little bit narrower than the space in between.

Q. What is your best judgment as to the reason for the apparent shrinkage here?

A. Some shrinkage and some is, it went to one side.

Q. In that respect it wasn't very well constructed, is that it?

A. I consider the construction all right as far as that is concerned.

Q. Would a properly constructed blind here have this particular shrinkage as indicated there?

A. It is pretty hard to construct a blind, outside blind, without having some of those things like that show up.

Q. Those defects may show up then?

A. Yes.

Q. For the same reason we have this little gap between the transverse middle rail and the stile which I direct your attention to?

A. Yes.

Q. There is some shrinkage there?

A. This dowell pin here, in here you can't see them, they are blind. Maybe they let go a little.

Q. That may happen in any blind or door?

A. It may come along through weather.

1448 Q. This was exposed to the weather, of course?

A. Sure. The rotten part has nothing to do with that.

Q. Do you know of your own knowledge how this was ordered, that is, under what name? Was it ordered as northern white pine?

A. No, sir. There wasn't anything mentioned about that as I know. Of course, I couldn't answer that.

Q. You do not know how the order went in?

A. No, I do not.

Q. Was it ordered by your son or ordered by the contractor or by whom?

A. My son.

Q. You do not know whether the lumber came from which was used in the manufacture of this blind?

A. No. I do not know where it came from. I know it is western pine. Whether it is Idaho or California I couldn't say. I don't think there is any sugar pine in it to my knowledge.

Mr. MATTHEW. I didn't ask you about the sugar pine.

Mr. BURR. That is all.

Mr. MATTHEW. Mr. Examiner, you requested that I reserve the right to press an objection to testimony of this character and I think I should and present it at this time. My objection is to this effect that the mere offering of samples of wood which may be identified satisfactorily or otherwise as coming from the ponderosa
1449 pine tree, does not go to the issues of this case and that furthermore it is perfectly obvious that we can find samples of any kind of lumber imaginable throughout the broad expanse of the United States which have failed under various conditions, and it puts these respondents in an unfairly prejudicial position to allow evidence of this character to go into this record.

Now, if this lumber were identified with an order for California white pine or with an order for white pine but with our California white pine furnished I suppose it might be received, altho there again I think that it should have the most inconsiderable influence upon the conclusions of the Commission as to the essential issues in this case, as I understand those issues.

For these reasons I move to strike the testimony of the witness Luetscher and Professor Koehler respecting the wood of this particular blind.

Mr. BURR. Mr. Examiner, this testimony is not offered for the purpose of showing that the naming of ponderosa as California white pine is confusing. We will prove that by other evidence. This evidence is offered for the purpose of showing that ponderosa being predominately sapwood fails to stand up under weather conditions, and it makes no difference for the purpose of proving that whether the particular specimen of ponderosa offered was
1450 sold under the trade name pondosa or under the trade name western white pine or under the trade name California white pine.

On the question of durability and the question of the use of sap for this purpose by the manufacturers of ponderosa this testimony is offered, and I think it is helpful and beneficial to the Commission to have the evidence of this character.

Mr. MATTHEW. If it was helpful on any theory certainly to offer corroborative evidence of Idaho white pine and California sugar pine and of the strobus pine, it would be under similar conditions.

Examiner SHEPARD. That could well be brought out on your side of the case. I will tell you, gentlemen, as I said in New York, I think I am going to make findings in this case on the various incidents that are in the record on the side of the ponderosa and on the side of the California white pine and let the Commission do what they please with it.

In reference to the testimony of Mr. Luetscher, there is an element in my judgment lacking there in reference to this matter that we do not know from the testimony what was specified, but I take it since the testimony of Mr. Koehler, that made the identification, that that element would not add to it at all. He testified that the wood was ponderosa, and comes under, therefore, my conception of this case that the two woods being so similar a finding should be made on both and let the Commission draw their own conclusions, and I am going to so hold.

1451

So I will deny the motion to strike and allow the testimony to remain in, giving an exception.

Mr. MATTHEW. Will the examiner allow me an exception?

Examiner SHEPARD. I said, allowing the exception on the record. Is that all?

Mr. BURR. I think that is all this evening.

Examiner SHEPARD. We will take an adjournment until ten o'clock tomorrow morning.

(Hearing adjourned until Tuesday morning, October 22, 1929, at 10:00 o'clock a.m.)

1452

Docket Nos. 1620–1669, inc.

MADISON, WISCONSIN, *October 22, 1929.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before William W. Shepard, examiner.

Appearances:

Mr. Eugene W. Burr for the Commission.

Messrs. Matthew & Wheat for the respondent.

J. S. TIMLIN resumed the stand and further testified as follows:

Direct examination (continued) by Mr. BURR:

Q. Did you bring your invoices, as requested by the examiner and counsel last night?

A. I did; yes, sir.

Q. Will you be kind enough to produce them?

A. Yes.

(Witness producing invoices.)

Mr. BURR. May it be stipulated that Mr. Timlin's invoices which he brought down this morning, insofar as the Red River Lumber Company is concerned, which constitutes the bulk of the invoice material, the designation of the material purchased is in the main "C.W.P." and "California white pine" with two instances where the material is designated as "California pine D.I.M."

1453

Mr. MATTHEW. May it be added that it is our assumption that the letters D.I.M. stand for dimension, so that the entire term means California pine dimension lumber.

Examiner SHEPARD. All right.

Mr. BURR. It is so stipulated, is it?

Mr. MATTHEW. Yes.

Mr. BURR. Other invoices are immaterial to the present matter; is that correct?

Mr. MATTHEW. Yes. May it likewise be stated that the invoices of the Red River Lumber Company which the witness has submitted are under the caption "The Red River Lumber Company, manufacturers of California white and sugar pine."

Mr. BURR. That is agreeable. You may cross-examine, if you please.

Mr. MATTHEW. I think I shall have no questions upon cross-examination, Mr. Examiner.

(Witness excused.)

1454 A. KOEHLER recalled for further redirect examination, and thereupon testified as follows:

Redirect examination (continued) by Mr. BURR:

Q. Mr. Koehler, have you this morning at my request cut from some of the samples at your office from Pinus strobus lumber and brought them for the hearing this morning?

(Pieces of wood marked "Commission's Exhibits 21, 22, 23, 24, 25, and 26" for identification.)

A. Yes.

Q. Now, of these samples, four represent cuttings from virgin growth, do they?

A. They do.

Q. And the other two are from what?

A. Second growth, so called.

Q. Now, Mr. Koehler, these samples having been marked, will you state which are original and which are second-growth samples.

A. Samples numbered 21, 22, 23, and 24 are virgin-growth samples. and samples 25 and 26 are what is commonly known as the second-growth samples.

Examiner SHEPARD. I understand that is all Pinus strobus.

A. Yes.

1455 Q. Will you state briefly how one unfamiliar with lumber can from these samples detect the point at which the sapwood and the heartwood are divided?

A. The sapwood in each case is lighter in color in general than the heartwood; and also, in these samples, the sapwood is permeated in places by a bluish stain which is absent in the heartwood.

Q. Now, would you say that the samples or any of them show a fair average as regards the proportion of heartwood and sapwood?

A. I believe these samples are representative of Pinus strobus with respect to the portion of sapwood and heartwood.

Q. Including those both of virgin growth and of second growth?
A. Yes.

Mr. BURR. I ask that they be received with the numbers already given to them as Commission's exhibits for the record.

Examiner SHEPPARD. Any objections?

Mr. MATTHEW. None.

Examiner SHEPPARD. Let them be received, Mr. Reporter.

Mr. BURR. I think that is all on this topic.

Mr. MATTHEW. No questions.

Mr. BURR. Mr. Koehler, I may want to recall you; would you mind staying? I believe, if the Commission please, at this time I will make an offer of certain correspondence that has been
1456 received from the Forest Products Laboratory files and which has been loaned to opposing counsel.

Q. Mr. Koehler, I believe you referred the other day in your testimony to correspondence involving the comparison of Pinus ponderosa with white pines and correspondence involving the identification of Pinus ponderosa, together with expressions of dissatisfaction from correspondence with regard to certain pine, samples of which were handed you for consideration, handed your office for consideration, did you?

A. Yes, sir.

Q. And those files you turned over to me previously, did you?

A. Yes.

Mr. BURR. Now, if the examiner please, I realize that under the strict rules of evidence this material is hearsay. It comes, however, from all parts of the country and it is a practical impossibility for it to be identified and run down and that I think goes to the probative value as well as to the question of its strict character as evidence under the hearsay rule. However, on some occasions the examiners in Federal Trade Commission cases have let down the bars in some respects where they felt satisfied that the material was offered in good faith and where it did contribute something to the knowledge of the Commission in a practical fashion, such as practical men would consider in reaching their views; and, accord-
1457 ingly, I offer these two packages of correspondence both on the part of people who wrote in to the Forest Products Laboratory and carbon copies of replies thereto, and ask that they be received as Commission's exhibits for the record, nos. 27 and 28.

A. We do not want to part with that correspondence permanently.

Mr. BURR. Under the understanding that if they be received counsel for the Commission will have the privilege of substituting for the originals photostat copies and will return to Mr. Koehler the original correspondence, together with these carbon copies to which I refer for replacing the files.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. Yes; Mr. Examiner, I object to the tender upon the ground that it is clearly obnoxious to the hearsay rule. I urge the objection not merely because of the technical phase of the mat-

ter, but I think the objection is substantial. There is absolutely no means, of course, of our confronting the authors of these letters. I have examined the files in a cursory way and I am satisfied they will be of no assistance to the Commission in any event. I think they will merely result in confusion. I can find expressions there which will be very helpful to our side of the case and doubtless counsel for the Commission feels that there are certain fea-
1458 tures of the correspondence that will be helpful to his contention, but the hearsay objection is fundamental and substantial here and, of course, I am allowed to object to the receipt of letters upon that ground.

Examiner SHEPPARD. I do not think, Mr. Burr, it will help this case any from what you both have heard. Some features of the letters may be favorable to one side and other features favorable to the other. It is more or less of an offset. I think I will bar them. I do not think they will be of any service to us.

Mr. BURR. If the examiner is barring them upon the ground that it is about an offset between the failure of ponderosa and matters that may be favorable to the defense, I would say that it would be my idea that perhaps the examiner might profitably glance over the papers and see if he thinks it would add anything to the knowledge of the Commission in this matter.

Examiner SHEPPARD. There is another reason there, too, in my own mind which I was going to state, and that is that any promiscuous bunch of letters written by Tom, Dick, and Harry on a question of this kind which is gathered together as Mr. Koehler has said he received them, I do not think it is exactly fair to the respondent in the case to be confronted with letters of such a nature, because there is no opportunity to call the witness before them for cross-examination, and I think that in a case of this kind, as in cases of
1459 similar kind, we should take our facts from the witnesses as they appear on the stand, being fully examined and cross-examined by the counsel and all the facts brought out in regular order, and I think that is sufficient in this case without going outside of the rule and allowing a bunch of promiscuous letters to be brought in, and where there is no opportunity for cross-examination and for me to observe the witness himself, which is one of the big things in hearing one of these cases, to see the witness himself, see how he conducts himself or what he knows, and the examiner is under the apprehension that a promiscuous bunch of letters of the kind that you offer here would not be of any material use from that angle to me or either to the Commission.

Mr. BURR. If the examiner please, if the examiner would look at the papers he would find that the word "promiscuous" is hardly a fair designation of the letters. They come in from people who desire to know what they are buying or proposing to buy is white pine or not and also complaints as to the early rotting out of certain wood; and then Mr. Koehler's office—and he is on the stand here today and could testify as to the accuracy of the reports made—Mr.

Koehler's office then comes back with a report to the effect that the sample submitted is western yellow pine; that is to say, ponderosa, and it seems to me it is hardly a promiscuous body of letters
1460 and I would suggest that, if the examiner deems it appropriate, he might take a look at the correspondence and ascertain whether or not he thinks it would add something to the knowledge of the Commission.

Mr. MATTHEW. I object to the characterization of correspondence which is not itself admissible because that characterization by counsel while not in the record technically is, nevertheless, in the record physically, and I think, further, it is highly out of place to suggest that the examiner should review correspondence which afterwards will presumptively not be made a part of the record, but, nevertheless, may be a part of the record in his mind. That is the very essence of the objection to hearsay.

If I should venture to tender at this hearing a sheaf of correspondence which therein the virtues of California white pine were extolled to the high heavens and Pinus strobus were reputed to be something which, while of some value in its glorious past is today something to be frowned upon, I think counsel would very legitimately object; and if I offered in turn to allow the examiner to read the correspondence, even though it should be made a part of the record, I think he should again object. I take it, when the examiner referred to this correspondence as being promiscuous, he merely meant that these letters came in from various parts of the country, in no particular orderly fashion.

Examiner SHEPPARD. That is what I meant by promiscu-
1461 ous, coming from various parts of the country and from various people whom you gentlemen would not have a chance to cross-examine or whose knowledge you would not have a chance to test. I do not think they have any place in this record, and under the rules I am going to bar them from the record and consideration in this case. Mr. Burr, I will be glad to give you an exception to that ruling.

Mr. BURR. I do not care for an exception. I think the examiner's ruling is in accordance with the strict rule, if we apply the strict rule.

Examiner SHEPPARD. Yes; I think so, too. If they had been offered on the other side I would bar them because I prefer to take the testimony of the witness on the stand.

Off the record.

(Discussion not for the record.)

Mr. BURR. Now, if the examiner please, and with the consent of opposing counsel, I desire to offer as Commission's exhibit for the record, no. 27, census figures of the production of various kinds of soft lumber, including therein columns designated "sugar pine", "western yellow pine", and "white pine", for the purpose of showing the Commission the relative quantities, State by State, produced

in these three types of lumber during the period of 1927, and ask that they be received.

Examiner SHEPPARD. Any objection?

1462 Mr. MATTHEW. There is no objection, Mr. Examiner. May I add in that connection that we may ask leave before these hearings are concluded to supplement these census figures with other data taken likewise from official sources of perhaps the 1928 figures, which I understand are shortly available?

Examiner SHEPPARD. I would like to have that. I would like to have it up to date.

Mr. MATTHEW. And there may be some other data of similar character.

Examiner SHEPPARD. Six months of 1929 or something like that. I would be glad to have that. Mr. Reporter, you may mark this exhibit and receive it in evidence.

(Commission exhibit 27 received in evidence.)

Mr. MATTHEW. There may be some other data of similar character taken from Government publications we may ask also to admit

Mr. BURR. May it be stipulated that the word "white pine", includes monticola as well as strobus; that is to say, the northern white pine and the Idaho white pine, respectively?

Mr. MATTHEW. I understand so.

Mr. BURR. "Sugar" is a separate column. If the examiner please, with the consent of opposing counsel, I am offering that

1463 portion of a leaflet publication purporting to be gotten out by H. S. Betts and W. D. Brush, of the U. S. Forest Service, showing the distribution of "sugar pine", "western white pine", and "white pine", respectively, being Pinus lambertiana, Pinus monticola, and Pinus strobus, it being understood that counsel for the Commission is instructed to cut off and mount that portion of the publication which contains the map, eliminating the reading matter.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. There is no objection.

Mr. BURR. May this be received as Commission's exhibit 28?

Examiner SHEPPARD. Let it go in, Mr. Reporter.

(Commission's exhibit 28 received in evidence.)

Examiner SHEPPARD. Showing the map as stated by Mr. Burr and the elimination of any reading matter or explanation under them. Anything else?

Mr. BURR. I believe the understanding is that the defense will proceed with the matter next.

Examiner SHEPPARD. Mr. Koehler, you are excused unless these gentlemen want you.

Mr. BURR. I should rather you would continue to attend for the time being, Mr. Koehler.

Mr. MATTHEW. I desire to call one witness if I may at this time, Mr. Examiner.

Examiner SHEPPARD. All right.

1464 JOHN A. NEWLIN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Newlin, where do you reside?

A. In Madison.

Q. What is your profession or occupation?

A. I am in charge of the section of timber mechanics at the Forest Products Laboratory.

Q. And the Forest Products Laboratory is under the general supervision of the United States Department of Agriculture?

A. Yes, sir.

Q. How long have you held your present position?

A. Since the establishment of the laboratory.

Q. In what year was that?

A. In 1910. I was the Forest Service before that.

Q. Will you let us have your entire experience in the Forest Service, if you please?

A. I was in the timber testing at Purdue University for five years before the laboratory was established at Madison, starting in December 1904. I have been with the Forest Service continually since then.

Q. Have you had any engagement in the lumber industry apart from your connection with Purdue University and with the Forest Products Laboratory?

1465 A. Not except as I was working with my father in repair work as a young man.

Q. In general your time is given up almost entirely to your professional work with the Forest Products Laboratory?

A. I had four years with the railways.

Q. What is the exact nature of your duties, Mr. Newlin, in the Forest Products Laboratory?

A. Testing of timber for strength properties and the designing of structures made of timbers or designing for strength.

Q. Are you familiar with Bulletin No. 556 of the United States Department of Agriculture, dated September 15th, 1917?

A. I am.

Q. I note you are one of the joint authors of that bulletin, Mr. Newlin, the other being Mr. Thomas R. C. Wilson?

A. Yes, sir.

Q. And Mr. Wilson appears to be the engineer in forest products for the Forest Products Laboratory?

A. Yes, sir.

Q. Will you state what your relation was to a preparation of the data which was found in that bulletin?

A. I worked with Mr. Wilson in compiling that bulletin. He did more of the detail work. I had more of the general supervising character. Passed upon everything that went into the bulletin as to whether these should be included or should not.

1466 Q. In general the work which was done in this connection was under your supervision?

A. Yes, sir.

Q. This is a copy of the bulletin to which I have referred? (Handing document to witness.)

A. Yes, sir.

Q. You are familiar with the matter which is found in tables 1 and table no. 2?

A. Yes, sir.

Q. Of that bulletin, and the data which is there found, was the result of the various tests which were made under your supervision?

A. Some of them were not made under my supervision; most of them were. We had several laboratories; had one at Seattle; one at Boulder, Colorado; and one at San Francisco or rather at Berkeley right across from San Francisco. Some of those tests made by the Forest Service are in the bulletin; the tests were not made under my direction.

Q. In other respects the tests were made under your direction?

A. Yes, sir.

Q. And the results have been collated, assembled, and set forth in tabular form in this Bulletin No. 556?

A. Yes, sir.

Mr. BURR. You refer only to tables one and two.

Mr. MATTHEW. I refer now to tables one and two.

1467 Q. Now table no. 1 in this Bulletin No. 556, Mr. Newlin, is entitled—I am reading from page 27—"Results of tests on 126 species of wood tested in a green condition in the form of small clear pieces", and table no. 2, which commences on page 37 of the bulletin, is entitled, "Results of tests on 126 species of wood tested in an air-dry condition in the form of small clear pieces." I think it is stated elsewhere in the bulletin, Mr. Newlin, that the data in table no. 1 is derived from a considerable larger number of tests and therefore somewhat more reliable than those at table no. 2.

A. They are.

Q. That is your statement as one of the authors of this bulletin?

A. Yes, sir.

Q. And is a correct statement?

A. Yes, sir.

Q. May I hand you a copy of that bulletin, Mr. Newlin, and direct your attention first to certain features of table no. 1 and more particularly to data on page no. 35 which initially I would like to direct your attention to the data found under column no. 5, which bears the caption "Summerwood (percent)." First, may I ask you to state what the summerwood is?

A. Summerwood is that dark portion of the annual ring
1468 that is put on in the summer. It is against that light, usually lighter in color and lighter in weight materials put on in the spring of the year.

Q. The texture of the spring wood is ordinarily softer than the texture of the summer wood?

A. Yes, sir.

Q. Directing your attention to this column no. 5, I find that the percentage of summer wood in the case of Pinus strobus is 31, and from that I will understand that that is the percentage of the summer wood to the aggregate of summer wood and spring wood.

A. Yes.

Q. Now, immediately above the data as to the Pinus strobus we find the data as to the Pinus ponderosa and it there appears that the percentage of summer wood is but 22% or materially below the percentage of summer wood as to Pinus strobus. May I ask you if you have the results of any other tests which tend to change the conclusion indicated by those two percentage figures?

A. When it comes to measuring summer wood and those particular species it is a very difficult proposition, and those figures I do not consider to be very reliable on species of this kind.

Q. You don't believe them to be especially significant one way or the other?

A. No; I do not.

1469 Q. Now, will you turn to the column numbered 9, entitled "Weight per cubic feet," and may I direct your attention again to the weight of the several species which are there shown. The weight for Pinus strobus appears to be 39 pounds per cubic foot; Pinus ponderosa, 46 pounds; the Pinus monticola, 39 pounds; and for Pinus lambertiana, 39 pounds. As I understand it, these are the weights of the wood in a green condition.

A. Yes, sir.

Q. Now, in that same connection, will you turn to table no. 2, which shows the results of wood tested in an air-dry condition, and I have particularly in mind the data found upon pages 42 and in 43 and 44, there appears, I have particularly in mind data on page 44, that the weight of strobus in a dry condition is 27 pounds per cubic foot, the weight of Pinus ponderosa is 28 pounds per cubic foot, and the weight of Pinus monticola is 29 pounds per cubic foot.

A. Yes.

Q. Now, it would appear from these particular figures that the weight of monticola in a dry condition is somewhat greater than the weight of ponderosa in a dry condition. May I ask first whether there are any other tests which reveal a different relationship than here indicated?

A. The latest that we have show the specific gravity tests.

1470 Mr. BURR. Green or dry now?

A. This specific gravity is always dry. That is, they may be on various volumes, but it is always in a dry condition. These other, the weight green there and the other weights include moisture, but these do not. They give the strobus specific gravity of 34 and the monticola 36 and ponderosa is 38.

Q. Those figures are to be classed with the figures that you find in column 6 on page 34.

A. Yes.

Q. The figures which you have just read are the result of recent tests.

A. They include recent tests as well as the tests that are in this bulletin.

Q. Are they confined to the lumber you say in an air-dry condition?

A. The specific gravity that we give is for lumber without moisture.

Q. Have you got the figures in the weight per cubic foot in air-dry condition?

A. No; I have not here. I could get them.

Q. Now, may I pass in turn to the columns upon pages 34 and 35 of table no. 1, numbered 26 and 27, bearing the caption "Hardness, load required to imbed a 0.444-inch ball to one half its diame-
1471 ter." Now, it would appear from the data found in these columns that the Pinus strobus is the softer of the several pines which have been under discussion in this proceeding, the test being 300 pounds.

Mr. BURR. I do not think we ought to have this duplicated and spread upon the record all these figures, if the examiner please.

Examiner SHEPARD. I presume Mr. Matthew has some reason for it. I do not know; I am not particularly interested in these various data relative to the weight of ponderosa and weight of Pinus strobus. It has got nothing to do with this case.

Mr. MATTHEW. If the examiner please, there has been a great deal of testimony about the relative softness of strobus, monticola, lambertiana, and ponderosa in this case. Now, I assume that when we are dealing with softness that the results of Government tests as to hardness are directly in point. In other words, hardness is simply the obverse of softness. One of the purposes of my detailed inquiry here was to find out whether the figures which are shown in these tables are as significant as I believe them to be, and also to give the expert witness for the Government a chance to tell us if there are any subsequent figures which modify those which are here in tabular form.

Examiner SHEPARD. All right, go ahead.

1472 Mr. BURR. I object to the repeating of the figures into the question each time.

Examiner SHEPARD. Go on; make it as short as you can.

Mr. MATTHEW. Sometimes it makes the record more intelligible when it is being read some months afterwards.

(Question read as follows: "Now it would appear from the data found in these columns that the Pinus strobus is the softer of the several pines which have been under discussion in these proceedings, the test being 300 pounds.")

Q. With respect to both the end test and the side test. It further appears that the Pinus ponderosa lumber is less hard than the monticola lumber as shown by these tests. Am I correct in so reading the figures?

A. Yes, sir.

Q. And in turn when we pass to the comparison of Pinus ponderosa and Pinus lambertiana; we find with respect to the end test the ponderosa lumber is the softer of the two and that as to the side test they are exactly the same.

Mr. BURR. If the examiner please, if he is going to offer the exhibit, why should he duplicate it by going all through this long cross-examination of the man? The figures ought to speak for themselves rather than to be read into the record.

Mr. MATTHEW. This won't take long. I am not misstating
1473 the figures so I am not misleading anybody, I may take up a little time, but that is all.

Examiner SHEPARD. Go ahead.

Q. Are the results of any other tests which would tend to change the conclusion which is apparently to be drawn from the figures to which I have just directed your attention——

A. We have some other tests that do not show quite the same relations that are given here.

Q. Are they materially different?

A. They show the ponderosa slightly harder than the other pines there of the white-pine group, but these are not very widely different.

Q. Now, for practical purposes, would you ordinarily rely more upon the tests of the lumber in an air-dry condition or the test of lumber in a green condition?

A. That is a very difficult question to answer because of the fact that air-dry lumber may have been dried under so many different conditions and its strength values are likely to be changed or influenced by the condition under which they are dried, so that we have a great deal of trouble when we go to making comparison on the dry material.

Q. Then am I to conclude from that that you rely upon the results of tests upon lumber in a green condition to a greater extent than upon the results of tests made upon lumber in a dry condition?

1474 A. We have to have both, but for comparison we take the green as our main test, the foundation from which we calculate the strength.

Q. Now, these tables to which I directed your attention set forth not only the results of tests upon the several varieties of pine to which I directed your attention, but likewise the results of tests upon the southern yellow pines such as the Pinus palustris, Pinus echinata, and the Pinus taeda, I believe.

A. Yes, sir.

Q. Those three represent the most important of the southern commercial pines?

A. Yes, sir.

Q. Is it a fair summary or characterization of these tests that the mechanical properties of Pinus ponderosa as disclosed by the data in these tables more closely resemble the mechanical properties of the white pines, botanically speaking, than the southern yellow pine?

A. Yes, sir.

Q. Let us assume for a moment, Professor Newlin, that we are making one group of the three true white pines as they have been termed, botanically speaking, namely, the Pinus strobus, the Pinus monticola, and the Pinus lambertiana. Then we make a second group of the three leading southern yellow pines, namely, the
1475 Pinus palustris, Pinus echinata, and the Pinus taeda. We now address ourselves to the consideration of the mechanical properties of the Pinus ponderosa in comparison to the relation of the mechanical properties of the white pines and yellow pines to which I refer. Now, considering the mechanical properties alone, would you again say that Pinus ponderosa is more directly to be assimilated to the white-pine group than to the southern yellow-pine group?

Mr. BURR. If the examiner please, I think the figures speak for themselves. It is for the Commission to draw the conclusion rather than having a conclusion to be drawn from the figures. There is no special or practical experience shown by this witness which is paramount to the figures, and why not let the figures stand for themselves and let the Commission draw such conclusion therefrom as the Commission may find to be appropriate?

Mr. MATTHEW. There is a very practical reason for that particular question, Mr. Examiner.

Examiner SHEPPARD. The Commission will draw its conclusion, anyhow, but I will let Mr. Newlin state what he thinks about it. Go on.

A. The Pinus ponderosa in its mechanical properties more properly belong in with the white pines than with the southern yellow-pine group; that is, it is much closer in its mechanical properties to that group.

1476 Mr. MATTHEW. May I offer in evidence at this time, if the examiner please, the bulletin which the witness has identified and concerning which he has testified, namely, Bulletin No. 556 of the United States Department of Agriculture, dated September 15, 1917, and entitled "Mechanical Properties of Wood Grown in the United States, by J. A. Newlin, in charge of timber tests, and Thomas R. C. Wilson, engineer in forest products"?

I offer it for the data which is found in tables 1 and 2 relating to the several pines which have been under discussion throughout these proceedings, including both Pinus ponderosa, of course, the

white pines, and the southern yellow pines. I offer it likewise for any matter which may be in the text which may serve to explain and give character to the statistical data itself. Perhaps I may add that I am perfectly willing that the paper be in for any purpose which may serve the wishes of counsel for the commission. In other words, I am not intentionally making a limited tender. I am merely pointing out the particular matters which I have in mind in making the tender.

Mr. BURR. If the examiner please, I do not think I shall object to that. I had hoped that the complication which is involved in this exhibit, together with other exhibits, might be avoided; but
1477 I think the exhibit is competent, and I shall make no objection.

Examiner SHEPPARD. Let it go in, Mr. Reporter.

(Respondent's exhibit 21 received in evidence.)

Q. Mr. Newlin, are you familiar with the publication of the United States Department of Agriculture entitled "Miscellaneous Publication No. 46, dated June 1929, entitled 'The Strength of North American Woods, by H. S. Betts, senior engineer, branch of research, Forest Service'"?

A. I am.

Q. Can you tell us whether the statistical data found in table no. I of that bulletin which bears the caption "Properties of various woods, actual and comparative" was obtained from any records in your possession?

A. It is the same records as those of Bulletin 556.

Q. And the data which is found in this miscellaneous publication no. 46 represents simply a somewhat different assembly from the data which is found in Bulletin No. 556?

A. Yes, sir.

Q. Are there any important points of diversion or difference in treatment?

A. He has given it on a percentage basis there in comparative figures and a thing that was not given in Bulletin 556. He has also given the properties from the different localities of growth. and we give an average figure.

Q. Now, the case of the ponderosa pine, for example, he
1478 gives the results of tests on specimens obtained from five separate points, is that true? That appears upon page 12 of the tabulation.

A. Yes.

Mr. MATTHEW. I should like to offer this publication in evidence, if the examiner please, because it does represent a little more detail in some respects and also a slightly different treatment. The basic data is the same.

Mr. BURR. Before that is offered, may I ask a few questions?

Mr. MATTHEW. Certainly.

Cross-examination by Mr. BURR:

Q. Mr. Newlin. do I understand correctly that Miscellaneous Publication No. 46 had no new basic data to go upon?

A. I think there is no new basic data.

Q. Do you know how many specimens of Pinus monticola were used in compiling these data?

A. I could not say except with reference to the records.

Mr. MATTHEW. The record shows, does it not?

Q. Does the publication anywhere show how many specimens were used for the purposes of securing the conclusion that they reached?

A. It does in 556. It shows the number of tree, rather, not the number of tests, but the number of trees.

1479 Q. As I understand it, in respondent's exhibit no. 21, on page 34, the number of trees used for Pinus monticola is shown to be 5; is that true?

A. Yes.

Q. And is it true that there were only five trees from the entire range of monticola used for that purpose?

A. That is all that is in there.

Q. How many different localities was that from in monticola?

A. One locality.

Q. Now, then, referring to Pinus ponderosa, you examined 25 trees, I believe, did you?

A. Yes.

Q. For the purposes of respondent's exhibit 21, table I; is that true?

A. Yes.

Q. Now, referring to Miscellaneous Publication 46, the Pinus ponderosa seems to have been examined at one point in Arizona, one in California, one in Colorado, and one in Montana, one in Washington, or were there several in some of those States?

A. There may have been more than one.

Q. There may have been more than one?

A. Yes.

Q. Now, then, in the Miscellaneous Publication 46, it purports to segregate the results in various localities for Pinus ponderosa, does it?

1480 A. Yes.

Q. And in respondent's exhibit no. 21, table I, there is no way whereby the results can be segregated for Pinus ponderosa from different States; is that true?

A. There is none.

Q. Now, will you state for the purposes of Miscellaneous Publication No. 46 at this time how many different localities in Arizona were used for securing Pinus ponderosa samples, do you recall?

A. I do not.

Q. Did you collect those samples?

A. I did not. I think that there is only one from each of those, though; I am under that impression.

Q. Only one locality?

A. I think there is only one represented there.

Q. Do you know how the locality was selected; do you know how you come to go to one locality in California rather than another?

A. Well, they were selected by representatives of the Forest Service as being representative stands of the material, and, of course, availability of the material had something to do with it; but primarily we tried to find stands which are representative of the species in that section of the country.

Q. Now, did you have the help of the association in select-
1481 ing the locality?

A. Quite frequently we did. I don't know in this case whether we did or did not.

Q. Who would know?

A. I doubt whether anybody knows at this time.

Q. And by the association you mean the California White and Sugar Pine Association for the California selections?

A. In that case it would have been; yes.

Mr. MATTHEW. You mean as to the California?

Q. As to the California specimen?

A. Yes. It was our practice to consult with the association as to where we would get the material, but it was not always followed out, and in this particular case I cannot say whether we did or did not.

Q. Do you know who actually did that work?

A. I think it could be found; I don't know.

Mr. MATTHEW. Is this cross-examination?

Mr. BURR. The examination has gone to a greater extent than I anticipated, but it seems to me there ought to be some way in which the distribution of the samples that are shown to have been used in preparation of respondent's exhibit 21 for the purposes of the segregation which has been made for localities in Miscellaneous Publication 46.

A. We have records of those and we can take it from the
1482 records as to just where they came.

Mr. BURR. I won't press the matter further. I have already intruded more than I should on counsel's examination.

Direct examination (continued) by Mr. MATTHEW:

Q. Now, Mr. Newlin, it appears upon reference to page 12 that this Publication No. 46, that the specimen of Pinus ponderosa obtained from California came from Madera County. Do you know whether or not the Pinus ponderosa which came from Madera County is characteristically a harder type than the Pinus ponderosa that comes characteristically from the Klamath Falls Basin and the upper range of the Sierras?

A. We have some from the Sierra County as well as from Madera County there, not in that publication. I was looking at them yesterday, and I did not note any material difference.

Mr. BURR. Between Sierra County, which is not in there?

A. Is not in there.

Mr. BURR. All right, sir.

Mr. MATTHEW. Counsel and examiner recall the testimony about the Madera County pine previously in this case, without carrying that further. I think I may offer at this time as our next exhibit Miscellaneous Publication No. 46.

Examiner SHEPARD. Any objection?

1483 Mr. BURR. I shall interpose no objection.

Examiner SHEPARD. Let it go in, Mr. Reporter.

(Respondent's exhibit 22 received in evidence.)

Q. You stated heretofore, Professor Newlin, that some subsequent tests of these several pine properties have been made with the result that you have some new figures which vary somewhat from those which appear in exhibits nos. 21 and 22.

A. Yes, sir.

Q. Has that data been prepared in tabular form?

A. It has.

Q. Is this a copy of the table that you have had prepared in that connection [handing document to witness]?

A. Yes, sir.

Q. Does this reflect the results of the early tests as well as the more recent tests?

A. It does.

Q. May I ask you to explain this table which you are just identifying so that we may have an appropriate basis for comparing with the tests in the figures here shown with those which appear in exhibits nos. 21 and 22?

A. In comparing the various species we find that it is quite confusing to have the large mass of data that we have in Bulletin 556 where we give all the properties separately, and that we give

1484 dry and green material separately, and with the comparison of the species and for general use by nontechnical people that they would get a great deal more information from something that gave comparative figures in which several properties were combined, that were quite similar and varied in the same way, so we have combined various properties here and have some figures that are comparative. Thus we take stiffness; we have combined our modulus of elasticity in static bending and impact bending and in compression parallel to grain and for the green material with similar figures reduced to 12% moisture, and the figure 119 that you see is the result of that combination.

Mr. BURR. Where is 119 on here?

A. At the top, stiffness, Pinus strobus. Now, we have combined for the other species these same properties in exactly the same way and arrive at the figures given below. These figures we feel are more representative of the stiffness of the species than any of the single figures found in Bulletin 556. They also include data not given in 556.

Now in the hardness test we have included compression perpendicular to grain as well as this ball hardness test, figures to which you referred in 556. The compression perpendicular to grain test was made by placing a plate across the block and finding the load at the

elastic limit of the material. It represents what may be
1485 thought of as hardness and by a good many. It is not that hardness against puncture, but it is a hardness that will hold up a piece of furniture that is standing on the floor and something rolling across the floor that has a little larger area than we have in the ball hardness test. In the shock resistance we combine from 556 the height of drop in impact bending as well as the work values found under static bending.

Q. As I understand it, you used precisely the same formula in deriving these figures with respect to each species of lumber?

A. Yes, sir; absolutely.

Q. The purpose being to get what you believed to be a fair basis of comparison?

A. Yes, sir.

Mr. MATTHEW. In order to complete the testimony of the witness on this feature of the case I now desire to offer in evidence the table which the witness has just identified.

Examiner SHEPARD. Any objection?

Mr. BURR. No.

Examiner SHEPARD. Let it go in, Mr. Reporter, and mark it "Respondent's Exhibit No. 23."

(Respondent's exhibit no. 23 received in evidence.)

Mr. MATTHEW. I think that is all.

1486 Cross-examination by Mr. BURR:

Q. Now, Mr. Newlin, the tests that were taken of Pinus strobus samples were secured from one site in Wisconsin?

A. Yes, sir.

Q. By whom?

A. I secured those.

Q. You secured those; is that partly second growth and partly virgin growth, or what?

A. Those are virgin growth.

Q. All virgin growth?

A. Yes, sir; that is, those that I selected were virgin growth, and I am not absolutely certain about the New Hampshire material.

Q. I am referring to the one site in Wisconsin; where was that one site?

A. That site was in Shawano County.

Q. In Shawano County?

A. Yes; on the Indian reservation.

Q. Whereabout in Wisconsin is that?

A. That is north of here; I believe it is about a hundred miles.

Q. Now, is there anything to show on any of these various respondents' exhibits how many trees were used in Wisconsin for those samples?

A. The total number of trees used from all localities is given
1487 on the last exhibit.

Q. But you do not know how many were used in each one of those localities?

A. Not without referring to the record.
Q. How was the thing weighted——
A. I know——
Q. Excuse me.
A. I know the Pinus strobus from Wisconsin was five trees.
Q. Five trees, and were they all in the same locality?
A. Yes, sir.
Q. The operations of the same mill as they were working, is that true?
A. Yes.
Q. Now then, one locality was chosen in Minnesota?
A. Yes, sir.
Q. By the by, when was this work done in Wisconsin; how many years ago?
A. It was before the war, about fourteen years ago, I think.
Q. Did you have any help in picking out the samples in Wisconsin, do you recall?
A. None but that of a practical lumberman who went along with me to help fall the tree.
Q. How about in Minnesota; did you do that work yourself?
A. I did not.
Q. Do you know who did it?
A. No; I cannot; I don't recall.
1488 Q. Do you know whether he had help there in selecting the samples?
A. I do not.
Q. Was that also fourteen years ago?
A. I don't recall the date of those.
Q. It was some years back, was it?
A. Yes, sir.
Q. Now, how about the locality in New Hampshire; you did that work yourself, I believe?
A. No, sir.
Q. Do you know when that was done?
A. Not without referring to the record. I believe that is one you will find is not in that first exhibit. It had reference to the 556. I can tell you whether it is more recent or not.
Q. That means it is more recent, does it?
A. If it is not in Bulletin 556, if New Hampshire is not mentioned there.
Q. Can you tell me whether it is in Bulletin 556?
A. I cannot tell you without looking it up.
Q. Will you kindly look at it?
A. The only thing that we have in 556 there is the Wisconsin material.
Q. I see, thank you. Now, then, how about these samples taken from New Hampshire; do you know whether that was
1489 virgin growth or not?
A. I do not.

Q. Do you know whether the Minnesota was in virgin growth?

A. Supposedly it was.

Q. What do you mean by "supposedly"?

A. In the New England States we know that they are getting a great deal of the second-growth material, and I know that we have been getting second-growth material from that section of the country, and we have not been studying second-growth material from Minnesota.

Q. Now, do you know whether the strobus samples were more largely heartwood or sapwood?

A. Well, we have nothing there to say without going back into the records of the individual——

Q. Have you ever observed the difference between heartwood and sapwood with regard to mechanical qualities?

A. We have.

Q. Is there much difference?

A. In most species we have been unable to find any difference, and these five trees of strobus were among those that were examined when we were trying to find a difference between the sap and the heart wood in the mechanical properties.

Q. Now, I believe you said for the purposes of respondent's exhibits 21, 22, and 23, your reliance was upon the showing
1490 as to greenwood; is that true?

A. More reliance on the showing of green wood than on the others, but not altogether, because not all species change in drying by the same amount, and, consequently, it would not be fair to base a judgment altogether on green material when it is primarily used dry.

Q. Lumber users do not use green material if they can avoid it for any purpose?

A. Not if they can avoid it.

Q. Then the practical significance of the mechanical properties is solely a question of dry lumber, isn't it?

A. Primarily so.

Q. Isn't it almost solely, Mr. Newlin, if they do not use green lumber when they know it, isn't the mechanical difference between various types of lumber a matter of dry lumber rather than green lumber?

A. In a great many places it is set in the ground and not infrequently wood does come back that is wet, and come back in a green condition, so that from the standpoint of working stresses we have to give a great deal of attention to green lumber or wet lumber.

Q. Let me see if I get you. Isn't it true that for practically all purposes it is the dry lumber that is used for all purposes?

A. Dry lumber may be used, but it don't—in all purposes
1491 does not remain dry. Take a telephone pole, a bridge timber, and dock timber, things of that kind, while they are used when they are dry, prefer them dry, they get wet, and we have to compare them on the wet basis.

Q. Well, is the green basis and the wet basis precisely the same for mechanical purposes?

A. Not precisely, but very closely to the same. If they dry out, and then become wet again, they may have had some checks when they dried out and developed some weakness through the drying process, but ordinarily when you soak a piece of dry lumber it comes back to practically the green strength.

Q. Now, then, just why is it you rely upon results that you secure—the data for green condition to the results that you secure for dry condition?

A. As I stated before, we have a great many more tests in the green condition than we have in the dry condition, and the conditions under which the materials dry quite frequently change its strength perhaps, and it has been very, very difficult to set up a standard of drying such as we could have the material comparable, and when we are trying to make the material comparable in a dry condition, we may want it at 17% moisture for boxes or we may want it at 5% or 6% for interior finish or we may want it at 12% for unheated houses or something of that kind in this
1492 region around here, so that there is no moisture content to which we could dry it and be certain that we were hitting the condition of use; that, combined with very great difficulties of having representative methods of drying, is the primary reason why we do not base all of our data on dry.

Q. Are you improving constantly your methods of computation or are they pretty well stabilized?

A. The methods of computation have not been changed materially in a good many years.

Q. In other words, you have not improved, you mean, the method of drying the sample?

A. Oh, we improved in the kiln-drying processes very greatly.

Q. I mean treating the samples for the purposes of getting this data.

A. Yes; we have improved our conditioning on the samples.

Q. How recently?

A. Well, in the last three or four years we have been holding them in a kiln at a constant humidity for some months before we would test them, so as to have a very uniform moisture content of about 12%.

Q. How much of an improvement do you regard that as upon the older method?

A. Have no way of knowing, because the older method of putting them out in an open shed might not cause any damage what-
1493 soever, and then again they might have damaged the stock. If you put it out under those same conditions in the summertime you might damage it, and put it out in the winter time, most material, and you might not damage it at all; and, again, if you had material like the redwood, plum chuck full of water, and put it out in cold weather you may knock it all to pieces by freezing.

Examiner SHEPPARD. Off the record.

(Discussion off the record.)

Q. Now, referring to the lambertiana samples, do you remember who secured those samples?

A. I do not.

Q. Do you know whether the association's representative assisted there?

A. I could not tell you definitely on any of these whether the association representative participated or not.

Q. Do you know where those facts are?

A. Only by reference to them in our files.

Q. Do you know whether that was virgin timber or second growth?

A. That was virgin timber.

Q. Do you know whether the sapwood and the heartwood were examined in accordance with the ratio of sapwood and heartwood in that variety of lumber?

A. We record those all the time in every test.

Q. In every test you put it down whether it is sapwood or
1494 heartwood?

A. The percentage of heart and sap present in the specimen.

Q. Now, in the monticola samples I think you have already stated where those were secured from, have you?

A. Those were secured, I believe, from Idaho. I think that shows.

Q. One site in Montana and one site in Idaho appears in respondent's exhibit 23?

A. Yes; that is right. It is in here, one in Montana and one in Idaho.

Q. Who got those specimens?

A. I cannot tell you.

Q. Do you know how much help he had there in the selection of specimens?

A. I don't; I only know that our record is that they shall be selected by one qualified to identify the species, and we always try to see to it that he is qualified to identify the species and to select it as representative.

Q. Who was it that selected those samples; I mean what representative of the Forest Products Laboratory?

Mr. MATTHEW. I suggest, Mr. Examiner——

A. I cannot give you the name of any of those.

Mr. MATTHEW. I think those inquiries are irrelevant.

A. I can find it in the files and some of it I would have to go back into the correspondence to get it.

1495 Mr. MATTHEW. Do you know whether it was somebody in town here?

A. Probably not; most of this is not collected from anyone in the laboratories. It is usually someone in the district; not all the time.

Q. Who got these samples of Pinus ponderosa?

A. I cannot tell you except that Mr. Wilson got some of them.

Q. Wilson is here in town, is he?

A. Yes, sir.

Q. And the same is true of the samples from Colorado, Washington, Arizona, Montana, and California; is that true; but you do not know who got them?

A. Yes, sir; not without referring to the record.

Q. Now, referring to the two places where they were secured in California—I think we have those counties here somewhere, haven't we, referring to ponderosa?

A. Yes, sir—no; not the two; we have two in California, but I do not think you have got a record there of where they come from, what county.

Q. Can you tell what counties they come from from California?

A. I looked that up yesterday, and I believe that those two are from Madera County and Sierra County.

Q. Sierra County?

A. Yes.

Q. Yes; I think you stated. Now, the Pinus ponderosa
1496 varies widely, does it, in its characteristics and various parts of its range?

A. Varies widely in its characteristics and in its strength properties. It don't seem that the range has much to do with it.

Q. You think the Idaho and eastern Washington ponderosa is in the same category as regards its strength and hardness and texture, and so forth, that the ponderosa is of southern Oregon, for example?

A. Yes, sir.

Q. Are you familiar with the ponderosa from field work that you have done?

A. Not from field work; no, sir.

Q. Do your figures show any material difference between ponderosa in different parts of its range?

A. They do not.

Q. As to mechanical properties and hardness, and so forth.

A. They do not.

Q. You think in other respects your figures are about equally dependable as they are with regard to the various characteristics of ponderosa in different parts of its range. Are you as sure of the mechanical properties of Pinus ponderosa being practically uniform as you are with the rest of your figures?

A. I did say it was practically uniform?

1497 Q. Well, if I am misquoting you, please correct me. I do not want to thrust anything into your mouth at all.

A. The Pinus ponderosa is not very uniform in its mechanical properties.

Q. Do your figures so show?

A. I do not think we have given any figures there that show anything about it.

Mr. MATTHEW. I think the witness said, if I may set you right there, that there was not a great variation over the range. He said that the Pinus ponderosa does vary to some extent within the range.

Q. Is that your——

A. Yes, sir.

Q. You say it varies within the range; do you mean it varies in the same locality?

A. Yes, sir.

Q. In other words, the spread in the mechanical properties, in your judgment, could be found in each locality; is that true?

A. Yes, sir.

Q. Does that vary in accordance with the age of the tree?

A. Conditions under which it is grown have something to do with it. It may not be the age of the tree exactly, but an old over-matured tree in a dense stand will usually put on a slow
1498 growth, lightweight, soft material on the outside; and if you get into a stand of that character you will have more lumber of the soft texture.

Q. Then that means that it is practically absolutely crucial as to what trees are selected; is that true as to what results you would secure?

A. Well, you could change the results by not picking representative material.

Q. By not picking representative trees?

A. Yes, sir.

Q. And you could get almost any results from any given locality within the range of variability; is that true?

A. It would take a very great expert to do it, and he probably would have to select them after the trees were cut down; but it could be done.

Examiner SHEPARD. Do you mean to tell me that if you take ten ponderosa trees from California and perform your experiments on them and get a certain tabulated system of results as to hardness, stiffness, softness, and so forth, and then should be in California in another locality and take another ten ponderosa trees and subject them to the same experiments as you had the previous case, that you would arrive at a totally different bunch of results?

A. No, sir; you would usually arrive at the same results. He has asked whether it would be possible to select them so
1499 that you would arrive at very different results.

Examiner SHEPARD. Your answer to my question was that an experiment performed on the same tree in various localities would give you the same results?

A. Yes.

Examiner SHEPARD. But you could pick out a series of trees that would give you different results?

A. Yes, sir.

Examiner SHEPARD. That would be the exception and not the rule?

A. Yes, sir.

Examiner SHEPARD. All right; that is clear.

Q. Now, as I understand it, you personally had nothing to do with the selection of the samples except fourteen years ago in New Hampshire and Wisconsin; is that true?

A. Wisconsin. Cut out the New Hampshire.

Mr. BURR. Just in Wisconsin. I think that is all.

Mr. MATTHEW. That is all.

Examiner SHEPARD. I have one question to ask to straighten up the whole thing, in my judgment. I am only interested here in this matter of hardness and softness, and in column 8 on exhibit 23 you show the following figures under hardness: Strobus, 33; lambertiana, 38; monticola, 35; ponderosa, 41. I am not specially interested in the other two. What does that indicate? Does that indicate
1500 to me that ponderosa is softer than the others or harder?

A. Softer in proportion to those figures there.

Q. Then strobus from that would be 35; that would indicate that strobus was a softer wood than ponderosa?

A. Yes, sir.

Q. Lambertiana there appears to be 38; would that show it is softer than ponderosa?

A. Yes, sir.

Q. In other words, ponderosa there is 41; that means that it is the hardest of them?

A. Hardest of them.

Q. Hardest of the ones that are shown there. The next one is lambertiana, and it appears that strobus and monticola, being 35 each, are the softest of them all?

A. Yes, sir.

By Mr. BURR:

Q. What do you take as a unit there?

A. There is no unit about it. They are in the same order. You can have any of them as a unit, divide any if you want it on a basis of percentage. You could take your strobus as unity and divide each of the others by that, and you would have it on a percentage basis.

Q. You really believe that monticola is as soft as strobus, do you?

A. That is the best information that we have on it.

1501 Q. You believe that is correct, that strobus is no softer than monticola as an average, do you, throughout its range? Is that your view as an expert?

Mr. MATTHEW. He is testifying as to result of tests.

Mr. BURR. I think I am entitled to an answer on that.

Examiner SHEPPARD. Go on and answer it.

Q. You think monticola fully as soft as strobus, do you, throughout its range?

A. My general impression is there is very little difference, but that if you will take the old matured strobus of twenty years ago that it would average softer than the monticola of today that they are getting from Idaho.

Q. You think the average virgin forest of strobus and monticola, that strobus is no softer than monticola today for virgin forest?

A. I would not expect it from general experience with it. If there was a trifle difference it is so small that I would not make any difference at all if they wanted to furnish me one or the other.

Q. You think on the virgin forest monticola is as soft as strobus, do you?

A. I did not say I thought it was as soft. It is so near the same they could furnish me one or the other.

1502 Q. You think it would not show up in the figures, do you?

A. It has not shown up in the figures.

Q. Do you think the figures in that respect are representative of the virgin forest of those two types of lumber?

A. We have always got a possibility or probability of error. We can give you just how accurate we think those are. They indicate the same; that is, the best that we have is the same. We know if we got five trees we have got a certain probability of error in any of those and in our selection——

Q. Do you think you really selected enough trees to get results that you can rely upon when you say strobus and monticola are the same as to softness?

A. Nobody——

Q. Can't you answer that yes or no, and then explain?

A. Nobody has ever answered that question as to how many is enough, and never will.

Q. You have your own opinion as to whether or not the data are comprehensive, have you not?

A. They are as comprehensive as——

Q. Read him the last question and have him answer yes or not and explain his answer.

(Question read.)

Q. Just answer yes or no and explain your answer in any manner or fashion you think necessary.

1503 A. I will say yes, but I will also say that in all these tests we have to count the cost as against the desirability for accuracy and that you can never be absolutely certain of your values until you have tested every piece.

Q. Well, do you think obtaining samples in one site in Wisconsin, one in Minnesota, and one in New Hampshire is sufficient to base a real comprehensive test?

A. All that we had the money to pay for.

Q. Do you think it is a comprehensive test, just one site?

A. It is the most comprehensive test in the world we have met.

Q. I am not asking you that. Please answer yes or no and then explain your answer, if you will.

A. I do not think there is a yes or no answer to that.

Q. Read the question once more.

(Question read.)

A. It is the most comprehensive. I cannot answer that yes or no.

Q. Beg pardon; you don't know whether it is comprehensive or not, is that true? You know whether you think it is comprehensive?

A. I know it is the most comprehensive of any experience or test.

Q. That would be true if I went out and cut one tree if no one else had made a test?

A. Yes, sir; it would be.

Q. Do you think it is comprehensive enough so we can rely upon that that monticola and strobus are of equal softness when you have gone to only one place in Wisconsin, one place in Minnesota, and one in New Hampshire; do you really think that is a comprehensive test?

1504

A. Yes, sir; I do.

Mr. BURR. I think that is all.

Redirect examination by Mr. MATTHEW:

Q. Mr. Newlin, was this table, which was in evidence as exhibit 23, prepared upon the request of the respondents in these proceedings?

A. The table was prepared at their request, but the data was ready for publication on those species.

Q. Upon request of the——

A. Mr. Burr requested the table to be prepared.

Q. That is, Mr. Burr, the counsel for the Federal Trade Commission, requested this table, now exhibit 23, to be prepared?

A. That is my understanding.

Q. It was not prepared upon the request of any of the respondent lumber companies in these proceedings?

A. No.

Q. Now, the table which is in evidence is precisely the form in which you prepared it upon Mr. Burr's request, with the exception that, upon my personal suggestion to you, there was added the data as to Pinus palustris?

1505

A. I am not certain. Mr. Johnson and Mr. Marquardt prepared that. I don't think that he gave instructions as to just the form, but only the species, I believe.

Mr. MATTHEW. I think counsel will allow me to state that the table which I have in my hand, is one which I received from him, from you, Mr. Burr, and that it is identical with the table which is in evidence, with the single exception that the data as to Pinus palustris has been added and that data was added, I think, this morning responsive to my suggestion, following the visit which you and I and others made to the Forest Products Laboratory.

Mr. BURR. Does that implicate me in any fashion; if it does, I want to make some defense?

Mr. MATTHEW. It is not a question of defense, but I desire to be clear of record, Mr. Examiner, that this is not data that we requested, but I found that it had been prepared and, in order to complete the showing which would be partially made by the introduction of Bulletin No. 556 and Miscellaneous Publication No. 46,

I thought it only fair that the later data, which had been tabulated, should likewise be made of record.

Examiner SHEPARD. I think that is very correct, too.

Mr. MATTHEW. I want to make one further very brief comment, Mr. Examiner, that we do particularly desire that the com-
1506 parative data as to Pinus echinata and Pinus palustris be considered, because one of our points in the case, Mr. Examiner, is, our lumber does not resemble the southern yellow pine.

Mr. BURR. I have no objection to the addition of those two.

Examiner SHEPARD. I want to know if the figure that we have been discussing here and that you have been testifying about appearing on respondent's exhibit 23 is the last word of the Forestry Department on this question.

A. Yes, sir.

Q. Can you tell me when the data from which this exhibit was made was obtained?

A. It covers all of the Forest Service work back for the last thirty years.

Examiner SHEPARD. Now, is there any other question of this gentleman from either side?

Mr. BURR. Now, gentlemen, I have no further questions with regard to this matter, and I move we adjourn until two o'clock this afternoon, if the examiner please.

Examiner SHEPARD. Take an adjournment until two o'clock, Mr. Reporter.

Adjournment taken until 2:00 o'clock p.m.

1507 Dockets Nos. 1620–1669, inc.

MADISON, WISCONSIN, *October 22, 1929.*

Met pursuant to adjournment, 2:00 o'clock p.m.

Before: William W. Sheppard, examiner.

Appearances:

Mr. Eugene W. Burr, for the Commission.

Messrs. Matthew and Wheat for the respondents.

E. M. DAVIS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Davis, you are connected with the Forest Products Laboratory, are you?

A. Yes, sir.

Q. How long have you been so connected, if you please, sir?

A. Seven years this month.

Q. During that period you have been engaged in what line or lines of research?

A. My work has dealt with properties, uses of woods, the specifications, grades, manufacturing methods in general. Softwoods, that is.

Q. And in that connection you have made a study of the heartwood content as contrasted with the sapwood content of
1508 various softwood lumber?

A. Yes.

Q. And that included the lambertiana, monticola, ponderosa, and strobus, among others, did it?

A. Yes.

Q. Now, will you kindly state whether the sheets I am handing you now represent the ultimate figures that you derive from the study that you last mentioned?

A. Yes; those are the figures.

Q. Did you prepare those yourself?

A. A large part of the computing work was done in what we call our section of computing; a number of people who put their whole time on that sort of work.

Q. It was done under your supervision, was it?

A. Yes.

Q. Did you check it up?

A. The checking is also done by other members of the computing force.

Mr. BURR. I would request that this tabulation be marked by the reporter as "Commission's Exhibit 29, pages A and B."

Mr. MATTHEW. That is marked for identification.

Mr. BURR. Yes; for the present moment.

Examiner SHEPARD. You will have a photostatic copy, Mr. Matthew, and all of any others.

Referring to the first column, that is, the number of
1509 pieces tested, were those from the same tree to a large extent, or were they varied as to the number of trees?

A. They must have been from quite a number of trees, but it is impossible to say how many trees.

Q. You have not preserved the data on that subject?

A. Well, there was no data on that subject. We took the lumber from stock, did not trace it through from the original tree, but from the methods of manufacture they must necessarily have come from quite a large number of trees.

Q. How about the sites at which those specimens were selected; do you know as to that?

A. As to that we depended very largely on the law of averages. Under each species we collected material from several mills, and, as a rule, each mill is operating more than one camp, and, as a result of that, you would almost necessarily have a number of sites and a pretty good representation of sites included.

Q. From these different mills?

A. Yes.

Q. I see. Now, in the column "Average percent of heartwood and percent of heart face pieces", will you explain the distinction between those two columns?

A. Well, we have in the first species there under "Average
1510 percent of heartwood", we have the figures 84.9. That means that the 200 pieces had an average heart content of 84.9%; that is, 84.9% of the wood in those 200 pieces was heartwood.

Q. And the next column "Percent of heart face pieces", means what?

A. We have the figure 40 there. That means that 40% of those 200 pieces were of heartwood on the face side.

Q. What do you mean by the "face side"?

A. We mean the best side of the board, the side from which it is graded.

Q. And then "Percent of sap face pieces" means what?

A. Well, along the same line we have zero in that column. In that particular instance none of the 200 pieces were of sap on the face side.

Q. Now, in the specific instances and specific figure that you have given, you have referred to the first type of wood on that table as being typical of all the rest.

A. Typical of the method of presentation.

Q. Yes; it is just by chance that happens to be southern cypress, and we are not interested in this case, but your method was followed all the way through, and with regard to the various types of lumber, was it the same as you have described?

A. The same method was followed in all grades and all species; yes.

1511 Q. Who actually got these specimens out there in the West, did you handle that?

A. The actual work on this, I probably did about one third of it, and I would say about one third was done by Mr. Johnson, of the laboratory, and the remaining one third by Mr. Morbeck, of the laboratory.

Q. You actually did some of the field work then yourself, did you?

A. Yes, sir; I would say about a third.

Q. Did you handle the ponderosa or the white pine?

A. I handled some of each.

Q. Some of each variety?

A. Yes, some of all.

Q. Now, what part of California was visited for this purpose?

A. Well, we got the sugar pine, we got some of it at Westwood, some at Tuolumne, and some at Standard, and the ponderosa, we got some at Standard, some at Westwood, some at Weed, and some at Pine Ridge, Oregon, where the mill is a member of the California Association.

Q. How about the monticola, where did that come from?

A. Those mills were all in the northern part of Idaho, one at Spokane, one at Potlatch, and two at Coeur d'Alene.

Q. Now, the strobus, where did that come from?

A. One of those mills was at Virginia, Minnesota, and the other at Fort Frances, Ontario.

1512 Q. Two mills only?

A. Two mills is all we have the heartwood information on for strobus.

Q. What do you mean by that; did you get information on sapwood elsewhere?

A. No; we have a third mill on which we got additional information, but nothing on sapwood and heartwood.

Q. Nothing that went into this table?

A. Nothing that belongs in there.

Q. So there were two places only for the purposes of this table?

A. For the purposes of this table.

Q. Where did the sugar pine figures come from; did I ask you that?

A. You asked that.

Q. Strike out that question, will you please; do you think of any further information that should be offered to clarify this table?

A. Well, it probably should be explained that that was based entirely on one width, 8 inches, 1 by 8 inch board.

Q. I think you started to offer additional explanation, or did you finish?

A. Well, that 8-inch, of course, is merely one width of several which are manufactured. That might or might not change

1513 these figures in case we had studied all widths. We do not know that it would or would not.

Mr. BURR. I ask that be received as Commission's exhibit 29, pages A and B.

Examiner SHEPPARD. Any objection?

Mr. MATTHEW. I desire to offer this objection that I think this statistical data is absolutely irrevelant and immaterial to the issues in the case. I do not believe the relative proportion of sap and heart wood in these several species of pine lumber go at all to the major issue.

Mr. BURR. Let me ask a question or two further of the witness.

Q. (By Mr. Burr). Do you regard sapwood and heartwood of various species of pine as having varying degrees of durability where exposed to the weather?

Mr. MATTHEW. You have not qualified him yet to answer any question. I object on the ground there is no foundation for the question.

Mr. BURR. I will lay the foundation then.

By Mr. BURR:

Q. In connection with your studies of forest products have you had occasion to ascertain the difference between heartwood and sapwood as to durability?

A. I have not made any particular studies of that. Anything I happen to know is in a very general way, observation.

1514 Q. Well, isn't it a matter of general knowledge throughout the lumber world that there is a difference between heartwood and sapwood as regards durability?

Mr. MATTHEW. I do not think he is qualified to answer a question as to the lumber world.

Mr. BURR. I will withdraw the question. I think the record will show sufficiently and does already show. If the examiner please, I am sure it will be recalled that the record shows that sapwood is far less durable than heartwood, therefore the percentage of sapwood as contrasted with the total volume of the wood has a very direct bearing on durability where exposed to the weather. It will also be recalled that several witnesses testified in dealing with white pine that they were able to so adjust the manufacture of mill products that they were able to preserve a heart face to the elements, to the exposure, as contrasted with having sapwood so exposed. Therefore, it seems to me that this intends to bear out the evidence of this character, and shows the percentage that there is among white pines as contrasted with the western yellow pines.

Mr. MATTHEW. Let me suggest this, if I may, Mr. Examiner. Let it be assumed, let it be supposed, if you will, that the California white pine consists entirely of heartwood, that it had no sap

1515 whatever, would that circumstance go to the merits of this case? It seems to me obviously it would not, because if we are properly marketing this lumber under the name, California white pine, the fact that it has no sapwood in it or the same percentage of sapwood which there may be in strobus or monticola lumber or a greater proportion of sapwood, certainly does not go to the validity of the trade practice.

Mr. BURR. If the examiner please, we are not standing here solely upon botanical distinction; we are standing upon the fact that the sale of ponderosa pine, under the trade name white pine, has a definite detriment to the public inasmuch as in some respects Pinus ponderosa is not as satisfactory a wood, particularly for external use, as are the true white pines and particularly strobus, and therefore, it seems to me the percentage of heartwood and sapwood in the various types goes directly to prove that the public when they buy white pine and use it on the outside of the building do not get what they think they are buying.

Examiner SHEPARD. Well, gentlemen, it is my theory of this case that the question principally involved is one of the trade name, but all through these hearings it has cropped out on both sides, and I understand it is one of the major defenses of the respondent, that in various ways its wood, ponderosa, is more near the white

1516 pine family than others is.

Mr. MATTHEW. That is true, Mr. Examiner.

Examiner SHEPARD. Also, in this testimony, especially with reference to incidents or cases that have been put into the record as

to certain types of wood that have disintegrated or rotted in service, I have noticed that counsel has asked witnesses testifying on these various incidents as to whether the wood was sap or heart. I think I will let this go into the record for what it is worth. Mr. Reporter, mark it and admit it into evidence as Exhibit 29.

(Commission's exhibit 29, pages A and B, received in evidence.)

Examiner SHEPARD. Anything else?

Mr. BURR. Yes; you may cross-examine, sir.

Examiner SHEPARD. Make a note on the record here the examiner here requests counsel for the Commission to have photostatic copies of exhibit no. 29 made for the benefit of and transferred, delivered to Mr. Matthew and Mr. Wheat of respondent's counsel.

Mr. BURR. All right.

Cross-examination by Mr. MATTHEW:

Q. When were the two tables which have been received in evidence as exhibit 29 prepared, Mr. Davis?

1517 A. The tables themselves were prepared within the last two or three weeks. The information I think very largely was worked up several months ago.

Q. I note from a memorandum on the face of the exhibit that the tables were apparently prepared at the request of Mr. Burr, the attorney for the Federal Trade Commission.

A. Yes.

Q. Can you tell us how your selection of specimens of strobus pine lumber was made?

A. In the first place, all that strobus there I collected myself so I can answer that fully. I went to the mills with a tallyman; got the approval of the management and got the management in each case to provide a grader. With the tallyman and the grader we went out to the shed where they keep their stock on hand; went to a pile of 1 x 8 no. 1 common, for instance, and the grader looked over that material, one piece at a time, loading it onto a truck or onto horses until we had a thousand feet or whatever amount we were to study, and as he looked it over, any pieces he found which were off grade were put aside and not included in the study.

Q. Now, in order to save time, couldn't I ask you this general question, whether the specimens of other species of lumber were collected in essntially the same fashion?

A. There was one difference, in the case of the western pine, instead of depending upon a grader at the mill we were

1518 provided with an association grader in both the western pine and California association, who went from mill to mill with us and selected the material. With that difference it was the same system.

Q. Then the materials were in each instance obtained at the mills, and not in local retail or wholesale lumber yards?

A. At the mills in each instance.

Mr. MATTHEW. I think that is all.

Examiner SHEPARD. Let me have the exhibit a minute. Mr. Davis, I want to get some general idea of what you are trying to do here. The testimony in this case shows that as a rule the greater percentages of sap in the western and so-called western pines and in the northern pines, sapwood, the outside sappy portion of the wood of the western pines is greater than that of the old-time eastern, northern, strobus pines. Do you understand?

A. Yes.

Examiner SHEPARD. Now it seems to me that the percentage of sap on each tree in the forest would be different, isn't that the case?

A. It would differ depending on the age and size.

Examiner SHEPARD. Exactly. Depending on the circumference of the tree and its age. Now, do I understand that you are trying to, by a series of figures here, to show that the sap in any one species
1519 is greater or less as the case may be than in some other species, a great number of trees of all the species being examined.

A. We were not trying to show that one is greater or less. We had the figures and it was more of a proposition of finding out where they stood.

Examiner SHEPARD. Exactly. I do not mean to say you were trying to find one way or the other, but I mean you were trying to establish some grade or rule by which those questions could be determined?

A. That was it, largely.

Examiner SHEPARD. I am afraid that my idea that I have in my head is difficult for me to get over to you, but here is what I am trying to find out: I am trying to find out if, for instance, you took a large number of sugar pines, for instance, of given dimension and age and found out the variety or the percentage of sap in those logs as compared with the monticola here, for instance, or some other tree; is that what you are trying to get at?

A. I think I ought to explain that what we did in heartwood was really an afterthought. The main job we were doing when we got this information was a defect study. And while we were getting this defect information, we saw a chance to get information on heartwood at the same time while we got the other and without any great additional work; and, consequently, that is, I would say
1520 indicative rather than conclusive. If we had made a study exclusively on heartwood, we would have gone about it in rather a different method than we did there.

Examiner SHEPARD. Here, just to see if I get what you are trying to get at here, let us take strobus here on exhibit 29, page A, you examined there 106 pieces?

A. Yes.

Examiner SHEPARD. And I take it that your examination showed in the B or better grade that 64.6% of that was heartwood?

A. Yes, sir.

Examiner SHEPARD. And the remaining was sap?

A. Yes, sir.

Examiner SHEPARD. All right, now. Let us find out what the finding was in reference to ponderosa. There is none here for that.

A. Yes; we have ponderosa on there under the three regions.

Examiner SHEPARD. All right.

Mr. BURR. You ought not to use sheet 1 against sheet 2, because ponderosa are on both of them, Judge.

Examiner SHEPARD. Here we are. In that you find, you examine for ponderosa on the same exhibit 106 pieces, the same as was examined on the strobus and you found four percent of heartwood against no sap.

A. No; four percent compared with 64.6, and no heartface
1521 pieces compared with 6.5; 73.5 sap face compared with 1.9.

Mr. BURR. The percent of sapwood is not on there. It is the correlative of the percent of heartwood.

A. Yes; subtract the percent of heartwood from a hundred and you would get the percent.

Examiner SHEPARD. The 4% represents the heartwood under the ponderosa, and the record shows, or rather this exhibit shows, that 6.5% was the sapwood under the strobus, wasn't it?

A. No; this means that 6.5% of the pieces of strobus were heartface pieces. To get the sapwood you would subtract 64.6 from a hundred.

Mr. BURR. In other words, 35.4 is the sapwood for the strobus; is that right?

A. Yes; that is right. This figure represents the percent of pieces which were of sap on the face side. No heart whatever on the face side.

Examiner SHEPARD. All right.

Cross-examination (continued):

By Mr. MATTHEW:

Q. Mr. Davis, would you feel that you were warranted in stating to the Commission that the ponderosa lumber in the B and better grades characteristically has but 4% of heartwood?

A. That is what we found at this one mill in the Arizona
1522 territory. I would not feel justified in saying that applies to the whole region.

Q. And you have no data as to the B and better from California?

A. No; we got no heart and sap data on B and better in California.

Q. Then I would gather from your testimony that you regard these results indicative by these figures as somewhat unconclusive.

Mr. BURR. I do not think that is a fair question.

Mr. MATTHEW. It is a fair question for me to put upon cross-examination.

Mr. BURR. I do not think, it seems to me, that is a fair question to gather from his testimony when you only asked him on but one grade.

Mr. MATTHEW. I will go through these other grades then and string this out as long as you want to.

Q. In the C selects you show for California a percentage of heartwood of 12.9%. For the D selects you show 32.9%; for the commons, no. 1, 2, 3, and 4, respectively, you show 44.9%, 61.3%, and 59.2%, and 40.2%, respectively. Are you prepared to say that those figures are typical?

A. According to the best information we could get the mills were typical mills, and the amount of material we got is enough to give a representative average.

Q. Then you are prepared to say these figures are typical
1523 of the percentage of heartwood to the entire wood of ponderosa lumber?

A. To the best of my belief they are fairly typical.

Q. Would you expect to find a greater portion of heartwood in the higher grades than in the lower grades?

A. No; you would expect to find less heartwood in the higher grades.

Q. Have you noted in the case of lambertiana you show a greater percentage of heartwood for B and better than in the case of the C selects?

A. You might find a slight difference between consecutive grades, but taking selects as a group, common as a group, you will find the selects considerably below the common in percent of heart.

Q. That would be the normal experience to anticipate, would it not?

A. Yes.

Q. Now, have you carried your studies into an examination of typical logs; I mean unsawed logs?

A. This particular thing concerns nothing but the 1 x 8 boards.

Q. I understand that, but what I want to know, is whether you have made any studies with respect to unsawed logs.

A. I have not personally; no.

Mr. MATTHEW. I think that is all.

Mr. BURR. I think that is all.

1524 Examiner SHEPARD. You are excused, Mr. Davis. Much obliged to you, sir, for coming down.

(Witness excused.)

F. L. BROWN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Brown, you are connected with the Forest Products Laboratory?

A. Yes.

Q. Have been for how many years?

A. For eleven years.

Q. Now, did you conduct some experiments in connection with a so-called paintability of various different types of wood?

A. Yes; I did.

Q. When was that?

A. The project was planned in 1922. These particular experiments actually started in 1924.

Q. What do you mean by "paintability"?

A. That is a term that we have coined for present purposes, endeavoring to express in a single word the qualities of lumber that influence the service given by paint coatings applied to it, applied to the wood.

Q. Now, in connection with that, did you make a graph
1525 showing the respective paintability of certain varieties of wood including among them a strobus, monticola, lambertiana, and ponderosa?

A. Yes.

Q. Will you be kind enough to state whether this graph is the one to which you refer in saying yes?

A. Yes; this is the graph in question.

Q. And this diagram goes with it, does it?

A. Yes.

Mr. BURR. Now, if the examiner please, I would request that these two sheets be marked for identification as "Commission's Exhibit 30, pages A and B."

(Commission's exhibit 30, pages A and B, marked for identification.)

Q. Now, will you state whether that diagram has been corrected or supplemented, I should say, by pen and ink?

A. It has been supplemented in india ink.

Q. That was done by you, was it?

A. I did that myself.

Q. That is, for the purpose of putting in the botanical term for each specie?

A. The botanical term; yes.

Q. And also for the purpose of explaining the number of tests; is that true?

A. Yes.

1526 Q. Now, will you state briefly what the eight different things shown by this diagram are, as briefly as you may and have it clear?

A. At the top of the diagram, that is to say, the diagram in the first place is divided into two portions, the right-hand portion giving the results obtained when we used a typical lead and zinc paint—type of prepared paint. The left-hand portion gives corresponding results when we use a straight white lead paint. Then along the top of each half we have a scale in months. That scale represents the time elapsed from the starting of the tests. That is the time when the panels were attached to the test fence out of doors and the paint coatings applied and allowed to dry. That is the time represented as zero. The length of time elapsing after that is the time plotted in these scales for each species of wood. I say species, in the case of numbers twelve and thirteen we had the same species, but we have

shipments obtained from different regions. For each species or shipment of wood we have two dividing bars, the upper half of each bar represents results obtained on flat grain boards exclusively. The lower half of each bar represents the results obtained with edge grain boards exclusively. If we take the upper half of this bar for example the full length of the bar out to this point, which would be about forty-four months, represents the time elapsed
1527 before, in my judgment, the coating applied to that; that is, it is the average time for all of the boards in question, all the panels in question, before the coating arrived at that stage in coating deterioration that was designated as poor. That is the point at which we believed, or at least that was the arbitrary point that we selected for the purpose of this investigation as representing the time at which the surface should be repainted in order to maintain an adequate coating of paint. That is merely from the point of view of keeping a coating—a continuous coating of paint over the surface. The portion of the bar from zero to this point.

Q. That is the solid black portion?

A. Just the solid black portion represents the time that elapses before the panel arrived; that is, of the average time that elapses before the panels of this group arrived at that point in their history where the appearance of typical wood checks indicated that the wood was beginning to weather in spite of the fact that it still had paint coating on top of it. That is to say, we had arrived at a point where if you were going to maintain a coating that will adequately prevent wood weathering, we felt that it was necessary to repaint.

Q. For each species you used forty-eight test panels each; is that true?

A. Yes; for each species.

Q. And each panel contained three boards; is that true?

1528 A. Yes.

Q. Making a hundred and forty-four boards?

A. That is correct.

Q. Of that number how many were flat grained?

A. Of the 144 boards 72 were flat grained. Of those 72, 36 were painted with a straight white lead paint and 36 with a lead and zinc paint.

Q. Did you have any check or consultation upon your work.

A. Yes; we have a long list of cooperators including the lumber interests and the paint interests and certain universities, other Government laboratories and two railroads.

Q. You do not mean to say you had help from all of those people?

A. Yes; I would say help in some material form from all of those people.

Q. Now, you used the word "arbitrary" in connection with one of those periods, some arbitrary time. Was that a criterion fixed upon for uniform use?

A. Yes; a paint coating after it is applied and exposed to the weather undergoes a gradual series of changes. There are, as far

as I know, no points at which anything happens very suddenly. What the condition today is much like the condition yesterday, except that there is just a slight increase in certain things. There are no jumps.

1529 Q. The gradations are imperceptible.

A. The gradations are small, therefore you must adopt some sort of an arbitrary as standard. Of course, the point is for a study of this kind to adopt an arbitrary standard that will be the same for all of the—in this case all of the different woods.

Q. You did adopt such an arbitrary standard, did you?

A. Yes.

Q. Would it be possible to define it? How did you keep it under your thumb so it would not vary from day to day?

A. I am afraid I cannot define it in a few words.

Q. You did have a definition that you adhered to, did you?

A. Yes; I had certain standards, all of the inspecting was done by myself. It is necessary that one man do this because the thing is a mental picture. We can not define it in terms of the percentage of the total area of wood left bare by paint flaking or something of that kind because we have no means of measuring that. The thing must be done by forming a mental judgment.

Perhaps I can explain it this way, that the particular criterion of judgment in the case of what we call coating integrity, that is, the thing that is measured by the full length of these bars, was whether or not we still retained coating over all portions of the wood to which it had been originally applied. That is, you

1530 start with a continuous coating covering all parts of the wood.

We find as time goes on we come to a point in the history of the coating where small pieces fall away and leave the underlying wood bare. We grade our panels with respect to that in something of the way we grade lumber for grade. The grader has to judge the size, distribution of knots, and things like that in order to classify his boards according to grade, while we had to grade our coatings with respect to these little knots, if you please; that is, a little places where the coating had fallen away.

We had four grades—good, fair, poor, and bad. The point is where they fell to the grade of poor in coating integrity, that is the arbitrary point that we chose as representing the time when repainting would be in order.

Mr. BURR. I ask this now be received, namely, Commission's exhibit for identification 30, pages A and B, received for the record as the Commission's exhibit, same number and pages.

Mr. MATTHEW. I will save an objection upon the ground of immaterial and irrelevant.

Examiner SHEPARD. I have no special objection to it, Mr. Burr, except I rather agree with Mr. Matthew.

1531 Mr. BURR. I do not care to argue the point if you are going to let it in.

Examiner SHEPARD. I will let it in, go in for whatever use you want to make of it.

Mr. MATTHEW. No questions.

(Commission's exhibit 30, pages A and B, received in evidence.)

Examiner SHEPARD. Anything else?

Mr. BURR. Yes; I have something more.

(Witness excused.)

R. P. A. JOHNSON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Johnson, you are with the Forest Products Laboratory, are you?

A. Yes, sir.

Q. How long have you been so?

A. 21 years.

Q. And in connection with that work have you had occasion to consider the variability of certain types of lumber as regards their specific gravity?

A. Yes, sir.

Q. Does specific gravity represent or is specific gravity and
1532 its variation an accompaniment or concomitant of other variations in the quality of wood, do you find?

A. Yes, sir.

Q. What other variations?

A. Practically all of the mechanical properties, specific gravity is the best criterion of strength and other properties we have aside from actual test.

Q. Have you prepared a graph showing the range of variation in specific gravity of the three varieties of white pine and also Pinus ponderosa?

A. Yes, sir.

Q. And also a table showing the comparison or purporting to show a comparison of species with respect to variation in specific gravity?

A. Yes, sir.

Q. I will ask you to state whether the two sheets that I hand you are the tabulation of the graph which you have just referred to?

A. Yes, sir.

Mr. BURR. May they be marked "Commission's exhibit for identification, exhibit 1, pages A and B"?

Examiner SHEPARD. So mark them, Mr. Reporter.

(Commission's exhibit 31, pages A and B, so marked for identification.)

Q. In connection with that study you conducted the collection of specimens yourself or through others?

1533 A. The specimens were collected by the organization, not by myself.

Q. What organization do you mean?

A. The Forest Products Laboratory personnel and the staff.

Q. They were then turned in to you, were they, or how was it handled?

A. The specimens were collected, packed into boxes, and shipped into the laboratory, where the determination of specific gravity was done by our nontechnical staff. The results were then sent in to the computing department and the analysis was made by myself.

Q. The weighing part?

A. The weighing and the measuring largely by the nontechnical staff.

Q. When you say here in the third column of Commission's exhibit 31 A, fourth column, I should say "Probable variation percent", what do you mean?

A. That is a statistical measure of the variability of material. It means that theoretically one half of the material will fall within that percent of the average, above or below.

Q. So the probable variation, taking the fourth column of the first tabulation, the probable variation is 6.55 of strobus, both above and below; is that true?

A. Yes.

Q. Making a total variation of 13.1%; is that true?

1534 A. Yes.

Q. And so on down through?

A. Yes. In other words, that means that a piece selected at random would have a 50-50 chance of falling within that range.

Q. Now, turning to the graph, page B, of the same proposed exhibit, will you state what is to be derived from the fact that the columns rise at the portion of the graph which relates to Pinus ponderosa, the rising of several columns to the height marked 16 or thereabouts, as contrasted with the smaller number of columns and rising to a higher distance in the other portions of the graph?

A. The height of the columns indicates that that percentage of the material we collected fell within the range of specific gravities indicated by the head of the lines in closing the bar at the bottom of the chart. In the case of Pinus ponderosa the bar coming around 16 indicates that about 16 percent of those specimens fell between .34 and .36. While in the case of monticola some 26 percent, or slightly under that, fell within that same range.

Q. Now, which shows the greater tendency toward variation of the four species that you have?

A. The Pinus ponderosa shows the greatest variation in specific gravity of the four species shown on the chart.

1535 Mr. BURR. I ask this exhibit be received for the record.

Examiner SHEPARD. Any objection?

Mr. MATTHEW. No objection.

Examiner SHEPARD. It may go in.

(Commission's exhibit 31, pages A and B, received in evidence.)

Examiner SHEPARD. In other words, Mr. Johnson, the strobus group consisting of the three we have been talking about, the monti-

cola and the sugar pine and the old northern pine, all have about the same specific gravity.

A. I wouldn't say; well, they all have very close to the same specific gravity.

Examiner SHEPARD. That is what I say, about.

A. Yes.

Examiner SHEPARD. And Pinus ponderosa has a varying?

A. Well, Pinus ponderosa differs slightly from them in specific gravity.

Examiner SHEPARD. Higher or lower?

Mr. BURR. Average, you mean?

A. In average specific gravity goes slightly higher than all the other species, three species.

Examiner SHEPARD. Just as a general proposition, if one substance has a certain specific gravity and another substance has

1536 a specific gravity less than that, what does it indicate?

A. In the case of wood it would indicate that the pieces with the higher specific gravity has higher strength properties. It would be slightly higher in bending strength and slightly higher in shock resistance. That is what we expect from it.

Examiner SHEPARD. That is what I want to know, what it leads to. To tell the Commission or me that one wood has a higher specific gravity means nothing.

A. An explanation in there: If you take two pieces of wood in your hand, one of balsam and one of hickory, for instance, with your eyes shut, you could tell which of those two were the strongest. You would not hesitate a minute to say the heavier piece was the strongest. This is simply drawing a finer distinction.

Q. The Pinus ponderosa samples were obtained for the purpose of this graph from five mills in California, were they? I wish you would refresh your recollection as to the number of mills, and state them briefly.

A. The Pinus ponderosa were obtained from five mills in California.

Q. Where was the other pine we are interested in here, the white pine?

A. Also some Pinus ponderosa from Montana and from one

1537 mill in Idaho. The strobus samples were collected from two mills in Minnesota; the Pinus monticola samples from four mills in Idaho; the Pinus lambertiana samples from three mills in California.

Q. When was all of this done?

A. This was done in the summer of 1927.

Examiner SHEPARD. I want respondent's counsel to have a photostatic copy of that also.

Mr. BURR. He has of the graph already. But I will see he has one of the other.

Examiner SHEPARD. Anything else from Mr. Johnson?

Mr. BURR. I think there was.

Cross-examination by Mr. MATTHEW:

Q. Mr. Johnson, can you give us the names of the five California mills from which the specimens of Pinus ponderosa were obtained?

A. I cannot do so without reference to the record.

Examiner SHEPARD. I will have Mr. Johnson write a letter and tell you that if you want it.

Mr. MATTHEW. If there is no objection, I should like such a record.

Examiner SHEPARD. Mr. Johnson, will you get Mr. Matthew's address before this hearing is ended and get that information
1538 and write him and send Mr. Burr a copy of your letter of the California mills?

Mr. BURR. I suggest we stipulate that that go in as exhibit 32 without further action by this examiner.

Examiner SHEPARD. I don't know that Mr. Matthew wants it in the record.

Mr. MATTHEW. Suppose we agree on that afterwards.

Examiner SHEPARD. I am perfectly willing to have it go in the record if you want to. I just thought he wanted it for his own information.

Mr. MATTHEW. I am not sure that either of us will deem it of enough importance to make it a matter of record.

Examiner SHEPARD. If it is, and you want to put it in the record, all right.

Q. Mr. Johnson, I note that the average specific gravity of the Pinus ponderosa specimens is very slightly in excess of the average specific gravity of the Pinus monticola specimens.

A. Yes, sir.

Q. You would agree that they are so close together that the difference is hardly material, would you not?

A. Yes, sir.

Q. Now, have you made any similar investigation respecting the specific gravity of the three better known southern yellow
1539 pines, namely, Pinus palustris, Pinus echinata, and Pinus taeda.

A. Not exactly similar because you will note that these are the random run of commercial lumber and the commercial lumber of the southern pine is not separated botanically by species; consequently, our figures on that are for southern yellow pine or for commercial longleaf and shortleaf.

Q. Let me get clear on that. You say the southern yellow pines are not segregated botanically by species.

A. The lumber is not.

Q. Do you mean by that that the longleaf lumber is not identical with botanical longleaf?

A. Yes, sir.

Q. You mean it is not identical?

A. Yes, sir.

Q. In other words, then, the commercial longleaf lumber may be made up of lumber obtained in part from Pinus palustris and in part from Pinus echinata?

A. Yes, sir.

Q. And in part from Pinus taeda?

A. Yes, sir.

Q. Similarly has the commercial shortleaf lumber content some lumber yield of each of these three trees?

A. It may.

Q. And the grading is in respect to the quality of the lum-
1540 ber rather than with respect to the botany of the particular tree?

A. Well, if you call that segregation by appearance, quality; yes, sir.

Q. Well, we will include appearance.

A. Yes, sir.

Q. Now, would it be practicable to obtain representative specimens of commercial longleaf lumber and commercial shortleaf lumber and make specific gravity tests of the same character that you have made as disclosed by your exhibit 31?

A. Oh, yes, sir; we have done that; not of the lumber, but of the trees, from the trees the selection in order to be botanically correct must be made from the trees and not from the lumber.

Q. Then in making your tests of the southern yellow-pine lumber with respect to specific gravity you have adhered to the trees and not merely to the lumber?

A. We have both, as you will see by your exhibit, you will see the one southern pine is shown in the second table.

Q. I did not have this table before me when I asked the question, Mr. Johnson, and that explains my ignorance; but you do show the specific gravity of the Pinus echinata in tables 2 and 3.

A. Yes, sir.

1541 Q. As I understand it now, selection has been made from trees which are botanically Pinus echinata?

A. Yes, sir.

Q. Have you any similar tests from the Pinus palustris tree?

A. Yes; those tests came from the same tests as a basis of bulletin 566.

Q. And from Pinus taeda?

A. Yes, sir.

Q. Could you conveniently prepare a supplemental table and a supplemental graph which would show the results of the specific gravity tests of Pinus echinata, Pinus palustris, and Pinus taeda in the same fashion in which you have shown the results of the tests of the four species covered by your graph of exhibit 31?

A. Yes, sir. I want to add here in order to avoid misunderstanding that the graph that you have in your hand is based upon the figures of table I and not tables 2 and 3.

Mr. BURR. Table I and tables 2 and 3 of what?

A. Of the exhibit.

Mr. MATTHEW. Of page A of exhibit 31?

A. Yes, sir.

Examiner SHEPARD. Mr. Matthew, I will have the witness prepare that information for you and write it to you at the same
1542 time that he writes you about the mills from which this comes from, and if you desire you can put it in the record later.

Mr. MATTHEW. I would request at this time when that tabular matter & accompanying graph are prepared they be formally incorporated in the record.

Mr. BURR. I think I have absolutely no objection to that.

Examiner SHEPPARD. Yes; I would rather like to have that, too.

A. Would you care to give me the three names you want?

Mr. MATTHEW. Pinus palustris pine and Pinus taeda and Pinus echinata. You do have the Pinus echinata in tables 2 and 3 of page A of your exhibit 31, but the echinata does not appear in table I or in the graph. My particular desire is to complete the showing by extending it to cover the three major southern yellow pines.

A. I can prepare it to go into tables 2 and 3, but not table I, for the reason explained.

Mr. BURR. How about the graph?

A. I can make a graph; yes, sir.

Mr. BURR. You can include the two, additional two types of lumber in the graph and table I, is that right?

A. I will have to prepare a new graph, if it is to be compar-
1543 able, based on the figures of table 2 for the four of them with the additional—for the five at present with the additional two he has requested, because table no. I is based on lumber—selection from lumber. Tables 2 and 3 are based on trees selected in the forest.

Mr. MATTHEW. Yes; I understand your distinction. If you can make such a supplemental showing as will, in your opinion, be fairly responsive to my request and not misleading in your own judgment, I shall appreciate it. In other words, I am sure that counsel for the Commission and I will be very glad to leave it to your own judgment as to the particular form which it should assume.

Examiner SHEPARD. Let the exhibit stay in and make the supplemental showing—I don't know whether you want another graph, too, do you—all I want for my own personal information is to have a comparison of the specific gravity of the trees. I do not care anything about the graph.

Mr. MATTHEW. I find that sometimes the graph is a great deal of assistance to some parties who like a visual presentation. That is the purpose of the graph in this instance.

Examiner SHEPARD. All right, fix him a graph, Mr. Johnson.

Mr. MATTHEW. I would suggest when that exhibit is received and made part of the record that it be identified as exhibit 32.

1544 Examiner SHEPARD. Make a note, Mr. Reporter. Exhibit no. 32 is reserved for supplemental information to be furnished by Mr. Johnson in answer to a request from respondent's counsel.

Mr. MATTHEW. The average specific gravity of Pinus ponderosa approaches more closely to the average specific gravity of the three white pines than to the average specific gravity of the southern yellow pine to which I have directed your attention.

A. Yes, sir.

Mr. MATTHEW. That is all.

(Witness excused.)

GEORGE M. HUNT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Hunt, you have been with the Forest Products Laboratory for how long a period?

A. Sixteen years.

Q. And where did you receive your training for forest work?

A. University of California.

Q. During your time with the Forest Products Laboratory, what forest service, if any, have you had?

1545 A. What service in the forest?

Q. Yes; have you had experience in the actual forest?

A. I have been out on field trips at various times; and before I came to the laboratory I served for two years on the Pacific coast—one year in California and approximately one year in Washington and Oregon.

Q. That was as a member of the staff of the Forest Service, was it?

A. Yes; Forest Service.

Q. What topics have you specialized on in your research studies for the Forest Products Laboratory?

A. Specialized in the collection of evidence on the durability of wood, on the methods and materials for protecting wood from decay, and I have had supervisory duties in connection with various other studies.

Q. Over how long a period have you studied the durability of various types of wood, various species, I should say?

A. Substantially during the whole period of sixteen years.

Q. Did you some years ago work out a proposed method of testing the durability of wood within a shorter period than the actual experience where exposed to the weather?

A. No, sir.

Q. You pursued such a method at one time, did you?

A. Such a method was attempted at the laboratory before I came. I continued to experiment with it for a short time, and then

1546 we abandoned it as unsatisfactory. It did not give the data we could use.

Q. It did not give the data you could use?
A. No.
Q. Did you use the data that you obtained?
A. No; we never published that data.
Q. It was never published?
A. No. We couldn't use it. It was too inconsistent.
Q. Did you actually get out some material that purported to give the relative decay resistance under conditions favoring decay of untreated woods with average proportion of sapwood?
A. You are referring now to that specific publication?
Q. Yes; Publication No. 173.
A. No; I did not.
Q. Well, it was gotten out, was it?
A. It was prepared at the Forest Products Laboratory.
Q. Who got it out?
A. A man not now with us—David G. White.
Q. What time did he get this out?
A. About 1920.
Q. Where is he now?
A. I am not certain. He is with a hardwood lumber association in the East somewhere.

1547 Q. Do you know when this was gotten out?
A. About 1920.
Q. And that was before your time, was it?
A. No; I came in 1913.
Q. You have been there sixteen years?
A. Yes.
Q. Do you know whether this caused a good deal of criticism and trouble?
A. Yes, sir; it certainly did.
Q. As a result of that it was withdrawn, was it?
A. Yes, sir.
Q. Did you have anything to do with the experiment which resulted in a technical note no. 173?
A. Yes; the note is based upon all the evidence that we could collect, all the usable evidence that we could collect, and I had a hand in collecting some of that evidence.
Q. Did you have a hand in collecting the evidence as regards any variety of pine?
A. Yes; insofar as that means collecting statistics on the durability of railway ties and test tracks.
Q. Now, there was one test made with flasks, was there not?
A. Yes.
Q. Did you have anything to do with that?

1548 A. No; that was done by the pathological staff at the Forest Products Laboratory.
Q. Who was in charge of that at the time?
A. C. J. Humphrey.
Q. Is he still there?

A. No; he is in Manila.

Q. Is there anyone there who assisted him?

A. Not now; no.

Q. Did you have any hand, not to incriminate yourself, sir, but did you have any hand at all in the preparation of the ultimate figures that appear upon the third page of this—no; the second page of the technical note no. 173, a copy of which I now hand you—did you have anything to do with those figures there in actually getting them up?

A. I considered the figures and discussed them with Mr. White after he had prepared the table, and at my suggestion he changed some of them.

Q. Can you testify that the figures are approximately correct on the assumption that the method of procedure was correct? I merely want to ascertain whether the figures are correct, irrespective of the merits of the method, and I will get the merits of the method in some other fashion.

Mr. MATTHEW. It seems to me, in view of the witness's prior testimony, not only his testimony that he had nothing to do with
1549 the figures themselves, but the preparation of the bulletin itself was severely criticized and was withdrawn by the Forest Products Laboratory, certainly we should not proceed further with this.

Mr. BURR. I am not offering it as yet. I think you may make that objection at that time, as you see fit.

Mr. MATTHEW. I think you have laid no foundation for any question to the witness.

Mr. BURR. May I proceed further?

Q. The durability of commercial white oak was considered as 100%, was it?

A. Yes.

Q. And the figures that are above will be supposed durability greater than white oak?

A. Yes.

Q. And those less than a hundred to the same extent as being inferior to white-oak durability, is that true?

A. Yes.

Q. That was supposedly under the same conditions of test, is it, that was applied to all of these alike?

A. Under the same conditions of service.

Q. What were those conditions of service?

A. In contact with the ground, or in other places where the wood could collect moisture and decay, would be favored.

Q. Did you also have tests applied which related to conditions that the wood was subjected to in certain flasks?

1550 A. I did not; no.

Q. Did the flask results enter into the figures which were shown on the technical note no. 173?

A. They were certainly considered by Mr. Humphrey, by Mr. White, but to what extent they entered into these figures I cannot say.

Q. You do not know whether those figures represented a composite of conditions including the flask treatment and the treatment in the ground, and the treatment at the surface of the ground; is that true?

A. I don't know that those figures enter into—the flask figures enter into these figures in technical note 173. I know they were considered.

Q. How long is it since you saw this note 173?

A. About two minutes.

Q. You saw it years ago, did you not?

A. Yes; I saw it during its preparation, and I O.K.'d it when it was issued.

Q. You O.K.'d it when it was issued. Will you be kind enough to look it over and see if anything refreshes your recollection on the question that you say you are unable to answer?

A. Nothing in this note would help me to recall to what extent the flask tests entered into the compilation of these figures.

1551 Q. Do you know of any comprehensive experiments with regard to decay that have been made?

A. The principal experiments that have been made on the decay of wood are made in railway tracks and in pole lines throughout the country.

Q. That is the actual experience, isn't it?

A. That is experience.

Q. What I mean is this——

A. I mean something more than experience, establishing experimental sections of ties or poles or fence posts under actual conditions of use.

Q. Driving in a nail, you mean, with an eye on it where it was placed?

A. Yes; and then inspecting it frequently thereafter and keeping accurate records.

Q. Has anything as to the durability as to any of the pines been secured in that fashion?

A. Yes, sir; to a slight extent.

Q. On which of the pines have data of that kind been secured?

A. There is a small amount of evidence available on Pinus ponderosa, but the largest amount of evidence on the durability of pines is on the southern yellow pines, because they are most commonly used in contact with the ground.

Q. Is there anything on any of the white pines resulting from that kind of actual experience in use?

1522 A. There may be, but I don't recall.

Q. What railroad has experimented on Pinus ponderosa for the purposes of poles or ties or both?

A. I cannot name the specific tests on the durability of untreated Pinus ponderosa ties. Such ties are used by the Santa Fe Railroad and the Southern Pacific Railroad, the Northern Pacific Railroad, I

believe by the Great Northern, and the Chicago, Milwaukee, St. Paul & Pacific, but they are almost invariably used after having received preservative treatment.

Q. I see; creosoting or something of that kind, you mean?

A. Chiefly creosoting.

Q. They creosote their southern pine logs, do they not?

A. Yes.

Q. In this matter of durability do you know of any tests that have been attempted which would show a comparison between the durability of the white pines and Pinus ponderosa?

A. No.

Q. Other than this one that was embodied in 173; is that true?

A. That is not a test. The comparison in 173 between the white pines and Pinus ponderosa are based on opinion and judgment and not on tests.

Q. Well, but there was a test made of these various woods.

A. There was no comparative test made in which Pinus ponderosa and the white pines were used under the same conditions of

1553 service. They were included in the flask test perhaps.

Q. They were included in the flask tests?

A. I think they were, but I would have to see the record again to be sure; but I am not positive they were; but there is no service record available that I have ever seen or heard of in which those pines in question have been compared under the same service conditions.

Q. Now, the results of the flask tests, were they ever given out?

A. Yes; they were published by Mr. Humphrey.

Q. What publication is that?

A. I would have to look it up for you. I think it was the Review of Applied Mycology.

Q. Was that gotten out by the Forest Products Laboratory?

A. No; that is a national publication, and his article was a contribution to it.

Q. How much did you have to do with that flask test?

A. Not a thing.

Q. You mean to say that 173 was gotten out by the Forest Products Laboratory without anything to back it up?

A. No, sir.

Q. What did they have to back it up?

A. The durability——

1554 Mr. MATTHEW. I suggest the witness should not read from the——

A. Well, I will tell you, upon the available evidence, where evidence was available, plus observation and general opinion—might call it expert opinion.

Q. What evidence did they have available as to the comparative durability of the pines—the white pines and ponderosa?

A. The general experience with the use of the white pines, during the 200 years since they began to be used, indicated that those pines

had moderately high durability. The general experience with Pinus ponderosa indicated that that wood had low durability in contact with the ground or any place favoring the growth of decay. That is a matter of common knowledge.

Mr. BURR. That is all.

Mr. MATTHEW. No questions.

(Witness excused.)

C. P. WINSLOW was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Winslow, when was technical note 173 withdrawn?

A. Oh, approximately about eighteen months ago, I think, as I recall it, without looking up the date.

1555 Q. Was that withdrawn as the result of considerable pressure from various interests?

A. It was withdrawn—considerable amount of rather aggressive criticism of the correctness of the note by interests that felt they were affected by it.

Q. What interests were those?

Mr. MATTHEWS. If you will pardon me for a moment—

Mr. BURR. Pardon me.

Q. You are in charge of the Forest Products Laboratory?

A. Yes, sir.

Q. Director, are you?

A. Yes, sir.

Q. And you have been for how long a period?

A. Since April 1917.

Q. How large a staff have you, Mr. Winslow?

A. Technical staff of approximately 75 to 80.

Q. Now, where did the pressure come from for the withdrawal of this technical note?

Mr. MATTHEW. I don't think you should use the word "pressure." I don't think the witness did. I think he used the word "criticism."

Q. Where did the criticism of technical note 173 come from?

Mr. MATTHEW. Is that material?

Examiner SHEPARD. If you will object, I will rule on it.

1556 Mr. MATTHEW. I object on the ground criticism is not material in this case.

Examiner SHEPARD. I think so. I will support the objection. The matter was withdrawn by the Forest Products Laboratory. That is sufficient for me. I do not care why.

Mr. BURR. I think the ruling is in error for this reason: If it was withdrawn as the result of criticism and in order to avoid difficulty it might not be withdrawn on the ground it was inaccurate. If it was withdrawn on the ground of inaccuracy that is one thing. If it was withdrawn simply because somebody is hurt because their wood is put down at a low durability, that is something entirely

different; and I think it is highly competent to prove it was upon criticism and where the criticism came from.

Examiner SHEPARD. The matter does not come before us at all. The paper is not in evidence and has not been admitted to this record.

Mr. BURR. I am leading up to the offer of the document. If the document was withdrawn primarily on account of criticism and not because it did not represent the best judgment of the Forest Products Laboratory, why I think that the evidence is competent. If it was withdrawn because it no longer represented the views of the Department, why then I would not think it worth while to
1557 offer it. Therefore it seems to me the whole matter of the criticism is thoroughly competent, and I desire to lay a foundation for the offer of this document, and I am trying to do so.

Mr. MATTHEW. If a responsible Government body has withdrawn a given publication it seems to me that it must be deemed to be withdrawn fo all purposes.

Examiner SHEPARD. Yes; it is not up to us to inquire why the Forest Department withdrew it. I will state for your information, if the document testified to by the previous witness is offered for the record I will refuse it.

Mr. BURR. I so offer it.

Examiner SHEPARD. I do not think the document means anything to this case one way or the other. I see no reason why it should be in the record. It is a document that has been thoroughly discredited by the parties who issued it.

Mr. BURR. Absolutely not, if they withdraw it because it hurts somebody and not because it was not true.

Examiner SHEPARD. I say it is not an official document at all.

Mr. BURR. It was an official document issued, and the publication of it has now been stopped as a result of this pressure. It seems to me the facts contained in it as representing the best views of the Forest Department of Madison are now thoroughly competent
1558 and it seems to me that the pressure that was brought to bear makes the document stronger than weaker.

Mr. MATTHEW. I do not understand merely the cessation of publication; I understand it was withdrawn, that it was not regarded as being the publication of the Bureau.

Examiner SHEPARD. The position of the Bureau at all.

Mr. BURR. I have explained myself with sufficient fullness.

Examiner SHEPARD. Anything further?

Mr. BURR. Yes.

Direct examination (continued):

Q. Mr. Winslow, is it your view that Pinus ponderosa is a less durable variety of the wood than the northern white pine where exposed to the weather?

Mr. MATTHEW. Just a minute——

Mr. BURR. He is the head of this Bureau, with a large staff, and if he is not an authority on the durability of wood from the standpoint of a technician, I do not know who would be.

Mr. MATTHEW. It is entirely possible he may not himself have gone to the question of durability.

Examiner SHEPARD. Find out what he knows about wood; see if he has got a groundwork. A man may be in an
1559 executive position in a bureau having executive charge of a bunch of men without knowing anything about woods at all.

Q. What opportunity, Mr. Winslow, have you had for the purpose of reaching a sound opinion with regard to the durability of various pine lumbers here in controversy?

A. Almost entirely reliance upon the viewpoint of members of the staff who make a study of it and tell me what their thoughts or viewpoints are.

Q. Is it part of your duty to receive the reports from your staff?

A. Yes.

Q. Is it part of the duty of the staff to keep you informed as to the problems of their studies and as to the results they obtain?

A. Yes.

Q. And as to their methods of obtaining those results?

A. Yes.

Q. In connection with that work, have you had an opportunity to know what the studies of your staff are and the information that they have been able to obtain and the opinions they have been able to arrive at with regard to the durability of pine wood?

A. Yes.

Q. What in your judgment is the more durable of the four pine woods that we have here in controversy?

1560 Mr. MATTHEW. Is that answer based upon the opinions he received from members of the staff?

Q. Based in part upon opinions of members of the staff, is it?

A. The only way I could answer your question is that there was an abundancy of opinion that for conditions favorable to decay, that the tendency of the comparable durability would be about as shown in that technical note 173, but upon intensive consideration and scrutiny of that note, and so on, it developed that we had not enough real data of any kind to substantiate an opinion one way or another on it, and therefore it seems that the proper thing to do was not to give such a conclusion to the public, in spite of what might be the feeling or viewpoint of individual members concerned with it, since they were unable to firmly establish the correctness of those opinions regardless of the sincerity with which they might hold them.

Q. You frequently advise or your office advise as to the comparative durability of wood for various purposes, does it not?

A. Yes, sir.

Q. And the advice that you give is white pine in its three varieties is more durable than that of Pinus ponderosa?

Mr. MATTHEW. That is a little bit leading, I think. I object to that as leading.

1561 Examiner SHEPARD. Just turn it around and ask him the difference between the two and not lead him.

Q. What is the difference between white pine and Pinus ponderosa as to durability?

A. I don't know.

Q. Which do you regard as the more durable where exposed to the weather?

Mr. MATTHEW. He says he does not know.

Mr. BURR. That is a different question.

Mr. MATTHEW. He says he does not know which is the more durable.

Mr. BURR. Read the last two questions and the answer to the first one.

(Questions and answer read.)

Q. What advice do you give as to the durability of the pines?

Mr. MATTHEW. I think I shall object to that on the ground the witness has said he does not know which of the pines is the more durable, and therefore it should be immaterial as to what advice he gives.

Examiner SHEPARD. If you know, I will let you answer.

Q. What advice do you give as to the durability of these various pines when exposed to the weather?

A. Actually speaking, if somebody comes to the laboratory seeking that advice, I see that they get into the hands of the specialist

1562 on that whose opinion on that I consider more reliable than mine.

Q. Whose opinion?

A. Mr. Hunt's or Dr. Richard's.

Q. Do they answer letters in their own name or do they prepare them for your signature?

A. Matters of that type they answer in their own name generally.

Q. This technical note no. 173 was before your time, was it?

A. No.

Mr. BURR. It was in your time. That is all.

Examiner SHEPARD. Any cross-examination?

Mr. MATTHEW. No.

Examiner SHEPARD. You are excused.

(Witness excused.)

GEORGE M. HUNT recalled, and thereupon testified as follows:

Direct examination (continued) by Mr. BURR:

Q. Mr. Hunt, from time to time you have occasion to answer letters to the Forest Products Laboratory, or do you individually, with

regard to the various durability characteristics of Pinus ponderosa, monticola, and lambertiana and strobus, do you?

A. Occasionally; yes.

Q. What variety of pine do you advise as preferable for
1563 uses where exposed to the weather?

A. In answering such a letter we would explain first that the durability of any wood exists only in its heartwood and that the sapwood in all those pines, as well as all other species, has low resistance to decay. Now, if one can use the heartwood, then we say it is our opinion that the heartwood of the white pine has more decay resistance, will give longer service under conditions favoring decay than the heartwood of Pinus ponderosa. Furthermore, we sometimes say that the mill run of the white pine probably would average higher in durability under decay-producing conditions than the mill run of Pinus ponderosa, because we believe the mill run of the white pine has a lower percentage of sapwood than the mill run of Pinus ponderosa.

Q. Do you advise with regard to the relative durability of Pinus ponderosa and strobus as regards the heartwood?

A. Yes; that is what we would base our comparison upon.

Q. You base your comparison partly upon the greater percentage of heartwood in one rather than the other?

A. Yes.

Q. If you were to segregate all the sap of strobus and all of the sap of ponderosa, would you regard the heartwood of strobus as more or less durable than the heartwood of Pinus ponderosa?

1564 A. I believe the heartwood of Pinus strobus rather than the heartwood of Pinus ponderosa.

Q. Is the same true of the heartwood of other white pines?

A. We so believe.

Mr. BURR. I think that is all.

Cross-examination by Mr. MATTHEW:

Q. Has there been any tests which in your opinion are adequate, Mr. Hunt, which would enable you to advise with assurance as to to the relative decay-resisting qualitites of the heartwood Pinus lambertiana and the heartwood of Pinus ponderosa?

A. There have been no tests which we consider adequate to settle the question of comparative decay-resisting properties of those two woods.

Q. Have there been such tests as will enable you to advise with assurance as to the relative decay-resisting qualities of the heartwood of Pinus ponderosa and Pinus monticola?

A. There have been no tests that settle that question.

Q. Have there been tests which will adequately settle the question as to the relative decay-resisting qualities of the heartwood of Pinus ponderosa and the heartwood of Pinus strobus?

A. There have not.

Mr. MATTHEW. That is all.

1565 Redirect examination by Mr. BURR:

Q. Do you know of any efforts that have been made adequately to test the decay-resisting qualities of these varieties of lumber?

A. The only tests I know of in which that attempt was made was a series of flask tests by Humphrey, previously referred to.

Mr. BURR. That is all.

(Witness excused.)

HOWARD F. WEISS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Weiss, your business is what, please, sir?

A. I am in the industrial research work with the C. F. Burgess laboratories.

Q. Industrial research work in what line?

A. Largely in the wood line, wood cellulose.

Q. What is your experience with regard to wood technology been, Mr. Weise?

A. My experience in wood technology has been confined almost entirely to work I did while connected with the Forest Products Laboratory.

Q. You were director of that previous to Mr. Winslow, were you?

1566 A. Yes, sir.

Q. During what period does that cover?

A. I resigned, I think, in April 1917, and I was director for about three years—two or three years.

Q. Now, there have been certain references in the record of certain flask experiments. Were they carried on during your time?

A. Yes, sir.

Q. For how long a period was that carried on during your entire time? Do you remember?

A. No. I think those tests went over a period of about two years—about two or three years.

Q. Will you outline what the method adopted was in a general way?

A. We were trying at that time to get absolutely fundamental information.

Examiner SHEPARD. Wait a minute. If nothing came from this, why go into it.

Mr. BURR. I want to get, if the examiner please——

Examiner SHEPARD. If there are no results leading from it, nothing that I can consider, nothing upon which I can make a finding, why go into it and fill the record with it?

1567 Mr. BURR. If the examiner please, there are results that are published which I may desire to offer if I can lay the proper foundation. The author is in the Philippines; if I remember rightly Mr. Humphrey is in the Philippines.

A. Yes; the last I heard of him.

Q. This was Mr. Humphrey's article that was published. That, as I understand it, has nothing to do with the data published in 173; is that true?

A. Yes; that was gotten out prior to this.

Q. Prior to Technical Note 173, which was withdrawn, you mean?

A. Yes.

Q. Mr. Humphrey's publication in Mycologia; have I got it right now?

A. Yes.

Q. That was an official article, was it?

A. Well, it was written by Humphrey while he was in the employ of the United States Government. Yes; he signed it. It was not published as a formal Government document.

Q. Mycologia is a scientific magazine rather than a Government publication, is it not?

A. Yes; it is a scientific journal.

Q. Have you a copy of that article?

A. Yes.

Q. I believe I will ask you to produce it if I may. Did you see the article before it was published, Mr. Weiss?

A. Yes.

1568 Q. Has it ever been disavowed, so far as you know?

Mr. MATTHEW. Just a minute. I object to that question.

Mr. BURR. I withdraw it.

Examiner SHEPARD. Yes.

Mr. BURR. Off the record a moment.

(Discussion off the record.)

Mr. BURR. If the examiner please, I would like to question the witness with regard to this matter for the purpose of leading up to an introducton of a copy of this when I am able to secure one.

Examiner SHEPARD. All right.

Mr. BURR. And have it understood what number it is to be, and so forth.

Mr. MATTHEW. Do I understand counsel expects to offer through this witness an article published by a man named Humphrey who wrote it as his own personal contribution to a public magazine?—because I certainly object to it.

Mr. BURR. I want to see what I can do in the way of laying a foundation, then you can make such objection as you see fit.

Mr. MATTHEW. I object right now.

Mr. BURR. I would like to see what we can prove in regard to it first. It may be I won't want to offer it.

Q. Mr. Weiss, as I understand it, you looked over this article before it went out?

1569 Q. Do you recall whether you approved the article as being a correct presentation of experiments which were conducted under your supervision?

Mr. MATTHEW. I object to that question.

Mr. BURR. Perhaps I have not laid sufficient foundation. I am not pressing an answer for that. Just leave the question.

Q. Mr. Weiss, Mr. Humphrey, I understand, was under your supervision in connection with this work he was doing.

A. He was under my supervision and the supervision of Dr. Metcalf, of the Bureau of Pathology. He reported directly through Mr. Metcalf, and the Bureau of Pathology was cooperating at that time with the United States Forest Service in these investigations.

Q. Was Mr. Humphrey a member of your staff?

A. We considered him such.

Q. Was he such?

A. In my opinion; yes.

Mr. MATTHEW. To whom did he report?

A. To Dr. Metcalf and myself.

Q. Did Metcalf report to you?

A. No.

Q. Who did Metcalf report to?

A. He is in the Bureau of Pathology. That is another

1570 bureau of the Department of Agriculture. This was a cooperative undertaking between the two bureaus, the same as the Forest Service is cooperating with the University of Wisconsin.

Q. Then, as I understand it, did Mr. Humphrey give part of his time to your work and part of the time to the Bureau of Pathology?

A. Exactly.

Q. Now, then, was this regarded as part of the pathology work or part of your work?

A. Part of our work.

Q. This flask work was part of your work, was it?

A. Yes, sir.

Q. As regards this particular work which is reported in this article in Mycologia, or whatever it is, this work was under your Bureau rather than under the Bureau of Pathology, was it?

A. We asked the Bureau of Pathology to cooperate with us in making this study on the durability of American woods, and they detailed this Mr. Humphrey to the laboratory here at Madison to conduct this work; and he worked right with the same material that the men were using who were paid by the Forest Products Labora-

tory, and attended our staff meetings, and to all intents and purposes functioned as though he had received his pay from the United States Forest Service rather than the Bureau of Pathology.

1571 Q. As a matter of fact he was paid by the Pathology Bureau?

A. Yes, sir.

Q. But his reports came through you?

A. Yes.

Mr. MATTHEW. Through you or through Dr. Metcalf to you?

A. Through Dr. Metcalf to me.

Q. You approved of the publication of this article, did you?

Mr. MATTHEW. I object. I cannot see whether he approved of the publication of the article or not has anything to do with this case.

Mr. BURR. I submit I am laying the foundation.

Mr. MATTHEW. I submit it does not lay a foundation.

Examiner SHEPPARD. I have not seen any yet.

Mr. BURR. I will ask the privilege of the Commission appointing an examiner to take testimony out in the Philippine Islands and prepare interrogatories and try to get that out and introduce in that fashion. I had hoped to be able to get by, but I think it is practically impossible at the present statge of the game to technically qualify this papper.

Mr. MATTHEW. In view of the fact, Mr. Burr, that the prior witnesses for the laboratory testified respecting the inconclusiveness of that data and the fact that technical paper 173 is withdrawn,

1572 it seems to me it is quite unreasonable for you to expect to introduce in this fragmentary information.

Examiner SHEPARD. There is a right way and wrong way to do everything, gentlemen, and the only right way is to proceed.

Mr. MATTHEW. I want it to be clearly understood that my objection is not based on any merely technical ground but it is substantial.

Examiner SHEPARD. I understand.

Mr. BURR. If the examiner please, there was an effort here made to reproduce the functions of decay, the fungi which produce decay, the moisture condition, and to give the same treatment to a number of different classes of wood and combine the decay of many years in a short time, and it seems to me it is highly material, and it seems to me that it ought to be susceptible of proof as to what the results were as the very best thing that has thus far been attempted in the line of proof of durability of different species of comparison.

Mr. MATTHEW. Will you let me have the testimony of that witness? The witness regarded it as entirely inconclusive. I never heard of the so-called flask test until today. I am basing my objection on substantial ground.

Q. Did technical note 173 purport to give the result of the flask test?

1573 A. That was published after I left the laboratory, Mr. Burr. I mean 173.

Q. What was the general purpose of the flask test?

A. The general purpose of the flask test was to try and evaluate American woods under exactly identical conditions as to their relative durability.

Q. Were fungi introduced into each flask?

A. Yes; the same fungus.

Q. Were there several fungi?

A. Yes; that is one of the variables with which the technical man has to deal. There are several fungi that will attack any given kind of wood, and this test was run with just one fungus, trying to eliminate those variables.

Q. How about moisture condition?

A. The attempt was made to hold the moisture conditions constant, because that also affects durability.

Q. What was the comparative period that Pinus ponderosa lasted as contrasted with the white pine?

Mr. MATTHEW. I object. Counsel is making the same effort to get matter in without any proper foundation or qualification, either.

Mr. BURR. If the examiner please, this man had this work done under his supervision. The man who did it is out of the jurisdiction, and it seems to me that it ought to be possible to get this material in.

1574 Examiner SHEPARD. What was the question?

(Question read.)

Examiner SHEPARD. Do you think you can answer that question? If you have sufficient knowledge I think I will let you answer it.

Mr. MATTHEW. Before Your Honor rules finally, may I ask the witness one or two questions?

Examiner SHEPARD. Yes.

Cross-examination by Mr. MATTHEW:

Q. Can you tell me the period during which these flash tests continued?

A. The article in question was published in 1916. I think these tests ran about 1913 to 1915, about in there.

Examiner SHEPPARD. Nothing been done in this respect since that time; I mean by the Bureau.

A. I believe Mr. Winslow can answer that better than I could. You see I am not there any more.

Q. Were you Mr. Humphrey's chief during the entire period while these flask tests were being carried on?

A. No; Mr. Humphrey's chief was this Dr. Metcalf that I referred to.

Q. You went with the laboratory in about 1914?

A. No; I went with the Forest Service in 1905, and we started the Forest Products Laboratory about 1909. I went there

1575 as assistant director at that time.

Q. In 1909?

A. About that time; yes.

Q. What was your status when these flask tests were initiated?
A. I was regarded as assistant director.
Q. What relation did Mr. Humphrey sustain to you at that time?
A. Well, he worked out under our general direction and supervision in the carrying out of these tests.
Q. Were you the director when the tests were completed?
A. Yes.
Q. Did you have anything to do with making the tests?
A. Only in a supervisory way.

Mr. MATTHEW. I think it is clear that he is not qualified to state the results of the tests. We ought to have the man here who made them, so we have the opportunity to cross-examine him.

Mr. BURR. You surely would if he was in town, and I think the best evidence is through the man he reported to.

Mr. MATTHEWS. I have no opportunity to cross-examine this witness as to how that test was made or the details of the matter.

Examiner SHEPARD. Off the record.

(Discussion off the record.)

Mr. BURR. I think that is all.

1576 Mr. MATTHEW. I again want to assure the examiner and counsel I have no desire to hamper the Government in the development of its case, but I do not want to waive what I believe to be a substantial right, the opportunity to cross-examine the man who is reported to have made this test.

Examiner SHEPARD. That is a right that all defendants and respondents have, of course. Anything further?

Mr. BURR. I think that is all.

Examiner SHEPARD. Mr. Burr, do you want to adjourn to any time, or shall I adjourn without date?

Mr. BURR. If the examiner please, off the record.

(Discussion off the record.)

Examiner SHEPARD. Mr. Reporter, adjourn this hearing to reconvene again on five days' notice. The attorneys to be given five days' notice on reconvening again.

(Adjournment thereupon taken.)

1577 [Omitted.]

1578 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inc.

SPOKANE, WASH., *January 20, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before Ellis De Bruler, examiner (as per copy of order which is herein set out in full, the copy to be attached to the original transcript of testimony).

Appearances:

Eugene W. Burr for the Federal Trade Commission.

McCutcheon, Olney, Mannon & Greene, attorneys for all respondents for which that firm appeared as named at the original hearing in Boston, represented by Carl I. Wheat.

1579–1580 [Order appointing examiner omitted. Printed side page I, ante.]

1581 Examiner DE BRULER. If the parties are all ready, the hearing will now be resumed, pursuant to adjournment.

Mr. BURR. If the examiner please, I would like to call Mr. Dixon.

GRANT DIXON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your full name?

A. Grant Dixon.

Q. Mr. Dixon, your business is what, sir?

A. Manufacturing of lumber, also manufacturing from lumber sash, doors, moldings, frames, box shooks, inside finish, and so forth, I would say.

Q. And the name of your company is what?

A. The Western Pine Manufacturing Company.

Q. And in connection with your work do you sell lumber as well as manufacturing millwork?

A. Very little lumber. We sell some lumber.

Q. Now what is the lumber material out of which you make your millwork from?

A. I would say ninety-five percent pondosa pine.

1582 Q. Ninety-five percent pondosa pine?

A. Yes.

Q. And the balance of it would be Idaho white pine, would it?

A. No. It would be a mixture. We sometimes make some cottonwood, some spruce, and occasionally a little white pine.

Q. I see.

A. Special cases.

Q. Where is your mill located?

A. In Spokane.

Q. Now, for how long a period have you been calling your type of lumber pondosa?

A. (Pause.) Well, I would say since—it was called that when I bought the company.

Q. And that was when?

A. I think in 1922.

Q. Now, in your business you sell to what class of purchasers, retailers or jobbers, I mean wholesalers, or what is the line?

A. Well, we have sold our biggest items, are probably to jobbers, and we have sold to others. Now you understand we are in a

variety—we manufacture a variety of goods, as I told you—box shooks and such as that. Now, that is not sold to jobbers. That is sold in the community.

Q. I was referring to millwork.

1583 A. Well, millwork; yes.

Q. The millwork is sold to jobbers?

A. Principally to jobbers and some to wholesalers and retailers.

Q. Now, do you have salesmen in the organization to dispose of these products?

A. We have connections; yes.

Q. Do you come in contact with these salesmen? Are you engaged in supervising your sales operations?

A. To a certain extent; yes.

Q. And you do come in contact with the problems of the sales forces, do you?

A. Oh, yes.

Q. In disposing of the goods?

A. Yes.

Q. Do you find that there is any competition on the part of concerns making so-called California white pine millwork—I mean of the California white pine so-called millwork—any competition?

A. (Pause.) In one or two cases they sold California white pine. Whether that has been pondosa and sugar pine mixed, I don't know.

Q. You do not know, then, whether you meet in competition millwork which is sold to the trade as California white pine sash and doors, and so forth?

1584 A. We have, as I just said—we have one or two occasions where we have come across California white pine.

Q. Well, where is your market? What part of the country do you call upon—do your force call upon the jobbers?

A. All over the United States; principally east of the Mississippi River, and south quite a good deal. We have quite a trade in Texas.

Q. Do you regard the use of the word "white pine" in connection with the trade lumber California white pine as a disadvantage to you in disposing of your goods?

Mr. WHEAT. Now, if the examiner please, this man, this witness, has testified that he never has come in contact with California white pine except in one or two cases, and I think to ask him whether he finds any disadvantage in his business, without asking him the specific instances in which it might have been a disadvantage, is entirely immaterial in this case and is not a subject on which this witness is qualified to speak.

Examiner DE BRULER. The objection is overuled. Note an exception. Let him tell what he knows about it.

Mr. BURR:

Q. All right, sir.

A. Ask the question again, please.

Q. Will you read the question, Mr. Reporter, please?

(Question read.)

1585 A. (Pause.) Well, with the one or two exceptions, why it has not been a disadvantage.

Q. But where you have met the manufacturer of millwork made of California white pine do you regard it as a handicap, do you?

A. (Pause.)

Mr. WHEAT. May my objection be understood as to such a question as this, certainly?

Examiner DE BRULER. Read that question again there.

(Question read.)

I would suggest that you define it.

Mr. BURR. Let me take a little different course. I will withdraw that question, if I may.

Q. Now, your pondosa is made out of what species of pine tree, your pondosa products?

A. Made out of what species?

Q. Yes; the pondosa products.

A. Ponderosa pine. I presume that is what it is. That, *au* be the botanical name. I do not know exactly.

Q. Is that tree the same one as furnishes the California white pine products, do you know?

A. Well, that is—Mr. Burr, if I might refer to that other question, I was not sure that those other people were selling sugar pine or the California pondosa pine.

Q. I will withdraw the question. I will not press the question any further. Where do you sell lumber, aside from your millwork products?

1586 A. What?

Q. You are in the lumber business, too, are you not?

A. Not very much.

Q. Not very much?

A. No.

Q. That is negligible, is it, pretty nearly?

A. Yes.

Q. The sales of lumber?

A. Yes. We only sell lumber, the accumulated surplus from the manufacturing of different articles.

Q. Now, do you find that the wood made from ponderosa holds paint in the case of the heart portions as well as it does in the case of the sap portions, or better? Is that question clear?

A. The heart portions of the pondosa pine?

Q. Yes. Is there any difference in the paintability of the heart and the sap wood of the pondosa?

Mr. WHEAT. If Your Honor please, this witness has not been qualified to know anything about the paintability of these woods. If he

is an expert on paintability, I suggest that he will so qualify him. He says he manufactures millwork.

Mr. BURR. In manufacturing this millwork do you have an opportunity to learn as to the advantages and disadvantages of the wood that you manufacture in the actual use of it?

A. We do not make millwork out of the heart of a pondosa
1587 pine.

Q. You do not?

A. No.

Q. Why not?

A. It is not the type of wood to make it out of.

Q. Your millwork, then, is the sap portion of the tree, is it?

A. More or less the sap portion; yes.

Q. Exclusively, you mean?

A. Well, that is open to argument. What some might call sap, others might not.

Q. Well, the—define what you mean when you refer to sap?

A. What is that?

Q. Define what you mean, if you can, when you refer to sap?

A. It is the outside of the log, the outside of the log of pondosa pine. It is the cutting portion of the log. When you get into the heart portions of the log there is lots of knots and other defects that cannot be put into millwork, and it has not the texture that can be put into millwork.

Q. How much of the log do you regard as the heart portion? Are you talking about the very center of the tree?

A. That is according to the log, Mr. Burr. There is more in some than others. That is all according to the log.

Q. Yes; I understand it varies, but the sap portion is the part that inducts the sap, isn't it?

1588 A. What is that?

Q. The sap portion of the tree, of any tree, is the part that conducts the sap—isn't it?—to the leaf and to the outer branches? Is that right?

A. Well, I have never made a study of that, Mr. Burr; I could not tell you about that.

Q. Now, when you say that you use the sap portion only for millwork, did I understand you correctly?

A. Mostly, millwork is made out of the sap portion of the lumber.

Q. That is the light part of the wood, is it, in color?

A. Not only that, but that is the cutting type, more or less. When you get into the heart there is more defects show up in the heart of the log than does in the sap. It is a harder texture.

Q. Now, do you have experience as to which part of the wood will hold paint the best, as regards to the heart and the sap I am referring to?

A. (Pause.) Generally speaking, the sap will. You might find some that has more sap than others and some might class it as——

Mr. WHEAT. If your honor please, I move that that answer be stricken out as not responsive to the question. The question was whether or not the witness has had experience.

Mr. BURR. That is true.

1589 Mr. WHEAT. And I think that question can be answered by yes or no.

A. No. I am not a paint expert.

Mr. BURR. What?

A. I am not a paint expert; no.

Q. Do you in connection with your business post yourself as to the paintability of different parts of the wood?

A. No; I do not.

Q. You do not?

A. No.

Q. Now, do you know whether or not the product that you get out in the way of millwork must by the consumer in the ordinary instances be painted?

A. Not always; no.

Q. Beg pardon?

A. No.

Q. You think a sash and door is quite apt to be left unpainted, do you?

A. Sometimes they might oil it.

Q. Beg pardon?

A. Sometimes they might oil it.

Q. They may oil it?

A. They may make an oil finish.

Q. Now, in connection with your business, is it part of the manufacturer's duty to ascertain whether or not he is selling

1590 something that does not take paint and oil well, or whether he is selling a product that really will take paint and oil properly when it is installed for use? Is that part of your business?

A. I do not go out and do that myself, Mr. Burr.

Q. Yes; but your company has to know whether you are selling something that will hold paint and oil, or whether it won't; isn't that true?

A. We make the product according to the specifications. We do not tell them about paint.

Q. Of course not.

A. We do not make that study. We presume that the painters know that line of business, not ourselves.

Q. Well, now, what part of the forest are you familiar with in the West?

A. What part?

Q. You are familiar with the forest in Idaho, are you?

A. I have lived in Idaho; yes.

Q. And you have studied the forests in Idaho, have you? You are familiar with the trees and the timber and the forest products of Idaho, are you?

A. I have not made a study of that, excepting I have been in them all my life.

Q. I do not mean a technical, botanical study of them. You
1591 have studied the forests of Idaho from the practical standpoint, have you?

A. I have worked in them.

Q. And you have made a study of them now, haven't you?

A. It is accord'g to how you mean. What do you mean by study, Mr. Burr? I do not understand.

Q. In your answer, what you mean, you have made a study of the trees, have you? You have not gone through the forests and looked at nothing, have you, that is a certainty, that's a cinch?

A. If I go down to buy lumber manufactured from logs, I generally go out in the timber to see what kind of logs that will produce, the shop type.

Q. You are familiar with the trees in the pondosa forests, are you?

A. To a certain extent; yes.

Q. And you know what a pondosa tree is; they are cutting them every day, are they not?

A. I know the lumber; yes.

Q. And you have gone out there and given them your attention; is that true?

A. Let me correct you there.

Q. Yes. Please do.

A. Up to the present time our company has not manufactured lumber. We are now, some, but we have been remanufacturing lumber. We have bought our lumber.

1592 Q. You have bought your lumber?

A. And bought it on grades and manufactured different articles from the grades we bought.

Q. I see. And in that connection you have gone into the woods, and have been in the woods considerably in Idaho, have you?

A. I went and looked at timber, and I would buy the lumber to be produced from this timber on grades, and I would not base my estimate from the logs principally. It was from the manufactured lumber that came from them.

Q. Where else have you visited the forests besides in Idaho? Any other parts of the country?

A. In adjacent—around Spokane.

Q. Now, is the Pinus ponderosa a uniform timber, or does it vary considerably?

Mr. WHEAT. May I ask whether that is limited to the Pinus ponderosa of the Spokane area?

Mr. BURR. Yes. It is limited to his experience and as to which he has testified; that is all.

Q. Please confine yourself, sir, to your knowledge of the forests.

A. There is variations in the growths of ponderosa pine.

Q. To what extent is the variation, what is this departure, in what qualities?

1593 A. There are certain trees—certain parts of it—that you can get more what we say shop lumber and factory lumber out of than others. It would be a better texture.

Q. I see.

A. You can get some trees produce the fancy finish, and other trees are not so good.

Q. Now is there a variation in the trees as you have observed them of the ponderosa species as regards color?

A. (Pause.) Yes. There is some variations.

Q. Is it a variation between the color of the heart and the sap of the ponderosa tree?

A. Yes.

Q. Is that more or less marked than the variations of the Idaho type lumber?

Mr. WHEAT. Now, if Your Honor please, this gentleman has testified that he never uses Idaho white.

Mr. BURR. Oh, no; he has not.

Mr. WHEAT. He stated that he made millwork of cottonwood and spruce and occasionally white pine, I think he said.

Mr. BURR. I think he did say occasionally.

Examiner DE BRULER. That is my recollection, what he said.

Mr. BURR. Will you read the question, please?

(Question read.)

A. We have not used Idaho to the extent that I would be competent to testify whether there is as much variation as there is in ponderosa.

1594 Q. Is there much variation in the ponderosa tree with regard to the amount of heart and sap in the young tree, percentage?

A. Yes. There are some trees have more heart than others.

Q. And would that be true of trees about the same age and size, would some vary considerably?

A. Yes. I think you will find there is variation in different trees.

Q. Now, is there much variation in the ponderosa trees as to the amount of resinous, the pitchy substances, that there is to be found?—will you read the question, please?

(Question read.)

A. There is some variations, yes, in that.

Q. Well there is quite a considerable variation, would you say?

A. Well, in just what amounts I could not say. There is some variations, I would say.

Q. Are you familiar with the so-called Tokoa district in Idaho?

A. Yes.

Q. Now have you visited that district?

A. I used to visit it quite often. Not so much lately.

Q. Well, what is the characteristics of the ponderosa there?

A. What do you mean by characteristic?

Q. Well, is it a soft or a hard ponderosa?

1595 A. I must say the texture is very good, soft, a nice good texture for the manufacture of millwork.

Q. Do you regard that as of a superior character of ponderosa, that which grows in that section, in that district?

A. I would say a very good quality; yes.

Mr. WHEAT. May I ask, Mr. Examiner, whether the California white-pine industry is being tried on the Tokoa district, and others around Spokane, Washington? Frankly, Mr. Burr, I fail to see the pertinency of this line of testimony.

Mr. BURR. I am about through the examination, and I would say for the examiner's benefit that the species of Pinus ponderosa, in my judgment, is a species which is in interest here in two respects. In the first place, the species is in interest for the reason that the Commission's complaint alleges that it has been misnamed. Then it is of interest here, also, for the reason that the amended complaint alleges that that misnaming is of detriment to five different classes of the public. The one is the consumer, another is the manufacturer of the same type of lumber made in the Pacific Northwest, and not misnamed according to the theory that is embodied in the complaint, and called pondosa instead of a name which embraces the word "white." Then there is also the interest, inasmuch as it constitutes when sold as California white pine, according to the theory embraced in the complaint, unfair competition against not only the pondosa

1596 wood but also the wood which is manufactured and sold of the three various white-pine species. So that it seems to me that the character of the lumber made from Pinus ponderosa, and the character of the tree, on the side of those that are injured——

Examiner DE BRULER. I think it is very material. Answer the question.

Mr. BURR. And also on the part of others.

Examiner DE BRULER. I understand it is to prove the characteristics, the different points, in different localities, is that it?

Mr. BURR. Yes, sir. And one of the things that we have alleged in the complaint is that the Pinus ponderosa varies very widely in three respects: One is that it varies in its wide range; another is that it varies in its stand and character in the same locality; and, thirdly, that it varies in the same tree between heart and sap, more than some woods mentioned in the complaint.

Examiner DE BRULER. I think those questions can be asked to a limited extent. I would not want to go too far into them.

Mr. BURR. Yes. I do not want to go too far in the field, and that was the only district I wanted to ask about. I think I am through with that, practically.

Q. Will you read the last question?

(Question and answer read.)

Q. Now, there are other sections, would you say, within the
1597 district that you have become familiar with that are not as good as the Takoa district as regards to the character of the pondosa that is produced. Is that true?

A. It may be just as good for some purposes, but not for millwork.

Q. Not for millwork?

A. Yes.

Q. What are the characteristics that you need for millwork; what do you seek to find in the Pinus ponderosa you use for millwork in a high degree?

A. You want soft, high-textured wood, with not much grain to it.

Q. With not much grain?

A. Yes.

Q. Have you ever observed the differences between the spring and summer wood in the same annual ring, as having a bearing upon softness; have you ever observed that?

A. The spring and summer wood?

Q. Yes.

A. I do not know as I understand that question.

Mr. BURR. I will withdraw the question, then. I guess that is something that you have not given very much attention. All right. You may step down, sir.

1598 Cross-examination by Mr. WHEAT:

Q. Mr. Dixon, you really do not know a very great deal, do you, about the sale of Pinus ponderosa as California white pine?

A. Is that the botanical name for what we——

Q. I am asking you whether or not you know. I will reframe the question, Mr. Dixon. You really do not know much, do you, about the sale of what is known in the trade as California white pine?

A. (Pause.) I cannot say that I know so much about it. I know the wood. I know that we compete against it right along. I know that—you understand California makes sash and doors and millwork the same as we do out of something of the same class of wood, and we have——

Q. Now, out of what botanical species is the wood commonly called in commerce California white pine produced?

A. I do not know.

Q. You have not made any particular study of botany, I take it, have you?

A. No.

Q. Your interest is, isn't it, more in the quality and utility of the lumber as it comes than in the tree?

A. That is it.

Q. You are not familiar with the wood now marketed as
1599 pondosa under any other trade name, were you? May I say that I think you testified that when you bought this company, in 1922?

A. Yes.

Q. That wood was called pondosa in the market?

A. Well, I think really about that time or may be a little later, somewheres about that time, the wood was sold and looked at as western white pine.

Q. Yes.

A. But I do not think that is sold much that way any more. Anybody that is dealing in the woods knows one wood from the other. When you talk pine, you do not have to go and say mine is pondosa white and that is Idaho white pine. When we are talking about white pine, we refer to it as Idaho white pine. It is not necessary for anybody in the lumber business to go into botanical names. They want the quality of the goods. They do not care what we call it. They can tell by looking at it.

Q. And they are not so much interested in the botanical end of it?

A. No; they are not. They are not interested in that at all.

Q. No.

A. No.

Q. You said that, with only one or two exceptions, you have
1600 not found it disadvantageous in your business to have certain wood whose botanical species you do not know marketed as California white pine. Now, I would like to ask that you give me a specification of exactly what these one or two exceptions are.

A. I would probably have to go in detail a little bit and explain that.

Q. I would like to have you do so, sir.

A. One of our customers—I think it was a couple of years ago—that we used to sell quite a good deal of sash to, I was in there visiting with him, closing up some business matters, and asked why we had not been receiving his sash orders, and he said, "I have been getting sash a little bit cheaper and of a lighter texture, or, I mean, not as heavy in weight as yours." We argued the question a little bit, and I went out and looked at them, and I could not see any difference, practically, in the looks of them, excepting that—he showed me several bundles, and I said, "What do you call it?" I wanted to know where it came from. It came from Texas—I know the concern's name—and they had represented it to be California white pine to him. I could not see much difference. I do not know whether it was sugar pine or not. In fact, sometimes you cannot tell the difference between the woods; at least, I cannot.

Q. Which woods?

A. You take the finished product of a nice soft pondosa
1601 pine and Idaho white pine or the sugar pine, and, after it is manufactured up, I cannot tell much difference between them. Maybe a better man than I can. I cannot.

Q. Do you find that it is equally usable in the market?

A What is that?

Q. Do you find that it is equally usable in the market?

A. Some may use it and some may not. I do not know. I have not been on the retail end back there.

Q. You have not been on the retail end at all, have you?

A. Yes; I have. I want to correct that. I mean back East. I followed the retail business in the city of Spokane for eighteen years.

Q. Now, that is your chief example, is it, of competition between your wood and what you say was California white pine?

A. That was one of the chief examples. I never run into it very much anywhere else. Yes; I believe in Philadelphia, too, I had one example.

Q. Will you just describe that, sir?

A. Well, that—we disputed about that. He claimed it was a white pine and we went out in the works and he said it came from the river mills. I told him it was just the same as ours, and we finally came to the conclusion, we both looked at it that neither one of us knew exactly what it was.

Q. Now, Mr. Dixon, will you describe where the so-called
1602 clears in lumber come from in your pondosa logs?

A. Principally out of the sap.

Q. On the outside of the log, do they?

A. Yes.

Q. Now, where do you get your common lumber?

A. Out of the heart of the log, or out of the small tree.

Q. And is what you have termed shop lumber a lumber which contains a certain amount of knots?

A. Clear cuttings between knots is factory lumber.

Q. It contains knots, though?

A. Yes.

Q. I take it that the grad'g rules provide that there shall be a certain proportion of clear cutting between knots in each grade of shop lumber?

A. That is it.

Q. So that the shop lumber comes from that portion of the log where you would meet the knots, does it?

A. To a certain extent; yes.

Q. Now, how many logs per thousand feet on an average does it take to produce your pondosa lumber?

A. I do not know as I quite understand that question.

Q. How many logs does it take on an average of the pondosa trees to produce a thousand feet of lumber? I am speaking of logs in their technical sense, sixteen-foot lengths, cut from the living tree?

A. Well, I think that varies. You probably had better
1603 get more expert testimony than I can give you. I would generally say, though, that if a man had four log timber, he would have pretty good timber.

Q. Have you any idea about what it runs, an average? If you do not know, just tell me.

A. I would not be competent enough to state.

Q. Well, now, what is clear lumber in pondosa used for?

A. Finish.

Q. Finish?
A. Yes.
Q. What type of finish?
A. I think both outside and inside finish.
Q. Well, what do you mean by finish? I just want the record to show what you mean.
A. Casing and factory lumber, made in doors, and outside lumber——
Q. I am talking about clears?
A. Yes; I am talking about clears.
Q. You do not cut up clears for factory lumber?
A. Sometimes I do; yes.
Q. Do clears call for a higher price than the so-called factory or shop grades?
A. They do usually; yes. Not always, they have lately.
Q. How long have they sold for a higher price than the shop grades?
1604 A. How long have they?
Q. Yes. How long have the clears of the pondosa logs sold for a higher price than the shop grades?
A. Well, the clears always sell for more, but I misunderstood your other question. I thought you asked me if we cut up clear lumber into factory lumber. I told you sometimes we did.
Q. Then I asked you whether or not the clear lumber *did not sell* for a higher price than the shop grades.
A. Oh, it always does. Clear lumber always sells for more than shop grades, particularly before it is manufactured. Usually shop grades, after it is manufactured, generally sold for——
Q. You were buying from a manufacturer here in Spokane?
A. Yes.
Q. You would pay more, would you not, for the clear grades of lumber than for the shop grades?
A. Oh, yes; sure, anybody would.
Q. Then it would follow, would it not if you were making and remanufacturing, cutting up lumber to make doors and sash and millwork, that it would be cheaper for you to cut up the shop lumber, providing you could get your cuttings out of it, than the clear lumber?
A. It would be cheaper if we could buy clear lumber at the
1605 same price, because the knots do not always come to suit us, you understand, but we buy shop lumber because we can buy it cheaper and we can in most cases get up the cuts by watching our shop lumber just the same as in clear lumber.
Q. You do not know that lumber sold as shop grades has more or less cuttings between the knots than that sold as California white pine? I am asking whether you know.
A. (Pause.) I do not know.
Q. Now, is pondosa, so-called, a valuable wood for the uses to which it is ordinarily put?

Mr. BURR. Wait a minute. Do you mean to compare it with something?

Mr. WHEAT. I am asking whether it is a valuable wood in general for the uses to which it is ordinarily put. I am not comparing anything.

A. Yes; it is.

Q. Do you think it in general satisfactorily fulfills the uses to which it is ordinarily put?

Mr. BURR. Wait a minute. I object to that. He has not qualified to prove that he is familiar with the satisfaction of the lumber. In fact on direct examination he proved that he knew very little about the paintability and various other characteristics because, he said, he does not follow it through to that degree.

Mr. WHEAT. I will reframe the question, then.

Q. How long have you been in the lumber business, Mr. Dixon?

1606 A. Practically all my life.

Q. Yes. That is twenty or thirty years, is it?

A. I am forty-seven years old and I went to work in a sawmill when I was fourteen.

Q. You have been manager, have you, of the Western Pine Manufacturing Company for some little time?

A. Eight years. Going on eight years.

Q. How many sash on an average do you produce a day?

A. Do you mean our total capacity, or do you mean what we really ship?

Q. Well, I know that at the present time, and the record, I think we can take judicial notice of the fact, and Mr. Burr, I think, will agree with me, that the lumber market just now is in pretty low condition.

Mr. BURR. I think so.

Mr. WHEAT:

Q. But on the average over a period of years about what do you produce a day in sash?

A. Well, I think—for several years the output, we averaged around three-quarters of a million sash a year.

Q. That would be several thousand a day, wouldn't it?

A. We have run between three and four thousand a day.

Examiner DE BRULER. I do not think it is necessary to follow this up. Ask him your leading question.

Mr. WHEAT:

Q. Now, having sold all these sash, how many million was it a year?

1607 A. Three quarters of a million.

Q. Three quarters of a million sash are sold a year. Is it your opinion that the pondosa lumber from which you produced this sash satisfactorily fulfills the uses to which it is put?

Mr. BURR. One moment. I object to that for the same reason, that complaints as to that sash and lumber, it is not shown that he would get them, and after a building has been sold, and if it does not prove to be satisfactory and durable, does it ever get back to the manufacturer? He has not so proved and I do not believe it does. I do not believe this witness is qualified to answer the question.

Examiner DE BRULER. Can you answer that question?

The WITNESS. I certainly can.

Examiner DE BRULER. Answer it.

Mr. BURR. What is the knowledge of the witness?

Mr. WHEAT. May I ask that the question be read?

Mr. BURR. I take an exception to Your Honor's ruling.

Examiner DE BRULER. Exception allowed.

Q. (Question read.)

A. It certainly does, or we would not be making sash today.

Examiner DE BRULER. Do you know anything about its lasting qualities?

A. I can only testify as far as I know. I know that we
1608 built a house when I was a boy. The house still stands. It was built entirely out of pondosa pine, 30 some years ago.

Mr. WHEAT. Q. Then I take it, Mr. Dixon, that, in your opinion, pondosa lumber sells on its merits for the uses to which it is most fitted by its appearance and quality and utility; is that so?

Mr. BURR. Object to that on the same ground.

Examiner DE BRULER. Objection overruled.

Mr. BURR. Exception.

A. Yes.

Mr. WHEAT. Q. Has there been any material change in the uses to which pondosa pine is put since they changed the name from western white pine to pondosa?

A. I do not think to any great extent; no.

Q. Now, does the trade in general, in your opinion, you dealing with the trade quite largely throughout the United States——

A. Yes.

Q. Does the trade in general——

Mr. BURR. Wait a minute. I object to any such question, trade in general throughout the United States. The witness is not qualified.

Examiner DE BRULER. No; you are not qualified to testify to that.

Mr. WHEAT. I asked him whether he dealt with the trade
1609 in general through the country and he answered yes. I take it that is a perfectly proper question. That is exactly what Mr. Burr asked, as to where he dealt, and perhaps it is objectionable on the ground it has been asked and answered, but, of course, on cross-examination I am entitled to ask it again.

Q. May I ask you this, then? Does the trade in general that you deal with understand the term pondosa and what wood it is that is being sold as that?

Mr. BURR. Just a moment, please. He is asking for the mental state of the buyer. I do not believe he is qualified. He does not personally wait on this trade. If he gets it through other sources of some kind, it is hearsay. I do not think the witness is qualified to answer any such question at all. We have called the retailers back East, and we have called the trade, and we have obviated the necessity at this time of speculative testimony of these men in the West.

Examiner DE BRULER. That is pure speculation.

Mr. WHEAT. I will withdraw that question for the moment as far as this witness goes and reframe the question.

Examiner DE BRULER. Yes.

Mr. WHEAT:

Q. Is the term pondosa in general use in the lumber trade with which you deal?

A. I will have to explain a little bit, if I answer that
1610 question.

Q. Yes; I would like to have you.

A. I do not think that we in our quotations or in our correspondence, I do not think we are particular all the time drawing the line to pondosa or what kinds. We quote them on doors, inside casings, finish, and we quote them on the outside. The customer we have been doing business with, have been doing business for years, and I think they know what it is without writing back East, is the material pondosa or what it is.

Q. You have reorders, then, from customers who have been your customers for years, have you?

A. Yes, sir. There is never a question as to wood.

Q. And they come back year after year for the same kind of sash and doors they get before?

A. Absolutely.

Examiner DE BRULER. Does that show what kind of wood it is when you sell it?

Mr. BURR. You bill it as pondosa, do you not?

Examiner DE BRULER. How do you bill it?

The WITNESS. I do not know as we—I do not think we put a name after it, say this is pondosa sash. Our headline is Western Pine Manufacturing Company. Our customers generally know what we manufacture. We are in the pondosa-pine business, and there
1611 is no question ever raised what kind of wood or anything.

Examiner DE BRULER. What is on your billheads?

The WITNESS. Western Pine Manufacturing Company.

Examiner DE BRULER. Western Pine Manufacturing Company?

The WITNESS. Yes. Manufacturer of sash, box shooks—probably I had better get a billhead. I cannot remember everything that is on it.

Mr. BURR. Doesn't the billhead say pondosa?

The WITNESS. I really forget.

Mr. BURR. You know it does not say white pine?

The WITNESS. Yes, sir; I know it does not say white pine.

Mr. WHEAT:

Q. If you should receive an order from somebody in the East for, say, western white pine sash, what would you send them?

Mr. BURR. Ask him if he ever does receive such an order, not speculate.

A. If there was a doubt in our mind that the customer was expecting a certain kind of wood, we would certainly get in touch with him.

Mr. WHEAT:

Q. Yes.

A. I have in mind one instance where we had a customer up in Massachusetts that we were quoting on hotbed sash, and I cannot remember the details, but there was something that we had the idea that he wanted Idaho white pine, and we took the matter up with him and found out what he wanted.

1612 Q. What did he want?

A. He wanted Idaho white pine, and he had a special use for it, for a special—I don't know what it was, but we furnished it in that wood.

Q. Do you by any chance know what the Forest Service generally calls Idaho white pine; that is, the wood that is commonly termed Idaho white pine? What does the Forest Service call it when they sell the lumber, sell the tree?

A. I do not know. I have never bought any. I do not know.

Q. You do not know whether they use the term in general western white pine for that wood, do you?

A. I have always thought they used Idaho, but that would only be conjecture on my part.

Q. Well, now, in general and laying aside from our thoughts for the moment the present difficulty just at the present moment in the lumber market, is the sale of pondosa lumber in general increasing or decreasing?

A. I have always thought that it is increasing.

Q. Well, now, in your business through the East and Middle West, regarding which you have spoken, do you compete primarily with the southern yellow pines or with some other woods?

A. No; we do not compete with the southern yellow pines. We compete with—our own locality here and California.

Q. And why don't you, why doesn't your wood come in
1613 competition with the southern yellow pine? What is the reason?

A. Why, that is a different texture of wood and not fit, in our estimation, to make the millwork out of.

Q. Now, does your wood come in competition in general with Idaho white pine?

A. I do not think so, like——

Q. It is cheaper in general, isn't it?

A. Yes.

Q. The millwork, the mill-manufactured quality, sells for less money, doesn't it?

A. Yes.

Q. But do you compete with sugar pine?

A. Well, to the same extent that we compete against Idaho white pine.

Q. Do you know whether or not any of the so-called northern white pine, the botanical genus strobus, is in competition with your wood?

A. Well, I think that would be the same as Idaho white pine or sugar pine. We do not have much occasion for them but I have heard of them.

Q. Yes.

A. Not in a competitive way, though.

Q. Now, when you come into your mill—perhaps I had better ask you first, have you used much of any Idaho white pine,

1614 in your mill?

A. Just as I said, a very small amount.

Q. Just a very small amount?

A. To special customers.

Q. Then I won't pursue this question. Do you belong to the Western Pine Manufacturers' Association?

A. I do not.

Q. Do you sell or buy pondosa from or to the Weyerhauser interests?

A. We buy some from the Weyerhauser interests.

Q. What companies? There are a large number of companies in that group, aren't there?

A. There are a large number of companies; yes. We generally place it with the central office, and I don't know—usually they place the orders. Sometimes different mills.

Q. They represent a number of mills?

A. Yes.

Q. Have you ever been in their employ?

A. I never have.

Q. Now, you are not qualified, I take it—I want to get it from some witness, I will say in explanation—you are not qualified to tell us, are you, the cut, the amount of pondosa pine in the inland empire region?

A. I would not be competent enough to tell. It might be more or less a guess. While I do have some statistics, I

1615 might guess but I could not tell you; no.

Q. Now, Mr. Dixon, how many needles are there on Idaho white pine in the bundle?

A. I have never paid any attention. I always thought about five.

Q. Five?

A. Yes. I might be mistaken.
Q. And how many are there on the sugar pine?
A. On the what?
Q. On the sugar pine?
A. I could not tell you.
Mr. BURR. He has never been in the sugar pine woods, he says.
Mr. WHEAT. How many on the Pinus ponderosa?
A. I always thought three, making a complete circle.
Q. Do you know whether there any five-needle pines that are not white pines?
A. I do not know.
Q. You do not know?
A. No.
Q. Do you know of any white pines with other than five needles?
A. I do not know.
Q. Do you know how many needles Pinus monophylla has?
A. No.
1616 Q. You are not really interested in the botany, are you?
A. No.
Examiner DE BRULER. He said he was not, and I do not think it ought to be continued at length.
Mr. WHEAT. By the way, grade for grade, the Idaho white pine and its manufactured products sell for more money than the pondosa and its products, do they not?
Mr. BURR. He has answered that already.
Mr. WHEAT. Has he?
Examiner DE BRULER. Yes; I think he has answered that.
Mr. WHEAT. All right. I think that is all.

Redirect examination by Mr. BURR:

Q. Now, Mr. Dixon, you say you can tell—that the customer can tell by looking at the lumber whether it is satisfactory when he purchases. Is that true? I understand you to say that.
Mr. WHEAT. Now, if Your Honor please, the witness never said anything of that sort.
Mr. BURR. Well, then, I misunderstood him.
Mr. WHEAT. I am confident that he did not. He said that the sale of his wood in large quantities was satisfactory with the trade, and that is the question I asked him.
Mr. BURR. No. You asked him that question, but long before that the witness made this reply, that when the lumber came
1617 the man could tell by looking at it whether it was satisfactory grade, and so forth.
Mr. WHEAT. Yes.

Mr. BURR:

Q. Did you not so testify?
A. I do not remember testifying that way, Mr. Burr. I might have said something like that. We do not go and ship our lumber on approval. We generally think we know what they want. They

buy it on grades. If they want select lumber, they buy it on a certain grade and price.

Q. Yes.

A. And if they want sash, want trim, they ask us for quotations, and we quote them, and there is no argument on the wood or anything like that.

Q. Yes. Now, by looking at lumber, as I understood you, you cannot always tell whether it is ponderosa lumber or whether it is sugar pine. Didn't you so testify?

Mr. WHEAT. He said he did not know anything about sugar pine.

Mr. BURR:

Examiner DE BRULER. You may answer the question.

A. Let me reiterate what I said.

Mr. BURR:

Q. Yes. Please.

A. That there has been times when they claimed it was sugar pine or Idaho pine or pondosa pine, and there is times I cannot tell which it was.

Q. Which of those three varieties it might have been?

A. Yes. They look so much alike sometimes. You

1618 can get those species to look so much alike.

Q. Now, there are differences between species which are similar in appearance as to durability, are there not? In other words, two species might resemble each other and yet have very different qualities in the long run, are there not?

A. Well, that might be the case. I could not say offhand.

Q. Well, there are differences in the reputations of woods as to durability, aren't there?

A. Probably more in the reputation than actually.

Q. Than in actuality?

A. Yes.

Q. But you are still of the opinion that there are differences in the durabilities of woods, aren't you?

A. It is according to what you refer to. Do you mean hardwoods and softwoods?

Q. Yes; between the hardwoods there would be probably differences, but you are not an expert on hardwoods, I take it?

A. No.

Q. Now, there are differences between the characteristics of woods that are based upon their constituents, what they are made of—woods are made of different substances, are they not, as a matter of growth?

A. I am not an expert to know in that line.

1619 Q. But by looking at a wood you would not be able to tell whether it had durability or not, would you?

A. You can tell if it is properly handled, if it is properly dried and properly taken care of.

Q. What do you mean by properly taken care of?

A. Well, I think any kind of wood should be taken care of, whether it is put in sash or casing.

Q. What do you mean by taking care of; you mean painting, do you?

A. Yes. And then it should be taken care of before it is put in the house. It should be warehoused, and such as that.

Q. Well, after it is installed in place, it should be painted in order to get the necessary durability, in your judgment, should it?

A. Yes.

Q. Now, that house that you lived in, was it in Spokane?

A. No. It was Idaho.

Q. Beg pardon?

A. Idaho.

Q. Whereabouts in Idaho?

A. Nes Perce County, Idaho.

Q. Is that up in the Panhandle?

A. Oh, no. That is south.

Q. South.

1620 A. Out from Lewiston.

Q. Is that an irrigated country?

A. No.

Q. Is it dry country?

A. I would say it was very wet, sometimes.

Q. What is the rainfall there; do you know?

A. I could not tell you as to the rainfall; no.

Q. I believe you testified that pondosa pine is cheaper on the market than Idaho white pine. Is that true?

A. Generally speaking, I think that is a matter of record.

Q. Do you know why that is?

A. Do I know why that is?

Q. Yes.

A. I would only have to give you my views.

Q. Yes.

A. That would be that Idaho has had a reputation for years and it was the same as northern pine, what we used to call northern pine, from Michigan there, and some people just get used to using it, and they want it.

Q. Northern white pine has the reputation for high durability, has it not?

A. I do not know.

Q. You do not know?

A. I could not answer that.

Mr. BURR. That is all.

1621 Re-cross-examination by Mr. WHEAT:

Q. By the way, Mr. Dixon, just one or two questions. What is the climate generally at Nes Perce? What is the altitude of Nez Perce, where you said you lived?

A. I believe it is 2,800 feet.

Q. And is the climate, is that a nice mild climate, or is it a rather severe climate?

A. It is a rather severe climate, I would say. A little more severe than Spokane.

Redirect examination by Mr. BURR:

Q. You mean severe as to temperature?

A. Yes.

Mr. BURR. That is all.

Re-cross-examination by Mr. WHEAT:

Q. And severe as to wind and rain?

A. Yes, sir.

Mr. WHEAT. That is all.

Mr. BURR. That is all.

(Witness excused.)

1622 GEORGE A. HOLDEN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. State your name?

A. George A. Holden.

Q. You are with the McGoldrick Lumber Company, are you, sir?

A. Yes.

Q. How long have you been with them?

A. Approximately seventeen years.

Q. In what capacity are you with the McGoldrick Lumber Company?

A. Sales manager.

Q. And how long have you held that position?

A. Nine years.

Q. Were you connected with sales prior to that nine years' period?

A. Yes.

Q. And you were probably on the road for them at that time, were you, in part?

A. Not at that time, but I have been on the road off and on.

Q. Now, the McGoldrick Lumber Company sells princi-

1623 pally what product?

A. They manufacture Idaho white pine, pondosa pine, fir and larch, white fir.

Q. Now, referring to the Idaho white pine and pondosa pine, what proportion, roughly speaking, would you estimate your company sells of each, referring now merely to the pines?

A. Do you want percentage or footage?

Q. Yes. Approximate it.

A. Well, we perhaps sell each year about equal amounts of Idaho white pine and pondosa pine.

Q. And the Idaho brings you in a little more revenue than the pondosa, because it is higher in price?

A. Yes.

Q. Now what is the nature of your sales; is it the ordinary lumber trade, or do you make sash and door millwork?

A. We do not make millwork to any great extent. We are principally engaged in the selling of lumber.

Q. Now your ponderosa or pondosa sales that you say go under the name of pondosa entirely—are they?

A. Yes.

Q. Do you ever get orders for white pine?

A. You mean merely white pine, without——

Q. Yes. Do they ask for white pine?

A. Yes.

Q. And you furnish them Idaho white, do you, or do you
1624 write and find out?

A. That depends on the territory. For instance, if we get an order here anywhere from, we will say Missouri or Kansas, in that territory down there, and it says white pine, in quoting we call attention to the fact that we are quoting on pondosa pine. If they send us an order for white pine, we write and find out whether they want pondosa white pine or Idaho white pine, because they do not seem to know the difference down there. They call it Idaho white pine, California white pine, Arizona, or whatever it is.

Q. Then when you get an order, generally speaking, for white pine, you consider what the man generally understands in that locality, is that true?

A. That is true; yes.

Q. Are there any localities when you get an order for white pine you are unable to tell whether they mean Idaho or whether they mean pondosa?

A. Yes. That is true.

Q. Where are those localities?

A. Well, I would say principally in Missouri, Kansas, Oklahoma, that district there.

Q. Then when you get an order from that district, what procedure is followed by the sales force of your company?

A. Well, we confer with the customer and have a definite understanding of what he wants. We do not ship anything
1625 until we know that the customer knows what he is going to receive and what he wants.

Q. And sometimes it is one and sometimes it is the other, is that true?

A. That has happened; yes.

Q. In those localities do you have competition from so-called California white pine?

A. Very largely; yes.

Q. And do you find that the use of the word white in connection with California white pine products is a handicap to your pondosa?

A. Yes; I think it is.

Mr. WHEAT. May I ask that that answer be stricken out until I have opportunity to object to the question?

Mr. BURR. I will consent to that.

Mr. WHEAT. I desire to object to the question in that form unless the witness is asked specific instances. We are here with a large industry through a large portion of the West, being tried for a claim of fraud and deceit, and we are entitled to know in what way we are complained of and the complainants, whoever they may be.

Mr. BURR. I do not think the word fraud has been used, if the examiner please.

Mr. WHEAT. It is the word deceit, and in the trade commission the word fraud is very frequently used in similar cases, and
1626 we are entitled, we believe, in order that we may produce the testimony to meet these questions, to have specific instances only and not witness' mere opinion stated.

Examiner DE BRULER. Read that question.

Mr. BURR. I will withdraw that question for a moment and lay a little broader foundation.

Q. In connection with your work as a sales manager do you have occasion to do any advertising; does your company advertise?

A. To some extent; yes.

Q. And they occasionally insert an advertisement in the trade journals or the newspapers, do they?

A. Yes, sir.

Q. Do you have a share in making recommendations and forming the policy of your company as to advertising?

A. Yes.

Q. Do you have an advertising agency at all?

A. No.

Q. Do you have occasion, then, in your department to frame those advertising insertions?

A. Yes.

Q. Do you yourself write the text of advertisements on occasions?

A. No. To some extent. Just, for instance, one paper, for the American Lumberman, they prepare our advertising
1627 for us, subject to our approval, but outside of that the small amount of advertising we do we prepare in our own office.

Q. Now, in connection with that work do you have occasion to study the effect of the phraseology which you use in your advertising upon the prospective buyer whom the advertising is intended to appeal to?

A. Well, our particular line of advertising is not directed to the consumer.

Q. No; it is directed to the——

A. Wholesaler.

Q. The buyer, is it not?

A. Wholesaler, or the men, largely, to whom we sell our lumber.

Q. And in connection with that you regard the phraseology of your advertising as being of some importance to you?

A. Yes.

Q. And do you have occasion to consider the question of how the advertisement can be worded so as to appeal to the buyer and make him buy from you rather than from some other manufacturer of lumber?

A. Well, we usually have our advertisements, the wording and so forth, conform to the Western Pine Manufacturers' Association.

Q. As to terminology?

1628 A. Yes. And further than that we do not go much into detail except to say our name and our location and our capacity and the woods we produce, and that is practically the extent we go to in our advertising.

Q. Well, now, do the salesmen travel part of the country?

A. We have some salesmen traveling the West; yes.

Q. Do they report to you?

A. Yes.

Q. Do you have occasion to study that they—do they come back to Spokane and meet you here occasionally? Do you have occasion to study with them their problems as to competition and as to selling in disposing of your product for you?

A. Yes.

Q. And do you ever travel yourself in this manner?

A. Yes.

Q. Do you call upon the trade when you have an especially important buyer, or where there is a problem involved, do you help your retailers?

A. I very seldom call on the trade, no, because our sales outside of one or two territories are usually through wholesalers, and we call on the wholesalers and they in turn call on the trade. Occasionally we go into a retailer's yard with the wholesale man.

Q. Their customers?

1629 A. Yes.

Q. And sometimes are you desirous of getting an outlet through a different wholesaler?

A. That may be true; yes.

Q. In that case you might call upon him, is that true?

A. Yes; we might possibly call upon him.

Q. In connection with that work, have you had occasion to study the effect of the use of the word white pine on the part of ponderosa products competing with you?

Mr. WHEAT. May I now interpose again my same objection. These questions, if the examiner please, have all been leading up to what I was expecting to be Mr. Burr's question.

Mr. BURR. Yes.

Mr. WHEAT. Mr. Burr says, do you have occasion to call on people? The witness says, we may call on people, and I expected Mr. Burr

would ask him, have you called on people, have you instances of this matter, but instead of that he has repeated the same question, whether or not there is some tendency in this way. I say we are entitled to the specific instances so that we may inspect them and cross-examine them as to that.

Examiner DE BRULER. Just read that question. What is the question.

(Question read.)

Examiner DE BRULER. You may answer.

1630 Mr. WHEAT. Exception.

A. Yes.

Mr. BURR:

Q. Now, what effect does the use of the word white in connection with California white pine have upon your ability to sell pondosa pine, if any?

Mr. WHEAT. Now, if the examiner please, clearly that——

Examiner DE BRULER. Let me ask you, do you know what effect that has?

The WITNESS. I think so. That is, I have some idea; yes, sir.

Mr. WHEAT. Clearly, Mr. Examiner, that is the very question that this Commission is going to be called upon to decide, and this Commission can only decide that question on facts which are brought before it, and it has been held already in this case by the examiner formerly sitting in the case, by a ruling on page 1028 of the transcript, that the witness may state the facts, but not merely his opinion in regard to any tendency.

Examiner DE BRULER. There is not any doubt about that. Just state the facts upon which you base your statement. Give the facts.

A. We come into instances where wholesalers have told us that retail yards have in instances where the article may have specified——

Mr. WHEAT. May I ask whether this witness is to be allowed to go into hearsay testimony?

1631 Examiner DE BRULER. Are you talking about something that you personally know now?

The WITNESS. What has been told to me, yes, upon occasions.

Examiner DE BRULER. By your customers?

The WITNESS. By people who we sell lumber to, or who sell our lumber back East.

Mr. WHEAT. Of course, I shall object to that as hearsay. We have no opportunity to meet these gentlemen on the stand and cross-examine them and have their background.

Mr. BURR. If the examiner please, I will ask the witness in connection with that answer to confine yourself to your relations with the prospective customer.

Q. Does your ability to sell to these jobbers, is that affected by the name white in connection with ponderosa products that are sold

as California white pine, Arizona white pine, and New Mexico white pine?

A. We consider it so.

Q. Now, why do you consider it so?

Mr. WHEAT. Before we go further, may the record show my objection to that question and any line of questions that does not go to definite instances mentioned by the examiner in his question to the witness, goes to all such questions, and I will ask a ruling on that.

Mr. BURR. If the examiner please, in my judgment that goes to the weight very strongly. I think it would be much more
1632 entitled to great weight if he were able to say on the 27th day of January I called with so and so upon Mr. A and so and so, and on such another date I called upon this other man. That goes to the weight, and true it would be very much stronger, but I do say that this man with his long experience in this trade is competent to testify as to the competition difficulties that he encounters when he goes to see these men, even though he is not able to put his finger on the day and the date and the man.

Mr. WHEAT. I still press my objection, Your Honor, to any question that does not deal with specific instances and facts so that we can have an opportunity to look into them. As a matter of fact, this Commission is not interested in occasions of this sort. It is interested in facts, and facts alone. On those facts it must make its own determination of the very question as to this man.

Examiner DE BRULER. What was the question?

(Question and answer and question read.)

Examiner DE BRULER. In answer to that, state the facts.

The WITNESS. Well, he asked me why I considered that, so I am entitled to give my own reasons.

Examiner DE BRULER. All right. Give them.

Mr. WHEAT. May I have the record also show, this is one of the main reasons, including the one I stated, I feel I must press this objection, because there are so many other factors
1633 regardless of the name that enter into the marketing of lumber, there are general economic conditions, freight rates, and different conditions of manufacturing lumber, and if a sale is lost it is not shown that the name has anything to do with the loss.

Examiner DE BRULER. Let the record show your exception. You go ahead and answer the question the best you can.

A. Some territories formerly white pine was sold from out of the North and from Maine as white pine.

Examiner DE BRULER. When was that?

A. That was a great many years ago, before my time. But before the manufacturers, we will say, came out to the West to manufacture this Idaho white pine, consequently over a large territory I think white pine was known as white pine. It was not known as northern white pine or Idaho white pine, or California white pine,

or Arizona pine. It was known as white pine; true white pine. In territories where they have used white pine as white pine, if we find that—where we must—we are not allowed to quote white pine except as Idaho white pine, or Pinus ponderosa as pondosa pine. Frequently where we quote pondosa pine where a customer has asked for white pine, we are at a disadvantage because some other district quotes California white pine, which is the same species as our pondosa pine.

Examiner DE BRULER. Have you run across that?

1634 The WITNESS. Yes, sir.

Mr. BURR. Q. How many instances?

A. That I cannot say but that comes up now and then in exchange of correspondence and inquiries, and so forth.

Q. Over what length of time has that been?

A. Well, I would say within the last thirty days, perhaps.

Examiner DE BRULER. Well, what instance was it?

The WITNESS. Would you like to——

Mr. BURR. Q. Did you bring into the courtroom this morning a letter?

A. Yes, sir.

Q. And you handed it to me during the course of the examination of another witness, did you?

A. Yes.

Q. I will hand this to you and ask you to refresh your memory from that letter, if you can, and answer the question?

A. Would you like me to read from the letter, Mr. Commissioner?

Examiner DE BRULER. Just state the facts.

Mr. WHEAT. I have not seen the letter.

Examiner DE BRULER. Pass it to him.

Mr. WHEAT. Why don't you state what the facts are?

Examiner DE BRULER. What are the facts?

The WITNESS. I would rather read the letter. It is more clear. I do not see any reason why it could not be read as

1635 well as told.

Examiner DE BRULER. Just wait a minute and you can state the facts.

Mr. WHEAT. I will look at this letter.

Examiner DE BRULER. You look at the letter.

Mr. WHEAT (examining letters). I would be very glad to have these letters put in the record. I think they are excellent. I would like very much to have that done.

Examiner DE BRULER. That may be done.

Mr. BURR. If the examiner please, with that understanding, I now offer for the record a letter of Putnam & Jones, December 13, with a carbon copy of reply of the company of the witness of December 16, followed by the letter of the Putnam & Jones Company in rejoinder, being dated December 23, 1929, and ask that the same be

received as Commission's exhibit for the record number 33, with the understanding that the originals will be returned to the witness and that the final exhibit shall be the photostat copy.

Examiner DE BRULER. Commission's exhibit 33 admitted.

(Thereupon said letters were received in evidence as Commission's exhibit no. 33-A, 33-B, and 33-C admitted; and photostatic copies thereof are transmitted herewith.)

Mr. BURR. Q. Now, have you found in your experience as sales manager that there is any disadvantage to your company as regards its sales of Idaho white pine by the use of the
1636 term white as part of the trade name of ponderosa products?

Mr. WHEAT. Before the witness answers——

Mr. BURR. Q. I am not asking for your opinion now. I am asking for your experience and the facts of any trade disadvantage that you are placed under.

Examiner DE BRULER. Just state what you know about it.

Mr. WHEAT. May the witness be advised by the examiner that he should state the instances rather than some general opinion?

Examiner DE BRULER. Yes.

Mr. BURR. I think, if the examiner please, that he may summarize these instances.

Examiner DE BRULER. Just state the facts, what you actually know about it.

A. We feel that we are at a disadvantage.

Mr. WHEAT. Now, Mr. Examiner——

Examiner DE BRULER. That may be stricken.

A. If you ask me for specific instances, that is, dates, company, and so forth, I am unable to give them to you, because I do not know.

Mr. BURR. If the examiner please, if he has experienced this on several occasions the fact that part of the facts have slipped from his recollection does not mean that his experience is not a matter of facts.

Mr. WHEAT. Mr. Examiner, may I ask, then, that he be
1637 advised not to speak of those things which have slipped from his recollection, but to speak only of those things as to which his recollection is clear?

Mr. BURR. Yes, sir; those things as to which his recollection is clear.

Examiner DE BRULER. Just speak to the facts in your trade; what are the facts?

A. Well, the facts are that California white pine has been used, we feel, where Idaho white pine or white pine may have been specified.

Mr. WHEAT. Well, now, if Your Honor please——

Examiner DE BRULER. You say you feel, but——

A. Well, our connections back East at different times have told us——

Mr. BURR:

Q. Never mind that now. Just a moment. Do you find that in marketing your Idaho white pine there is a difficulty that is based upon the fact that the other man is selling so-called California white pine?

A. We do; yes.

Q. Now, can you be more full in your answer on that point, how you know that that is the case?

A. Well, we know it is the case because we have had many conversations with people that are selling the lumber.

Mr. WHEAT. Now, if Your Honor please——

Mr. BURR:

1638 Q. Do you have conversations with the man who buys the lumber?

A. You mean the ultimate consumer?

Q. No. The man who buys from you?

A. Yes; we have.

Q. You have contracts and relations with your purchaser, do you?

A. That is true; yes.

Q. And do you or do you not learn from him that the California white pine is enabled to sell partly because of the fact that it is named white?

Mr. WHEAT. Just a moment, before the witness answers. The witness should really, I think, be advised that he is a little quick on the trigger.

Mr. BURR. I am agreeable to the objection preceding the answer.

Examiner DE BRULER. You may answer over objection. Objection noted, and you answer.

Mr. WHEAT. Exception.

A. Yes; we feel——

Examiner DE BRULER. Not what you feel.

A. We believe, then——

Mr. BURR:

Q. Do you find that to be the case?

A. We find that to be the case.

Mr. WHEAT. May I ask what he finds to be the case?

Examiner DE BRULER. Has that been your actual experience

1639 in the trade?

A. That has been our actual experience, although I am unable to give specific dates and instances, because in these things with the trade I did not note down on such and such a date I had such and such a conversation. You form your opinion of the things you have learned.

Examiner DE BRULER. That is what you did?

The WITNESS. Yes.

Mr. BURR:

Q. What is the nature of the experience that you have testified to; is that based upon conversations with the buyer on occasion?

A. The things that I have in mind at this time are based on conversations with wholesalers who have in turn sold our product to the retail yard. Those same wholesalers may have sold Idaho white pine and are selling California white pine, may sell the same two woods.

Mr. WHEAT. On the strength of this answer I move that the answers that the witness has made be stricken from this record. He states what he has stated about his actual experience is based on conversations with wholesalers. Now, that certainly is not actual experience. That is the merest of hearsay, and we are entitled to have these men, to meet concrete facts on which we can cross-examine and on which we can call other witnesses.

Examiner DE BRULER. I will let the record stand as it is
1640 and note an exception.

Mr. BURR:

Q. Now, has anyone on occasion said to you that he preferred to buy a cheaper product that was equally with Idaho white pine designated white pine?

A. Would you ask that question again, please?

Q. Read it, please.

(Question read.)

Examiner DE BRULER. Answer that only if you have a specific instance in your mind.

A. No.

Mr. BURR. If the examiner please, I would object to reducing that to a specific instances, for this reason, that unquestionably goes to the weight, but it seems to me that it is entirely possible that down through the years when this man waited on customers and other connections, when he has called with his salesmen upon certain parties, that might have occurred five hundred times and he not be able to testify to a single instance, and the fact that he is unable to testify to a single instance may only mean that it happened so often that it does not stick in his memory.

Examiner DE BRULER. Let me ask him this, then: Do you know, as a matter of fact, there are instances of that kind?

The WITNESS. No, sir.

Examiner DE BRULER. That is what I mean.

1641 Mr. BURR. I see.

A. Because that could——

Mr. WHEAT. May I ask that the witness——

Mr. BURR. I think he has a right to explain his answer. A man always has a right to answer yes or no, and then explain why he has answered yes or no.

Mr. WHEAT. When he states a fact, I do not know of any such instance.

Mr. BURR. I will ask you why do you not know?

A. Because we do not in the manufacturing proper, handling and selling the product, we do not come in contact with the retail yard who ultimately sells that product to the consumer. We come in contact largely with wholesaler who buys and sells whatever the retailer—buys whatever the retailer buys from him.

Mr. BURR. Will you read the question prior to my last question?

Examiner DE BRULER. Yes; read the question and see what that is.

Mr. BURR. I think the witness misunderstood the question.

(Question read.)

Q. Now, I am referring to instances of the wholesaler or jobber who is buying from you; have you had occasions, although the specific instance has left your recollection, have you had specific in-
1642 stances in your experience where the Idaho white pine that you were trying to sell has been refused because the buyer preferred to have a product that was cheaper but was still known equally with Idaho white pine as a white pine in its trade name?

A. No; I cannot say that I—that such is the case.

Q. In other words, you do not recall whether that has ever occurred; is that true?

A. No; I do not.

Q. I am not asking for a specific case, but you are not sure whether that has ever occurred?

A. I feel that it has, but I have nothing concrete to base my thoughts on.

Q. I am now saying, do you know whether or not it has occurred, even though the instances have slipped from your memory or recollection?

A. I do.

Q. It has occurred?

A. Yes.

Mr. WHEAT. If Your Honor please, the witness says he felt it occurred and now he comes back and says it occurred. I believe that the witness' testimony along this line is all subject to objection because he has shown his entire ignorance in the matter, and that it should be stricken out.

Mr. BURR. If the examiner please——

Examiner DE BRULER. I will let the record stand as it is,
1643 with exception noted.

Mr. BURR. Now, Mr. Holden, how long has your ponderosa product been known as pondosa pine, that is, that sold by your company?

A. I believe approximately five years.

Q. What did you designate your ponderosa product prior to about that time or to about five years ago?

A. Western white pine.

Q. What led you to make the change in name of that product?

Mr. WHEAT. May I here interpose what I consider to be the most fundamental objection, perhaps, of this whole case. Some of the producers, Mr. Examiner, of lumber from the wood, the tree Pinus ponderosa, have seen fit to change the trade name of that lumber as it goes to the trade. Others of the producers of that wood have seen fit to retain the name which the record in this case shows has been used continuously for a period of approximately forty years. The reason why some producers of the wood from this tree at one hearing may have gotten together and changed the name of their wood, are certainly not pertinent to a question whether there is fraud and deceit and misleading, which is the gist of this case, in the use of the old trade name by the respondents from another part of the country.

The question in this case is only the fact, and it is the fact
1644 only. I want the record to show this. Now the fact of the matter of the change of name, of course, can enter, and properly should, I suspect, be brought out in this record, but this Commission throughout its whole history has shown that it deals with facts and it does not deal with conclusions of one set of people in an industry as to the acts of another set of people in the same industry. I think that is absolutely fundamental.

Now the only question in this case that can be determined by this Commission is whether or not the term California white pine as used to designate in the trade products of Pinus ponderosa from a certain area does in fact operate as unfair competition against their competitors who produce true or so-called true white pine. Now I say this, the mere fact that Mr. Brown has divorced his wife is no reason to argue that Mr. Greene should go and do likewise, and this action is brought against the California white pine people.

Mr. BURR. I object to all this argument going into the record.

Mr. WHEAT. I consider it is very important.

Examiner DE BRULER. Let him state the objection.

Mr. WHEAT. I have stated the objection.

Examiner DE BRULER. I think the objection has been stated fully enough.

Mr. WHEAT. It is fundamental, Your Honor. That is why I stated it fully.

1645 Mr. BURR. I would like to state that this is merely asking the Commission to amend the complaint. We have alleged, if I recall correctly, that change of name and something about why it was made.

Examiner DE BRULER. That is my recollection of it.

Mr. BURR. And this is in the nature of a motion to strike, and I think it ought to be overruled.

Examiner DE BRULER. I think that is covered.

Mr. WHEAT. May I add to the record this, in our opinion, is not in any sense a motion to strike. It is in the sense that if the complaint

said white is black I do not take it that you would receive evidence on that matter. The question is whether or not the California white-pine people are deceiving the public and whether Mr. Brown has changed the name is no——

Examiner DE BRULER. Just read the question, please.

(Question read.)

Mr. WHEAT. I ask that the witness be advised to state the facts again.

Examiner DE BRULER. Just state the facts.

A. We sell all of our products under whatever name is adopted by the Western Pine Manufacturers' Association, of which we are a member; and when they changed the name to pondosa pine we, of course, automatically changed our name under which we were selling that wood.

Q. Was your company a party to litigation brought by the
1646 Federal Trade Commission about that time with regard to the name of the product that you were selling—the ponderosa product?

A. I believe it was.

Q. Did that have anything to do with the change of name? Was there a committee appointed at that time, as a result of those proceedings?

A. Well, my recollection is that a committee was appointed by the Western Pine Manufacturers' Association, who afterwards adopted the name of pondosa pine, and nationally advertised it, and it has since been sold only as pondosa pine.

Q. That was the result, in part, was it, of certain investigations that were undertaken about that time in the Inland Empire by the Federal Trade Commission?

Mr. WHEAT. If the witness knows.

Examiner DE BRULER. If you know.

A. I think so.

Mr. WHEAT. I ask that that be stricken out as hearsay.

Examiner DE BRULER. I will let that answer stand. He seems to be pretty well advised on the situation.

Mr. WHEAT. Exception.

Mr. BURR. Q. Do you remember who were members of that committee?

A. My recollection is that Mr. Geddes, of the Craig Mountain Lumber Company at Winchester, Idaho, was chairman, and
1647 who the other members were I cannot say. I do not recall accurately enough to give their names.

Q. And that committee reported in 1925, early in 1925, or was it 1924, if you recall?

A. I cannot recall. I believe it was 1925, but I am not certain.

Q. Do you know whether since that time the Inland Empire producers of Pinus ponderosa have been designating that species of lumber as pondosa?

A. I believe so, universally.

Q. Your company has not varied from it in the meantime?

A. Not in a single instance.

Mr. BURR. I think that is all.

(Witness temporarily excused.)

(Thereupon an adjournment was taken until 1:30 o'clock p.m. of the same day, Monday, January 20, 1930, at which time the hearing was resumed and the following proceedings were had:)

1648 Docket No. 1620-1669, inc.

SPOKANE, WASH., *Jany. 20, 1930.*

Met pursuant to adjournment, 1:30 o'clock p.m.

Before Ellis De Bruler, examiner.

Appearances: Eugene W. Burr, for the Federal Trade Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Carl I. Wheat), for the respondents.

GEORGE A. HOLDEN resumed the stand and further testified, as follows:

Cross-examination by Mr. WHEAT:

Q. Holden, what has your experience in general been in the lumber industry?

A. Well, it has always been connected with the manufacturing and sale of lumber.

Q. Have you had any experience in the woods themselves?

A. Not to speak of.

Q. And then you are not very definitely familiar with that end of the game?

A. No; not thoroughly.

Q. Do you know of your own knowledge the type of lumber which various of these pine trees and others that you have testified to produce?

1649 A. I should say so; yes.

Q. The Pinus ponderosa produces some percentage, does it, of what is known as shop lumber?

A. Yes.

Q. About what percentage is this territory?

A. Why, I should say eighteen to twenty percent.

Q. And does the Idaho white pine tree produce as much percentage of shop as that?

A. The Idaho white pine tree produces a very small percentage of shop. Possibly 3 percent of the log.

Q. Now, are you familiar with the general uses of the wood sold as pondosa?

A. Yes. I should say so.

Q. What in general are the main uses of that wood?

A. Well, your selects are used usually for inside trim. A certain portion of your selects are re-worked for beveled siding, for use on the outside of the building.

Q. Let's for the record show what [redacted] select?

A. That would be C and better, possibly D. Your selects are divided into three grades, D, C, B, and better.

Q. And those, you say, are the clear grades which you have named?

A. Yes. Those are considered the clear or select grades.

Q. Now, what are the shop grades used for?

A. The shop grades are used for remanufacturing into
1650 frames, window frames, door frames.

Q. Those are boards, are they not, with knots in them but clear cuttings between the knots?

A. That is it. The shop grade is divided into a—we will say—three different grades, number one shop, number two shop, and number three shop, in proportion to the clear cuttings that that particular plank will produce.

Q. And those clear cuttings, after having the knots cut out, are used, are they, for these remanufacture purposes?

A. Yes.

Q. Now, what is the common lumber used for?

A. The common lumber is used oftentimes for sheathing in a building. It is also used in the manufacture of boxes.

Q. That is the lumber with a number of knots so close together or defects so close together?

A. Yes; that is the lower grade your lumber produces; three, four, and five, common.

Q. And your shop grades come out of the part of the log with knots in it, do they?

A. Yes.

Q. First let's go back to your general experience. Where did you begin working with lumber?

A. At the McGoldrick Lumber Company.

Q. In this city?

A. Well, my first year was for a short time at a mill in
1651 British Columbia. Then from there I came down here and was here ever since with the exception of time out for school and the war.

Q. You have always been with the McGoldrick Company?

A. Yes.

Q. And have you had any direct experience with what we termed in your direct testimony as northern white pine?

A. Only as I have seen it in retail yards.

Q. You have not ever handled it yourself?

A. Never sold it or interested in the manufacture of it.

Q. Now, about when did you say the name ponderosa was adopted for this wood?

A. I thought about 1925.

Q. Wasn't it prior to that? Probably, wasn't it?

A. I hardly think so. That is my recollection, that it was in 1925 sometime. The controversy extended over a period of several months before the name was finally adopted, in discussions, and so forth, but I recollect it was pretty close to 1925.

Q. And up to that time—that is, say, 1922, 3, and 4—this wood was generally sold on the market, was it, as western white pine?

A. Yes.

Q. Do you happen to know, by the way, what term the Forest Service uses in its sale of Idaho white-pine standing timber,
1652 standing trees?

Mr. BURR. I would stipulate that, if you like?

Mr. WHEAT. Yes.

Mr. BURR. I will be willing to stipulate, if counsel is agreeable, that the regular term that the Forest Service uses in its publication for Idaho white pine in general is western white pine.

Mr. WHEAT. Thank you.

A. That is true.

Mr. WHEAT. That will meet all that line of questioning.

Examiner DE BRULER. That will shorten it up.

Mr. BURR. Will you, in turn, stipulate that our regular term is western yellow pine for ponderosa?

Mr. WHEAT. I understand that it is.

The WITNESS. Western yellow pine for the pondosa and western white pine for the Idaho.

Mr. WHEAT:

Q. Now, you testified on direct examination that universally the Pinus ponderosa from this area is now sold as pondosa?

A. Yes.

Q. Do you know whether the Biles-Coleman Lumber Company, of Omak, Washington, is a member of the association which you mention?

A. They are not.

Q. Do you know how they are selling their lumber as with
1653 regard—first, where is Omak?

A. That is in the north central part of Washington, I would say, above Wenatchee. I don't know how to give you any closer description.

Examiner DE BRULER. In Okanogan County?

The WITNESS. In Okanogan County; yes.

A. I think they marked their products as Omak white pine. I am not certain, though, but I believe that is the trade name they apply to it, as Omak quality white pine.

Q. Did you ever hear of it being sold in very recent periods as Okanogan white pine?

A. No; I do not think so.

Mr. WHEAT. I think I should like to offer that.

Mr. BURR. I shall have no objection if he wants to offer.

Mr. WHEAT. This, if Your Honor please, is a page taken from the American Lumberman and Trade Journal under date of January 11, 1930, showing the advertisement of this Biles-Coleman Lumber Company, Inc. I would like to offer that as respondents' exhibit.

Mr. BURR. No objection.

Examiner DE BRULER. Admitted.

(Thereupon said advertisement was received in evidence as respondents' exhibit no. 24 admitted.)

Mr. WHEAT:

Q. I ask you whether you know whether this com-
1654 pany ever was a member of the Western Pine Manufacturers' Association?

A. I do not believe so. To the best of my knowledge they never were a member.

Q. Is your company, by the way, a member of that association?

A. Yes.

Q. Now, does the trade with which you come in contact in your selling work generally understand that the term pondosa which you now use refers to the same wood that was formerly marketed as western white pine?

A. Yes. I think they very clearly understand that in most territories. I will have to qualify that, because there is a certain district that I do not believe that they are entirely familiar with the differentiation of the different woods.

Q. Now, where is that?

A. Well, I refer particularly to the South Central States, such as Kansas, Missouri, Oklahoma, and Texas.

Q. Those are the ones mentioned in your direct testimony, are they not, as the ones where you had some difficulty in explaining the wood?

A. Yes. I could go further into detail if you would like to have my thought on that.

Q. I would be very glad to.

A. Most other territories were familiar with northern white
1655 pine, Bemidji white pine, and Maine white pine.

Q. May I ask that you stay within your own knowledge?

A. Yes. And consequently they came to know this wood as white pine.

Q. Which wood do you refer to?

A. Well, I am talking about northern white pine or Maine white pine, they called that all white pine, and that, of course, go back many, many years ago, but in the States that I speak of, in Missouri and Kansas, Oklahoma and Texas, I believe their principal source of supply always came from the South and they used southern yellow pine. In the transition of buying, I think California perhaps got

into that territory quicker than we did, selling California white pine, and consequently the trade of that particular district came to recognize, came to call it white pine. You see what I mean. Whether it came from California or Arizona it was sold in there as white pine, and their previous first introduction to that wood was knowing that particular type as white pine. Do you see what I mean?

Q. Yes. Now, you are advertising your pondosa pine, are you not?

A. As pondosa; yes.

Q. Is it usually association advertising, or is it individual mill advertising?

A. It is very largely with our particular company asso-
1656 ciation advertising. We do not do any advertising much, except in certain trade journals as a means of supporting the trade journals. We sell so small a portion of our product now direct to the trade that we do not go out and advertise ourselves particularly for the purpose of increasing the sale of our product, because most of our sales being through wholesalers we cultivate the wholesaler through other means rather than advertising our products through newspapers or trade-promotion work or trade papers.

Q. Do you invoice your Pinus ponderosa lumber as pondosa?

A. Yes.

Q. Exclusively?

A. Yes.

Q. Did you ever receive any orders for western white pine?

A. No.

Q. No orders for that?

A. We have not for a good many years.

Q. Do you know of your own knowledge the amount that has been spent on advertising pondosa pine?

A. I would not be in a position to give the exact figures, but I would estimate perhaps $300,000.00, perhaps a little more.

Q. That is the complete amount for all the advertising of pondosa pine, or just the association?

1657 A. That is just the association I take into consideration. I base that on the fact that I think they spent in the neighborhood of $100,000.00 for two or three years and then had to cut that down. I would say possibly $300,000.00, might be a little more, possibly less.

Q. They are advertising both in the general markets—in the general magazines and the trade magazines, are they not?

A. Yes. Their appeal is usually to the consumer instead of possibly to the wholesaler, such as we aimed to sell.

Q. In general do the advertisements of pondosa pine state the botanical names of the tree from which it is taken?

A. I do not think so. I do not believe it does. You see, pondosa pine has a trade mark, a registered trade mark, and I do not believe

that in their advertisements they refer to the botanical name, although I am not absolutely certain as to that.

Q. You think that more people with whom you come into contact in the trade are acquainted with the quality and character of the wood under the name pondosa than they were when it was called western white pine?

A. No. I would not think so.

Q. About the same?

A. I would imagine practically the same. Possibly a little better advised, because they have been handling it that many more
1658 years and of course their knowledge has probably increased a little.

Q. Forgetting your present slump in the lumber market, did you notice that when the name was changed there was any particular drop in the price of the wood?

A. No; I cannot say that there was.

Q. You do not think that there was any particular lost ground which had to be regained by all this advertising?

A. No; I do not think so. Of course, the reason for advertising was to acquaint the trade with the new name, and, of course, as the advertising went along it was naturally hoped that it would increase the sale of that particular wood.

Q. And it has somewhat increased it, has it?

A. Well, that I cannot say. I have not the exact figures, but I think that possibly sales and production are pretty much the same now that they were in 1925, in pondosa pine.

Q. Now, does this pondosa pine that you sell meet any very active competition from the producers of southern yellow pine?

A. In some territories and in some classes it does; yes.

Q. In general, what is the nature, if you know, of southern yellow pine?

A. Well, of course, I am not in position to speak with authority concerning yellow pine, but——

Q. If you do not know, just answer——

A. We fell that our product is somewhat superior to cer-
1659 tain grades of southern yellow pine; that is, it is lighter in texture, softer in texture, possibly lighter in weight, does not contain as much resin as yellow pine, and is a more select grade possibly than lots of the pine they get from the South now, and in certain classes we find for particular purposes the trade has had to turn to this district for certain of their requirements they used to get in southern yellow pine.

Q. Is this pondosa very largely used for millwork and remanufacture purposes, sash and doors?

A. Yes, sir.

Q. That is rather general over the country, is it not?

A. That is true from all over the country; yes.

Q. What other woods in general are used—what other pines are used mostly for sash and door purposes?

A. Well, you mean not out of pondosa pine? Of course, California white pine is used quite extensively.

Q. And what other bontanical wood?

A. Idaho white pine is used to a certain extent for millwork.

Q. Yes; you said the production of shop lumber from Idaho white pine was three percent?

A. That is true, but at the same time that three percent is used for the manufacture of frames and sash.

Q. Then it does, do I understand, come in direct competi-
1660 tion with white pine?

A. It does. While you do not cut the percentage of Idaho white pine shop lumber in this State, that percentage you do cut is used for the manufacture of door and window frames to the extent that all there is of it is available, don't you see?

Q. And, as I understand it, then, it is in direct competition with your pondosa pine?

A. Yes.

Q. Sells at higher price, does it?

A. Yes, sir; it sells at a higher price.

Q. Is that true in most of the grades of the pondosa; does it sell higher than pondosa pine?

A. That is true; grade for grade it sells higher than pondosa pine.

Q. Do you have any competition between your pondosa and the northern white pine?

A. I would say the northern white pine competes more with the Idaho white pine than it does with our pondosa pine.

Q. Have you run into instances of competition between Idaho white pine and northern white pine?

A. I cannot give you any specific instances.

Q. You cannot recall any?

A. No.

Q. How about sugar pine?

A. We run into competition with sugar pine, both Idaho
1661 and pondosa oftentimes run into competition, usually where they are using the wood for pattern purposes.

Q. That is competition between the Idaho white pine and sugar pine?

A. Sugar pine; yes, sir.

Q. Do they use pondosa for pattern purposes?

A. I do not believe they use pondosa for pattern purposes; no.

Q. Do they use Idaho white pine for pattern purposes?

A. Quite a good deal.

Q. Do you find that the fact, if it is a fact, that Idaho white pine has a very large number of small knots in it interferes with its general use for pattern purposes?

A. Well, of course, I believe that they use more clears for pattern purposes than they do the common product.

Q. By the way, about what proportion of clears does Idaho white pine produce?

A. From eight to twelve percent, depending on whether it is second growth or old growth timber.

Q. Now aside from your clears and your shop lumber, the rest of the production is, of Idaho white pine, what is known as common lumber, I take it?

A. Yes; I think so.

Q. And in general does the Idaho white pine common lumber, grade for grade, obtain a higher price than the pondosa?

1662 A. Yes.

Q. Or California white pine?

A. Yes; either.

Q. About the same as sugar pine, is it, do you know?

A. I am not familiar enough with the prices of sugar pine to say.

Q. Well, if you are not familiar, don't——

A. Exactly, but my understanding is that the selects are about the same as sugar pine and the commons perhaps command a higher price than the commons of the sugar pine.

Q. Whay is that?

A. I believe you will find in your Idaho white pine there are know defects which are smaller than in sugar pine, and consequently it lends itself to uses for those purposes to better advantage than sugar pine. That is my impression.

Q. The knots are small and tight, are they not?

A. Yes; I believe that is true.

Q. Now, in general would you say that number three common Idaho would be about equivalent in character to number two pondosa?

A. The grade is similar in the two woods.

Q. Well, is it true that the Idaho white pine common grades, for the reason of these know defects, are better than the common grades of pondosa?

A. You mean grade for grade?

1663 Q. Yes.

A. Yes; that is true. The Idaho white pine is considered better, grade for grade, than the pondosa pine.

Q. That is because of this peculiar and excellent knot defect?

A. It is because of the peculiar knot defect and the general appearance of the wood. For instance, your white pine, because of its uniform and small knot defect, has a more pleasing appearance than your pondosa pine.

Q. Does it cut more to the tree?

A. I do not believe, as a rule. Of course, in the Idaho white pine you have second growth and old growth.

Q. You are cutting second growth?

A. Yes; to a certain extent. I think that the average run of Idaho white pine will be more logs to the thousand in Idaho than it is in pondosa.

Q. Do you recollect how many it runs in pondosa?

A. I would say the average would be about five logs to the thousand.

Q. That would be fairly good, would it not?

A. That would be. Four and five log timber is very good; yes.

Q. How many logs to the thousand is the minimum size that they log now?

A. That I cannot say. I would say about eight-inch tops,

1664 six- or eight-inch top is the smallest log that they take.

Q. That would be how many logs to the thousand?

A. Of course, that depends on the size of the tree, but your white pine, I think, will run from eight to twelve logs to the thousand, possibly a little less than that in old-growth timber, and more than that in second-growth timber.

Q. By the way, how is your pondosa that is sold to wholesalers resold by them?

A. I am not in position to answer that. I believe that it is sold as pondosa pine.

Q. You are not sure, are you?

A. I have never seen the invoices to the trade, but my personal acquaintance with the wholesalers that we sell wood lead me to believe that they do not misrepresent the product to their trade.

Mr. WHEAT. I have not asked anything of that sort and I will ask that that particular answer be stricken out as not responsive.

Examiner DE BRULER. I will let it stand. His answer shows how much he does know.

Mr. WHEAT. I want it understood that his conclusion as to whether or not it was misrepresentation is objected to.

Q. Well, aren't you interested in how it is resold by your wholesalers?

1665 A. Yes; we are. We are very much interested in that.

Q. And you make a study of that matter?

A. If we thought—yes; to a certain extent.

Q. All right. Let me ask you what concrete efforts have been made by either your company or the association, if you know, to have people to whom you sell this pine resell it as pondosa?

A. Well, we have not made any direct efforts in that direction to insist that they are. We sell our lumber and sell it as pondosa pine. We assume that the people we sell our product to sell it for what it is.

Q. Do you know whether or not any of those persons resell that for western white pine?

A. No. If we had a concrete example of it, we would not sell it again.

Q. As a matter of fact, the lumber is the same as it always was, isn't it?

A. The same lumber; yes, sir.

Q. And do you know whether or not there has always been a price differential between California white pine and ponderosa pine?

A. No.

Q. Do you know whether there is now?

A. No; I do not.

Q. Grade for grade?

1666 A. No.

Q. You are not familiar with that end of it?

A. Only in a general way. I am not familiar enough to quote the comparison or price of California white pine, although I say I feel that, grade for grade, our prices are practically the same. I will give you an example. We cannot expect to sell out 12-inch no. 2 ponderosa pine in the Chicago market at a higher price than California white pine of the same item is being sold in the Chicago market; consequently as the price varies in California white pine, sooner or later we must vary our price here to meet that competition if we expect to sell our product there, because it is a common market.

Q. That has been true throughout your experience with the ponderosa wood, has it?

A. Yes, sir.

Q. That ran back for a number of years prior to the change of name?

A. I think that is pretty generally true, since they have been operating in California.

Q. Well, did your pine, western white pine, when it was called western white pine sell for any more than California white pine when it was sold under that name?

A. I do not believe that it did; no.

1667 Q. In other words, what I want to get at is this, the situation is about the same now as it was about ten years ago, is it?

A. I think that is the price situation; allowing for fluctuations in the market and less demand and so forth, I would imagine they are comparatively the same, although as certain districts became more familiar with the California product they may have been willing to pay a little better than our price, or people who understood our product might have preferred certain types of our product.

Q. But you have not seen any marked change in the price over a period of years?

A. I do not believe so, offhand.

Q. The term California white pine, you have been familiar with that for a number of years, have you?

A. Yes, pretty.

Q. When did you first hear of it, do you know?

A. As far back as I can remember it was California white pine, to the best of my knowledge.

Q. Do you know how many needles there are in Idaho white pine?
A. Three—five.
Q. How many are there in the northern white pine?
A. I believe there is five.
Q. Do you know of any five-needle pines that are not white
1668 pines?
A. No. I will say that I am not a botanist, however.
Q. I see. Do you know of any white pines with other than five needles?
A. I cannot say that I do.
Q. You are not familiar with Pinus monophylla, are you?
A. No; not at all.
Q. Does the purchaser who buys from you ever ask for any number of needles?
A. I have never had that happen.
Q. He is not interested in needles or bark or the foliage?
A. I do not think he is interested in the botanical; he is interested in the commercial name.
Q. He is interested in the lumber and its quality and utility, isn't he?
A. Yes.
Q. Have you cut any two-needle pine?
A. No.
Q. Oh, you do not cut any lodgepole pine?
A. No.
Q. Not a bit?
A. No.
Q. You do not cut any lodgepole pine?
A. Not to my knowledge.
Q. On any sales invoice, you do not note it?
1669 A. No. To the best of my knowledge I don't believe we have ever manufactured any, although I never stood and watched the logs going onto the bull chain in the mill.
Q. Does it occur in the forest mixed with the white pine?
A. That I do not know. As far as my company is concerned, we do not consider lodgepole pine commercial pine, and I do not believe we have ever logged any.
Q. Where is your Idaho white-pine mill located?
A. In Spokane.
Q. In the State of Washington?
A. Yes.
Q. You still sell it as Idaho white pine?
A. Idaho white pine.
Q. That is a trade usage, is it, to call it Idaho white pine?
A. Yes; that is a trade usage.
Q. Is sapwood considered a defect in grading Idaho white pine?
A. Well, it is given some consideration, I believe.
Q. Referring to your grading rules, you are familiar with those, of course?

A. To a certain extent, but I do not believe sap is considered a defect.

Q. Do you know if it has ever been?

A. That I could not say.

1670 Q. Not in the grading rules as a defect, is it?

A. That I could not say. I believe it is given consideration, but I am not familiar on that point. If I had my grading book here, I could tell you.

Q. Are you familiar through your sales experience with what the approximate demand is through this country for shop type of lumber for remanufacture?

A. You mean the total? Total averages?

Q. Yes, about.

A. No. I could not say what the averages are on shop.

Q. A very large amount?

A. It is considered approximately 20 percent of pondosa pine purchased through the country; it is all used for that purpose eventually.

Q. And many other woods?

A. Four——

Q. For shop purposes?

A. No, I do not think so; outside of Idaho white pine.

Q. A very small amount of that?

A. As I said, about 3 percent of the log.

Q. You do not know, then, you would not be able to give the amount in figures as the general demand in the country for shop type lumber?

A. No; I could not, not exact figures. I would have to know the production of Idaho and California.

1671 Q. You know it is very large?

A. All the shop that is produced, all pondosa is eventually used for cutting up purposes.

Q. And all the shop of Idaho white pine?

A. Yes, sir; all the shop of Idaho white pine is eventually sold for cutting up purposes.

Q. And northern white pine?

A. I presume that is true; yes.

Q. And that is true of sugar pine?

A. I presume that is true; yes.

Q. Now, is this price differential, by the way, between white pine and pondosa something new, or has it always existed?

A. As far back as I can remember, there has always been a price differential in the return of Idaho white pine as against pondosa pine.

Q. That is grade for grade, of course?

A. Grade for grade, or log run, which ever way you want to call it.

Q. For what purposes is the pondosa lumber used now that are different from the purposes for which it was used when it was called western white pine?

A. I would not say that the uses have changed any with the name.

Q. And does it still—it still, I take it then, enters the
1672 trade for the uses which grow up when it was known as western white pine?

A. I think that is true, with the changes that have taken place in demand since that time.

Q. Do you know whether western white pine, or pondosa as it is now called, is used much for structural purposes or heavy timbers of building construction?

A. It is not used to any extent for heavy timbers.

Q. Do you know whether southern yellow pine is used for heavy timber construction?

A. It is.

Q. Do you cut any pseudotsuga taxifolia?

A. You will have to give me the commercial name for that. I do not know what it is.

Q. You did not give me any commercial name for it by which it is ordinarily sold. You said that you produced pondosa, Idaho white pine, larch, fir, and white fir?

Answer. Yes.

Q. Now, what is this fir that is produced?

A. Well, we feel that it is the same species as Douglas fir, only it grows in a different territory.

Q. But you do not know?

Examiner De Bruler. Wait a minute. I did not know there was any question about fir in this case.

1673 Mr. Burr. No.

Examiner De Bruler. I think that is beside the question.

Mr. Burr. I think so. We will be here a month.

Examiner De Bruler. Let's confine it to the field under investigation.

Mr. Wheat. Q. Then I will ask this question, we will get away from pseudotsuga tasifolia temporarily. Your customers are not interested in these botanical matters, are they?

A. No; I believe not.

Q. They are interested, as you said before, in the quality of the lumber?

Mr. Burr. I think you proved that by the other witness.

Mr. Wheat. We are going to prove that by every witness in the case.

Mr. Burr. I think it is time the examiner cut out something that is merely corroborative. When you ask it of all the retailers on the stand. I think the rest is corroborative, and I am going to object.

Mr. WHEAT. Of all the people we are going to ask that question.

Mr. BURR. We are going to have an extensive record.

Examiner DE BRULER. Let's get as near to the point as we can in these matters and not drag out the record.

Mr. WHEAT. That is all.

1674 Redirect examination by Mr. BURR:

Q. I think you said ponderosa pine was not used for pattern purposes?

A. I think that is true.

Q. Is it less suitable for pattern purposes than Idaho white pine?

A. Yes.

Q. Why?

A. Due to the fact that it is not considered as easily workable as Idaho white pine. I think it contains more resin than Idaho white pine and more pitch.

Q. Is it more subject to shrinkage for those purposes?

A. That I would not be in position to answer correctly or accurately.

Q. Is northern white pine, do you know, much used for shop purposes?

A. I could not answer that question, because I do not know the production of shop that they get out of northern white pine exactly.

Q. What percentage did you say of Idaho white goes into clear?

A. I said between eight and twelve, I believe, depending on the type of timber that you are cutting.

Mr. BURR. That is all.

1675 Recross-examination by Mr. WHEAT:

Q. Just one question. You are not a patternmaker, are you?

A. No.

Q. You never did any of that work?

A. No; I never did any. What I said is merely saying here what has been told by the trade.

Mr. WHEAT. That is all.

(Witness excused.)

G. T. NORKEN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name, please?

A. G. T. Norken.

Q. And you are with the Winton Lumber Company, are you?

A. Yes, sir.

Q. And you are in the business of Idaho white pine, or pondosa, are you not?

1676 A. Largely Idaho white pine.

Q. And where is the stand located, roughly speaking?

A. On what we call the Coeur d'Alene River territory.

Q. And that is up in the State of Idaho?
A. Yes, sir.
Q. Is it?
A. Yes, sir.
Q. And the lumber is divided into about what percentage of Idaho white pine?
A. What do you mean? Our product?
Q. Yes, sir.
A. In the last few years our product has been ninety percent or more of white pin.
Q. And could you tell me about how large those timbers run, say, breast high, about how large the timber is as an average? Could you do that?
A. We average about a nine log timber.
Q. That is, nine logs to the thousand feet of the timber measure?
A. Log feet.
Q. Beg pardon?
A. Nine logs to a thousand feet of logs.
Q. Of logs?
A. Yes, sir.

Q. Now, a thousand feet of logs; that is, linear measure?
1677 A. That is log measure.
Q. What is log measure? Is that different from board measure?
A. Scale, log feet. There is a lumber scale on log rule.
Q. Now what part of the work of the Winton Lumber Company are you concerned with?
A. With the manufacturing of it.
Q. Are you concerned at all with the sales?
A. No; only indirectly.
Q. Do you happen to know how much higher the stumpage of white pine is then the stumpage of the yellow pine?
A. Approximately; yes.
Q. Can you give about what they are?
A. The white-pine stumpage now is around six, six and a half dollars, and yellow pine, I think, about three, although we have not bought any pondosa pine or yellow pine.
Q. In other words, when a cruiser scales up that is about what you pay, is it, if you buy it on the market?
A. Yes.
Q. Is that the market including the land.
A. That is stumpage.
Q. Or is that what is sold by the Forestry Service?
A. That is stumpage.

Q. By the Forestry Service?
1678 A. Yes, sir.
Q. Just what relationship do you have to manufacture?
A. I do not know as I understand the question.

Q. What is your function in getting out this lumber?
A. Why, I am superintendent, superintendent of operation.
Q. Concerning the manufacture?
A. Yes, sir.
Q. Are you familiar with the specie Pinus ponderosa?
A. To some extent; yes, sir.
Q. Is that a more variable wood in its texture than Idaho white pine?
A. Yes.
Q. Is it remarkably so, is that quite a wide variation in texture of the Pinus ponderosa?
A. I think so.
Q. Is it more variable than Idaho white pine as regards its density and weight?
A. Yes, sir.
Q. Is it more variable than Idaho white pine with regard to its ease of working?
A. Yes.
Q. Now is that true in the same stands of ponderosa; that is, will one tree be considerably more dense right in the same stand than another?
A. Yes, I think that is true.
1679 Q. Does that vary with the topography, or would that be right in the same piece of soil?
A. (Pause.) Well, I would not want to say, because——
Q. One might come from a rotten place, and it might be due to that, then; is that true?
A. It might be. I would not say.
Q. Does your connection with the business enable you to say whether—do you come in contact at all with the man who buys your lumber?
A. Very little. No, sir.
Q. You have seen him on occasions; is that true?
A. Once in a while we have buyers at the mill visit the plant.
Q. And then you talk to him?
A. At times; yes.
Q. Have you ever found in your experience that the fact that your product was called Idaho white pine and that there is other wood that is designated as California white pine is a handicap to your white pine selling at a higher price?
Mr. WHEAT. Now, before the witness answers, of course my objection with reference to the matter of instances goes to this testimony, and I take it the examiner will make the same ruling he did this morning with reference to the other witness.
Examiner DE BRULER. State the facts.
1680 A. I have no specific instance that I could quote on that.
Mr. BURR. Q. Well, we do not restrict you to specific instances, if you have experience that enables you to know the facts,

whether it is a handicap to you or not, I would like to have that fact one way or the other.

Mr. WHEAT. I will ask that it be restricted to the specific instance.

Examiner DE BRULER. Let me ask you, is it a handicap to you?

The WITNESS. Yes.

Examiner DE BRULE. You can note an exception. In what way?

Mr. WHEAT. I want an exception to that question.

Examiner DE BRULE. You can note an exception.

The WITNESS. Because it competes with our white pine.

Mr. BURR. Q. Because it competes with your white pine? Is it sold at a lower price than your white pine?

A. Yes, sir.

Q. Do you have any experience that leads you to be able to contrast the durability of Idaho white pine with pondosa?

A. No.

Q. Ponderosa?

A. No.

Q. You have none?

1681 A. No.

Q. How about the lumber cut from ponderosa; is it more liable to shrinkage or warping, if not handled precisely correctly, than Idaho white pine is, or less likely to warp and shrink?

A. There is very little difference, according to reports gotten out by the engineer for the Western Pine Association.

Q. You have no information other than reports?

A. No.

Q. That you have received of that kind?

A. No.

Q. Now, do you sell Idaho white pine for pattern purposes?

A. Yes, sir.

Q. Are you able to sell that in competition with California white pine for pattern purposes?

A. We sell white pine for pattern purposes.

Mr. BURR. That is all.

Cross-examination by Mr. WHEAT:

Q. How many logs would it take to make a thousand feet of board measure? I think that is what we have been talking about with other witnesses?

A. About seven logs?

Q. Seven logs?

A. That is, our timber. It varies, you understand, some-

1682 times we have timber that runs four or five logs to a thousand, sometimes fifteen, but the average would be about eight or nine log timber we are logging.

Q. And about how much does it run in the ponderosa which you cut?

A. That I could not say, because we have not cut any for some time, but the pondosa timber runs heavier, averages larger than our white.

Q. Where does Idaho white pine largely grow?
A. Well, right through this territory.
Q. In the inland empire?
A. Yes.
Q. Runs east to Montana, does it?
A. East to Montana and north as far as the Canadian line.
Q. South as far as——
A. Not very much south of here. Probably——
Q. West as far——
A. Not very much farther west than what we are.
Q. How long have you been familiar with ponderosa pine?
A. Twenty years.
Q. You were familiar with it under some other trade name first?
A. Yes, sir.
Q. What was that?
A. Western pine was the only name we ever used.
1683 Q. Western pine. When did you change your name to ponderosa?
A. When the association changed.
Q. And that was about 1925, was it?
A. Yes, sir.
Q. Are you members of the association?
A. Yes, sir.
Q. That is known as the Western Pine Manufacturers' Association, isn't it?
A. Yes, sir.
Q. Headquarters in Portland?
A. Yes, sir.
Q. Is there an Idaho white pine association?
A. No, sir.
Q. Well, now, your Idaho white pine is in competition with a number of other pines, is it, in the market?
A. Yes, sir.
Q. What are they?
A. It competes with the ponderosa pine, the California pine, sugar pine, to some extent, I believe, southern pines.
Q. Northern white pine?
A. Northern pine, northern white pine.
Q. Northern white pine is the old Pinus sprobus, is it?
A. So I understand.
Q. Now, have you at any time cut large quantities of Pinus ponderosa?
1684 A. No, sir.
Q. Your experience has been largely with Idaho white pine, has it?
A. Yes, sir.
Q. Are you familiar in detail with the price matters on sale, or do you go into that very much?

A. Very little. I am not familiar enough to quote you prices, comparative prices.

Q. Your Idaho white pine does have—does enjoy a differential over this pondosa, does it?

A. Yes, sir.

Q. Has it always enjoyed a higher price?

A. As far as I can remember; yes.

Q. How long ago was that that you went into the lumber business here?

A. I have been with the Winton Lumber Company about twenty years.

Q. And as far back as that you recall that there was a differential in price, do you?

A. To the best of my recollection; yes, sir.

Q. You do not come directly in contact, except very seldom, with the purchaser of lumber?

A. No, sir.

Q. Do you cut any lodgepole pine?

A. No, sir.

1685 Q. What do you do with it when you find it?

A. We do not have any that I know of. We never log it, anyway.

Q. Do you sell much Idaho shop?

A. We sell what our logs will produce.

Q. That is not a great deal, then?

A. No.

Q. Is there a good demand for shop lumber?

A. Not now.

Q. May I qualify it. Aside from just at the present, the slump in the lumber market, is there ordinarily a good demand for shop lumber?

A. At a fair price, a fair demand; yes.

Q. You sell your pondosa that you cut, when you cut it, for the ordinary uses to which that wood is put, do you?

A. Yes, sir.

Q. Are you familiar with California white pine?

A. I am not.

Q. What are, in general, the natural uses of your Idaho white pine, would you say?

A. Inside and outside finish, mouldings, sheathing, and siding.

Q. That would be the common, would it not?

A. Common.

Q. Sheathing and siding?

1686 A. And there is pattern stock, shops.

Q. That would be the clear?

A. Pattern stock is clear.

Q. The shop is used for what purposes?

A. Usually used for cutting up stuff, sash and doors.

Q. Such type of millwork as require cut-up lumber?
A. Yes, sir.
Q. And do you of your own knowledge know what the ordinary uses of southern yellow pine are?
A. I do not.
Q. You are not familiar with that?
A. No.
Q. Have you had any experience in northern white pine?
A. No, sir.
Q. You never have cut any Pinus strobus, then?
A. No.
Mr. WHEAT. I think that is all.
Examiner DE BUTLER. Let me ask, What is your address?
The WITNESS. Gibbs, Idaho.

Redirect examination by Mr. BURR:

Q. Mr. Norken, the log scale was referred to in your testimony. Please give us a definition for the record of what you refer to by the log scale.

1687 A. Scaling the board feet contained in a log.

Q. Now, when you referred to the overrun what do you mean by overrun?
A. It is the increased percentage of board feet that you get off of the actual scale of feet in scaling the log.
Q. In other words, it takes about 1,200 feet by the log scale to make a thousand feet of board measure, does it not?
A. Just the other way.
Q. The other way? Will you define it accurately, how many feet of log scale does it take to make a thousand feet of lumber?
A. Twenty percent less; that would be about 800 feet.
Q. About 800 feet?
A. That is the general run. That may vary. The overrun varies with the type of logs you have.
Q. Now is that log scale used throughout the country?
A. Quite generally; yes.
Q. That overrun will vary on account of rot and various defects?
A. Yes, sir.
Q. The more you have, the less the overrun?
A. Yes, sir.

Mr. BURR. That is all.

1688 Recross examination by Mr. WHEAT:

Q. I want to be sure about that question. You said about nine logs on the average in your Idaho white pine made a thousand log feet?
A. In the timber we are cutting right now; yes, sir.
Q. And you said that would make about 1,200 feet, board measure, cut up?
A. Yes, sir.

Redirect examination by Mr. BURR:

Q. And if there is an excessive amount of rot and defects, there might be an underrun?

A. Yes, sir.

Q. At any rate, there is no misrepresentation as a result of this log overrun or underrun, is there?

A. No.

Q. And the same scale is used in western pine?

A. Yes, sir.

1689 Recross-examination by Mr. WHEAT:

The more defects there are, the more overrun there is?

A. The less overrun, because you scale that out from the log as you scale your log.

(Witness excused.)

JAMES M. BROWN was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination:

Examiner DE BRULER. What is your name?

The WITNESS. James M. Brown.

Examiner DE BRULER. What is your address, Mr. Brown?

The WITNESS. Spokane.

By Mr. BURR:

Q. Now, Mr. Brown, you are with what company?

A. Long Lake Lumber Company.

Q. How long have you been with that company?

A. Since its organization. Eleven years.

1690 Q. And what is your capacity with that company?

A. President.

Q. How long have you been president?

A. Since its organization.

Q. And in what line of forest products are you engaged?

A. Well, our major production is pondosa pine.

Q. And what else do you produce, any other variety of pine, I mean?

A. Idaho white pine.

Q. And referring only to your pines now, what proportion would be pondosa and what proportion would be Idaho white?

A. About 80 percent of pondosa and about 12 percent white.

Q. And the balance would be what?

A. The common mixed woods here, fir and larch.

Q. Now, do you have to do with the sales of the pine lumber?

A. Yes. Only in a supervisory way now. I did up until a year and a half—two years ago.

Q. And did you go out in other parts of the country where you encounter competition, promoting and representing sales?

A. No.

Q. Up until two years ago?

A. No; I did not. I made trips, but not for the express purpose of doing that. We sold to wholesalers.

Q. Don't your company have anybody call on wholesalers?

A. We do; yes.

1691 Q. Have you ceased to have any direct connection there with the traveling part? Didn't you, when you made trips, call upon wholesalers for the purpose of helping your company in its sales?

A. Yes.

Q. Now, then, in that connection did you find that the word "white" as part of the trade name of California white pine was a handicap to you in your sales of pondosa, or didn't you find that to be the case?

Mr. WHEAT. If the examiner please, we have gone over this before, but we will go over it again. In the first place, this witness has not said he ever heard of California white pine. We do not know whether he even competes with California white pine. We do not know what his experience has been, so I take it that my first objection is that there is not any foundation laid for this question. Of course, when the question arises again I shall have our objection.

Mr. BURR. Well, I think it can be judicially noticed. Notice can be judicially taken that these are competing woods, but I will go down the line with all the questions there are, if it is necessary.

Examiner DE BRULER. Just a moment. What is the question?

Mr. BURR. I will withdraw that question for the moment and will lay a further foundation.

Examiner DE BRULER. Just let's go back a minute.

1692 (Question read.)

Examiner DE BRULER. You may answer the question. Note an exception.

Mr. WHEAT. I wanted that exception noted.

Examiner DE BRULER. Yes, sir.

Mr. WHEAT. I think that is the most important objection in this case.

Mr. BURR. Do you remember the question, Mr. Brown?

A. Yes.

Q. Can you answer?

A. I have found it a sales resistance.

Q. You have found it a sales resistance?

A. Yes.

Q. Just how does that operate? Can you be more specific? Just what would happen that leads you to the statement of fact that you find that to be a sales resistance? Will you describe how that comes up?

A. If a man were to come in to our office and we would quote him on the same grade on the basis of the prices of California white pine, we would not get the business, but we have a usual rule that we follow. For instance, in shop lumber we—if California prices—

Idaho pine prices are a certain price, we drop, depending upon who the customer is, from a dollar to two dollars a thousand, because of the fact that it is quoted as pine, or white pine.

1693 Q. Now, do you recall any specific instances—that you could relate, or don't you recall any specific instances of conversations with buyers?

A. Well, no; I cannot recall a specific instance, but I can say that that is such a common statement among the lumbermen that it is the first thing that we hear.

Q. They want to have something with the trade name white in it, do they?

A. That has happened very shortly and very recently with us.

Mr. WHEAT. Now, if the examiner please, I think we have here a further instance of the very thing we tried to cut out this morning; that these witnesses should not discuss their general thoughts on the case, but this Commission is dealing with facts.

Examiner DE BRULER. As I understand it he is stating his experience he actually had. Is that right?

The WITNESS. Yes.

Mr. BURR. Q. Have people come in your office to your knowledge and asked these questions?

A. Yes, sir. Many of them.

Examiner DE BRULER. That is the way I understood him.

Mr. WHEAT. Then I ask that he be required to produce those instances instead of telling what might have happened or would have happened.

Mr. BURR. That goes to the weight, if Your Honor please.

1694 Examiner DE BRULER. Let the question stand as it is answered, with exception noted.

Mr. WHEAT. I would like to have that statement you made finished in the record. What did you say?

Mr. BURR. Where somebody interposed there?

Mr. WHEAT. Well, he said it is not as weighty and did not finish the statement.

Mr. BURR. I will fix that. I will admit that the testimony of a witness in general terms is not as weighty as such testimony would be if he were able to go down with each specific instance and say that on a certain date Smith called on me in February at my office, and then were to go on down the line with a great many other instances. That would be more weighty, but the objection of counsel goes to the weight rather than the competency itself.

Examiner DE BRULER. The Commission will weigh the weight of the testimony.

Mr. BURR. Certainly.

Q. Now, then, in connection with the marketing of your 12 percent of Idaho white pine, do you find from your experience that there is a sales resistance by virtue of the fact that it is a higher-priced product and is competing with another product equally called white

pine in the trade, is there a sales resistance against Idaho white from the same circumstances?

1695 A. Well, I am sure there is, from general knowledge of the handling, the manufacturing, and selling of the lumber; but I am really not competent to say, for the reason that for the past two years we have been selling our white pine green and not shipping it.

Mr. WHEAT. May I ask that my objection be shown in the record to go to all this line of testimony?

Examiner DE BRULER. I understand that.

Mr. BURR. That is conceded.

Examiner DE BRULER. Let the record show it.

Mr. BURR. Q. Up to two years ago did you experience a sales resistance in disposing of your Idaho white pine, resulting from the combination of facts that your Idaho white pine is higher priced, and that the other—the California white pine—contains the word "white" in its trade name?

A. I think I—yes; I have. I said, I think before, in all species of pine we have run against that sales resistance.

Q. How familiar are you with these species of trees in the forest itself, and with these species of logs? Do you get out into the woods a good deal and see these logs as they come into the mill?

A. Yes. I superintend our own woods operations.

Q. Are you familiar in California with the ponderosa trees down there, the logs?

A. No.

1696 Q. You have not become familiar with that?

A. No.

Q. Is the Idaho white pine a more uniform tree, a more uniform species of lumber, in its texture and in its lightness and so forth than is Pinus ponderosa?

A. Yes; I believe it is.

Q. Greater variability in the ponderosa, is there?

A. Yes, sir.

Q. Is the same true with regard to the amount of resinous substances in the two woods, is there a greater variability in the resinous content of either of these woods than the other?

A. Yes. There is greater difference in the pondosa.

Q. There is more variability?

A. More variability; yes.

Q. In the content of resinous substance, is that what you said?

A. Yes.

Mr. BURR. I think that is all.

Cross-examination by Mr. WHEAT:

Q. Mr. Brown, what is your definition of this term "sales resistance" you mentioned?

A. Might I cite——

Q. I want to know what it means first, and then we will talk

1697 about instances.

A. Well, in my experience, a customer who wishes to purchase pine lumber for shipment to the Middle or Eastern States, considering the same grade, and so forth, would prefer a lumber with the word white, or a pine with the word white attached to it, and I think I have found that true for years.

Q. All right. Now go into your specific instance that you have found this true for years. You can remember some instances, can't you?

A. No; I do not believe I can remember any. It is so general.

Q. You do not remember any instance, do you?

A. It is so general.

Q. In other words, there are so many such instances that you cannot remember any, is that true?

A. Yes. In fact, I would say that the greater part of our contacts, particularly in our shop lumber, are such.

Q. Well, now, then would you say that if we should interview all of the people who buy shop lumber from you that we would find most of them making this statement?

A. They might not make that statement to you, but they do to us. I could not say what they would make to you.

Mr. Burr. That would be highly speculative.

Mr. Wheat. Well, this gentleman has said that most of his trade make these statements to him, but he says he could not remember a single instance.

1698 Q. Now, I want to know, Mr. Brown, how I could ascertain what was said. Can you give us one conversation with the time and place and people present, and what was said on this matter?

A. Well, I do not remember one conversation. If I were to remember it, it might be very embarrassing to my friend whom I would quote.

Q. I am not speaking of that. I am talking about a specific instance?

A. I do not remember a specific instance.

Q. In all your experience, then, in all those years, you do not remember any specific instance of this situation?

A. No.

Q. Now, what was this you said about a drop of a dollar or two dollars a thousand in price with various customers? I did quite understand that. I would like to have you tell us over again?

A. For illustration, if a man were to come in to our office to buy, say 25 cars of shop over a period of shipment for 90 days, and we wished to sell him that 25 cars of shop, it would be necessary for us to cut the price from a dollar to two dollars under the going market. There is a general market on California white pine, that is, a joint market.

Q. You mean under the price what California white pine sells for?

A. Yes.

1699 Q. Well, now, how long has that situation existed?

A. Well, it has only been to us in the past three or four years, particularly on shop, because previous to that time we sold all of our shop green to the local manufacturers.

Q. Well, now, are you a member of the Western Pine Manufacturers' Association?

A. No.

Q. Did you keep fairly close tab on prices of lumber?

A. Yes, fairly close.

Q. Is it not true, Mr. Brown, that over a long period of years the quoted prices on California white pine have been slightly in advance in general and on the average over the quoted prices of Pinus ponderosa out in this area?

A. May I have that question again, please?

Q. Yes. Read the question, Mr. Reporter, please?

(Question read.)

A. Well, I could not answer that. In fact that would be hard, there are so many governing factors in that. I can remember a year ago there when we were selling box lumber at a greater price than they were getting for it in Klamath Falls.

Q. There are a great many factors, aren't there, that go into these matters of relative prices?

A. A great many factors?

Q. General economic conditions, do they affect it?

1700 A. Something affects the price.

Q. Do freight rates affect it?

A. Naturally; yes.

Q. Can you think of any other factors that affect the relative prices of your pondosa lumber and California white pine?

A. Well, I think of some, but I was called here as a witness, not knowing anything that you wanted me to say. The trade name California white pine would be a determining factor.

Q. I am talking about other things than what you said on your direct. You said the trade name had something to do with it. Now I want to know what other things have?

A. Well, for distribution I believe the dominating factor is the freight rates—are the freight rates.

Q. Do you or does the California ponderosa producing region enjoy a better freight rate to your main markets?

A. Well, I think that—of course, that would depend on what you call the main markets. In the southern markets they have an advantage. Some of the main markets in the South they have an advantage, and some of the main markets in the East they have an advantage.

Q. So that that particular matter varies with the locality?

A. Yes.

Q. General economic conditions do have a certain influence, do they not?

A. Well, now, certain influence over what, Mr. Wheat?
1701 Q. Over the relative prices between your two woods?
A. I do not know why general economic conditions would have any bearing on it.
Q. Now, some time ago this wood was sold as western white pine, was it not?
A. Yes.
Q. Did you sell it as western white pine?
A. Yes.
Q. Now, say, take a period there, a date some time in 1922 or 3, just fix your mind on some particular time and tell me whether or not there was a differential in price at that time between the California white pine and the western white pine?
A. I do not remember.
Q. You do not remember?
A. No.
Q. Do you remember any change in any differential that has existed over a far longer period of years?
A. No; I do not remember of any change.
Q. This differential has, so far as you know, then, always existed? Has it?
A. Yes, sir; so far as I know. There was a variance in price between 1922 and the present time, if that is what you mean, both one way and the other.
Q. Oh, yes; I do not doubt that, but I am talking about this general differential you are talking about that has sort of
1702 run along through your experience, hasn't it?
A. Well, now, when I speak of mine, it was only on shop.
Q. That is all I am talking about.
A. I am talking about the past three years. Prior to that my shop was sold green. I am talking about the past three years.
Q. That is the only experience you have had competing with the California white pine?
A. If I did not say that, that is what I was talking about.
Q. By the way, do you sell a good many manufactured sash and doors of pondosa pine, do you not?
A. I do not sell any.
Q. How do you sell it, all as green lumber?
A. No. We ship the lumber dry and green, both.
Q. You sell it as shop lumber?
A. Yes.
Q. Yes, sir. You do not manufacture it; you have no mill?
A. Just planing mill.
Q. Oh, you have a planing mill here?
A. Yes.
Q. And what do you produce there?
A. Pondosa pine.
Q. Where do you sell it?
A. All over.

Q. Now, let's get clear on that.

1703 A. East. Principally east of Chicago.

Q. I thought you just testified that you sold no shop lumber, I mean no manufactured products, that is, sash and doors, anywhere?

A. I did.

Q. Now, but you also testified, did you, that you produced shop lumber from your ponderosa trees, and sell it through the markets of the country?

A. Yes.

Q. Now, what do you produce at your planing mill?

A. Just lumber.

Mr. BURR. Surfaced lumber.

A. Just surfaced lumber. You see, the mills cuts rough lumber, the green lumber, and the planing mill surfaces it.

Mr. WHEAT. It is not remanufactured?

A. No remanufactured; no.

Q. When you first began cutting ponderosa and Idaho white pine, they were pretty well known woods, were they not?

A. Yes.

Q. And you sold one of them as Idaho white pine and the other one as western white pine?

A. Yes.

Q. And just what material change in the uses of Pinus ponderosa has there been in the last few years?

A. I do not believe there has been much of any change in

1704 the uses.

Q. The clears are still used for about the same purpose, are they, and the shops for the same purpose, and the commons for about the same purposes?

A. I would think so; yes.

Q. That covers your full experience?

A. Yes.

Q. Does that cover more than this three years you have mentioned?

A. Beg pardon?

Q. Does that cover more than the eleven years that you have been with the Long Lake Lumber Company?

A. I do not understand you.

Q. When you say that includes your lumber experience, did you have lumber experience before you were with the Long Lake Lumber Company?

A. Yes. I am forty-five, and I have been at it since I was nineteen.

Q. All in this area?

A. No. I was for a while in northern Minnesota. I was a boy there.

Q. Oh, yes. You cut what lumber there?

A. Well, cut pine.

Q. What kind of pine?

A. Northern white pine.

1705 Q. Did you find any other pine mixed with that pine?

A. Well, I was very much of a boy at that time. I do not believe it would be hardly fair for me to answer. I would not know.

Q. Your experience, then, with northern white pine has not been great?

A. Has not been great.

Q. Since that time you have been engaged in the inland empire?

A. Yes.

Q. You have?

A. Yes.

Q. Now, do you find that the term pondosa is pretty well known through the market?

A. Yes; pretty well.

Q. The trade that you come in contact with understands what they are getting, do they?

A. Yes and no. Some do and some do not.

Q. They still come back for more, whether they do or not?

A. Beg pardon?

Q. They still come back for more, do they?

A. Yes; I assume they do.

Q. You sell, do you, year after year to the same customers?

A. Yes, sir.

1706 Q. By the way, has there been a great change in those customers since you changed the name to pondosa?

A. Well, there is always a change. I find the turnover in that, in eleven years, the turnover in customers. That is all too uncertain.

Q. You sell to the same general type of customers, do you, you sold to then?

A. Yes; I believe so.

Q. And for the same purpose?

A. I believe so; yes.

Q. Do you receive orders for western white pine?

A. Not to the best of my knowledge.

Q. Do you ever receive orders for just white pine alone?

A. Yes, we do, quite frequently.

Q. Then you say you write them, do you?

A. Yes.

Q. What do you say in your letter?

A. Well, we tell them that we furnish only pondosa pine, which would be the natural thing.

Q. Did you ever get any orders as the result of such letters?

A. Oh, I do not know. I could look it up and tell you. I do not know whether we do or not, to be frank.

Q. By the way, are you familiar with southern yellow pine?

A. No.

Q. Not at all?

1707 A. No.

Q. You do not know whether your wood competes actively with southern yellow pine, do you?

A. Well, I know as a general—I know from general conditions in the lumber industry that we compete with all wood, of course, a little.

Q. As a matter of fact, it is true, I suppose, isn't it, that all lumbers compete with all other lumbers?

A. Yes. Some to a greater and some to a lesser extent.

Q. And some for particular uses compete more with some types of lumber than others?

A. Yes, sir.

Q. Is that true?

A. That is natural.

Q. Now, when you say—would you say that you are in general active competition with southern yellow pine, and if so, for what purpose?

A. Well, to the best of my belief we would be in active competition with southern yellow pine only where the freight rates meet and in a low grade.

Q. Does your pondosa compete with Idaho white pine?

A. Well, it does, only there is a differential of eight or ten dollars a thousand in price between Idaho and pondosa.

Q. I take it that difference in price is something that has been in existence for a long time, isn't it?

1708 A. Yes; it is.

Q. That difference in price existed between them prior to the change of name to pondosa?

A. Yes; it did.

Q. There has not been any particular difference in that price differential over that period of years, has there?

A. Only the general and natural fluctuations.

Q. Now, would you say that in general pondosa pine is in active competition with Idaho white pine, and if so, in what grades?

A. (Pause.) Well, it would be hard for me to determine what active.

Q. May I frame the question another way then, Mr. Brown? Do you find that the pondosa lumber that you produce goes into the trade in this country for any of the uses to which Idaho white pine is put?

A. Oh, yes.

Q. Now, what are those uses?

A. (Pause.) Well, I would think to mostly all uses. If you wanted to build a frame, why it would be up to the man building this frame; he would decide whether or not he wanted to put that much additional money into Idaho white pine.

Q. I see; and that would be a natural use of both of those woods, would it?

A. Yes; it would.

1709 Q. And now, going from frames, let's take sash. Do those two woods naturally, so far as they produce sash lumber, go into the sash business? Are they naturally fitted for that use, in the way they cut up, and so forth?

A. Well, I am not competent to say whether they are naturally fitted. I would say they do go into it. So does fir and other woods.

Q. Let's take doors. Are they both cut up for doors?

A. Yes.

Q. Idaho white pine does not produce as much shop lumber as the pondosa?

A. Well, when you said doors I was not thinking of Idaho as the shop. I was thinking of Idaho for the panels, and so forth.

Q. Oh, yes. And what would you use for sills and rails in such a door?

A. You mean in this territory?

Q. Yes; so far as you are familiar with the general lumber business.

A. Well, they would use pondosa for the frame.

Q. For the sills and rails they would use pondosa, and for the panels they would use Idaho white pine?

A. No. I do not think you quite understood me. May I make myself clear? There is a very small percentage of shop in Idaho white pine.

1710 Q. Yes.

A. And the percentage of shop in Idaho white pine would be so small that it would not supply the demand, very little demand; therefore it would be necessary to go to some other wood, and those other woods are pondosa pine, California white pine, and sugar pine, that are used mostly for the frames, on account of there not being enough shop type in that Idaho white pine, they go to those other woods. Now, with panels, and so forth, in this town they make doors, I believe, with both panels.

Q. But you do not make those yourself, do you?

A. No.

Q. By the way, how long have you been familiar with the term, California white pine?

A. Oh, for—for years.

Mr. WHEAT. I think that is all.

Redirect examination by Mr. BURR:

Q. Is there a difference between the market, the quoted market price that appears in the trade journals, and the prices that are quoted by you as an individual firm sometimes?

A. Oh, yes.

Q. Now, there might therefore be a parity or price between California white pine and pondosa pine, and you might find that

1711 you were not able to get the quoted price of the trade journals for your particular product, might that be true?

A. Yes, sir.

Q. That is true on occasion, is it?

A. On many occasions.

Q. Now, is it also true that you may quote a price for pondosa and then as a result of talk back and forth and correspondence back and forth you may take some other price than you are generally quoting on an order; is that true?

A. I do not like to admit it in front of this crowd, but it is true.

Q. Then it may be that sales resistance—sales resistance interferes with the market parity of the two woods; is that true?

A. Yes.

Q. Now, when opposing counsel, my friend here, was talking to you about your experience in disposing of your products you used the words "I might cite." I am afraid you will have forgotten it, but counsel interposed at that point and said, never mind the specific instance now; I would like to have you go ahead with that answer that you were preparing to make at that moment, if you can recall what you had in mind, what you were going to say. Is that clear? It is not clear to me, but maybe it is to you. I do not know what you had in mind, but counsel asked you a question, and you thought
1712 he was asking for specific instances, it seemed to me that you thought so, and you said "I might cite", and then counsel did not want you to cite, apparently, and he interposed, and I would like you to go ahead with that answer, if you can remember just what was the answer that you were expecting to make when you were interrupted.

Examiner DE BRULER. Does the witness remember anything about it?

Mr. WHEAT. I want to say that I do not understand it either.

Mr. BURR. But if there is any specific instance of any of those things I would like to hear them.

Mr. BURR. Well, he said "I might cite", and then you interposed and interrupted him, and I was wondering if I could bring him back to that point. All right, I will waive that question.

Mr. WHEAT. I interpose no objection to it, sir.

Mr. BURR. No; you cannot interpose any objection to it. I do not expect you to.

Q. Now, in 1921 and 1922 do you recall whether Idaho white pine was carrying a price differential over pondosa of between sixteen and seventeen dollars?

Mr. WHEAT. On what grades?

Mr. BURR. Q. On any grade?

A. 19—

Q. Do you remember there was a high differential there along about that time? That was a rather high mark, was it not, for lumber in 1921 and 1922? Can you recall how the market
1713 was about that time?

A. Well, I remember there was a difference in the market, but I thought it was 1922 and 23.

Q. Well, now, 1922 or 23, how much, if you can recall, was the extreme differential on the better qualities of lumber between white pine and ponderosa?

A. Well, I do not remember the exact figures, but the average differences was almost twice what it is today, I believe.

Q. Well, when did it come down to one half of the former figure, the differential?

A. In a certain September, if I can remember the year, September 1927.

Q. 1927?

A. I believe; yes.

Q. It took that drop?

A. Yes.

Q. Well, do you know whether that was due to the coming down of Idaho white pine, or the advancing of Pinus ponderosa, or was it a mutual movement together, in other words, was the one dropping, or did the other raise, or did each one drop a little and the other raise a little?

A. No. I believe Idaho white pine dropped, I believe.

Q. Was that due to the opening up of new mills, or the increased production of Idaho white, do you know?

A. I do not know.

1714 Q. You do not know as to that?

A. No.

Mr. BURR. I think that is all.

Recross-examination by Mr. WHEAT:

Q. May I ask whether you know there were any large new mills that came into production about that time?

A. (Pause.) I could not fix it with the date. I do remember that September was the particular time of the falling in Idaho white pine, but I could not say the date as to any new mills coming in. There were some came in and some went out about that time, and I do not remember whether that was the date.

Q. In some fall, prices took a drop?

A. I remember in September 1927 prices took a drop.

Q. Let me ask you again whether or not you can think of any instances where you have taken less money than what you had originally asked? You said it was rather a general practice, didn't you?

A. Yes. I could not cite any specific instances.

Examiner DE BRULER. You have reference now to his trade practices?

Mr. WHEAT. Q. I have reference to when he said that there might be a parity of price in quotations, but he could not get
1715 that quoted price, and I am asking him whether he has any instance of when he could not get that quoted price, and he has stated that he has no such instance that he can remember.

Q. Do you know whether any other lumbermen in this area have the same practice that you have along these particular lines?
A. I know from what they have told me.
Q. You do know it then, do you?
A. Yes; I do.
Q. And can you cite instances of that, sir?
A. Not specific.
Mr. WHEAT. All right. I think that is all.
Mr. BURR. I think that is all.
(Witness excused.)

I. N. TATE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. What is your name?
A. I. N. Tate.
Q. Mr. Tate, what is your present position?
1716 A. I am with the Weyerheauser Sales Company as general manager.
Q. How long have you been general manager of that company?
A. For two years and a half.
Q. Now, that is the sales corporation for certain lumber companies which are known in general as the Weyerheauser group of lumber companies?
A. Yes.
Q. Sometimes referred to as the Weyerheauser interests, together with the sales corporation; is that true?
A. Yes.
Q. How many such companies, without naming them, are there?
A. Well, it is a little hard to answer that, because some of them have a number of different branches. Do you mean different organizations or different mills?
Q. I mean different corporations or organizations. They are all incorporated, I suppose?
A. I would say ten or twelve.
Q. And in connection with the Weyerheauser Sales Corporation, you have a staff engaged in selling?
A. Yes.
Q. That is composed of about how many men?
A. We have over a hundred actual salesmen and eight district offices, with a district manager in charge of each one of them.
1717 Q. And your sales and operations extend to all parts of the country, do they not?
A. They extend to all that part that we can reach on present freight rates with the lumber manufactured at the Weyerheauser mills.
Q. Which section of the country does that exclude?
A. That excludes in general, the territory south of the Mason and Dixon line and east of the Mississippi River.

Q. Now, the buyers belong to what class, retailers, jobbers, wholesalers or brokers?

A. The largest part of our lumber is sold to the retail lumber delivery. We also sell some lumber to the large industries under certain circumstances, the large industry delivery under certain circumstances.

Q. And to railroads to some extent?

A. Yes, sir.

Q. And in that work the Weyerheauser Sales Corporation is engaged in selling practically all varieties of soft lumber, is it?

A. Except southern yellow pine, I would say.

Q. How about cypress? Do you sell cypress?

A. No cypress. We sell the lumber that is produced, in general, in the north and in the west, the softwood.

Q. You do not ship any varieties of lumber, do you, that is, buying from producers to sell again?

1718 A. In emergencies we do. In certain cases we do, but it is negligible.

Q. Before your appointment as general manager, you were assistant general manager, were you?

A. I was, since the organization of the cooperative sales company.

Q. And as general manager you are over and sales sales manager for the entire Weyerheauser interests, is that true?

A. Yes.

Q. Now, in connection with your experience, do you still have on occasion the necessity for travel in various parts of the country?

A. Yes; I get around to our district offices and contact a number of our men two or three times a year.

Q. And you travelled more up until two years ago, did you, when you were assistant manager?

A. Possibly more.

Q. Now, do you have your district sales managers into headquarters, so that you see them there?

A. Usually I see them only in the district offices.

Q. In the field?

A. We get them together occasionally for a meeting in Chicago or some convenient point.

Q. Now, do you have to do with the conferences over advertising matters?

1719 A. Yes.

Q. For your company?

A. We consult with our advertising department, although we do now write the advertising, or control it ourselves. It is all part of the sales program, however.

Q. Well, now, when the contact man of the advertising agency has a copy, an illustrative matter ready, he submits it to you, does he, or to a board of the Weyerheauser interests?

A. Both.

Q. Both?

A. He submits it to a board and we usually see it and comment on it.

Q. And you give your attention to the advertising campaign and the use of phraseology in the advertising, do you?

A. Yes.

Q. Now, as the result of the experience and contacts and duties that you have outlined, do you have occasion to study the sales resistances, if any, that your products come in contact with?

A. We do.

Q. Now, what are the pine products that your company is charged with responsibility for selling?

A. Pinus strobus from the North, also some mixed pine from the North, Idaho white pine, and ponderosa pine, all of which in
1720 our companies is produced in Idaho. At the present time our people have a new mill in Oregon which is now producing ponderosa pine.

Q. Now, your use of the words "all of which" might by some reader of this record be deemed to include strobus. I think you do not mean strobus was produced in Idaho, do you?

A. No. I beg pardon.

Q. Well, then, go into that more carefully. Where is your strobus white pine coming from that you are charged with responsibility for?

A. It is coming from northern Minnesota and all manufactured at Cloquet, Minnesota.

Q. Do you have holding of strobus outside of Minnesota that are not yet in course of development?

A. The stumpage that is tributary to the Cloquet mills is all located in the State of Minnesota.

Q. Do you own any Canadian—do any of your interests own Canadian strobus?

A. I do not know.

Q. You do not know as to that? At any rate it has not become your responsibility to sell Canadian strobus?

A. Not yet.

Q. Now, have they been taking the northern white pine or strobus from Minnesota during the entire time of your experience?

A. And long previous.

1721 Q. Does your experience go back to any other source of the strobus supply than Minnesota?

A. Yes. I have done nothing but sell lumber since I got through school, which was twenty-seven years ago, first in a retail yard as the—operating a retail yard, then a line of retail yards, afterwards in a wholesale way with headquarters in Minneapolis, and during that period I both bought and sold strobus from Wisconsin, Minnesota—I think Wisconsin and Minnesota.

Q. Now, have you had any experience to speak of in the woods?

A. Not except as I get it in visiting the mills.

Q. I see. How long——

A. Perhaps I should change that. I spent a year in a Canadian sawmill, working in the sawmill and in the woods, but that has nothing to do with strobus or with the present situation.

Q. What line of timber was that?

A. It was spruce and larch, largely.

Q. Now, then, your Idaho white pine, if I understand you correctly, comes exclusively to the sales corporation from Idaho?

A. That is true.

Q. You have none in Montana, then, or Washington?

A. No.

1722 Q. And your ponderosa at the present time is coming from Idaho exclusively?

A. That was true until last month, when this mill in Oregon commenced to saw.

Q. That is in the Klamath Falls section, is it?

A. Yes; it is in the Klamath Falls section.

Q. And you are already marketing some of the Klamath Falls ponderosa?

A. We sold very little of it; yes.

Q. Now your ponderosa lumber is being marketed at the present time under what trade term?

A. Pondosa pine.

Q. And how long has that been true?

A. Since the name of pondosa was adopted. Prior to that it was sold as western soft pine.

Q. Prior to that, ever how long a period anterior to the change to pondosa, was it sold under the last name that you have quoted?

A. I think the first of the mills was sawing about 1900—we manufactured ponderosa and it was sold from that time on, either as western pine or as western soft pine, never as western white pine.

Q. You have never used the word white for any of those companies in any of your advertising or other sales efforts, you have never used the word white?

1723 A. No.

Q. Now, as the result of your long experience and as the result of your contacts to which you have testified, have you given—have you found yourself under the necessity of considering the result in sales resistance of the word white as attached to the trade terms California white pine, Arizona white pine, and New Mexico white pine, and also western white pine?

Mr. WHEAT. Of course, Your Honor, I take it that we shall ask again for specific instances and facts?

Examiner DE BRULER. He may answer the question. Exception noted.

A. That is a constant factor in our sales problem.

Mr. BURR. Q. Will you state more specifically how that works out and hot it is encountered?

A. I personally have very few contacts with our customers. I do get our occasionally to meet customers with our salesmen. My contacts are largely with the salesmen and our district managers. They are constantly bringing to our attention as an almost weekly problem, perhaps I would say, I would guess, the customer that they cannot sell because he wishes to buy at our prices, or as nearly our prices as possible, a wood which he can have invoiced to him, which he can order and have invoiced to him as white pine.

1724 Mr. WHEAT. Well, now, Mr. Examiner, this is starting a new line and I think that it is proper that at this time we interpose an objection. It goes somewhat to a different point, and I think it is fully as weighty as the one I interposed to the other line of questions. This witness has to do with a large number of salesmen and he states that almost weekly he has a certain type of report.

Examiner DE BRULER. The record shows what the witness has stated.

Mr. WHEAT. Yes, sir.

Examiner DE BRULER. State your objection briefly, please.

Mr. WHEAT. My objection is that if this witness has such instances, this is certainly the place where the Federal Trade Commission should demand instances rather than mere statements of what his opinion is. Also I wish to add that he has made a statement which attempts to bring the mind of the buyer of lumber from him into this record, and unless he is a mind reader, I object to that attempt going in.

Mr. BURR. If the examiner please, I think the record——

Examiner DE BRULER. The answer may stand, with the exception noted.

Mr. BURR. Q. Now, you have been referring in your last answer to the sales resistance of Pinus Ponderosa, have you not?

A. I have.

Q. That is your trade-mark for your company's pondosa?

1725 A. Yes, sir.

Q. Now, then, will you state whether there is a sales resistance found by you as the result of your experience to the sale of Pinus strobus and Idaho white pine through the naming of ponderosa products with the termination, with the term white pine as part of the ponderosa trade name?

A. Yes. There is a very decided confusion existing there, and we know from experience that it works to the detriment of the genuine white pine, that other woods of the same species, where we are not using the white-pine name, shall be sold under the white-pine name.

Mr. WHEAT. My objection, of course, will be noted to this line of questions.

Examiner DE BRULER. Objections noted and exception allowed.

Mr. BURR. Q. Now, there is a differential in the cost of getting your genuine white pine out, is there, as contrasted with getting out Pinus ponderosa?

A. You are referring to the cost of producing the lumber?

Mr. WHEAT. If the court please, this goes to a new point, which was the subject of great argument.

Mr. BURR. I think I will withdraw that; I think that is true.

Examiner DE BRULER. Yes.

Mr. BURR. Q. Now, there is a differential in the market between the Pinus ponderosa on the one hand and the genuine
1726 white pines on the other, is there?

A. Yes, sir.

Q. When you refer to genuine white pines, what commercial varieties do you refer to?

A. I refer to Pinus strobus—I refer to the five-leaf—the five-needle pines; that is, Pinus strobus, Pinus monticola, and Pinus lambertiana. They are the northern white pine, the Idaho, and the sugar pine. Do you want that?

Q. Now, monticola is Idaho white pine, is it?

A. It is.

Q. And lambertiana is sugar pine, is it?

A. It is.

Q. And strobus is northern white pine?

A. It is.

Q. Or sometimes gives various names, such as northern white pine, and so forth, such as Minnesota?

A. Yes.

Q. And Wisconsin white pine?

A. Yes. Also Maine white pine.

Q. Now, can you explain more fully, in view of the higher prices of genuine white pines, the sales resistance that you encounter from the calling of Pinus ponderosa white pine in the trade term?

Mr. WHEAT. I assume my objection to the fact that you are not giving specific instances will go to this?

1727 Mr. BURR. Will go absolutely.

Examiner DE BRULER. The question may be answered and exception noted.

A. May I ask you to read that question, please?

(Question read.)

A. White pine is a trade name, has established for itself a very definite preference in the lumber world because of the record that white pine uses have established, have built up. A great many specifications call for white pine. It is extremely hard for the man who wants to furnish white pine to know when he is furnishing genuine white pine, if as a trade name it may be used to cover other species. Our experience has been that there is a very considerable confusion in the mind even of pretty well posted lumbermen as to how he can specify white pine and get white pine when he required it. Does that answer your question?

Mr. BURR. Q. Yes, sir. I think so. Now, in what respects does ponderosa vary from qualifying as a genuine white pine? Are you qualified to answer that?

A. Well, I know that it is—that we have been taught that it is not a true white pine. We do not regard it as a true white pine. The appearance is not the appearance of a true white pine, and in many cases the last thing qualities are not such as to justify us in thinking it is a white pine.

Q. Now, when you say its appearance is not that of a white
1728 pine, in some grades it is very close in appearance, is it not, to a genuine white pine?

A. Yes, sir. But taking the tree as a whole you can tell the difference. Taking the products of the log as a whole, you can tell the difference. Some parts of the log are very similar in appearance to parts of the genuine white pine.

Q. Which grades of ponderosa approximate in appearance the genuine white pine as a matter of lumber?

A. The upper grades.

Q. You mean B and better, B select and better?

A. I would say that all selects.

Q. Now, there is a greater variation, is there, of ponderosa, is there, than there is of genuine white pine that you are familiar with?

A. More variation in what respect, please?

Q. Variation in quality and characteristics?

A. Yes.

Q. There is a greater departure from the average, is there?

A. Yes.

Q. The extremes are greater?

A. Yes.

Q. Is that purely a question of texture?

A. There is more variation in texture also.

1729 Q. Is there more variation in the content of a resinous or pitchy character?

A. Yes.

Q. Which is the more pitchy on the average, the genuine white pines or the ponderosa?

A. The ponderosa.

Q. How about the weight of the two; is there a greater variation in weight between the extremes of Pinus ponderosa?

A. Yes.

Q. Than there is between the extremes of genuine white pine?

A. That would necessarily follow.

Q. Pitch is heavy stuff; is that true?

A. Yes.

Q. Now, has the market for Idaho white pine remained stationary, approximately or does it vary, taking a period, say, for the last fifteen years?

A. I am sorry to say that it varies.

Q. It has varied up and down by quite radical gradations, has it?

A. Yes.
